\* Prior to 1926 number of commodities was 236.

(Continued from page 820)

included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each since January, 1910. The quantities of each

commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetables is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according

to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930 and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices, which had declined during the first five months of the year, showed a slight upward movement in June, sirloin steak being up in the average from 24.8 cents per pound in May to 25.5 cents in June; round steak from 20.1 cents per pound in May to 20.6 cents in June; and rib roast from 18.6 cents per pound in May to 19 cents in June. Corresponding prices in June, 1931, were 28.9 cents per pound for sirloin steak, 24.1 cents for round steak and 22.2 cents for rib roast. Shoulder roast of veal was down in the average from 13.5 cents per pound in May to 13.3 cents in June. Mutton was also lower averaging 22.1 cents per pound in June as compared with 22.5 cents in May. The price of bacon was lower in most localities, averaging 16.8 cents per pound as compared with 17.2 cents in May. Lard was slightly lower at an average price of 11.3 cents per pound as compared with 11.5 cents the previous month and 15.2 cents in June, 1931.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent 18½%; Clothing, 18½%; Sundries, 20%.

Egg prices showed a slight decline, fresh averaging 19.2 cents per dozen in June as compared with 19.5 cents in May. The price in June, 1931, was 23.8 cents per dozen. The price of milk was down in the average from 9.9 cents per quart in May to 9.7 cents in June, which is 1 cent per quart lower than the price a year ago. Decreases during the month were reported from New Glasgow, Amherst, St. John's, Thetford Mines, Niagara Falls and Lethbridge. Both dairy and creamery butter were lower in most localities, the former being down from an average of 21.4 cents per pound in May to 19.5 cents in June, and the latter from 24.5 cents per pound in May to 22.6 cents in June. Corresponding prices in June, 1931, were 23.7 cents per pound for dairy butter and 27.6 cents for creamery. Cheese was also lower, averaging 20.7 cents per pound in June, as compared with 21 cents in May.

Bread prices showed the first decline since the beginning of the year, averaging 5.9 cents per pound in June as compared with 6 cents previously. Onions were generally higher, the price being up in the average from 6.6 cents per pound in May to 7.9 cents in June. Potatoes were slightly lower at an average price of 64 cents per ninety pounds as compared with 65 cents in May and \$1.01 in June, 1931. Prunes were up from an average of 10.8 cents per pound in May to 11.2 cents in June. Coffee was again slightly lower, averaging 42.6 cents per pound as compared with 43 cents in May and 49.2 cents in June, 1931. Anthracite coal was down in the average from \$15.62 per ton in May to \$15.52 in June. Decreases were reported from Halifax, Quebec, Hull, Ottawa and Woodstock. Decreases in rent occurred in several localities.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The prices of grains, for the most part, moved to lower levels during June. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down in the average from 62.9 cents per bushel in May to 55.1 cents in June, which is the lowest average reached since September, 1931. The high price for the month was 61.2 cents per bushel reached at the beginning and the low 53.1 cents at the end. The decline was said to be due to favourable weather conditions for the European crop and to the lack of export demand. In coarse grains western barley was

down from an average price of 40·3 cents per bushel in May to 37·8 cents in June, flax from 83·8 cents per bushel to 71·7 cents, oats from 35·5 cents per bushel to 33·8 cents and rye from 41·2 cents per bushel to 33·8 cents. The price of flour at Toronto was down from \$5.10 per barrel to \$4.90, while oatmeal and rolled oats were also lower, the former declining from \$2.92 per ninety-eight pound bag to \$2.81 and the latter from \$2.65 per ninety pound bag to \$2.55. Raw sugar at New York advanced from an average price of 65·3 cents per cwt. to 86·8 cents (Canadian funds), while granulated at Montreal was unchanged at \$4.28 per hundred pounds. Coffee prices at Toronto were  $\frac{1}{2}$  cent per pound higher at 18 cents. Ceylon rubber at New York was down from an average price of 3·5 cents per pound to 3·1 cents (Canadian funds). In live stock choice steers at Toronto advanced from \$5.84 per hundred pounds to \$6.16 and at Winnipeg from \$5.15 per hundred pounds to \$5.27. Veal calves at Toronto were down from \$5.29 per hundred pounds to \$5.13 while bacon hogs advanced from \$4.51 per hundred pounds to \$4.58 and at Winnipeg from \$3.67 per hundred pounds to \$3.87. Lambs at Toronto declined from \$10.53 per hundred pounds to \$8.07 and at Winnipeg from \$7.38 per hundred pounds to

\$6.48. Creamery butter prices at Montreal were down from 19·7 cents per pound to 19·1 cents and at Toronto from 20·1 cents per pound to 19·3 cents. Stocks of this commodity in storage showed a substantial increase in June over May but were still about 50 per cent lower than a year ago. Fresh eggs at Montreal advanced from 20·9 cents per dozen to 24·1 cents and at Toronto from 18·5 cents per dozen to 20·4 cents. Production was said to have fallen off during the month and storage holdings were smaller than for some years at this season. Raw cotton at New York averaged 7·2 cents per pound as compared with 7·6 cents the previous month. The price of raw wool was 1 cent per pound lower at 9 cents. In lumber Canadian white pine was \$1 per thousand board feet lower at \$38 and spruce scantlings declined from \$11.50 per thousand board feet to \$10. Galvanized steel sheets were down from \$3.65 per hundred pounds to \$3.55, while steel tank plates advanced from \$1.80 per hundred pounds to \$1.85 (Canadian funds). In non-ferrous metals copper was down from \$6.97 per hundred pounds to \$6.79, tin from 28 cents per pound to 27 cents, while silver was slightly higher at 31·5 cents per ounce.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 124=100, was 60.6 for May, a fall of 1.6 per cent for the month. Of the ten sub-groups, two only showed advances. These were meat and fish and metals and minerals (other than iron and steel and coal). All other groups were included in the general decline.

The *Statist* index number, on the base 1867-1877=100, was 80.2 at the end of May, a fall of 2.8 per cent for the month. Of the six sub-groups, only animal food advanced. All other groups were lower, including a fall of 7·8 per cent in textiles and 4·4 per cent in vegetable food.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 142 at June 1, a decline of 0·7 per cent for the month due to lower prices for food and clothing.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 85 for May, which is 1.2 per cent lower than for April. Foods were slightly higher for the month due to higher prices for vegetable and animal foods. Industrial materials were lower, showing declines in all groups.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 97.2 for May, a decline of 1.2 per cent for the month. There was a slight advance in iron, but the other fifteen groups were all lower for the month, the greatest decline being one of 7.8 per cent in hides and leather.

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) New Series. (i) Revised series. (j) Sum totals of the prices per pound of 90 articles of common consumption. (k) Estimated cost of a year's supply of commodities in wholesale markets. (l) Until end of 1926 "Gosplan". (m) Lorenz. (n) Prior to 1926, number of commodities was 236.

(Continued from page 831)

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 121.1 for May, a fall of 0.5 per cent for the month. Rent was unchanged but all other groups showed decreases.

#### Australia

**WHOLESALE PRICES.**—The Melbourne index number of the Commonwealth Bureau of Census and Statistics, on the base 1911=1000, was 1438 for March, a decrease of 0.8 per cent for the month. Declines were noted in metals and coal, jute, leather, wool, etc., agricultural produce, etc., and groceries, while there were advances in dairy produce, meat, building materials and chemicals.

#### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics, on the base 1926=100, was 64.4

for May, a fall of 1.7 per cent for the month. Of the ten groups, nine were lower for the month while the other, fuel and lighting materials, was slightly higher.

The *Annalist* index number, on the base 1913=100, was 88.6 for June, a decline of 0.2 per cent for the month. There were declines in farm products, textile products, building materials, chemicals and miscellaneous products, while food products and fuels were higher; metals were unchanged.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 77.9 for May, a decline of 1.1 per cent for the month. Comparing the index number for May, 1932, with September, 1929, it is found that food has declined 37 per cent, clothing 32 per cent, rents 20 per cent, fuel and light 8 per cent, and sundries 5 per cent in this period.

## RECENT LEGAL DECISION AFFECTING LABOUR

### Use of Inference from Evidence as to Cause of Accident

In an action by the father of one of the Canadian Pacific Railway company's employees, who was killed while engaged as a "rider" in switching operations over a "hump" in the company's yards, it was held that the jury could reasonably infer from the facts, considering the position of the body after the accident, that the fall had been caused by the negligence of the company in allowing this defective brake to be placed in commission and used on this occasion by its employees. On appeal by the company the Supreme Court of Canada, in a Memorandum dismissing the appeal, stated as follows:—

"The evidence establishes not only that the accident was possibly due to the negligence to which the plaintiff seeks to ascribe it; but the evidence, to use the words of Lord Macmillan, in *Jones v. Gt. W.R. Co.* (1930), is such that the attribution of the accident to that cause may reasonably be inferred.

"The dividing line between conjecture and inference is often a very difficult one to draw. A conjecture may be plausible, but it is of no legal value, for its essence is that it is a mere guess. An inference in the legal sense, on the other hand, is a deduction from the

evidence, and if it is a reasonable deduction it may have the validity of legal proof. The attribution of an occurrence to a cause is, I take it, always a matter of inference. The cogency of a legal inference of causation may vary in degree between practical certainty and reasonable probability. Where the coincidence of cause and effect is not a matter of actual observation there is necessarily a hiatus in the direct evidence but this may be legitimately bridged by an inference from the facts actually observed and proved. Indeed, as Lord Shaw said in *Marshall v. Owners of SS. Wild Rose*: 'The facts in every case may leave here and there a hiatus which only inference can fill.' The true doctrine in the matter is clearly stated by Lord Penzance in *Parfitt v. Lawless*: 'It is not intended to be said that he upon whom the burden of proving an issue lies is bound to prove every fact or conclusion of fact upon which the issue depends. From every fact that is proved legitimate and reasonable inferences may, of course, be drawn, and all that is fairly deducible from the evidence is as much proved for the purpose of a *prima facie* case as if it had been proved directly.'

*Murray v. Canadian Pacific Railways*, 1932, *Dominion Law Reports*, vol. 2, page 806.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of July showed a slightly downward tendency, according to the Dominion Bureau of Statistics, which tabulated returns from 7,994 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 811,972 workers, or 3,935 fewer than they employed on June 1. The index (based upon the average for the calendar year 1926 as 100) stood at 88·7, compared with 89·1 in the preceding month and 103·8 on July 1 last year. On the same date in the ten preceding years, the index was as follows: 1930, 118·9; 1929, 124·7; 1928, 117·7; 1927, 109·7; 1926, 105·0; 1925, 98·0; 1924, 97·1; 1923, 100·7; 1922, 92·2; and 1921, 88·6.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in June, 1932, as compared with that of May, but a gain in comparison with the transactions taking place during June, 1931, these computations being based on the average daily placements effected during the periods under review. Vacancies in June, 1932, numbered 29,404, applications 50,547, and placements in regular and casual employment 28,532.

At the beginning of July, 1932, the unemployment percentage reported to the Department of Labour by local trade unions was 21·9, compared with 22·1 per cent at the beginning of June, 1932, and 16·3 per cent at the beginning of July, 1931. The July percentage was based on the returns supplied to the Department of Labour by 1,791 labour organizations, covering a membership of 175,006 persons.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was practically unchanged at \$6.78 for July as compared with \$6.79 for June; \$8.11 for July, 1931; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.27 for July,

1922; \$16.84 for July, 1920; \$16.92 for June, 1920 (the peak); and \$7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was unchanged at 66·6 for July, the same figure as for June, as compared with 71·7 for July, 1931; 85·3 for July, 1930; 97·2 for July, 1929; 98·7 for July, 1922; 164·3 for May, 1920 (the peak); and 64·4 for July, 1914.

### Industrial Disputes Investigation Act

Two applications for the establishment of Boards of Conciliation and Investigation under the Act were received by the department during June. The first was in connection with a dispute in Ontario which was found to fall within provincial jurisdiction; the recent provincial Act designed to give effect to the provisions of the federal Act not having yet been proclaimed as effective, no Board could be appointed without the concurrence of both parties, and the company's consent being refused, no Board was established in this case. The second request, which was in connection with a dispute in a coal mine in Nova Scotia, was under consideration as the month closed. Particulars of the proceedings under the Act during the month will be found on page 854.

Pursuant to the Act passed by the Legislature of Ontario at its recent session (LABOUR GAZETTE, May, 1932, page 582) making the Dominion Industrial Disputes Investigation Act applicable to disputes within provincial jurisdiction, a proclamation has been ordered by the Provincial Government making this Act effective as from August 15. Similar legislation was enacted by the Province of Quebec early this year (LABOUR GAZETTE, February, 1932, page 110) and is now in effect. All the provinces with the exception of Prince Edward Island, which is mainly an agricultural province, have now adopted "enabling" legislation, so that the Industrial Disputes Investigation Act is again operative practically throughout Canada. It will be recalled that the Judicial Committee of the Privy Council, in a

judgment delivered in January, 1925 (LABOUR GAZETTE, February, 1925, page 241), pronounced the Act in its then existing form to be *ultra vires* of the Dominion Parliament in so far as it related to disputes within provincial jurisdiction. The Act was accordingly amended at the parliamentary session of 1925 (LABOUR GAZETTE, June, 1925, page 557), so as to restrict its application to disputes within federal jurisdiction, and, in addition, to "any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act."

### **Organization in industry, commerce and professions in Canada**

The Eleventh Annual Report of the Federal Department of Labour on Organization in Industry, Commerce and the Professions in Canada, being for the year 1932, has just been distributed. The volume, which contains the names of all known associations of the classes mentioned, gives some idea of the extent of organization among those identified with the industrial and commercial life of the Dominion, and also indicates the development of organization of those who are connected with professional, technical and scientific pursuits. The objects of the various associations are outlined in the report, and among other things they include dealing collectively with trade questions and the co-ordinating of other activities as well as endeavouring to secure what may be considered necessary legislation and freedom from unjust or unlawful exactions. The associations are divided into the following groups: (1) Manufacturing; (2) Building and Construction; (3) Mining; (4) Transportation and Communication; (5) Printing and Publishing; (6) Laundering, Cleaning, Repairing; (7) Personal Service and Amusement; (8) Financial; (9) Agriculture; (10) Dairying; (11) Horse, Live Stock, Sheep Breeders, etc.; (12) Wholesale Merchants; (13) Retail Merchants; (14) Real Estate Dealers; (15) Professional; (16) Technical and Scientific; (17) Insurance; (18) Funeral Service.

The first seven divisions contain the names of 239 main and 166 branch or affiliated associations, with a combined membership of 50,772, which are composed of persons or firms who are identified with industries in which the employment of work people is essential. (The number of trade unionists in the same groups, according to the Twenty-first Annual Report on Labour Organization in Canada, is 310,544). Some of the organized employers who are members of the associations whose

names are included in the report have working agreements with the corresponding organizations of workers covering the conditions of employment in their respective establishments. In the remaining eleven groups the employment of labour is in some cases only incidental, and with the exception of the retail merchants' section there is no corresponding body of organized workers. While in the main the associations whose names appear in the report are purely Canadian, a number are connected with organizations whose headquarters are in the United States. The names of all classes of associations published in the volume number 856 main bodies and 504 branch or affiliated associations, making a total of 1,360 organizations, with a combined membership of 746,322.

### **Conference on shorter working hours in the United States**

President Hoover recently complied with a request from the Governor of New Hampshire that he would meet the representatives of a conference in New England for the purpose of discussing the conclusions of that conference upon the five-day week or shorter week hours as a means of wider distribution of employment. "I welcome the opportunity to do so," the President stated. "In the meantime I have instructed the Departments of Labour and Commerce to immediately re-survey the present situation and experience of the industries now using such plans. At the White House conferences with employers and labour over two years ago the general policy of spreading available work over the largest number was adopted and has been consistently followed by a great many industries. The same action was further spread by the President's Employment Committee Conferences held last fall. We have, therefore, a large amount of actual experience. There are many different methods in different industries to spread work through shorter hours. Some of them have adopted the five-day, the four-day or three-day week; some have adopted six-hour shifts; some are staggering employment; some are using the furlough plan for salaried employees; some of them have suspended night shifts; some are using the flexible week depending on the volume of business. In fact many varieties of attaining the same end have now been developed and I welcome the opportunity to review the situation and see what further co-ordinated steps can be taken. The New England Conference has made constructive suggestions and with our accumulated experience we should be in position for a new stage for action by further conference between employers and labour representatives."

**Shorter  
working hours  
recommended  
by British  
Columbia  
Legislature**

In a resolution adopted at its recent session the Legislature of British Columbia expressed the opinion that existing unemployment conditions might be remedied "by the inauguration of a system of shorter shifts, to be brought about by the establishment of shorter periods of labour for the workers in each shift, whether by the hour-day or by the week-day, in such certain trades and industries as may be economically amenable thereto without impairment of efficiency."

It was further declared that, in order to be effectual, the adoption of such a system should be nation-wide, and the Legislature therefore resolved to petition the government of Canada, to forthwith establish a Commission to enter upon a rapid survey and consideration of all matters germane to the preamble hereof, and to report findings thereon at the earliest possible date; and that immediately upon the filing of said report a conference be convened of representatives of the Provincial Governments of Canada for the purpose of agreeing upon the legislation to be uniformly enacted with a view to bringing into legal effect the recommendations of such Commission.

The preamble to the resolution declared that "present day methods of distribution have changed entirely the system of employment for the workers, by reason of improved transportation and communication and increased use of labour-saving machinery"; that "there has been no adjustment of employment to meet such changed conditions, as a consequence whereof unemployment has now become a world-wide fixture, with no appreciable steps having been taken to restore the equilibrium between distribution and employment for the masses at a fair living wage;" that "such consequent unemployment brings upon the people suffering, despair, and panic, which in turn gives way to stagnation, bankruptcy, and crime in ever-increasing proportions"; that "it is of first importance, in order to avoid nation-wide economical catastrophies and ruin, that efficient measures be adopted at the earliest moment leading to a solution of the unemployment problem which now confronts every world country"; and that "a remedying of the present obsolete system of distributing the available work of the nations amongst a portion only of the workers would seem to be the only practical effectual method of rectifying the situation."

The resolution finally proposed "that the government of Canada be requested to consider the advisability of suggesting to the

governments of the other countries of North America that they follow the same procedure with a view to making the said system of redistribution of labour uniform throughout the North American Continent."

**A. F. of L.  
Executive and  
shorter hours**

The Executive Council of the American Federation of Labor held a special meeting in July to consider possible measures for meeting the distress existing in the United States. The remedies suggested at the conference were described by President Green of the Federation, in an article appearing in the *New York Times*, July 17. "From the first," he says, "the American Federation of Labor urged the shorter work day as the most constructive principle that could be adopted for the emergency. . . . The principle of sharing the work is not a new or untried remedy. Unions have used the measure for more than half a century to keep their members at work during dull times. Employers have introduced it as a substitute for lay-offs; they find it pays to keep their work forces intact." President Green gives the following examples of the displacement of labour by machines: "In agriculture, machinery made possible an increase of 1,185 per cent in productivity per worker between 1850 and 1924. This brought a displacement of labour of 80 per cent. The printer-telegraph substitutes typists for trained Morse telegraph operators in addition to displacing workers. The number of telegraphers and telephone operators controlling railway traffic has steadily declined since 1921, in close correlation with technical changes. Automatic devices and central and remote control of train movements have brought displacement. The decline between 1921 and 1931 for all groups in traffic control was 33 per cent. The loss of work opportunities to telephone operators through the dial system is 32.5 per cent. Mechanical music in motion-picture houses in Washington, D.C., displaced 60 per cent of the musicians in white theatres and 91 per cent in coloured. Unemployment among all musicians is now 53 per cent. One operative and a ditch-digging machine can do the work that forty-four diggers with hand shovels formerly did. This problem of displaced workers," Mr. Green continues, "is one which single companies or industries cannot solve within their own jurisdiction. It requires too wide a knowledge of economic trends and specific facts. To help meet the needs of business and these displaced persons the Federation has proposed a Federal agency accumulating information on man-hours of work by industries, workers available and potential, and the

factors that determine productivity and output. Such an agency would perform for wage earners and managements a service in some respects similar to that which the Weather Bureau performs for ships; it would report where highs and lows in employment are developing, broadcast warnings of danger and spread advice in business planning and organization of the labour market."

#### **Survey of legislation for protection of women**

The International Labour Office (Geneva) recently published in its *Studies and Reports* (Series 1—Employment of Women and Children, No. 2) a study of "Women's Work Under Labour Law—a Survey of Protective Legislation." It is pointed out that while general labour legislation applies to female as well as to male workers, there is also a special type of laws which relate only to women. The reasons for the existence of such special protective legislation lie partly in the physical nature of women which exposes them to special risks; "moreover, the social position of women is very different from that of other workers. By custom and tradition she is responsible for the management of the home; in addition to her occupational task there are a multitude of domestic tasks which she assumes; house-keeping, the care of children and the repair of clothing for members of the family. A first consequence of that is that the working woman would inevitably be overworked and would ruin her health if certain measures of social protection were not taken; in the second place her attention is to some extent distracted from the collective interests of the workers, and, in particular, she shrinks from the extra effort involved in taking an active part in the trade union movement. In addition, the fact of the woman's time being divided between her occupational work and her numerous domestic tasks, which at times make particularly heavy and urgent demands on her strength, often makes her economic activity unstable and reduces her occupational value and her ability to defend her interests as a worker."

The bulletin describes the methods used in various countries, including Canada, for regulating female labour, and enumerates the official bodies for their protection. It next deals with existing legislation on the subjects of maternity protection, the employment of women before and after childbirth; hours of work; night work, employment in dangerous, unhealthy, and heavy work, and on work involving moral dangers. An important chapter deals with the regulations of women's wages,

including the provision of minimum wages for women; and in this connection the question of "equal pay for equal work" is discussed. "When the principal (of equal pay) is laid down in legislation," it is stated, "it is generally as an ideal to be aimed at rather than as an obligation which can be enforced." Consideration is given in the final chapters to labour problems arising out of the civil and political status of women, and the representation of women on bodies dealing with labour questions.

In conclusion, the report draws attention to two problems that have become more serious owing to the depression—those of women's wages and vocational guidance. "The problem of the low wages often paid for women's work is one which must be dealt with by every possible means, legislative or other. Minimum wage legislation has already been tested, and has often proved of value, but it is not always so fully operative as might be desired. It is too easy for the wage-fixing bodies to grow careless, for their work is of necessity complex, and the rates fixed require constant adjustment. There can be no doubt that some further effort is required to make this legislation as beneficial as it ought to be; the experience already gained should at least indicate the path of future progress."

#### **A. F. of L. executive now favours unemployment insurance**

The executive council of the American Federation of Labour, on July 23, directed the President of the Federation to formulate a compulsory unemployment insurance plan for submission to the annual convention of the Federation to be held at Cincinnati in November. The new policy reverses the opinion expressed by the Vancouver convention (LABOUR GAZETTE, November, 1931, page 1208), and at previous conventions, where unemployment insurance as practised in Europe was declared to be unsuitable to conditions on this continent. According to press reports the executive council recommended that compulsory unemployment insurance should be established through federal rather than State legislation.

#### **United States Senate committee recommends unemployment reserves**

The Select Committee of the United States Senate, appointed last year to investigate unemployment insurance, made their report in June. The committee was composed of Senators Hebert (Rhode Island), Glenn (Illinois), and Wagner (New York). In the course of their inquiry the committee

investigated (a) unemployment insurance systems in use by private interests in the United States; and (b) those in use by foreign governments. The report outlines various types of American plans, including those carried on by trade unions and companies, and by joint agreement between those two parties. Reference is also made to the Wisconsin Unemployment Insurance law (LABOUR GAZETTE, March, 1932, page 323), the first law of this kind to be adopted by any State in the Union.

The committee state their main conclusions as follows:—

"Having reached the conclusion that some form of relief of unemployment and the solution of the many problems attendant upon it, is desirable if not imperative, and having become convinced that such a solution may not be had through Federal action, there remain but two avenues by which the problem can be approached. We must have recourse either to the establishment of reserves compulsorily maintained by industries, to which employees may contribute, in pursuance of State legislation, or voluntary reserves maintained by the industries themselves with the co-operation of their employees. Upon neither of these alternatives can Congress legislate effectively in our opinion. It can only recommend.

"Having in mind the attitude of some of the large employers of labour in establishing their own reserves, and that this method, after all, would perhaps prove the most satisfactory, nevertheless, we are not unmindful of the fact that relatively few employers of labour have made such provisions for their employees to guard against the inevitable in times of depression and lack of employment. The ideal solution, to our minds, would be the establishment of reserves by private industries in conjunction with their employees, each plant employer taking care of his employees, at the same time fostering and encouraging the maintenance of those systems of unemployment benefits which the workers themselves have maintained for many years. But again, the experience of the past demonstrates to our satisfaction, at least, that industry will not, at least for a long time, if ever, take upon itself without compulsion the establishment of such reserves. Therefore, we conclude that ultimately, at least, the States should formulate some program.

"It may also be advantageous to all concerned if some form of legislation can be enacted in the several States fixing a period during which industry can formulate plans for the establishment of proper reserves. What that period of waiting should be we are not prepared to say, but we rather think it should be left to the well-considered judgment of

those in charge of governmental affairs and those industries in the several States.

"If at the end of such a period of waiting, industry has not responded to the demand which is felt now, and which perhaps will continue to arrest our attention, then the only remaining solution will be the enactment by the States of compulsory unemployment insurance laws, or, at any rate, the maintenance of reserves for unemployment benefits."

In a supplementary report Senator Wagner expresses agreement with many of the committee's findings, but recommends further the enactment of federal legislation permitting employers who maintain unemployment reserves to deduct from their statement of income for tax purposes 30 per cent of the cost of such reserves.

#### **Assistance for building industry in New Zealand**

The methods followed in New Zealand for relieving unemployment have been outlined in previous issues of the LABOUR GAZETTE (December, 1931, page 1324; May, 1932, page 479). Among its other measures the government recently decided to assist construction work commenced between July 1 and December 31, 1932. Domestic materials must be used as far as possible in the connection with projects benefitting by the government subsidy. The following classes of work are to be assisted: (1) Painting, renovating, repairing, modernizing or making alterations or additions to private dwellings where the occupant is the owner or where the occupant is purchasing the dwelling; (2) painting, renovating, or maintenance repairs of dwellings other than those in Class 1; (3) the erection of dwellings for the *bona fide* owner-occupant; (4) painting or maintenance repairs of business premises or commercial buildings; (5) building, re-building, painting, or renovating public or semi-public buildings; (6) building, making alterations or additions to, and painting, renovating, or repairing dairy factories, refrigerating plants, storehouses for primary produce, or erecting any new factories that would not be directly in competition with existing factories in New Zealand.

#### **Proposed "rationalization" of British trade unions**

The Council of the General Federation of Trade Unions in Great Britain, at their annual conference held at Aberystwyth in July, adopted a resolution recommending a policy of "rationalization" among trade unions, to correspond with the movement among employers which has resulted in the formation of combines and trusts in in-

dustry. "The Council considers that multiplicity of unions in an industry is inimical to the general wellbeing of the operatives," the resolution stated; "with the modern development of capitalized production only the united strength and power of all workers through the industrial trade union can ensure any guarantee of success in preserving standards that have been secured, and in laying the foundations for building up wages, obtaining a shorter working week, and improving working conditions."

**Committee  
of Ontario  
Mining  
Association on  
Silicosis**

The Ontario Mining Association, at their annual meeting which was held at Lake Timagami in July, appointed a special committee to consider the serious problem of silicosis,

an affection of the lungs caused among certain classes of mine workers by the inhalation of stone dust (a paper on this subject by Dr. J. G. Cunningham, Director of the Division of Industrial Hygiene of the Ontario Department of Health, appeared in the *LABOUR GAZETTE*, January, 1931, page 39). The association appointed a committee of three from each of the three leading mining camps in Ontario—Sudbury, Porcupine and Kirkland Lake, as well as two to represent the other mining areas, to formulate some plan to combat the disease. One likely result of the committee's investigation is thought to be a more strict medical examination of miners for tuberculosis.

During the month of July a total of 2,863 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act; thirteen of these were fatal cases; in Schedule 2 industries 206 were reported, including 5 fatal cases. In addition, 244 accidents to employees of the Crown were reported, one of which was fatal. In all, 3,313 accidents, of which 19 were fatal, were reported to the Board during the month.

The Hon. C. J. Arcand, Minister of Labour of the Province of Quebec, recently announced that a new system had been instituted in the employment offices at Montreal and Quebec for meeting the requirements of householders in regard to domestic help. A card index of available domestics is being maintained, specifying their qualifications as nurses, cooks, etc., with information as to their physical condition. Mr. Arcand believes that the new plan will benefit both the employers and the workers.

The Minimum Wage Board of Alberta has amended the six orders already issued by the addition of the following paragraph to each order:

"This order shall apply to cities, towns and villages having a population of six hundred and over, and to Banff, Lake Louise, Waterton Park and Jasper."

A new method for supplying winter clothing for the unemployed has been evolved in Victoria, Australia. The Government made £10,000 available for the purchase of materials to be manufactured into clothes for men, women and children by destitute girls at suburban centres. Thus the £10,000 worth of materials is made into £30,000 worth of warm clothes for the unemployed.

The Province of Quebec is stated to be considering the appointment of a corps of safety inspectors, who would visit the industries of the province in the interest of accident prevention. This plan was suggested by the Province of Quebec Safety League and the provincial branch of the Canadian Manufacturers' Association. Such an organization would, it is estimated, cost \$35,000 a year, and it is proposed that the expense would be borne by the Workmen's Compensation Board out of the revenue obtained by means of assessments levied on employers. The Hon. Premier Taschereau promised that the plan would be submitted to the Workmen's Compensation Board.

Vacancies on the New Brunswick Workmen's Compensation Board have been filled by the appointment to the Board of E. R. Steeves, of Moncton, and Alexandre J. Doucet, ex-M.P., of Notre Dame, Kent county. Mr. Steeves, president of the New Brunswick Federation of Labour, takes the place of the late James L. Sugrue, as official Labour representative on the board. Mr. Sugrue died in 1930. Mr. Doucet fills the vacancy caused by the resignation of Frank C. Robinson, due to ill-health. Mr. Steeves was an employee of the Canadian National Railways at Moncton for many years. He served as labour member on the Moncton City Council for two years and for ten years was a member of the Moncton School Board. He is a member of the International Association of Machinists and was for three years president. Mr. Doucet has been an active member of the Farmers and Dairymen's Association, being president in 1930, and corresponding secretary since 1918.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of July was reported by Superintendents of the Employment Service of Canada to be as follows:—

Farmers in the Province of Nova Scotia were busy with haying and a few extra hands had found employment. Good catches of fish were taken but prices were low. Lumber operations remained quiet. Coal mines in the New Glasgow district worked from two to five days per week, while the majority of those in Cape Breton and vicinity operated only two or three days per week. Salt mines reported business as good. Bakeries, mineral water and food manufacturers stated conditions showed improvement with the advance of summer. Conditions in the foundries and machine shops at New Glasgow were fair, but idleness still prevailed in some departments of the iron and steel industry at Sydney. Building activity was somewhat slow, with few large schemes in view, however, numerous minor repair jobs and small dwellings being erected, provided work for a number of mechanics and general labourers, while street and sewer work also afforded employment for additional men. Bus and railroad transportation was moderately active, with tourist steamships arriving at and departing from Halifax with good passenger lists. Trade was still slow, though retail lines showed some improvement. There was a nominal demand for domestics and charworkers.

Splendid crop conditions prevailed throughout the Province of New Brunswick and farmers were busily employed haying. Large catches of fish were reported and carloads of live lobsters were shipped to Upper Canada and the United States markets. Logging was quiet, except for the loading of pulpwood. The sawing of long timber was brisk on the Upper Miramichi River, but elsewhere sawmills were closing down, owing to adverse market conditions. Manufacturers of confectionery and foodstuffs reported business as fair. Both civic and provincial road work was active, though building construction, except at Moncton and St. John, was quiet. Passenger traffic, owing to excursion rates, was heavy. Several steamers were in port unloading, thus providing employment for a number of longshore workers. Trade was somewhat improved. There was the usual demand for women domestic workers, with plenty applicants available, both for casual and regular domestic service.

There was little call for farm help in the Province of Quebec, nor was there any demand for men in the logging industry nor in mining. Quietness prevailed in the factories in Hull. In Montreal, boots and shoes, metallurgy, tobacco and cigar and rubber showed little activity, but clothing manufacturers were fairly busy. Factories in Quebec City were operating on a small scale and in Three Rivers, industrial establishments in general, were working at only fifty per cent of their capacity, while papermills were below that mark. Building construction was very quiet, with highway construction and maintenance offering about the only means of employment in several centres. The commercial situation in Montreal was satisfactory, due to the tourist season, but in other districts not so affected, it was less favourable. Calls for domestic help still were in evidence and an increasing number of applicants was also at hand to fill all positions.

The majority of offices throughout Ontario reported considerable activity in connection with the placement of farm hands. Wages continued low, however, and the supply of experienced men was far in excess of the reported demand. Fruit pickers were also requested for small fruits. At this season, canning factories began to increase their working forces and many enquiries were being received for this type of employment. Other manufacturing industries showed no marked change, though in some cases former employees were being reinstated. Several factories had closed down for the time being, but expected to open again later on and in spite of seemingly poor conditions, a spirit of optimism prevailed in many parts of the province. The eagerness with which men were seeking employment was shown by the flood of enquiries following the announcement of the proposed St. Lawrence seaway construction project. Of course, no work would be available in this line for some time to come. Building construction was very quiet, with many men at hand suitable for such labour. Highway construction afforded employment for some workers in various sections. Logging and mining also were both exceptionally quiet. With many employers out of town, orders for casual work in the women's domestic section were at a minimum and fewer placements in regular work were likewise made.

Ideal weather for crop ripening prevailed throughout Manitoba and resulted in a decided demand for farm help. Wheat cutting had commenced in the southern areas and was expected to be general in a few days' time.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA  
(Official Statistics except where noted)

	1932			1931		
	July	June	May	July	June	May
Trade, external aggregate..... \$		82,444,180	85,763,611	99,049,813	107,828,379	134,302,391

(1) Calculated from yields of Ontario bonds.

(6) Excluding lines east of Quebec.

(2) For group figures, see articles elsewhere in this issue.

(7) Including lines east of Quebec.

(3) Bradstreet.

(8) MacLean's Building Review.

(4) Figures for end of previous month.

(5) Figures for four weeks ending July 30, 1932, and corresponding previous periods.

(9) Sugar production given in periods of four weeks ending July 16, June 18 and May 21, 1932; July 18, June 20, and May 23, 1931.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

Conditions for a large wheat crop appeared favourable, but depreciation in barley and oat indications was attributable to grasshopper damage. Logging and mining were inactive and manufacturing only fair. Building permits in Winnipeg were much below those of the corresponding period of 1931, but those taken out each week showed that small building jobs, such as dwellings, garages and repair work, had continued steady. Sewer work at Brandon afforded employment for a number of workers, otherwise, there was no demand at that centre. Trade was quiet. The work for women domestics remained unchanged, although experienced farm domestics were difficult to obtain, as the applicants preferred to remain in the cities.

A very satisfactory increase in the demand for farm help was reported by the offices in the Province of Saskatchewan, with plenty of men on hand to meet the demand. Cutting of grain had started in some sections, but would not be in full swing until the middle of August. Employment on sewer and other relief undertakings formed the only construction work available. In the women's domestic section, an increase was registered in the call for farm domestic help, with a shortage of applicants, although there was a large number of women looking daily for casual work in the cities.

Cutting of hay was in progress in the Province of Alberta, but the demand for harvest help was not expected to be active before the middle of August. Logging and mining were inactive. Manufacturing industries were quiet, with no prospect of increased operations. Little building construction was in evidence, but in some cities relief schemes of various kinds provided work for part of the unemployed. Trade was slow. Placements in the women's domestic section showed little change. A few enquiries had been made regarding harvest cooks, but the wages offered were very low.

There was little call for farm hands in the Province of British Columbia and plenty of help available for work in the fruit growing districts and canneries. No improvement was recorded in the logging industry, a few cordwood cutters and a rigging crew for a small camp at Howe Sound being about the extent of the demand for workers in this line. Coal mines at Nanaimo worked two days a week. Development work was carried out on several properties in the Prince Rupert district, but there were no requests for miners elsewhere, and, except for nine mine workers sent out from Vancouver, quietness prevailed. Manufacturing also was slack, although quite a few transients had secured work at various sawmills. Building construction showed little

activity. Relief work still continued and provided employment for some of the men out of work. Railway construction was nil. Very little water-front work was available. Trade remained unchanged, and a surplus of applicants was registered for all positions in the women's domestic section.

#### EMPLOYERS' REPORTS.

There was a slight decrease in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 7,994 firms employing 811,972 workers, or 3,935 fewer than on June 1. This reduction brought the index number (based upon the average in the calendar year 1926 as 100) to 88.7, as compared with 89.1 in the preceding month, and 103.8 on July 1 last year. On the same date in the ten preceding years the index was as follows: 1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6.

The trend was unfavourable in Quebec and Ontario; in the Prairie Provinces, improvement was indicated, while the general situation in the Maritime Provinces and British Columbia was unchanged. In the Maritime Provinces, construction recorded the greatest improvement, there being large increases in highway construction, and there were also gains in lumber mills, iron and steel plants and services; on the other hand, manufacturing as a whole was slacker, and mining and transportation showed seasonally reduced activity. In Quebec, shipping, railway construction and services reported additions to staffs, but building and highway construction and manufacturing registered declines. In Ontario, gains were shown in construction, transportation and mining, but manufacturing was seasonally quiet, and there were losses in communications, services and trade. In the Prairie Provinces, the most noteworthy advances were in construction, while manufacturing, services and transportation also showed improvement; on the other hand, mining and logging recorded seasonally reduced activity. In British Columbia, manufacturing, particularly of food products, was seasonally busier, but logging and highway construction reported declines.

In Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, reductions in employment were registered, while improvement was indicated in Winnipeg. In Montreal, employment showed a decline, there being losses in manufacturing and construction; on the other hand, shipping reported heightened activity.

In Quebec City, manufacturing and construction were slack, while services registered advances. In Toronto, there were seasonal losses in manufacturing, mainly in textiles and iron and steel, while construction, trade, services and communications also showed curtailment. In Ottawa, there were comparatively small reductions in manufacturing, transportation and trade. In Hamilton, manufacturing reported considerable improvement, but construction released employees. In Windsor and the adjacent Border Cities, curtailment was noted, mainly in automobile plants. In Winnipeg, manufacturing, construction and trade registered moderate advances, while other industries fluctuated only slightly. In Vancouver, there were losses in shipping and construction; the other groups showed minor changes.

In the manufacturing division, seasonal curtailment was shown in textile and iron and steel plants, and the leather, pulp and paper, chemical and clay, glass and stone groups also recorded contractions in employment. On the other hand, food canning, lumber and mineral product factories recorded heightened activity. Although the general trend in this division was downward, the reductions were on a smaller scale than those noted on July 1, 1931. In the non-manufacturing industries, there were declines in logging, mining, communications and trade, while transportation, services and construction recorded expansion.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1932.

#### TRADE UNION REPORTS.

The local trade union situation at the close of June, 1932, was based on the returns received by the Department of Labour from a total of 1,791 labour organizations, including a membership of 175,006 persons. Of these 38,372, or a percentage of 21.9, were reported idle in comparison with 22.1 per cent of inactivity in May. Alberta unions indicated a somewhat smaller unemployment percentage than in May, the coal mines of the province being chiefly responsible for the change, though conditions in the mines were still quiet and much short time work was in evidence. The employment expansion reported from Manitoba was closely related in volume to that of Alberta, but was of a rather general character throughout the various trades. A slightly higher level of activity than in May was shown by New Brunswick unions, and in Ontario the improvement was nominal only. Curtailment of employment almost sufficient to offset these gains were reported from British Columbia, Nova

Scotia, Quebec and Saskatchewan. In no province, however, were the changes particularly marked. All provinces participated in the downward employment movement from June last year, when 16.3 per cent of idleness was registered in the country as a whole, conditions in New Brunswick, Quebec, Ontario and British Columbia being especially quiet.

On another page of this issue will be found a more detailed article with tabular statements on unemployment at the close of June, 1932.

#### EMPLOYMENT OFFICE REPORTS.

Reports from the offices of the Employment Service of Canada for the month of June, 1932, showed 30,357 references of persons to vacancies and a total of 28,532 placements. Of these, the placements in regular employment totalled 12,777, of which 9,017 were of men and 3,760 of women, while placements in casual work were 15,755. Positions offered to the Service numbered 29,404, of which 22,237 were for men and 7,167 for women. Applications for employment were registered from 38,780 men and 11,767 women, a total of 50,547. A decrease was shown in the volume of business transacted when the above figures were compared with those of the preceding month, but a slight gain was manifest over June last year, the reports for May, 1932, showing 32,209 vacancies offered, 54,745 applications made, and 31,039 placements effected, while in June, 1931, there were recorded 27,183 vacancies, 56,113 applications for work, and 25,973 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1932, and for the quarterly period April to June will be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada, during June, 1932, was \$4,386,349, as compared with \$5,289,506 in the preceding month and with \$8,593,958 in June, 1931.

The *MacLean Building Review* states that construction contracts awarded during July throughout Canada had an estimated value of \$12,540,100. The seasonal tendency in former years has been for the July total to decrease from June. The past month showed a slight increase.

Over half of the July contracts are shown as having been awarded in Ontario, where 54.2 per cent of the Dominion contracts, valued at \$6,792,600, were awarded. Quebec had 27.4

per cent, or \$3,443,700. The Prairie Provinces shared to the extent of \$1,023,400 worth, or 8.2 per cent, while British Columbia had 5.2 per cent, valued at \$650,700, and the Maritimes, 5 per cent or \$629,700.

Contracts in the engineering group for July, amounted to \$4,806,300, which was 38.3 per cent of all contracts. \$4,528,500 is shown for Business Building, the percentage being 36.1 per cent. Residential had 21.4 per cent or \$2,674,900 and Industrial, 4.2 per cent or \$530,400.

### Production and Trade

**INDUSTRIAL PRODUCTION.** Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 848.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that despite a number of constructive factors bearing on economic conditions in Canada, business operations reached a lower point in June. A majority of the statistical series regarded as contributing to the economic trend, after adjustment for seasonal tendencies, were lower in June than in the preceding month. A marked decline was shown in the operations of the primary iron and steel industry, the output of pig iron being limited to 8,163 tons compared with 13,339 tons in May. The production of steel ingots and direct steel castings declined to 18,118 tons from 29,239 tons in the preceding month. During June one furnace at Sault Ste. Marie was blown out and one furnace at Hamilton was banked, with the result that there were no iron furnaces in blast in Canada on June 30, 1932. A better showing was made by the automobile industry, the output in June being 7,112 units compared with 8,221 in May. After adjustment for seasonal tendencies, a gain of 6 per cent would be indicated. The tire industry made greater preparations for operations by the import of 6,349,000 pounds of crude rubber compared with 3,171,000 in May. The gain in the imports of crude petroleum was less than normal for the season, receipts being 113,948,000 gallons compared with 109,518,000 gallons in the preceding month. Exports of boards and planks at 110,685,000 feet were considerably greater than in May, shipments to the United States being hastened for the purpose of avoiding the new tariff going into effect on June 21. Production of newsprint was reduced to 161,368 tons compared with 175,887 in May. As shipments in the month under review were greater than production, mill stocks declined.

Making adjustment for seasonal tendencies, the meat packing industry was more active than in May. Inspected slaughterings of cattle, sheep and hogs showed gains, markets for live stock exhibiting mixed price movements. The production of flour and sugar showed gains in the last period for which statistics are available. The index of manufacturing production based on 16 factors adjusted for seasonal tendencies was 125.1 in June compared with 144.2 in the preceding month.

The expansion in gold production was the feature of the mining industry. Shipments from Canadian mines reached a new high point in June. Receipts at the Mint from Canadian mines were 273,351 ounces compared with 241,535 in May, and 260,353 in April, when all preceding records were broken. The total receipts of gold at the Mint, exclusive of jewellery, were valued at \$5,650,668. The receipts from Ontario were valued at \$4,650,823, of which \$2,200,659 was the value of shipments from the Kirkland Lake district compared with \$2,142,299 from the Porcupine. Receipts from Quebec, British Columbia, and Manitoba were valued at \$867,746, \$100,514 and \$31,171 respectively. Exports of copper were 6,896,200 pounds compared with 6,884,200 in May, the gain after seasonal adjustment being 19.5 per cent. Exports of nickel, zinc and asbestos showed decline. The output of coal was 749,453 tons compared with 672,441 in May. The index of mineral production was 128.6 in June compared with 141.5 in the preceding month; the gain in gold, copper and coal being counter-balanced by declines in other metals and minerals.

Bank debits in the clearing house centres were \$2,203,000,000 compared with \$2,175,000,000, the gain after adjustment for seasonal tendencies and for changes in the general price level being 10 per cent.

**Coal.**—Coal production in Canada during June reached a total of 749,453 tons, a decline of 39.6 per cent from the 1927-1931 average for the month of 1,239,871 tons. The output of bituminous coal in June amounted to 663,491 tons, of sub-bituminous coal, 20,870 tons and of lignite coal, 65,092 tons. Nova Scotia mines produced 361,199 tons as compared with 431,725 tons in June, 1931. Output from Alberta mines declined to 228,897 tons from the total of 236,010 tons produced in the corresponding month of 1931. British Columbia's production in June was 129,776 tons as against 194,633 tons a year ago. Mines in New Brunswick produced 14,687 tons and in Saskatchewan, 14,673 tons as com-

pared with the June 1931 output of 10,920 tons and 17,892 tons, respectively. Canada's imports of coal continue at a lower level than in preceding years. In June, 958,742 tons were imported, a 45.5 per cent falling-off from the five-year average for the month of 1,760,387 tons. Anthracite coal imports totalled 253,166 tons, made up of 146,657 tons from Great Britain, 100,816 tons from the United States and 5,693 tons from Germany. Receipts of bituminous coal consisted of 671,034 tons from the United States and 34,391 tons from Great Britain. Importations of lignite coal in June amounted to 151 tons. Canadian coal exports declined 78.3 per cent to 13,771 tons as compared with the June, 1927-1931 average of 63,356 tons. The June exports included 8,954 tons from Nova Scotia and New Brunswick and 4,817 tons cleared through Manitoba, Alberta and British Columbia ports. Coal made available for consumption in Canada in June was 1,694,424 tons or 42.3 per cent below the average for the month during the past five years of 2,936,902 tons. During the month under review 253,166 tons of anthracite coal, 1,355,188 tons of bituminous coal, 20,870 tons of sub-bituminous coal and 65,200 tons of lignite coal were made available for use in Canada. This supply was drawn from the following sources: the United States, 45.6 per cent; Canadian mines, 43.4 per cent; Great Britain, 10.7 per cent; and Germany, 0.3 per cent.

#### EXTERNAL TRADE.

A summary of Canadian trade in June, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$40,743,105, as compared with \$44,361,312 in the preceding month and with \$52,508,534 in June, 1931. The chief imports in June, 1932, were: Non-metallic minerals and products, \$9,229,452; Iron and its products, \$6,709,980; Agricultural and vegetable products, mainly foods, \$5,974,190.

The merchandise exported from Canada during June, 1932, amounted to \$40,945,490 as compared with \$40,594,404 in the preceding month and with \$54,348,421 in June, 1931. The chief exports in June, 1932, were: Agricultural and vegetable products, mainly foods, \$14,047,045; Wood, wood products and paper, \$12,696,346; Animals and animal products, \$4,262,440.

#### Strikes and Lockouts

The time loss due to industrial disputes during July showed a substantial increase over that recorded for the previous month, a corresponding increase having appeared in the

number of disputes recorded and the number of workers involved, important disputes commencing during the month in clothing factories in Montreal, fur shops in Toronto, in coal mines in Nova Scotia and among fishermen at Rivers Inlet, B.C. In comparison with the figures for July, 1931, almost three times as many disputes occurred, the number of workers involved and the time loss incurred showing an even greater increase. There were in existence during the month twenty-six disputes, involving 6,121 workers, and resulting in a time loss of 50,397 working days, as compared with seventeen disputes, involving 3,011 workers and resulting in a time loss of 38,147 working days in June, 1932. In July, 1931, there were on record nine disputes, involving 836 workers and resulting in a time loss of 5,627 working days. At the end of the month there were on record eleven disputes involving approximately 1,800 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was practically unchanged at \$6.78 for July as compared with \$6.79 for June; \$8.11 for July, 1931; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.27 for July, 1922; \$16.84 for July, 1920; \$16.92 for June, 1920 (the peak); and \$7.42 for July, 1914. The prices of milk, butter, cheese and coffee were lower, while the prices of beef, eggs and potatoes were higher. Including the cost of fuel and rent with that of foods the total budget was \$16.21 at the beginning of July as compared with \$16.20 for June; \$18.28 for July, 1931; \$21.26 for July, 1930; \$21.26 for July, 1929; \$20.67 for July, 1922; \$26.92 for July, 1920 (the peak); and \$14.17 for July, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was unchanged at 66.6 for July, the same figure as for June, as compared with 71.7 for July, 1931; 85.3 for July, 1930; 97.2 for July, 1929; 98.7 for July, 1922; 164.3 for May, 1920 (the peak); and 64.4 for July, 1914. In the classification according to chief component materials five of the eight main groups were lower and three were higher. The Vegetables and Vegetable Products group and the Animals and their Products group advanced, the former due to higher prices for bran, shorts, coffee and potatoes, which more than offset lower prices for barley, corn, flax, rye, flour,

oatmeal and rolled oats, and the latter because of higher prices for hides, cured meats, butter, eggs, calves and hogs, which more than offset declines in the prices of fish, furs, leather, steers and lambs. The Chemicals and Allied Products group was also higher. The groups which declined were: the Fibres, Textiles and Textile Products group, because of reduced prices for raw silk, cotton yarn, grey and bleached cotton; the Wood, Wood Products and Paper group, due mainly to reductions in

the prices of certain lines of lumber and for pulp; the Iron and its Products group, due to lower prices for steel sheets, steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, due to lower quotations for lead, silver and zinc, which more than offset higher prices for copper and tin; and the Non-Metallic Minerals and their Products group, owing mainly to lower prices for hollow building blocks and granite.

### Health Insurance and Pensions in Great Britain

An Act amending the National Health Insurance and Contributory Pensions Act of Great Britain received the Royal Assent in July. Its effects on this legislation are outlined in the *Ministry of Labour Gazette* as follows: The main object of the amending Act, it is stated, is to make certain changes in the National Health Insurance Scheme, which the Report of the Government Actuary on the Third Valuation of the Assets and Liabilities of Approved Societies has shown to be necessary.

*Women's Sickness and Disablement Benefits.*—The rate of sickness benefit for unmarried women is to remain unchanged at 12s. a week, but the rate of disablement benefit for such women is to be reduced from 7s. 6d. to 6s. a week. In the case of married women the rate of sickness benefit is to be reduced from 12s. to 10s. a week, and the rate of disablement benefit from 7s. 6d. to 5s. a week. The new rates of benefit will come into force as from January 1, 1933.

*Loss of Contribution Income.*—Since July, 1928, under regulations made under the National Health Insurance Act, 1928, all arrears of contributions due to genuine unemployment have been excused, without any loss of benefit to the insured person. This has thrown an excessive burden on the Approved Societies, and under the new Act it is provided that regulations shall provide that in future these arrears shall only be excused to the extent of one-half. Full benefits will be paid for fifty contributions a year; credit will be given for half the weeks of unemployment, and any shortage of contributions, after giving that credit and allowing for weeks excused on account of sickness, will involve a reduction in the rate of benefit for the ensuing year, beginning with the year 1934.

*Continuance of Insurance during Unemployment.*—Under section 3 of the National Health Insurance Act, 1924, as amended by

the Act of 1928, an unemployed insured person was given a period of free insurance (for health and pensions purposes) of between eighteen months and two years, with a possible further extension, in certain circumstances, at reduced rates of benefit. Two further periods of extension of free insurance, of a year each, were given by the Prolongation of Insurance Acts, 1930 and 1931, the rights under the latter Act expiring on December 31, 1932.

The new Act extends until December 31, 1933, the insurance of persons who would otherwise cease to be insured by reason of prolonged unemployment. The pension rights of such persons will be fully protected, and, on the health insurance side, they will be entitled to medical benefit. It is also provided that any persons who are thus kept in insurance until December 31, 1933, and who are still unemployed up to that date, shall remain insured during the year 1934 for pensions purposes, but with no title to any health insurance benefits; similarly, if unemployment continues throughout 1934, insurance for pensions only will be continued until December 31, 1935.

The *Monthly Labour Review* (Washington) in an article in the July issue, states that group insurance has had a tremendous growth in the United States since it was first instituted in 1911. The insurance in force at present amounts to approximately \$10,000,000,000. Even during the present depression every form of group insurance has maintained and increased its premium income. During the past five years there has been a trend away from the provision of straight-life insurance policies and the present tendency is to provide coverages for group accident and health, accidental death and dismemberment, and annuities. There is also a tendency toward the adoption of plans in which the employees contribute toward the insurance.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JULY, 1932

**D**URING the month of July two applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour as follows:—

(1) From certain employees of the London Street Railway Company, being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and other miscellaneous employees, members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America. Notice by the company on June 29 of a reduction of 3 cents per hour in the scale of wages for all employees as from July 1, 1932, was the cause of the dispute, the employees contending that the company had violated the existing agreement in not giving sixty days' notice in writing of the desired change. The number of employees directly affected by the dispute was stated to be 191. It was explained to the parties affected that the statute enacted by the Legislature of the

Province of Ontario in March of this year, and which was designed to give effect to the provisions of the Industrial Disputes Investigation Act within the province, comes into force only on proclamation of the Lieutenant-Governor, and, this proclamation not having at that time been issued, a Board could be established to deal with the present dispute, which falls directly within provincial jurisdiction, only by concurrence of both parties concerned. The company's consent being refused, no action was taken during July looking to the establishment of a Board.

(2) From certain employees of the Intercolonial Coal Company, Limited, at Westville, N.S., being members of Local No. 50, Mine Workers' Union of Canada. The application stated that 450 employees were directly affected by the dispute, which had arisen in connection with the desire of the men to negotiate a new working agreement. The matter of the application was being taken up with the employing company when the month closed.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1932

**T**HE following table shows the number of disputes, workers involved and time loss for July, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1932....	26	6,121	50,397
*June, 1932....	17	3,011	38,147
July, 1931....	9	836	5,627

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. In-

formation as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

A substantial increase appears in the number of disputes, the number of workers involved and in the time loss for July as compared with June, and also as compared with July last year. The important disputes commencing during the month were in clothing factories in Montreal, fur shops in Toronto, coal mines in Nova Scotia and among fishermen at Rivers' Inlet, B.C., in addition to strikes of coal miners in Alberta, fishermen at Port Essington, B.C., and pulpwood cutters in the Nipigon District of Ontario, carried over from June.

Eleven disputes, involving approximately 2,824 workers were carried over from June, and fifteen disputes commenced during July. Of the twenty-six disputes in progress during the month fifteen were recorded as terminated, five resulting in favour of the workers concerned, four in favour of the employers involved, five resulting in compromises, and the result of one being recorded as indefinite. At the end of July, therefore, there were eleven disputes recorded as strikes or lockouts in progress, namely: coal miners, Blairmore, Alta., coal miners, Bellevue, Alta.; lithograph-

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1932

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to July, 1932			
LOGGING— Loggers, Nipigon District, Ont..	225	2,000	Commenced June 10, 1932; for increase in wages, reduction in board and improved working conditions; lapsed by July 31, 1932; in favour of employer.
FISHING AND TRAPPING— Salmon fishermen, Port Essington District, B.C.....	1,800	10,000	Commenced June 20, 1932; for increase in rate per fish over that offered by canners; terminated July 10, 1932; compromise.
MINING, NON-FERROUS SMELTING, AND QUARRYING Coal miners, Blairmore, Alta....	300	7,500	Commenced Feb. 23, 1932; against dismissal of worker; untermiated.
Coal miners, Bellevue, Alta.....	330	8,250	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore, Feb. 23, 1932. Untermiated.
MANUFACTURING— <i>Textile Clothing, etc.</i> — Men's clothing factory workers (cutters, etc.), Montreal, P.Q.	50	100	Commenced May 2, 1932; against reduction in piece rates; terminated July 4, 1932; indefinite.
Women's clothing factory workers (dressmakers), Toronto, Ont.....	12	200	Commenced June 3, 1932; against dismissal of worker; lapsed by July 31, 1932; in favour of employer.
Women's clothing factory workers (cloaks and suits), Toronto, Ont.....	17	221	Alleged lockout; commenced June 7, 1932; <i>re</i> reduction in staff; terminated July 16, 1932; compromise.
Other Wood Products— Box factory workers, Winnipeg, Man.....	37	700	Commenced June 21, 1932; alleged discrimination in re-employment of workers after previous strike; terminated July 25, 1932; compromise.
Printing and Publishing— Lithographers, Toronto, Ont..	7	175	Commenced April 15, 1932; against reduction in wages; untermiated.
CONSTRUCTION— <i>Buildings and Structures</i> — Plumbers, Saskatoon, Sask....	43	172	Commenced June 1, 1932; against reduction in wages and for shorter hours; terminated July 7, 1932; compromise.
SERVICE— <i>Recreational</i> — Motion picture projectionists, Winnipeg, Man.....	3	50	Alleged lockout; commenced Feb. 27, 1932; <i>re</i> union working conditions; employment conditions no longer affected by end of July; in favour of employer.
(b) Strikes and Lockouts Commencing during July, 1932			
FISHING AND TRAPPING— Salmon fishermen, Rivers Inlet, etc., B.C.....	1,400	8,000	Commenced July 10, 1932; for increase in rate for fish over that offered by canners; terminated July 17, 1932; compromise.
MINING, NON-FERROUS SMELTING, AND QUARRYING— Coal miners, Little Bras d'Or, N.S.....	200	4,800	Commenced July 4, 1932; against discharge of check weighman; untermiated.
Coal miners, River Hebert, N.S.	175	875	Commenced July 14, 1932; for equal division of work; terminated July 20, 1932; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1932—*Concluded*

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during July, 1932—<i>Concluded</i></b>			
<b>MANUFACTURING—</b>			
<i>Fur, leather, etc.—</i>			
Fur factory workers, Toronto, Ont.....	24	576	Commenced July 4, 1932; against reduction in wages, and sending work to outside shops; un-terminated.
Fur factory workers, Toronto, Ont.....	39	650	Commenced July 12, 1932; for removal of foreman; un-terminated.
Fur factory workers, Toronto, Ont.....	800	1,600	Commenced July 29, 1932; for union wages and working conditions; un-terminated.
<i>Textiles, clothing, etc.—</i>			
Boys' clothing factory workers, Montreal, P.Q.....	138	1,242	Commenced July 11, 1932; for recognition of union; terminated July 21, 1932; in favour of workers.
Women's clothing factory workers, (cutters), Montreal P.Q.....	10	140	Commenced July 15, 1932; for recognition of union; un-terminated.
Men's clothing factory workers, Montreal, P.Q.....	285	1,710	Commenced July 20, 1932; for recognition of union; terminated July 27, 1932; in favour of workers.
Men's clothing factory workers, Montreal, P.Q.....	40	40	Commenced July 26, 1932; for recognition of union; terminated July 27, 1932; in favour of workers.
Men's clothing factory workers, Montreal, P.Q.....	75	225	Commenced July 28, 1932; for recognition of union; un-terminated.
<i>Other wood Products—</i>			
Shingle weavers, Vancouver, B.C.....	50	250	Commenced July 6, 1932; against reduction in wage rates; terminated July 11, 1932; in favour of workers.
Shingle mill workers, New Westminster, B.C.....	40	760	Commenced July 12, 1932; for increase in wage rates; un-terminated.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Carpenters, Niagara Falls, Ont.....	14	140	Commenced July 19, 1932; alleged violation of agreement <i>re</i> wage rates; un-terminated.
<b>SERVICE—</b>			
<i>Business, etc.—</i>			
Waitresses, Toronto, Ont.....	7	21	Commenced July 16, 1932; against reduction in wages; terminated July 19, 1932; in favour of employer.

ers, Toronto, Ont.; coal miners, Bras d'Or, N.S., three disputes of fur factory workers, Toronto, Ont., women's clothing factory workers, Montreal, P.Q., men's clothing factory workers, Montreal, P.Q., shingle mill workers, New Westminster, B.C., and carpenters, Niagara Falls, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., February

23, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto, London, Ont., Montreal, Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; cooks and waiters, Edmonton, Alta., September 29, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer, and motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer, this last being added this month. The dispute involving compositors employed by one firm in Saskatoon, Sask., commencing December 14, 1931, and carried in this list since May, is recorded as having lapsed during July and has consequently been removed from the list.

A dispute involving fur workers in one shop in Toronto about July 18 has been reported in the press. The Department has secured information that this was a brief dispute as to working conditions and was settled immediately, without time loss.

A dispute involving bricklayers on one building in London, Ont., about July 13, has been reported in the press. The Department has secured information that no cessation of work occurred, the press statement arising out of a proposal by outside parties to do the work at a lower rate, this being refused.

A strike of forty-eight men loading pulp logs in the Pigeon River District, Ont., on July 19, demanding an increase in wages from 30 cents per hour to 35 cents, has been reported in the press, but particulars have not yet been received.

A strike of six hundred pulpwood cutters in the Nipigon District of Ontario occurred on June 29, 1932, the workers demanding an increase in wages from \$2.50 per cord to \$2.75 with certain improvements in camp conditions. Their demands being conceded, work was resumed on July 1. This information was received too late to be included in the July issue of the LABOUR GAZETTE.

A cessation of work in a shingle mill at Marpole, B.C., has been reported. It appears that the establishment was being operated on a co-operative basis, and the returns for the quarter ending June being unsatisfactory, the workers terminated the arrangement.

A cessation of work for one night shift in one mine at Sydney Mines, N.S., on July 25 has been reported, but particulars have not yet been received.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**LOGGERS, NIPIGON DISTRICT, ONT.**—The strike involving loggers in a number of camps, commencing June 10, 1932, is reported to have lapsed by the end of July, the strikers having been replaced. The Lumber and Agricultural Workers' Industrial Union picketed the camps and railway stations in the district.

**SALMON FISHERMEN, PORT ESSINGTON, B.C.**—A settlement of this dispute, involving some 1,800 salmon fishermen on the Skeena and Naas rivers since June 20, 1932, was reached on July 10. The men had refused to accept the rate of 27½ cents per fish for sockeye

offered by the canners, demanding a rate of 40 cents per fish. The rate last season was 30 cents. Negotiations were carried on between the canners' association and the United Fishermen of British Columbia, resulting in a rate of 30 cents per fish being accepted by some of the fishermen, with a reduction of twenty per cent in the price of nets. Others, however, commenced work on July 11 at the 27½-cent rate originally offered by the canners, being granted greater concessions as to gear, gasoline, etc., than those accepting the 30-cent rate.

**COAL MINERS, BLAIRMORE AND BELLEVUE, ALTA.**—These disputes, together involving upwards of six hundred miners since February, 1932, were untermated at the end of July, a deadlock apparently having been reached owing to the refusal of the miners to agree to the indefinite layoff of certain men who had been active in connection with the calling of the strike contrary to the agreement then in effect. During July, fifteen persons were arrested, including two women, in connection with an alleged assault on four miners. On July 18 a delegation representing the striking miners interviewed the Premier of Alberta regarding the destitute condition of the miners' families. The Premier agreed to take the matter up with the members of the government.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.**—On June 3, 1932, employees in one establishment ceased work owing to the dismissal of one worker. At the end of July, the shop being operated with a full staff and the pickets having been withdrawn, the dispute is recorded as terminated.

**MEN'S CLOTHING FACTORY WORKERS (CUTTERS), MONTREAL, P.Q.**—This dispute, which commenced on May 2, 1932, when employees in one establishment ceased work against a reduction in certain piece rates, lapsed early in July.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS & SUITS), TORONTO, ONT.**—This dispute commenced on June 7, 1932, owing to a reduction in staff by the employer instead of dividing the work, and an alleged reduction in wages. On July 16 work was resumed under conditions as prior to the dispute.

**BOX FACTORY WORKERS, WINNIPEG, MAN.**—On June 21, 1932, as stated in the July issue of the LABOUR GAZETTE, employees in one establishment ceased work, claiming that there was discrimination in regard to re-engaging workers involved in a previous strike commencing earlier in the month. The mayor of the city and the resident representative of the Federal Department of Labour acted as mediators, but a settlement was delayed by the

refusal of the manager to negotiate while the strikers were connected with an organization affiliated with the Workers' Unity League, which had picketed the plant, police protection being required. Several clashes between pickets and the workers employed to replace the strikers occurred early in July, nine being arrested and charged with rioting, none of these, however, being strikers or connected in any way with the establishment. On July 23 the strike was terminated on the terms arranged by the Secretary of the provincial Department of Labour, the employer agreeing to re-engage the former employees as soon as required, without discrimination; also that wages and working conditions prior to the first dispute would be restored and that a shop committee elected by the employees would be recognized.

**PLUMBERS, SASKATOON, SASK.**—This dispute, commencing June 1, 1932, against a proposed reduction in wages from \$1.30 per hour to \$1. and for shorter hours, thirty-three instead of forty-four, was terminated on July 7, an agreement being signed providing for a rate of \$1.05 per hour with a forty-hour week.

**MOTION PICTURE PROJECTIONISTS, WINNIPEG, MAN.**—This dispute, an alleged lockout, commenced on February 27, 1932, when the employer involved replaced three former employees, members of the International Association of Theatrical Stage Employees and Motion Picture Machine Operators, with two operators who were members of the Canadian Motion Picture Projectionists' Association. By the end of July, however, employment conditions being no longer affected, although the union had not called it off, the dispute has been added to the list, carried elsewhere in this article, of such strikes and lockouts.

**SALMON FISHERMEN, RIVERS INLET AND SMITHS INLET, B.C.**—This dispute, involving some 1,400 salmon fishermen, commenced on July 10, 1932, when members of the Fishermen's Protective Association demanded a rate of 40 cents per fish for sockeye, the cannery having offered a price of 27½ cents per fish. As a result of negotiations between the cannery's association and the union the fishermen returned to work at a rate of 30 cents per fish.

**COAL MINERS, LITTLE BRAS D'OR, N.S.**—On July 4, two hundred miners in one colliery ceased work in protest against the removal of the check weighman by court order on charges of interfering with the operation of the mine. It appears that there had been a dispute regarding overtime work and the management had instituted proceedings against the check weighman appointed by the miners. Some of the strikers were later arrested on charges of interfering with the police in the discharge of their duty and later the mine manager, one of the employees and a county

constable were arrested on charges arising out of an explosion endangering life and property. At the end of the month no settlement of the dispute had been reported.

**COAL MINERS, RIVER HEBERT, N.S.**—This dispute commenced on July 14, 1932, in two collieries operated by one company, the workers desiring an equal division of work. After negotiations between the union officials and the management the miners' proposal was accepted and work was resumed on July 20.

**FUR FACTORY WORKERS, TORONTO, ONT.**—Three disputes commenced during the month and remained unternminated.

In one establishment twenty-four employees ceased work on July 4, 1932, against a reduction in wages and sending work to outside shops. In connection with picketing a number of strikers were arrested and remanded for trial.

In another establishment thirty-nine out of fifty-four employees ceased work on July 12, 1932, demanding the removal of the foreman.

On July 29, eight hundred employees in some seventy shops ceased work, being called out by two of the four local unions. The other two locals continued to work, having reached an agreement with the Independent Furriers' Association on July 26. The establishments affected were picketed by the union, one striker being arrested for assault. On July 30 four of the firms affected had reached agreements, but the dispute was unternminated at the end of the month.

**CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Five disputes involving clothing factory workers commenced during the month in Montreal. A new organization, the United Clothing Workers of Canada, reached agreements with a number of manufacturers and called strikes in establishments of certain employers who refused. In one establishment, manufacturing boys' clothing, 138 employees ceased work on July 11, demanding the recognition of this union. The firm had previously had a verbal agreement with the Amalgamated Clothing Workers of America, but, after negotiations between the parties, agreed to recognize the new union, and on July 21 the employees returned under the same rates and conditions as prior to the strike.

Workers in a large establishment manufacturing men's and boys' clothing, ceased work on July 20 similarly demanding recognition of the United Clothing Workers of Canada, which was secured, and on July 27 work was resumed.

Another firm, formerly working under a verbal agreement with the Amalgamated Clothing Workers of America, similarly became involved in a dispute on July 26. Work was resumed the next day, however, the employer having reached a verbal agreement with the new union.

A similar dispute occurred on July 28, some seventy-five workers employed by a sub-contractor for men's factory clothing demanding recognition of the United Clothing Workers of Canada. At the end of the month the dispute was still unterminated.

Another dispute occurred on July 15 in three establishments operated by one firm, when ten employees, cutters and operators, stopped work, demanding recognition of the Montreal Dress Cutters' Union, which they had recently joined. They also alleged that two workers had been unjustly discharged. During July some twenty-five arrests were made on charges of intimidation, obstructing sidewalks, etc. At the end of the month the dispute was still unterminated.

SHINGLE WEAVERS, VANCOUVER, B.C.—On July 6 shingle weavers, members of the Lumber and Agricultural Workers' Industrial Union, ceased work following a reduction in wages, alleged to be from ten per cent to fifteen per cent. Negotiations were carried on between the parties with the result that work was resumed on July 11, the employer agreeing to withdraw the wage cut.

SHINGLE MILL WORKERS, NEW WESTMINSTER, B.C.—Employees in one establishment became involved in a dispute on July 12, demanding an increase in wages and a signed agreement. At the request of the mayor of the city, the Deputy Minister of Labour for British Columbia and the resident representative of the department met the parties to the dispute in conference but no settlement was reached.

CARPENTERS, NIAGARA FALLS, ONT.—Employees of one contractor ceased work on July 19, demanding the union rate, an increase in wages from 60 cents per hour to 90 cents. The employer replaced the strikers to some extent, but at the end of the month the dispute was unterminated.

WAITRESSES, TORONTO, ONT.—A number of waitresses in a restaurant in Toronto ceased work on July 16, owing to a reduction in wages from \$1.40 to \$1.25 per day and an increase in hours from seven per day to eight. These were replaced and since July 19 employment conditions appear to have been no longer affected.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes which began during June was 46, and 13 were still in progress from the previous month, making a total of 59 disputes in progress during the month, involving 12,300 workers, with a time loss of 77,000 working days for the month. Of the 46 disputes beginning in June, 28 were over proposed reductions in wages, 8 over other wage questions, 4 on questions respecting the employment of particular classes or persons, 3 on other questions of working arrangements and 3 on questions of trade union principle. During June, settlements were reached in 38 disputes, of which 5 were settled in favour of workers, 20 in favour of employers and 13

ended in compromises. In one other dispute, work was resumed pending negotiations.

A dispute involving about 22,000 workers in the cotton manufacturing industry at Burnley, Lancashire, began July 23 over proposed reductions in wages.

### Belgium

During the last week in June, a strike began in the coal mining industry of the Mons district against proposed reductions in wages. The dispute later spread and affected practically all of this industry in Belgium and in some places also workers in other industries became involved. Riots were reported in several mining centres during the second week of July.

### Poland

The number of disputes beginning in the year 1930 was 319, involving 50,439 workers with a time loss of 329,001 working days for the year.

### United States

The number of disputes beginning in May was 62, and 58 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 53,280 and the time loss for the month was 1,242,409 working days.

No settlements have yet been reported in the disputes in the bituminous coal mining industry which were reported in the LABOUR GAZETTE, April and May.

## OLD AGE PENSIONS IN CANADA

### Financial Summary of Administration During Second Quarter of 1932 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156; as amended by statutes of 1931, chapter 42) and the various provincial concurrent Acts, during the second three months of 1932, and since these Acts became severally effective. Similar information bringing the statistics down to March 31, 1932, was given in the LABOUR GAZETTE, June, 1932. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act made provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. The provinces now participating in Old Age Pensions are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The Northwest Territories are also within the scheme. The New Brunswick legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year; and in cases where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province where the Act is not in force, the pension payable is reduced by the same proportion as the duration of the pensioner's residence in these provinces bears to twenty years. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-half of the total amount of the pensions paid by

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1932

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan	Northwest Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in C. effective Jan. 2, 1929	
Total number of pensioners as at June 30, 1932.....	4,624	6,536	7,473	40,972	7,699	5	67,309
Average monthly pension.....	\$18 74	\$19 00	\$19 43	\$18 29	\$19 14	\$19 83	.....
Total amount of pensions paid by Province during first quarter of fiscal year 1932-33, (Period April 1—June 30, 1932).....	\$257,169 35	\$379,797 74	\$430,381 14	\$2,237,870 01	\$450,234 10	\$312 32	\$3,755,764 66
Dominion Government's share of expenditure.....	\$192,904 91	\$285,528 77	\$322,785 86	\$1,678,402 51	\$337,606 13	\$312 32	\$2,817,540 50
Total amount of pensions paid by Province since inception of Old Age Pensions Act to June 30, 1932.....	\$2,111,153 54	\$5,072,025 59	\$4,990,154 62	\$20,531,445 95	\$4,676,751 91	\$3,975 87	\$37,385,507 48
Dominion Government's share of expenditure.....	\$1,220,989 74	\$2,787,754 98	\$2,773,259 30	\$11,591,009 25	\$2,632,416 09	\$3,975 87	\$21,009,405 23

the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure. Accordingly new agreements between the Dominion and Provincial Governments under the provisions of the amending Act were completed recently, as stated in the

LABOUR GAZETTE, May, 1932, page 517. That issue also contained the text of the Old Age Pensions regulations, as recently revised. Arrears resulting from the increase of the Dominion contribution were paid to the provinces back to November 1, 1931; and the payments by the Dominion for the current year are on the basis of 75 per cent of the total expenditure on old age pensions.

## SOCIAL INSURANCE IN THE PROVINCE OF QUEBEC

### Third and Fourth Reports of Provincial Commission Respecting Family Allowances and Industrial Hygiene

THE Quebec Social Insurance Commission, which was appointed by the Provincial Government in 1930 (LABOUR GAZETTE, November, 1930, page 1236), recently issued their third and fourth reports, dealing respectively with the subjects of family allowances and Industrial hygiene. These reports have been published in one volume by the authority of the Hon. C. J. Arcand, Minister of Labour of Quebec.

The instructions issued to the commission by the provincial government proposed the study of the following subjects: unemployment insurance; old age pensions; sickness insurance; family assistance, or aid to the parents of large families; family placements, or the placing of under-privileged or distressed children with approved families in various sections of the province; sanitary conditions in industrial establishments, and conditions of workers in such places; occupational diseases; medical inspection for workers engaged in

occupations hazardous to health; medical examination and attendance, with periodical inspections, among factory workers; campaigns of industrial hygiene for workers.

The members of the Commission are as follows: Mr. Edouard Montpetit, chairman; the Right Reverend Mgr. Georges Courchesne, Bishop of Rimouski; the Ven. Archdeacon F. G. Scott, Quebec; Mr. John T. Foster, president, Montreal Trades and Labour Council; Mr. Gérard Tremblay, Deputy Minister of Labour, Province of Quebec, and secretary-general of the National Catholic Syndicates; Dr. A. Lessard, director of the Provincial Bureau of Health; and Mr. Georges A. Savoy, president of the Quebec Division of the Canadian Manufacturers' Association.

The first report briefly stated the problems set before the Commission; the second report, which dealt with Child Protection and Mothers' Allowances was reviewed in the LABOUR GAZETTE, February, 1932, page 171.

### Third Report—Family Allowances

In their third report the Commissioners pass from the consideration of the general problems of child welfare to the special question of the workman's family responsibilities, and to the suggestion that workmen, in addition to their wages, should receive a grant from the state in respect to each one of their children. The problem which Family Allowances is meant to solve is stated in the report as follows:—

"We may ask ourselves then what there is of equity and social justice in the salary offered to working men among us who have to support from four to ten children. Families of that size—and are they not the most worthy of admiration?—must, in order to balance their budget, agree to painful restrictions, even in the case of necessities. The result will be

that the large family, needing a larger house, better ventilated, with more sun, will have to remain satisfied with lodgings which are more cramped and less hygienic, because of the necessity of cutting down those expenses which can be curtailed. The same result will follow when it is a question of food and clothing. It will be necessary to reduce to their lowest sum all expenses in this department of the family economy."

Advocates of family allowances suggest that the only method that would restore equilibrium in the budget of a large family is to offer a progressive allowance for each child above the number of children in the average family (in Quebec the average is stated to be three). The proposal is, in fact, to establish a collective fund for the benefit of large

families that would be similar in principle to the Accident Fund established in connection with Workmen's Compensation.

Members of the Commission visited Europe for the purpose of investigating social insurance systems in various countries. They studied the working of family allowances in France and Belgium, their conclusions being given in the present report. An account is given also of the present standing of the movement in Holland, Switzerland, Germany, Poland, Czechoslovakia, Austria, Italy, Great Britain, Spain, Sweden, Australia and New Zealand.

Canadian opinions on the proposal are next considered, particular reference being made to the work of the Rev. Father Lebel, S.J., on behalf of mothers' allowances (LABOUR GAZETTE, June, 1928, page 605; June, 1928, page 598), and to the report made to the Commission by Miss Charlotte Whitton, of the Canadian Council on Child and Family Welfare, who took the opposite view.

### Conclusions

The Commissioners set forth their conclusions in the following paragraphs:—

1. While recognizing that family allowances in France and Belgium, if not in Germany and Australia, have furnished a solution to the very important problem of large families, the Commission, after long deliberation, is unanimously of the opinion that for the moment there is no opportunity of taking legal measures instituting officially family allowances in this province. We are here face to face with a system exclusively European, adapted to low wages, and it is very difficult to predict what would be the results of its application here. It is true that the partisans of family allowances take into consideration the difference in the rate of wages found in Canada, by proposing to offer the family allowance from the third child only; but it must be remembered that in many

industries the wages, even in Canada, are not very high and that there is occasion to suggest their increase rather than to run the risk, by creating a system of family allowances, of keeping them for a long period at their present level.

2. The system of family allowances, added suddenly to the collective insurance in the matter of accidents suffered while working, organized last year in Quebec, would perhaps place our manufacturers in a disadvantageous position with reference to the other provinces.

3. The economic crisis through which we are passing makes a move of this kind very difficult.

4. Grave fears may be entertained lest the drift of population from our country districts should be accentuated by the family allowance system confined to industries.

5. It would be impossible and dangerous to extend family allowances to the whole population and to make them a State institution.

6. The great agricultural problem to be faced in the province of Quebec, namely the placement of farmers' sons, or in general, the problem of an excess of population in country districts, would still remain unsolved, whereas the resources of the Government ought rather to be employed to encourage this placement on provincial lands, by means of an intensive policy of colonization.

For all these reasons the Commission has abandoned the idea of proposing the institution of family allowances in the Province of Quebec. However, there is no need to say that the Commission offers a tribute to those who have consented to bear the heavy burden of a large family.

The Commission has not yet considered the problem of social insurance, but all the systems contain special arrangements with a view to protecting the family, and the question of the family will be thus studied at a later date. The Commission offers no objection to owners of factories, who might be interested in so doing, attempting of their own accord the organization of compensation funds. That is the method of family allowances followed in France and which Monsieur Bonvoisin recommended seriously to the Commission. That is the method of social initiative, the result of a special education, which people in this Province will doubtless desire to follow.

### Fourth Report—Industrial Hygiene

In their fourth report the Commission consider the group of subjects that are included under the term "industrial hygiene,"—hours of work, employment of women and children, and safety of workshops. Details are given of the provisions for factory inspection and safety under the laws of Quebec. These mainly relate to the general hygiene conditions of workshops and the prevention of accidents. The Commissioners believe that this limited conception of hygiene should be extended so as to embrace all conditions of labour that directly or indirectly affect the worker's health and well-being. At present, for example, the factory regulations contain no pro-

vision for occupational illnesses, and the field of the doctor who is engaged in industrial work is therefor restricted. The outstanding need in provincial administration, it is stated, is to secure correlation between the Department of Health and that of Labour, and the setting up of an authority directly responsible for the health of factory workers.

The Commission conclude their report with the following recommendations, pointing out that "the security of labour will be dependent upon the Ministry of Labour, and industrial hygiene upon the Director of the Provincial Health Service."

## Recommendations

### 1. *Security of Labour*

#### 1. Title of the Act.

Chapter 182 of the Revised Statutes of the Province of Quebec, entitled the Industrial Establishments Act, should be entitled the Act relating to the Protection and Inspection of Labour.

#### 2. Definition of the term, "Industrial Establishments."

The words "industrial establishments," paragraph 3, article 2, division 1, of the aforementioned act, should be defined as follows:

The words "industrial establishments" mean and include, for the purposes of the present act, manufactories, works, workshops, workyards of all kinds and their dependencies. They mean and include also all classes of industry mentioned in Schedules 1 and 2 of the Workmen's Compensation Act, 1931 (chapter 100, 21 Geo. V, 1931).

#### 3. Hours of Employment of boys, women and girls.

Article 15 of Chapter 182 should be replaced by the following, and article 16 suppressed: "Except in the cases mentioned in section 17, no boy under sixteen years of age, and no girl or woman, shall be employed in any of the establishments mentioned in section 3, for more than nine hours in one day, or for more than forty-eight hours in any one week. Any employer may, however, apportion the hours of labour per day for the sole purpose of giving a shorter day's work on Saturday.

"One hour shall be allowed at noon each day for meals, if the inspector so directs, but shall not be counted as part of the working hours hereinabove mentioned.

"The day mentioned in this section shall not commence before seven o'clock in the morning, nor end after half-past six at night."

#### 4. Maximum length of working hours in certain cases.

In section 17, a maximum of seventy-two hours of work per week for boys, women and girls, may be permitted by the inspector at the request of the employer. This maximum is too high. The Commission recommends, on the suggestion of the inspectors of labour, that it should not exceed, at any time, the limit of sixty hours.

This new maximum gives to the worker an extra twelve hours per week; it permits several working evenings per week, which are quite sufficient.

#### 5. Information for purposes of statistics concerning employees.

In order to obtain detailed statistics concerning employees, the Commission recommends that the employers or heads of industrial establishments should be required to keep a register of employees, wherein are entered the names, ages, and places of abode of the boys, women and girls. Consequently in the subsection (a), paragraph 3, section 18, after the words, "names, ages and places of abode," should be inserted the words "of the men."

#### 6. Information concerning working conditions.

In order to complete the documentation as to general working conditions, the following subsections should be added after the subsections (a) and (b) of paragraph 3, section 18:

- (c) Method of remuneration: by the hour, or piece-work.

- (d) Indication of the work done by a crew, and time required, if there is occasion.

- (e) Night work, if there is occasion.

- (f) Work done on Sunday, if any.

- (g) Such other information as the chief inspector, with the approval of the Minister, may find it expedient to obtain, for the purposes of statistics, or other purposes.

#### 7. Steam-Engines.

The Commission recommends the suppression, in the Industrial Establishments Act (Chapter 182) of divisions V and VI, having to do with steam boilers, and the inclusion of those divisions in the Act relating to Stationary Engineers (Chapter 184) in order to make of the latter a comprehensive act, relative at the same time to both steam boilers and stationary engineers.

Likewise, all the regulations made according to these divisions should be included in the list of those authorized by Chapter 184.

#### 8. Documentation.

The Commission recommends the organization of classes, lectures, libraries, and the establishing of a museum of safety and industrial hygiene for the benefit of inspectors and industrial hygiene doctors.

#### 9. Regulations concerning the sick and injured.

The Commission recommends that regulations 106, 107 and 108, relative to the aid to be given to the sick and injured, should be enforced in a more extensive and thorough manner.

#### 10. Regulations concerning associations for the prevention of accidents.

Section 106 of the Workmen's Compensation Act authorizes employers referred to in Schedule 1 to form themselves into an association for accident prevention. They may make rules, which, if approved by the Workmen's Compensation Commission, and the Lieutenant-Governor in Council, shall be binding on the industries included in the particular class.

The Social Insurance Commission recommends that these regulations should previously have received the approval of the inspector in chief of industrial establishments, and of the chief industrial hygiene doctor, with a view to avoiding disregard of the regulations which it is the duty of these officials to have respected.

#### 11. Work of the association for accident prevention.

The work of the association for accident prevention, and of its inspectors (section 106, chap. 100, of the Workmen's Compensation Act), will have to be directed especially:—

- 1. Toward the education of employers and employees, by the organization of lectures, the showing of educational films concerning safety and hygiene, illustrated charts, advertising, etc.

- 2. (a) The formation of committees of safety in the workshops.

- (b) The organization of first-aid appliances.

- (c) The organization of a medical service, under the supervision of a medical director of industrial hygiene or of a qualified nurse, in all large workshops; the same organization in a co-operative form for the small workshops of one or several classes.

#### 12. Increase in the number of inspectors.

The Commission has noticed that the inspection of industrial establishments was joined

with the service of inspection of public buildings. Sixteen inspectors, male and female, of whom six are at Montreal, four at Quebec, and two at Sherbrooke, are found in this department.

The inspection of public buildings and the registering of children working in factories take the time of six inspectors, male and female. Therefore, ten inspectors only devote their time to visiting the industrial establishments of the province, which number, however, almost 6,000, without counting workyards, which ought to be visited, at least when they are large.

When it is remembered that the careful inspection of a large factory may take a week, it will be agreed that the staff is not large enough to insure the observance of the act, which, in a word, is excellent.

The Commission, therefore, recommends that the finances of this department should be increased in such a way as to allow it to engage a dozen extra inspectors.

The Commission likewise recommends that a service of inspection should be permanently attached to industrial districts of necessity rarely visited hitherto, such as Hull, Three Rivers, Chicoutimi, etc.

#### 13. Mines and lumber-mills.

The Commission, aware of the fact that the Department of Mines, as well as the Forest Products Commission, have at their service inspectors who have the qualifications and the time to look after the safety of those engaged in these industries, recommends that these officers should submit a report of their activities to the Inspector of Labour.

### *II. Industrial Hygiene*

#### 1. Regulations.

It is recommended that the Lieutenant-Governor in Council draw up regulations concerning industrial hygiene, according to section 99 of the Public Health Act, and appoint a competent staff, charged with the application of such regulations.

#### 2. Division of industrial hygiene.

A division of the industrial hygiene service should be formed within the Provincial Hygiene Service, with a specialized and competent staff, and powers ought to be accorded to it to insure the efficiency of its work.

#### 3. Collaboration of the services.

The chief inspector of industrial establishments, and the head doctor of the industrial hygiene service ought to work together for the organization of a necessary collaboration of their services. They ought, if possible, to have their offices in the same city, and to confer regularly every week concerning the work done and concerning the direction to be taken by future work.

#### 4. Appointment of a chemist.

The Commission recommends the appointment of a chemist specially attached to the office of the inspection of labour and industrial hygiene.

#### 5. Penalties.

Section 100 of the Public Health Act provides for penalties for every infringement of the regulations made under Division III having reference to the hygienic conditions of industrial establishments. These penalties should continue to be inflicted by the Provincial Hygiene Service.

#### 6. Work of Women and Children.

The work of women and children will be supervised closely by the new hygiene department and will be the object of frequent inspec-

tions and repeated medical examinations, especially in the textile industry. The woman who is pregnant should stop work, in certain industries, from the beginning of the eighth month of pregnancy, and continue work only after one month from the date of birth of the child.

#### 7. Medical service in industrial establishments.

Establishments employing a certain number of persons will be required to organize a medical service and infirmary service. As we have said above, in the centres where the arrangement is possible, the small industries will be grouped in order to share the expenses of a doctor and the service of a nurse.

#### 8. Sanitary education of the worker.

This education, need of which is making itself felt, should be offered by the medical service of the industrial establishments, working with the service of inspection of labour and the department of industrial hygiene.

#### 9. Mines.

As a result of the great development of the mining industry in the Province, and of the dangers created by this industry in the matter of hygiene, the new department of industrial hygiene should extend its activities to mines and quarries.

#### 10. Employment of health units.

The county health units, wherever they exist, will be employed as bodies of supervision and inquiry in the country districts and small towns.

#### 11. Lumber-camps.

It seems to the Commission that the hygiene regulations concerning lumber-camps ought to be extended according to the system existing in Ontario. Especially should powers be accorded to the director of the health service, or to his authorized representative, to see to the closing of camps in which the hygienic regulations are not observed. Exploitation companies should be held responsible for the observance of regulations on the part of contractors, or sub-contractors, for the cutting of wood. The construction of camps should be carried out according to plans approved beforehand by the director of the provincial hygiene service. The presence of women, and of children less than sixteen years of age, in camps, ought to be the object of suitable supervision. For all these purposes and for others similar to them, the Commission is of the opinion that a system of inspection ought to be established in all forest districts, and that penalties be provided for any infringement of the regulations.

By these two last arrangements the Commission believes that our country districts will be reached, at least in part. For the Commission did not consider that its duty was to take no thought of the problem of hygiene in the agricultural districts, although the Order in Council appointing it mentioned only "industrial" hygiene.

As in its second report the Commission advocated aid to needy mothers as a general measure, it desires to remind the Government that, by a unanimous resolution already submitted, it has pronounced itself in favour of health units established throughout the province. The Commission also believes that in the farther districts where it is difficult and costly for medical aid to be guaranteed, measures ought to be taken by the director of health in order to procure for the sick the facilities of treatment to which they have a right.

## LABOUR LEGISLATION IN NOVA SCOTIA IN 1932

THE following is a short summary of the principal laws of labour interest enacted by the Nova Scotia Legislature during its recent session which began on February 23 and closed on April 30, 1932.

### Provincial Department of Labour

An Act to Provide for a Department of Labour establishes such a department to be presided over by a Minister of Labour. The new department is to take cognizance of all matters relating to labour and administer such affairs, matters, acts and regulations as the Governor in Council from time to time assigns to it.

### Workmen's Compensation

The Workmen's Compensation Act was the subject of a number of amendments. A new clause provides that where there is cause of action against some person other than the employer the board is not obliged to sue for or require payment of damages unless it thinks fit to do so, and is given full power to compromise the cause of action or release its claim therefor, if, in its discretion, it thinks it inadvisable to bring action for such damages.

In 1929 the section providing that no compensation should be payable unless application therefor was made within a year after the occurrence of the accident was amended to include payment for medical aid also. This section has again been amended as regards medical aid, and now provides that the Board shall not pay any account rendered against it for medical aid in respect of any injury happening after the passing of the Act (April 18, 1932), unless application therefor is made within one year after the commencement of the disability. The Board may, however, in its discretion, pay the whole or any part of any claim for medical aid, furnished after the 1929 amendment was made and before the passing of the 1932 Act, in respect of which no claim for payment was made within one year after the occurrence of the accident.

A further change effected by the amending Acts of 1929 was an increase in the scale of compensation from 55 per cent to 60 per cent of average earnings or of the diminution of average earnings as the case might be. A section was added, however, stipulating that these provisions should not apply to increase the compensation payable to any person whose right to compensation arose before January 1, 1930, or to any workman whose disability arose out of his employment in the industry of lumbering (including saw-mills)

or any occupation incidental thereto or immediately connected therewith, before May 1, 1930, or to any person whose right to compensation depends upon the provisions of Part III. The above section is now amended to provide that compensation payable to any person whose disability arose out of his employment in the industry of lumbering (including saw-mills) or any occupation incidental thereto or immediately connected therewith before May 1, 1930, and to any other workman whose right to compensation arose before January 1, 1930, shall be continued under the provisions of the Workmen's Compensation Act as it stood before the amendment of 1929 was passed.

The 1932 amendment further provides that in cases where the Board is empowered to recognize an impairment of earning capacity although there has been no diminution of earnings, the amount of the compensation to be paid in respect of such impairment is in discretion of the Board. Provision is also made that those clauses of the Act which require application for compensation to be made within one year and right thereto established within fifteen months shall not apply to the persons in respect of whom payment of compensation under special Acts was sought at the 1931 Session of the Legislature.

### Unemployment Relief

The Nova Scotia Unemployment Act, 1931, ratifies and confirms an agreement, set forth in the schedule, between the Dominion Government and the Government of the Province pursuant to the Unemployment and Farm Relief Act passed by the Parliament of Canada in 1931. Agreements between the Province and Municipalities to enable the latter to benefit by the Federal Act are also confirmed. The Governor in Council is empowered to enter into and carry out any agreement with the Government of Canada under the Unemployment and Farm Relief Act, to furnish direct relief, provide for public works, and pay the required sums out of the Consolidated Revenue Fund or raise funds by way of loan. Municipalities are vested with power to carry out their agreements, to pay direct relief and undertake public works, and to raise loans with the approval of the Governor in Council. Where money is raised by the sale of debentures a sinking fund must be provided for. The agreement between the Dominion and the Province, which appears as the schedule to the Act, provides for the payment by the Dominion to the Province of fifty per cent of the cost of public works and

undertakings carried on by the latter to provide work for the unemployed, fifty per cent of the amount expended by the Province on sections of the Trans-Canada Highway and forty per cent of the amount expended on provincial highways. Provision is also made for the payment by the Dominion to the Province for remittance to any municipality of such proportion of the cost of municipal public works and of direct relief as may be agreed upon. The contribution towards public works may not exceed twenty-five per cent unless, owing to the financial condition of the municipality, a larger contribution by the Dominion is authorized by the Governor General in Council. The Dominion further undertakes to pay fifty per cent of the expenditure made by the Province for direct relief in territory having no municipal organization and where no suitable work can be provided. "Direct Relief" is defined as "necessary food, clothing, fuel, and shelter or the equivalent thereof." The Agreement further provides for an eight-hour day, unless a modification of this requirement is previously agreed to by the Minister of Labour, and for fair wages, the use of Canadian goods, if available, and the employment of residents of Canada and, as far as possible, of the locality in which the work is being performed.

#### Miners' Land Settlement

The Nova Scotia Miners' Land Settlement Act authorizes the Lieutenant-Governor in Council to appoint a Board of five persons to be called the Nova Scotia Miners' Land Settlement Board. Among the duties and powers of the Board are: to acquire, hold and dispose of farms, stock, agricultural machinery and equipment; to acquire and hold agricultural lands and sub-divide same before disposal; to erect buildings, make permanent improvements and carry on farming operations on farms and lands, the property of the Board; with the approval of the Lieutenant-Governor in Council to enter into an agreement with the Government of Canada or any municipality, organization or individual to settle miners upon farms in the province; to place settlers inexperienced in farming, but otherwise deemed fitted to engage in farming as a permanent occupation, with established farmers for the purpose of gaining practical experience in farming.

Any male person over twenty-one years of age who is the head of a household and who is a British subject and has been a resident of Nova Scotia for at least five years, two of which were immediately prior to his application, and has been an employee of the coal industry in the Province may apply to the Board for assistance, provided that he has had satisfactory experience in farming and intends to live and engage in farming on the land

he purchases from or mortgages to the Board. It is provided that the selling price of any property to a settler may not exceed the purchase price of that property together with subsequent expenditures thereon. No agreement of sale may be entered into for a larger amount than \$2,000 for land, buildings, stock, machinery or equipment, and permanent improvements. No agreement of sale for a sum of \$1,000 or less shall be for a longer term than fifteen years; between \$1,000 and \$1,500 the maximum term is twenty-five years and between \$1,500 and \$2,000 thirty-two years. Advances made to settlers are to be repaid in equal quarterly or monthly instalments of principal or interest as the Board may determine, but the Board may defer payments of all or part of the first thirty-six monthly or nine quarterly instalments at its discretion. The interest rate is fixed at five per cent per annum. The Board may make regulations for the carrying out of the purposes of the Act. It must submit an annual report of its operations to the Lieutenant-Governor in Council.

#### Early Closing of Stores in Halifax

The Halifax Early-Closing Act was amended with regard to petitions from shop-keepers and now provides that the persons engaged in the pursuit of any particular trade or calling may present a petition for the closing of all premises so occupied during certain hours on certain days mentioned in the petition. Such petition must be signed by not less than seventy-five per cent of the persons occupying premises within the city engaged in the particular trade or calling specified. The Council may make an ordinance granting the petition in whole or in part and directing that the premises occupied for the trade or calling named in the petition shall be closed during the periods mentioned therein or for such other periods as the Council specifies.

#### Licensing of Chauffeurs

The Motor Vehicle Act was revised and amended with but little change in the provisions relating to chauffeurs. A driver's licence, which is defined to include a chauffeur's licence, may not be issued to any person who is a habitual drunkard or addicted to the use of narcotic drugs. New sections were added dealing with the financial responsibility of owners and drivers, and provide for the suspension of the driver's licence of any person failing to pay a judgment or convicted of, or forfeiting his bail after arrest for, certain specified offences until such driver shall have given the registrar proof of financial responsibility. If the registrar finds, however, that such driver was employed by the owner of the vehicle as a chauffeur and that there is no motor vehicle registered in his name the owner may give proof of financial responsibility and the chauffeur be relieved of giving such proof in his own behalf.

## LABOUR AND INDUSTRY IN ALBERTA DURING THE FISCAL YEAR 1931-32

**T**HE report of the Bureau of Labour of Alberta for the fiscal year ending March 31, 1932, gives statistics of trade and industry in the province during this period, with details of the administration of the various acts in charge of the Bureau, including the Factories Act, the Minimum Wage Act, the Theatres Act, the Steam Boilers Act, the Labour Disputes Act, and the Employment Offices Act.

*Trade and Industries.*—According to the returns received by the Bureau there was a further decline in business the volume of decline being much greater than that of the previous year. Returns from 2,808 firms covered 40,030 male employees over eighteen, 571 males under eighteen, 7,793 females over eighteen, 229 females under eighteen, and 509 apprentices. Total payments for wages and salaries were \$63,786,134.52, of which sum \$54,254,896.47 was paid to wage earners. The returns, when considered as to employment by months for males, for the first time since returns have been received show a steady decline during the entire year, there being practically no improvement through usual seasonal activities. December was the month of least employment, when 38,497 were employed, and January the month of greatest, when 41,507 were employed. As in previous years, the returns, when considered by individual industries, show great fluctuations, demonstrating again that for the unskilled work in the various industries men interchange from one to the other. The returns of monthly employment of females indicate very little change in volume of employment throughout the year. Summer holiday trade and Christmas activities did, however, bring additional employment.

The report contains tables showing the average number of wage earners by months, the classified weekly wage rates, and the weekly hours of labour. The table showing "classified weekly wage rates" indicates that of the 40,030 male employees, the largest group (5,920) were employed in the wage classification between \$30 and \$34.99 per week. As regards working hours, the statistics show that of the total number of employees 43,938 are working 48 hours or less per week.

*Labour Disputes Act.*—The report of the Labour Disputes Act, by the Hon. J. E. Brownlee, premier of the province, gives the details of settlement of the two boards of conciliation and investigation that were established. (These reports appeared in previous issues of the LABOUR GAZETTE.) In the first—that in connection with the dispute be-

tween the Beverage Dispensers Alliance and the hotel proprietors of Calgary—a settlement was arrived at which was satisfactory to both parties. As regards the second—involving a dispute between the United Brotherhood of Carpenters and Joiners and certain planing mill operators in Calgary—the unanimous report of the board was accepted by the workers but was not acceptable to the employers.

*Factories Act.*—Returns of Inspectors covering inspections under the Factories Act show decreases in the staffs of quite a number of the places visited. A total of 4,638 inspections was made of 4,386 factories, shops, hotels, offices and office buildings, in which were employed 21,107 males and 7,355 females. Recommendations relative to safety; sanitation, hours and wages, and the employment of children, to the number of 1,102 were made, all of which were carried out by employers. There were 515 inspections made of 491 elevators, in connection with which 413 safety recommendations were made. Full particulars of the inspections are given in tables in the report.

*Theatre Inspection.*—The report of the chief inspector of theatres shows a decline in revenue. It is also indicated that there were many motion pictures in circulation during the year that "have been of an inferior quality," there being 541 complaints out of a total of 13,972 reports. Details were also given respecting three films fires. It is stated that some progressive changes have been made in the regulations pertaining to projectionists. The clauses for provisional certificates have been eliminated and the apprenticeship period extended from six to twelve months. The department is also permitted to confiscate motion picture prints which have become unfit for safe running in theatres. Particulars are also given respecting projection room inspections and recommendations.

*Boiler Inspection.*—The annual report of the chief inspector of boilers and machinery gives the number of inspections as 3,117 with a total of 4,457 inspection visits and the consequent issue of 2,479 inspection certificates. In addition, 45 inspections were carried out under the Factories Act at saw-mills, grain elevators, etc. The total revenue during the year accruing from inspection fees, etc., was \$23,319.25. The chief inspector reviews in detail the activities in his branch and the main features of work respecting various types of boilers and pressure vessels.

*Employment Offices.*—In common with other provinces, the offices of the Alberta Employment Service recorded a most active year. Due to the various specially created works to relieve unemployment, the placements were within .02 per cent of those recorded in the previous year. Of the 50,084 vacancies filled, 44,974 were for males and 5,110 for females. Placements in the male section were recorded as 9,807 being sent to farms, 300 to building construction, 58 to clerical work, 223 to personal occupations, 11,187 to general labouring, 573 to lumbering, 107 to manufacturing industries, 3 to professional occupations, 158 to railroad construction and maintenance, 981 to mining, 473 to miscellaneous occupations and 21,219 to casual employment. Of the female placements 958 were sent to farms, 15 to clerical positions, 2,343 as domestics, 7 to manufacturing industries,

10 to miscellaneous occupations and 1,779 to casual employment. Casual placements are those where the work is of less than one week's duration. In the male section these constitute 47 per cent of the total placements and 35 per cent of the female section. There was a slight increase in the operating costs, the average cost per vacancy filled being 78.89 cents as compared with 78.56 cents for the previous year.

The importance of the service given is indicated by the number of vacancies listed and the large number of applicants registered at the offices. Of the 45,282 vacancies listed in the male section, 99.32 per cent were filled, and of the 80,465 applicants, 56 per cent were given employment. Of the 5,240 vacancies in the female section, 97.5 per cent were filled, and of the 8,793 female applicants, 58.14 per cent were given employment.

### Women's Minimum Wages in Alberta

The report of the Minimum Wage Board shows decreases in female employment under all Orders except those governing amusement trades and beauty parlours. The decreases from the previous year were: manufacturing, 240; laundries, 38; hotels and restaurants, 402; offices, 771; and retail stores, 311. Amusement trades and beauty parlours had an increase of 16.

A total of 3,687 inspections was made of 3,378 businesses, in which were employed 8,626 experienced females and 504 learners; 305 orders for adjustment of wages, 87 for adjustment of hours and 13 for adjustment of staff so that not more than 25 per cent would be in receipt of apprentice wages, were made.

The following paragraphs from the Board's report indicate the extent of its administrative duties during the year.

Representations were made to the board in respect of the difficulties that postmasters in the small towns and villages were experiencing due to the application of Order No. 5 (office occupation) to this class of employment. After careful consideration Order No. 5 was amended, removing from its scope employment in post offices, and this class of employment was included within the scope of Order No. 8 (telephones and post offices).

Two requests were received from firms to work female employees overtime to permit of seasonal rush trade being taken care of; the requests were granted.

Permission was also granted to storekeepers in Calgary, Edmonton, Lethbridge and Medicine Hat to work employees overtime to take

care of Christmas shopping rush. Payment for overtime at not less than regular rates, and a report of all overtime worked was required.

Two requests were received from firms for permission to employ a greater percentage of apprentices than is permitted by regulation, due to their inability to secure a sufficient number of experienced employees. Investigations made by the board revealed a shortage of experienced employees and the requests were granted.

Three requests were received for permission to transfer employees from one branch to another at special rates to be fixed by the board. These requests were granted, the employer being required to furnish the board with a statement of earnings during the period of such transfer.

Special consideration was given to a number of individual female employees, and handicap rates varying from 10 per cent to 25 per cent below regular minimum rates were fixed for ten of these females, whose cases were specially considered.

Five court cases were taken against employers for failing to pay minimum wages; four convictions were obtained and employers were ordered to pay back wages. Decision in the other case is pending.

A number of permits were issued for overtime to be worked to take care of emergencies that had arisen. In all cases employers advised the Department of the number of hours worked and the amount paid for same.

## REPORT OF THE DEPARTMENT OF PUBLIC WELFARE OF ONTARIO FOR FISCAL YEAR ENDING OCTOBER 31, 1931

THE first annual report of the Department of Public Welfare of Ontario for the year 1930-31 has recently been issued. This department was organized by Order in Council of September 16, 1930, as a result of the recommendations of the report of the Ross Commission on Public Welfare, and the following divisions were placed under its administration: The Mothers' Allowances Commission; the Old Age Pensions Commission; the Soldiers' Aid Commission; Children's Aid Branch; Industrial Schools; Ontario Training Schools; Houses of Refuge; and Orphanages.

*Mothers' Allowances.*—The eleventh annual report of the Mothers' Allowance Commission is included in the report of the department, and covers the year ending October 31, 1931. This legislation became effective in 1920 and provides for the children of widows, deserted wives, women with totally and permanently incapacitated husbands, and foster mothers who have the care of orphan children. In the administration of this Act the following scale of payments has been adopted; a mother with two children, under sixteen years of age, living in a rural district—\$30 per month; in a town of 5,000 or over, or in a separated town—\$35 per month; in a city the rate of allowance is \$40 per month. For each additional child under sixteen years of age in the mother's care and dependent on her, \$5 per month is added to the scale.

The municipality in which a beneficiary has resided for one year is required to contribute 50 per cent of the allowances granted, and the cost of administration is borne by the province. In 1930-31, this was 3.31 per cent of the amount paid out.

The number of families under the care of the Commission at the end of the fiscal year was 5,998, an increase of 375 over the number on that date of the previous year. The children in these families numbered 18,036 an increase of 1,128 over the number on that date of the previous year. The amount expended during the year was \$2,582,221.41, an increase of \$188,133.41 over the year 1929-30. Desertion continues to be a common cause for the demand for consideration under the Act and the Commission recommends the necessity for the adoption of some means to check this type of social evil.

For purposes of inspection and counsel, the province is divided into districts and in each of these is an investigator responsible to the

Department of Public Welfare whose business it is to visit the homes of the recipients of Mothers' Allowances; to see that the money is being spent for the purpose for which it is intended; to see that the children are regularly at school; and to give counsel and guidance where needed. These investigators co-operate with the local boards for the effective working out of the Act. The report states that "no estimate can be made of the beneficial results flowing from the application of this Act. The Province must eventually feel in its social and economic life the effect of the thousands of children enjoying the blessings of home and mother care, made possible through the administration of this Act."

*Old Age Pensions.*—The second annual report of the Old Age Pensions Commission indicates the number of those receiving pensions and the amount expended up to October 31, 1931 (These statistics for each province and for all Canada are given quarterly in the LABOUR GAZETTE, the most recent presentation being on another page of this issue). Dealing with the question of eligibility for pension, the report states:—"In some quarters there appears to be a tendency on the part of children to evade their responsibility for the care of their parents and to thrust the burden on the public. This is not the purpose of the enactment and, in determining eligibility for pension or the amount of the pension, the ability of the children to aid their parents has been considered by the Commission as well." As to the effectiveness of the Old Age Pensions scheme the report states that "while it requires the expenditure of large sums from the treasury, it has removed the fear of dependent old age from the minds of many."

*Soldiers Welfare Work.*—There are two organizations functioning under the department whose activities are directed toward the welfare of ex-service men and their dependants.

The Soldiers' Aid Commission deals with that group of veterans of the Great War and their children who have been unable to establish themselves completely. The Commission was organized in 1915 to assist sick and wounded soldiers returning from the theatre of the war. In 1919 the Commission was given power to make wards of that body the orphaned children of soldiers dying from wounds or killed in action. During the years

that followed, the Commission administered a large sum in the way of assistance and loans. It further undertook the work of training returned men for new occupations. This work met with considerable success.

The report points out that additional welfare work is carried on among the soldiers by the Veterans' Welfare Service branch, which came into existence in September, 1930, and functions independently of the Soldiers' Aid Commission. An important part of the work accomplished by this service is the making of contracts with employers of labour and the placement of soldiers and their dependants who may be out of employment.

Efforts on behalf of ex-soldiers resulted in the temporary or permanent placement of 233 veterans and 148 of their dependants.

*Child Welfare.*—Grouped under this division are a number of organizations dealing with the protection of neglected children, crippled children, children in refuges and orphanages, and boys in training and industrial schools.

The report of the Children's Aid Branch indicates its activities in the supervision of the net-work of Children's Aid Societies throughout the province. It is explained that the system of child protection operates through 58 Children's Aid Society branches each with a full time local superintendent.

During the year 1930-31, wards to the number of 865 were released from supervision through legal adoption or through coming of age. Since the inception of the activities of the Children's Aid Society over 35,000 children have become wards of the Society. The number on the supervision list at the end of the year was 8,500. Efforts are constantly being made to keep this number at the lowest possible minimum by means of adoption. During the year local superintendents made 4,538 supervisory visits

and the Roman Catholic inspector reported on 876 Catholic children.

The Children's Aid Society also administers the Children of Unmarried Parents' Act, and the Legal Adoption Act. During the past year the number of completed adoptions was 819, an increase of 113 over the previous year, making a total of 6,796 adoptions since the legislation was adopted ten years ago. The report of the inspector of training schools, industrial schools, refuges and orphanages reviews the administration of these institutions during the year 1930-31.

The thirty-four orphanages throughout the Province have a population of 2,925 children, an increase of 267 over the previous year. Owing to labour conditions there have been few children placed out in foster homes, and the prospect is stated to be not bright for any decrease in the number of inmates in these institutions.

The refuges throughout the Province of Ontario are forty-six in number, there being forty city refuges, three district refuges and three convalescent homes. The total population in these forty-six institutions which form a chain of protection for unfortunate people is 3,284.

The number of inmates in the county houses of refuge is 1,988, the maintenance and care being provided by the county.

The number of pupils in the four industrial schools, November 1, 1930, was 604, and the number in residence October 31, 1931, was 640, showing an increase for the year of thirty-six. Academic and vocational training, both for boys and for girls, is carried on in these institutions.

There is also presented the report of the training school for boys at Bowmanville and the report of the Ontario Society for Crippled Children.

## Census of Merchandising and Retail Establishments in Canada

Two further preliminary reports on the Census of Merchandising and Service Establishments, taken by the Dominion Bureau of Statistics in 1931 were issued recently dealing respectively with Hamilton, Ontario, and Regina, Saskatchewan (Note was made in the last issue, page 788, of similar reports for Winnipeg and Ottawa.)

The report for Hamilton shows a retail business in 1930 of more than \$68,000,000. There were 2,005 retail stores with sales of \$63,068,300 and 727 service establishments with gross receipts of \$5,587,800. The 2,005 retail merchandising establishments employed 7,348 persons (including full-time and part-time employees and proprietors and firm members re-

ceiving a fixed salary) who received \$7,637,300 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$9,207,900.

The report for Regina shows a retail business during the year 1930 of more than \$32,000,000. There were 496 retail stores with sales of \$30,172,500 and 210 service establishments, with gross receipts of \$2,360,500. The 496 retail merchandising establishments employed 3,042 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$3,704,700 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$4,734,200.

## VOCATIONAL EDUCATION IN ONTARIO

THE following information for the guidance of employers in Ontario was issued on June, 30, 1932, by the Provincial Apprenticeship Board. The members of this Board are Messrs. J. B. Carswell (chairman), Ernest Ingles, and F. S. Rutherford.

### Information for Employers

The Ontario Apprenticeship Act is the result of careful study and persistent effort on the part of interested individuals representing both employers and organized labour in the construction industry, for the past ten years. At present it applies only to the building trades. Its purpose is to provide adequate training facilities for apprentices in order that they may become competent mechanics. This will benefit both employers and organized labour, and be of even greater benefit to the general public at large.

The Act is administered by the Minister of Labour, through the Provincial Apprenticeship Board, consisting of three members, and the staff of the Apprenticeship Branch under the direction of the Chief Inspector of Apprenticeship. Regulations governing the training of apprentices are made by order in council, on the recommendation of the Provincial Board after consultation with both employers and employees in the trades affected.

**Classes.**—After careful study it was deemed advisable to establish day classes for apprentices during the first and second years of apprenticeship. These classes are held during January and February, which are quiet months in the building trades. In order that the best training possible may be given, classes are organized in the larger centres with a sufficient number in each class to warrant engaging a competent instructor. The schools and supplies are provided by the local and provincial education authorities, who also pay the salaries of the instructors. During the third and fourth years, apprentices are required to attend evening classes wherever possible, and it is planned to provide correspondence courses for apprentices in the smaller municipalities.

**Assessment.**—While attending day classes the apprentices are taken off their employers' payrolls and paid \$10 per week as a maintenance allowance. The railway fares of the boys from outside points are also paid. All employers in the trades are required to contribute towards this expense through assessment.

Ninety-eight per cent of the first assessment issued in 1930 has been paid, which amounts to \$41,350. There are 127 assessments out-

standing amounting to \$840. Twenty-eight hundred assessments were issued for 1931, amounting to \$33,000.

The rate of assessment has been set at  $\frac{1}{2}$  of 1 per cent of the payroll for the preceding year and it is expected that this rate will be sufficient for all future expenses.

**Apprentices.**—During the 1931 term 314 boys attended day classes, 138 of whom came from outside places where classes could not be established, while 57 of these came from towns where no technical training of any kind could be had. Two hundred and sixty-three (263) attended 1932 classes, 109 coming from outside points, 23 of whom came from places without a technical school of any kind.

There are 957 active apprentices at present—99 in Bricklaying, 10 in Masonry, 101 in Carpentry, 37 in Painting, 58 in Plastering, 309 in Plumbing, 87 in Steamfitting, 113 in Sheet Metal Work, 143 in Electric Wiring. Three hundred and fourteen (314) of these attended day classes for eight weeks during the 1931 term of school and the average cost to the employer was \$13. Two hundred and sixty-three attended during the 1932 term, and the average cost was \$12. An effort is made to give the apprentice instruction in different branches and operations of the trades, which they do not get with the average employer.

The Provincial Apprenticeship Board extends a cordial invitation to all employers to visit these classes, and the inspectors will be glad to arrange for such visits, so that employers can see for themselves exactly how the boys are being trained. Additional information regarding the operation of the Act will be gladly furnished, on request, by The Chief Inspector of Apprenticeship, East Block, Parliament Buildings, Toronto 5, Ontario.

### Registrations and Attendance

The following additional figures showing registrations and school attendance as on July 13, 1932, have been supplied by Mr. A. W. Crawford, Deputy Minister of Labour and Chief Inspector of Apprenticeship for Ontario.

Registrations to date are as follows:—

Trade	Registered	Cancelled	Completed	Active
Bricklaying.....	193	15	86	92
Masonry.....	12	2	.....	10
Carpentry.....	191	10	86	95
Painting and Dec.	76	7	33	36
Plastering.....	116	8	53	55
Plumbing.....	496	51	144	301
Steamfitting.....	143	19	39	85
Sheet Metal.....	163	14	42	107
Electrical work..	247	30	81	136
	1,637	156	564	917

School attendances were as follows:—

Year	Hamilton	Ottawa	Toronto	Windsor	Total
1930-31.....	126	40	138	10	314
1931-32.....	99	23	141	.....	263

### Information for Apprentices

The Board has also published, in leaflet form, the following information for apprentices:

Under the Ontario Apprenticeship Act every boy entering any of the designated trades should receive sufficient instruction and practice to make a finished mechanic. In order that this may be accomplished the apprentice must be prepared to observe the following conditions:

Regularity and punctuality on the job are essential at all times and the apprentice is required to co-operate with the District Inspector of Apprenticeship, and to make every effort to fulfil his obligation to his employer and to those endeavouring to teach him his trade.

Regulations provide that an apprentice shall attend technical school day classes for a period of eight weeks in each of the first and second years of his apprenticeship. A complete course of instruction has been prepared by the Apprenticeship Board, and the apprentice is required to pass the necessary examinations at the end of each term. A living allowance of \$10 per week is paid each apprentice while in attendance at day classes. Deductions from this amount will be made for lost time. If absent from classes the apprentice is required to report at once to the school, giving reason for absence. The Board may consider non-attendance at day classes sufficient reason for withholding a diploma.

During the third and fourth years the apprentice is required to attend evening classes. Where such classes are not available, correspondence courses will be substituted. Failure to attend evening classes, or to complete a correspondence course, may be considered sufficient reason to delay promotion and increases of pay. Upon entering a technical school the apprentice should remember that he is there for instruction and should conduct himself accordingly, making the very best use of his time. The principal is responsible and has the power to suspend any person for not observing the rules of the school.

Failure by an apprentice to observe the apprenticeship regulations may result in cancellation of his contract. These conditions of

apprenticeship are submitted for your instruction and guidance, and they should receive your careful consideration and attention.

Any apprentice who conscientiously applies himself to work and study during the period of apprenticeship will have no difficulty in mastering his trade. The opportunities for thoroughly trained mechanics in the building trades are unlimited and your future depends on the extent to which you take advantage of the training and instruction provided during the period of your contract.

Mr. J. Clark Reilly, manager of the Canadian Construction Association, addressed the Rotary Club of Ottawa on July 18, on "Craftsmanship, a Need in Modern Industry," showing the urgent need that exists for providing useful training for boys who have passed through the public schools, and pointing out that under the Ontario Apprenticeship Act provision is made for turning out skilled workmen for the construction industry.

Average earnings per hour in the cotton-goods manufacturing industry in the United States in the early part of 1932 amounted to 26.6 cents as against 32.5 cents in 1930, a decrease of approximately 6 cents. Average full-time hours per week in 1932 were the same as in 1930, namely, 53.4. Further details, by occupation, sex, etc., are contained in a summary of a recent study by the Bureau of Labour Statistics, published in the *Monthly Labour Review* for July.

The Metropolitan Life Insurance Company has in course of publication a series of bulletins presenting a summary of the evidence taken by the British Royal Commission on Unemployment Insurance (The "Gregory Commission"). An Interim Report by this Commission was outlined in the *LABOUR GAZETTE*, July, 1931, page 781; the final report of their findings has not yet been published. The present bulletin forms a portion of a systematic study of social insurance that is being undertaken by the Research Department of the Metropolitan Company, the subjects of inquiry including unemployment, sickness and invalidity insurance, and old age pensions. A special commission was sent to Europe last year by the Company to investigate existing systems of social insurance. In regard to the English system of unemployment insurance the investigators found that the field was covered by the minutes of the evidence heard by the Gregory Commission, and accordingly this evidence is being summarized in the present series. The first bulletin deals with the economic and historical background of unemployment insurance in England.

## WORKMEN'S COMPENSATION IN BRITISH COLUMBIA AND ALBERTA IN 1931

### British Columbia

THE fifteenth annual report of the Workmen's Compensation Board of British Columbia reviews the administration of the Act during the calendar year 1931. Industrial conditions are reflected in the operation of the Act during the year, the report indicating that there were approximately 150,000 workers protected under the statute in 1931 as compared with 175,000 in 1930. While the figures for 1931 were not complete, it is estimated that the payroll for that year of the industries under the Act would total close to \$150,000,000. For the purpose of levying assessments the payrolls of all employers are checked each year. These totals for the past 10 years are as follows, 1930—\$176,845,469; 1929—\$189,839,024; 1928—\$183,576,470; 1927—\$175,315,992; 1926—\$172,862,307; 1925—\$164,216,219; 1924—\$155,410,227; 1923—\$153,548,944; 1922—\$130,592,502; 1921—\$129,518,375.

According to the report, firms employing labour in industries under the Act showed a 4½ per cent decrease in number at the end of 1931 as compared with December 31, 1930. At the end of each year for the past nine years the figures were as follows: 6,524 in 1923; 6,838 in 1924; 7,197 in 1925; 7,613 in 1926; 8,243 in 1927; 8,688 in 1928; 8,888 in 1929; 8,958 in 1930; and 8,565 on December 31, 1931. New employing firms to the number of 992 commenced operations last year; 178 other firms resumed operation in 1931. Optional protection was applied for and extended to 158 employers who desired to protect their workmen, but who were not required to do so by the Act. After deducting the number of employers who ceased to employ labour the net loss in operating firms for the year was 393.

**Numbers Benefiting.**—Summarizing the operations of the Act during the past fifteen years the report states that within that period 378,252 accident claims have been filed under the Act, or an average of 25,217 for each year. During those fifteen years 3,326 met death as a result of accidents at work; 8,990 others suffered injuries which left them either totally or partially disabled for work for life. Arising out of those fatal accidents there were at the end of 1931 on the pension-list 818 widows; 1,074 children; 128 dependent mothers; 44 dependent fathers; and 47 other dependants. One thousand nine hundred and two totally or partially disabled workers were in receipt of monthly allowances for what permanent impairment they sustained. In all, 4,013 people

were at the end of 1931 receiving regular monthly cheques in respect of fatal and permanently disabling accidents. About 1,900 other workers are at any given time off duty on time-loss compensation with injuries from which they recover entirely. It will be seen from these figures that those in receipt of benefits under the Act, together with those dependent upon them, numbered close to 15,000 at the end of last year. Those protected under the statute rely on its benefits to tide them over periods of disability caused through accidents at work. The records show that only 462 workers of the 25,877 injured in 1931 were carrying any other type of accident insurance. Over 98 per cent depended on the statute to provide them and their dependants with sustenance while disabled.

**Claims.**—The statistics regarding industries within the scope of the Act show another marked reduction in both fatal and non-fatal accidents, there being a decrease of 7,408 as compared with 1930. During the past five years the accident figures have been as follows: 30,066 in 1927; 32,793 in 1928; 36,750 in 1929; 33,285 in 1930; and 25,877 in 1931. Fatal accidents showed a marked decrease. For the past five years fatalities reported were as follows: 219 in 1927; 251 in 1928; 253 in 1929; 277 in 1930; and 125 in 1931. Non-fatal accidents numbered as follows: 29,847 in 1927; 32,542 in 1928; 36,497 in 1929; 33,008 in 1930; and 25,752 in 1931. Trifling accidents to the number of about 2,500 occurred, in which no claims were made by the workmen. First-aid treatment only was given in those cases, and the time-loss did not extend to more than three working days. Time-loss accidents were distributed amongst the industries as follows: Lumber industry, 30 per cent; construction, 11 per cent; general manufacturing, 11 per cent; the railroading groups, 10 per cent; coal-mining, 5 per cent; navigation and stevedoring, 5 per cent; metal mining, 4 per cent; and all other classes, 24 per cent. Of the fatal accidents, 42 per cent were in the lumber industry; 18 per cent in the railroading groups; 9 per cent in the metal mining; 5 per cent in navigation and stevedoring, 4 per cent in coal mining; 4 per cent in construction; and 3 per cent in general manufacturing. Of the workmen filing claims, over 70 per cent gave their nationality as British or Canadian and 54 per cent were married. One hundred and sixty-nine of the claims made were from injured women.

The total wage loss due to accidents in 1931 was \$2,070,135.32, the average daily wage being \$4.41, and the average cost per accident being \$95.62. The average length of disability was 44.96 days and the average age of workmen injured was 36 years.

*Accident Prevention and First Aid.*—"Most employers in recent times," the report states, "have accepted the responsibility for safety in industry. There are still to be found a substantial number, however, who cling to the fatalistic philosophy that 'accidents will happen' and that little or nothing can be done about it through organized safety campaigns and safety inspection. They resent the intrusion of outside interference with their organization and methods of doing their work. Statistical information regarding accidents for a period of fifteen years, in the various industries of the province, shows clearly that where accident-prevention has been given a fair trial the results have been uniformly good. Safety appliances in pulp plants, saw-mills, and shingle-mills have practically eliminated certain types of disabling hand injuries which were common before accident-prevention regulations were enforced. In those industries in which guards and other safety devices cannot be used to any great extent, safety work must be largely devoted to creating 'safety-thinking' amongst the workmen and the management of those firms engaged in those industries. In the woods, where workmen are to a greater extent on their own than are men in many other occupations, much depends on the general attitude of the management towards the whole safety problem. In those camps in which the employers and management become convinced that accidents are preventable, and in turn make it known that unsafe methods of work will not be tolerated, the accident records of those operators soon reflect the fact that they take their safety work seriously.

"Some firms have for years consistently kept their accident frequency and resulting accident cost much lower than the average for woods operations throughout the province. Some other operators who have introduced high-speed methods of logging, with insufficient regard to the safety of those concerned have had a disastrous and costly accident record. During the past ten years the total number of accidents sustained, as well as the number of permanently disabling and fatal accidents, have risen faster than the gross aggregate number of hours all workmen were employed in the woods. During the past fourteen years 730 workmen lost their lives at logging, 1,877 were left partially or totally disabled for life, and over 37,000 sustained

injuries which caused them temporary total disability for work. There are in the province a substantial number of workmen who have sustained fractured skulls in the woods, which either caused them to be put away in mental hospitals or rendered them incapable of returning to their former occupation or work requiring them to go up on scaffolds or do full manual labour. Many of them will have to be maintained, in part at least, for life."

It is pointed out that employers are required to provide, at their own expense, first aid equipment and service, the extent of such service depending on the number of workmen employed and proximity to the nearest hospital and doctor.

*Assessment Rates.*—The report reviews its method of establishing the assessment rates on the various industries under the Act in order to maintain the accident fund, out of which compensation and administration expenses are paid. For the purpose of assessment, all industries are divided into sixteen classes, and in fixing the rates of each class the past accident experience, covering a number of years in such class, is the determining factor. "Unless the nature of an employment changes from a relatively safe one to a comparatively hazardous one, or *vice versa*, the actual accident experience over a number of years fixes the rate of assessments in each sub-class. The records show that logging has steadily grown more hazardous, with a greater accident frequency and severity of injuries sustained. Each year during the past six years cognizance has been taken of this trend when estimates were made of the probable requirements of the class. Rates for all logging operations have had to be increased. These increases, substantial as they were, proved insufficient to take care of the mounting accident cost. The result is that the logging sub-classes caused losses to Class 1, with which they are grouped, and in turn to the Accident Fund.

"The accident cost in logging would have been much greater were it not for the fact that single men were largely employed in this industry. Of the thirty-four fatal accidents in logging in 1931, only seven were to married men. The cost to the class fund in respect of a fatal accident to an unmarried logger is for funeral expenses only, \$100, unless he was maintaining his mother or other dependant, or received medical attention for his injuries. The cost to the fund for the death of a married logger with a dependent family runs into substantial amounts, varying with the age of the widow and the number and ages of the children left fatherless."

"The compensation payable to widows, children, and other dependants, and for medical

attention, hospital care, and funerals, is the same under the Act whether the deceased workmen were earning \$3 per day or \$6 per day. Assessments, however, are based on the percentage of the actual pay-roll, and when wages fall to one-half, the portion of the assessment rate required to pay these benefits must necessarily be doubled. Time-loss com-

pensation, on the other hand, being based on actual wages, falls when wages fall, and consequently does not affect the rate of assessment. Only about one-half of all compensation payable under the Act, however, goes down when wages go down. The result is that if wages fall to one-half, assessment rates must necessarily rise accordingly."

## Alberta

The fourteenth annual report of the Alberta Workmen's Compensation Board, covering the administration of the Act during the calendar year 1931, indicates that the total number of accidents reported during that period was 10,049, of which 33 were fatal, as compared with 12,607 accidents and 49 fatalities in 1930. For all industries within the scope of the Act, the payroll in 1931 was \$77,010,626.41 and the estimated number of employees was 69,863.

The amount of assessment collected from employers during the year was \$738,889.58, as compared with \$1,139,586.97 for 1930. Since the Act came into effect in 1918, the Board has collected from the industries of Alberta the sum of \$10,218,468.08. The largest collection of assessment from employers was in 1929 when the total for that year amounted to \$1,345,403.51. In spite of depressing conditions, it is stated that collections during the year were satisfactory, and although \$20,630.35 remained unpaid at the end of the year, a large part of this sum is considered collectable.

Since the year 1918, 119,867 accidents have been reported to the Board, 764 proving fatal, and leaving 1,116 dependants—362 widows and 754 children.

Of the total of 10,049 accidents in 1931, besides the 33 fatalities mentioned above, 123 resulted in some permanent disability while 9,893 involved temporary disability. The mining industry was again responsible for the greatest number of accidents, there being 2,451 during the year. The building group was second with 1,256 while class 37 (warehouse, cartage, elevators, power laundries, etc.) was third with 983 accidents. The most frequent cause of accidents was that designated as "flying and falling objects", followed by "machinery, tools and equipment" and "falling and tripping". The time loss caused by permanent disability cases totalled 37,735 days, and by temporary disability cases 118,543 days. The number of accidents to minors (20 years and under) was 594; and to those of advanced age (60 years and over) was 200. The average age of all workmen meeting with accidents was 34.58 years.

The ratio of assessment levied on the employers in each industry under the Act per \$100 of payroll is given in the report. Among the industries with the higher rates of assessment are the following: Logging and saw-mills, \$7; fishing and steel construction (buildings and bridges) each \$6; sewer construction (with blasting) \$4.50; road making (with blasting) \$4.25; building construction (over four stories) \$4; coal mines, \$3.75. There is also given the medical aid rating under the various schedules, based on each shift or part thereof. In this respect, logging, saw-mills, and roadmaking have the highest medical aid rating with 5 cents each per shift. Under the Alberta Act employers are authorized to deduct a sum as determined by the Board from the earnings of each workman in their employ for every day or part of a day worked. These deductions are forwarded to the Board at stated periods during the year, and credited to the Medical Aid Fund, out of which payments are made for medical service and hospital attention to workmen who have met with accidents in the course of their employment. The contributions for medical aid during the year totalled \$203,001.27, while payments for medical aid services amounted to \$234,940.51, leaving a deficit in the year's operation of \$31,939.24, with the result, the report states, that an increased levy for the year 1932 becomes necessary in some of the more hazardous industries.

*Finance.*—The total revenue for the year 1931 on account of Accident Fund was \$800,395.94, as against an expenditure of \$939,027.50, or an expenditure in excess of revenue of \$138,631.56. The total amount collected and credited to the Accident Fund since 1918 amounts to \$10,218,468.08. Of that amount, \$4,338,560.58 has been paid in compensation, \$4,307,567.75 has been placed in the Pension Fund to provide the statutory pensions for workmen suffering various degrees of permanent disability, and for dependants of workmen where the accident resulted fatally.

The Board has also established a Disaster Fund to meet the loss occasioned by disaster, the cost of which, in the Board's opinion,

would be unfair to place upon the employers in any particular class. This Fund with the accumulated interest now amounts to \$286,510.25.

The cost of administration for the year past was \$121,760.10, which includes the cost of maintaining the Mine Rescue Cars and Stations, and the operation of The Electrical Protection Act.

The statistics relating to the claims made during 1931 are summarized as follows:

Number of employers within the scope of the Act as at December 31, 1931.	3,795
Number of accidents reported during the year 1931. . . . .	10,049
Number of accidents and claims not finally disposed of as at December 31, 1930. . . . .	1,420
Number of claims disposed of by award of pension or payment of compensation. . . . .	4,878
Number of claims disposed by payment only of account for medical aid. . . . .	3,065
Number of accidents disposed of for which no application for compensation was received. . . . .	107
Number of accidents disposed of on which no compensation was due. . . . .	2,090
Number of claims on which further payments have to be made. . . . .	591
Number of accidents awaiting further reports and on which no payments have been made. . . . .	738

*Rehabilitation.*—"One of the problems which frequently confronts the Board," it is stated, "is that in connection with the rehabilitation of permanently, partially disabled workmen. For instance, a miner, who for years has followed work in the mines, meets with a leg injury and is physically unable to return to his former occupation. The workman's disability may be such that his earning capacity is 30 per cent impaired and his pension award must necessarily be supplemented by earnings at work he can perform. A creditable number of employers make a practice of finding places for their crippled workmen, and if a sufficiently large number of employers followed this practice, the rehabilitation problem would be much less acute. Only a limited number of workmen can be re-trained for the lighter tasks suited to their particular needs. Rehabilitation is accomplished in a number of cases by the commutation of pension payments to lump sums, and at the request of the workman, the purchase and equipment of a farm for him. Other injured workmen have their pensions commuted and re-establish themselves in small businesses. For those partially disabled workmen, who, for various reasons, must be absorbed again in industry, the co-

operation of individual employers is necessary."

In accordance with the provisions of Privy Council Order No. 645, the Board is refunded the full cost of accidents to workmen who are in receipt of a war pension of 25 per cent or greater on account of disabilities due to or aggravated by service in the Great War. Through the provisions of this Privy Council Order, an employer may give employment to a disabled ex-service man without the risk of added cost on account of his war disability.

Under Section 38A of the Act, where an accident happens to a workman whereby he is entitled to an action against a person other than his employer, and he claims compensation from the Board, the Board is entitled to the rights of the workman or his dependants to recover from such other person any amount paid as a result of his injury. Under this Section \$805.68 was recovered during the year.

*Accident Prevention, Mine Rescue and First Aid.*—The report of the Mine Rescue and First Aid Department reviews the operations under its control during 1931. Activities of mine rescue cars in the various districts are reviewed as well as the work of the mine rescue stations in promoting first aid and safety training. The section on accident prevention deals with the checking and analyzing of accidents and the reports received monthly from 215 accident prevention committees, and the drafting of safety regulations.

The Board continued to give first aid training during the past year. Three hundred and thirty-five first aid certificates were issued by the St. John Ambulance Association to workmen who attended classes held under the auspices of the Board and who qualified in first aid work. A total of three thousand, five hundred and thirty certificates have been issued to workmen employed in industries throughout the province, and these workmen are rendering valuable service to those injured during the course of their employment.

Included also is the report of the chief electrical inspector who reviews the operations of his department under the Electrical Protection Act. Since the Act became effective in 1920, a standard type of construction was adopted for the province, and regulations have been put into effect, revised and amended from time to time in order to keep pace with the rapid development of the industry. A list is presented of the cities, towns, and villages where wiring inspections have been made.

## PROGRESS OF THE GARDEN ALLOTMENT MOVEMENT IN CANADA

SOME progress has been made recently in Canada, as in the United States and various European countries, in providing garden allotments as a means of lessening the distress resulting from unemployment or of adding to the resources of workers. On this continent the movement is maintained through spontaneous local effort, but in Europe it is fostered by a special organization—the International Allotments Office, founded in Luxembourg in 1927, and representing some two and a half millions of workers who belong to allotment societies in fourteen countries—and the International Labour Office at Geneva is now engaged in an enquiry into the progress that has so far been made. The policy of garden allotments was widely followed in various countries during the world war.

The following notes as to the movement in Canada are based on information supplied by the various provinces.

### Nova Scotia

There is no garden allotment scheme in operation in Nova Scotia, the only assisted plan being that relating to miners' land settlement, which was provided for in legislation enacted this year, as outlined on page 866 of this issue. In this case the allotments are of farm lands and not of garden lots.

### New Brunswick

Although it was reported that no allotment schemes were conducted by public authorities in New Brunswick, the experiment was tried in Fredericton under the auspices of the Rotary Club. Approximately fifty allotments, operated by unemployed heads of families, are being cultivated.

### Quebec

In the last issue of the *LABOUR GAZETTE*, page 741, reference was made to an address by Dr. Frank G. Pedley, director of the Industrial Clinic of the Montreal General Hospital, and executive director of the Montreal Council of Social Agencies, on the subject of "The Role of Private Charity in Meeting Distress due to Unemployment." In the course of this address, Dr. Pedley stated that a project was under way in Montreal to secure land for gardening purposes, and that a considerable number of married men had applied for allotments and it was hoped in this way to occupy the time of the men during the summer months and at the same time secure for their families a supply of fresh vegetables.

### Ontario

Reports have been received from representatives of the provincial Department of Labour in 24 municipalities in Ontario on the subject of garden allotments in the district. The reports indicate that in 21 of these municipalities garden allotment schemes are in operation with provision for probably 7,500 to 8,500 men cultivating garden plots. In 3 of the centres reporting, no allotment plan has been inaugurated. In no case has any special organization been set up to direct the scheme. Usually the civic relief officials, co-operating with voluntary welfare organizations and patriotic or service clubs, have made the necessary provisions and taken care of arrangements, or the complete responsibility has been undertaken by voluntary organizations. In addition there are in some centres the industrial plans undertaken by firms, primarily for the benefit of their own employees, whether unemployed temporarily, on short time or fully employed. In some instances the land thus put under cultivation is city property only. One city commandeered all vacant lots for this purpose and another has planted a large acreage which is being cultivated by rationed men in return for their meal tickets. In the majority of centres, however, the use of private property has been granted by the owners for the benefit of unemployed men or men on part time, in addition to the civic property; and in connection with the use of the privately-owned property, one report only mentions insecurity of tenure as a drawback in such a plan. In connection with industrial schemes, the land is owned by the companies concerned, one of which has donated to the city the use of a large tract of land for the benefit of the public at large and not for its own employees only.

The general idea in connection with garden allotments this year has been to provide for the unemployed, or rather to help them to provide for themselves, but the provision has been enlarged in many cases to include men on short time and fully employed men if any plots have been available after the first distribution. A certain amount of compulsion is exercised by some civic authorities in insisting that heads of families receiving direct relief should make this effort if possible to help themselves and their dependants and in one centre the relief granted a man may be in accordance with the success he has made of his garden plots. Many plans have been followed as regards the amount of assistance given in connection with the gardens, varying from the

staking off of the plots only, to the complete care until the garden is planted and then it is handed over to the men for their care and cultivation. Usually seed potatoes are provided free of charge, if need be, and frequently all seeds and sometimes the use of garden tools.

As to results, the consensus of opinion of municipal authorities and interested citizens appears to be that the scheme is a success if the allotment holders are thoroughly interested in the work and are given the necessary assistance and support, but unless their full co-operation is gained the results are apt to be mediocre. Several report plots "80 per cent excellent; 10 per cent fair and 10 per cent poor." Many civic relief officers feel that the amount of produce raised on these plots should reduce considerably the relief requirements of the families during the autumn and winter, and in some cases the plot-holders will be permitted to sell or trade their produce in order to provide themselves with other necessities.

#### Manitoba

The plan being followed in urban municipalities in Manitoba is to allot vacant city lots to citizens who are unemployed and who will undertake the gardening of them. In some cases the lots are owned by the city itself, in which case no special arrangements are needed except to give the man who wishes to use the plot a permit. In other cases plots of land are obtained from private owners and allocated to those desiring to use them. Because of the very critical unemployment situation this year it has been made a condition that every married man on unemployment relief must cultivate a garden, and in order that he may do this, free issue of seeds has been made to each applicant.

#### Saskatchewan

In the Province of Saskatchewan no legislation appears on the statute books providing for the organization and incorporation or operation of allotment societies nor does the government make any contribution from its public funds towards the promotion of such societies, or for direct assistance to individuals who may undertake allotment gardening, poultry and bee keeping, etc. In the largest cities of the province, however, considerable garden-

ing is carried on by wage-earners as a form of recreation as well as a means of supplementing the workers' income.

During the present period of depression the municipal governments have encouraged workers to undertake gardening and have rendered assistance to the extent of providing lands suitable for cultivation free of cost to the workers and in some instances have also provided the original cultivation such as ploughing and harrowing, and also a supply of seeds to permit planting.

#### Alberta

No specific organization of allotment associations has been organized in Alberta, land being readily available for gardens for workers. During the past 20 years there has been activity in urban centres in providing additional garden space for workers, the lots usually being made available by the civic authorities. During the last two years, in particular, the various cities have made land for gardening available to unemployed persons in receipt of relief. It is stated that in the cities of Calgary and Edmonton this year approximately 2,000 unemployed persons are cultivating a vacant lot under this scheme, while in Lethbridge and Medicine Hat from one to two hundred are operating similarly. Additional to this, the cities of Calgary and Edmonton are cultivating two or three large plots of land, supplying the seed, and having the actual work done by men in receipt of relief. The vegetables grown upon this land will, when harvested, be the property of the city and will be used for relief purposes during the coming winter, the thought at the moment being that the vegetables taken from these large plots of land can be used in the community kitchen for the feeding of some of the men.

#### British Columbia

There is no such official scheme in operation in British Columbia. However, the Consolidated Mining and Smelting Company, of Trail, have sponsored a program of garden allotments. The company has made available a tract of land at Tadanac, adjacent to the smelter, and supplies fertilizer and seed, while the workmen provide the necessary labour.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### General Safety Rules in Nova Scotia

The Nova Scotia Accident Prevention Association recently published, in pamphlet form, a series of "General Safety Rules and Standards," which have been approved by the provincial Workmen's Compensation Board. The "Foreword" to the code is as follows:—

"The assessment rates on the various industries coming under the scope of the Workmen's Compensation Act depend almost wholly on the number and severity of the accidents occurring in these industries. It is obvious, therefore, that if accidents can be prevented the assessment rates can be reduced. About ten years ago the Nova Scotia Accident Prevention Association distributed Safety Codes and Regulations to the industries throughout Nova Scotia with the object of interesting the employers in safety work, and assisting them in detecting and eliminating accident hazards. No doubt many of these Codes have since become lost or mislaid and we are therefore, making another distribution. In view of the different conditions obtaining in the various industries in the Province, it is impossible to draft regulations which will adequately cover all, but the accompanying Code will provide a convenient and reliable guide for the employers who are desirous of establishing and maintaining safe working conditions and practices within their plants. We trust that full use will be made of this Code."

It is pointed out that section 83, subsection 1 of the Nova Scotia Workmen's Compensation Act provides for the formation of Associations by the employers under the Act, and gives them powers to make and enforce Rules and Regulations for the prevention of accidents.

The Rules and Standards are classified as follows: Power transmission safeguards; Standard railings and toe boards; Plan equipment; Standards; Elevators; Machine tools; Compressed air apparatus; Safeguards for polishing and grinding machinery; Forging and stamping; Woodworking machinery; Foundry safeguards; and Suggested rules for safe operation of elevators.

### Safety Organization in Factories

The Home Office (England and Wales) recently issued in its Safety Series a pamphlet (No. 14) on Safety Organization in Factories. Statutory regulations, it is pointed out, have had fairly good results in safeguarding the lives and the health of workers, but the accident death rate still continues high. "It

has now come to be generally recognized that the problem of accident prevention can never be solved merely by an extension of the statutory regulations, but that adequate safety organization within the industry and within the individual factory, in which both employer and worker must take their part, is necessary to secure any substantial reduction in the annual total."

Reference is made to the resolution adopted in 1928 by the International Labour Conference (LABOUR GAZETTE, July, 1928, page 757), which declared as follows:—

The Conference is of opinion that the time has come to attempt to reach a higher standard of safety by the development of new methods and believes that the greatest advance can be made on the lines of the movement which has received the name of the "Safety First" movement, and which implies in its application to industry (i) the recognition of accident prevention as an essential part of the organization of the works; (ii) common interest and endeavour on the part of employers and workers in the individual works in seeking to promote a higher standard of safety.

The purpose of the present pamphlet is to supply information as to the essential features of a safety organization such as is recommended by the Geneva Resolution, and the nature of its functions. The important features of a Safety Organization are declared to be as follows: (1) An efficient organization must start at the top. The employer must, himself, be a believer in safety work, and must give "safety" a recognized place in the factory organization; (2) The interest of the foremen must be secured. Experience shows that the attitude of the foreman towards "safety" has an important bearing on the attitude of the men under him; (3) Equally, the interest of the workers must be secured. To achieve this, they should take a direct part in the work of the organization.

A safety organization should consist of (1) A safety committee, (2) a Safety Officer and (3) a Bulletin and propaganda service. The primary duty of the safety committee should be to stimulate the interest of all workers in the prevention of accidents by "Safety First" and other methods. The committee should further inquire into the circumstances of all accidents occurring in the factory. Accident prevention work must be based on accurate knowledge of all accidents which occur. Arrangements should therefore be made for a complete record to be kept of all injuries to workers, however slight such injuries may be. It is also extremely useful to have records kept of all accidents to plant, etc., which might

have resulted in personal injuries. A careful analysis of these records and a proper study of them will indicate the location and causes of the various accident risks.

The incidence of industrial accidents is affected by other factors such as atmospheric conditions and lighting, and by personal conditions, such as "accident proneness," age and experience.

### **Occupational Diseases in Great Britain**

The annual report of the Senior Medical Inspector of Factories in Great Britain for 1931 contains important details of occupational diseases occurring during the year.

Much information is given in regard to asbestosis and silicosis. A number of enquiries

into conditions in factories were made, especially in regard to the health of packers in the asbestos industry.

During the year 785 deaths from fibrosis of the lungs were registered; of these 319 were deaths from silicosis, as compared with 241 in 1930. The industries chiefly affected were those of sandstone (69 cases), pottery (57), coal-mining (47) and grinding (36). In addition, nine deaths from asbestosis were brought to the notice of the Department; in all, full particulars were available of 35 deaths from asbestosis, or asbestosis with tuberculosis.

The report also refers, among other things, to nervous disabilities due to monotony of mechanical work, and the fatigue resulting from the performance of domestic duties by women workers.

## **RECENT LABOUR UNION CONVENTIONS**

### **Eleventh District of the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada**

The eighteenth annual convention of the Eleventh District of the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada (comprising the Maritime Provinces and Quebec and Ontario) was held at Columbus, Ohio, June 3-4, 1932, with second vice-president W. P. Covert presiding. The delegates present represented eighteen of the twenty-four local unions in the District.

Chairman Covert gave a review of conditions in the larger centres of the jurisdiction. He urged the delegates to take back to their locals the message that they must do everything in their power to maintain high standards, using discretion, however, so as to avoid adding to unemployment among their members.

According to the financial report, total receipts, including balance on hand June 1, 1931, amounted to \$1,112.46, and disbursements totalled \$780, leaving a balance on hand of \$332.46. The total membership in District 11 was 820, while the total Canadian membership of the union numbered 1,211.

Among the resolutions adopted were the following:—

Asking that projectionists in Ontario be granted the same protection from an excess of apprentices as applies to the building and other trades in the Province;

Urging the Quebec Government to enact legislation that (a) in each projection room two licensed projectionists be employed during the whole of the performance; (b) the examination of applicant projectionists be made more exacting as to theory and practice of projection machines and their connection;

Recommending that before any reductions in wages are made, the theatre managers be notified that they will have to take up the question with the international office in New York;

Endorsing W. P. Covert as Canadian representative on the executive board of the International Union.

Mr. P. J. Ryan, Montreal, Que., was re-elected by acclamation as District secretary-treasurer.

Kitchener, Ont., was selected as the convention city for 1933.

### **American Federation of Musicians**

With approximately 240 delegates in attendance, the thirty-seventh annual convention of the American Federation of Musicians was held at Los Angeles, Calif., June 13-18, President Joseph N. Weber presiding.

According to the report of the treasurer, total receipts, including balance brought for-

ward, amounted to \$2,119,929.24, expenditures totalled \$870,357.75, leaving a balance on hand of \$1,249,571.49.

Resolutions were adopted as follows:—

Endorsing the five billion dollar bond issue by the United States Government for the relief of the unemployed;

Asking members of the Federation to co-operate in the promotion of sales of United States and Canada-made products in order to increase employment;

Recommending that no assistant of the president shall be a member of the executive council;

Protesting against the action of the United States Government in dispensing with the services of musicians at the various national homes, and asking Congress to have these bands restored to their former status;

Requesting the members to withhold their support from such Congressmen as have shown themselves unfriendly to organized labour by voting against the modification of the 18th amendment (prohibition);

Protesting against any move to reduce the number or strength of bands of the regular army or navy;

Recommending the separation of regimental bands from service companies, batteries or troops;

Instructing the local unions to cut down to the minimum the names of theatres, resorts and individuals on the unfair list;

Authorizing the levying of a two per cent tax on travelling bands and dance orchestras;

Endorsing the Band Leaders' Bill, which has for its object the commissioning of regular army and National Guard band leaders.

In the election all the chief officers were re-elected: President, Joseph N. Weber, 1440 Broadway, New York, N.Y.; Vice-President, Charles L. Bagley, 403 California Bldg., Los Angeles, Calif.; Secretary, William J. Kerngood, 37-39 William St., Newark, N.J.; Treasurer, H. E. Brenton, Box B, Astor Station, Boston, Mass. E. W. Jarrott was also re-elected as member of the executive board for Canada.

Chicago, Ill., was selected as convention city for 1933.

## NOTES ON INDUSTRIAL RELATIONS

### Employees' Stock Purchase Plan of Imperial Oil Limited

Announcement has recently been made of the coming into effect on July 1, 1932, of the Fourth Co-operative Investment Trust of Imperial Oil Limited. In previous issues of the *LABOUR GAZETTE* the various industrial relations plans and employees benefit schemes of the company have been reviewed. The principle underlying these co-operative investment trusts was first outlined in the issue for April, 1920, page 422. Since then, references have been made to the employee's stock-ownership policy of the company in the issues for July, 1922, page 649, and April, 1925, page 347. The industrial relations plan of Imperial Oil was outlined in the *LABOUR GAZETTE*, January, 1919, page 46, and March, 1921, page 508.

The purpose of the trust, which is to be in operation for a term of three years unless sooner terminated, is to enable employees of the company and those actively engaged in the conduct of its business to become stockholders therein on favourable terms, and to assist them in paying for their stock. The conditions of eligibility governing employees who have participated in previous trust funds of the company are detailed in the bulletin explaining the plan. The purposes of this trust are to be effectuated through the establishment and operation of a fund, to be constituted by joint deposits by the employees and the company and its qualified subsidiaries.

To such deposits shall be added whatever dividends are received from stocks held in the fund.

The chief features of the plan are given in the following paragraphs:—

Any eligible employee may become a participant in the fund by making deposits therein in the following manner:

He shall authorize the company, or the qualified subsidiary by which he is employed, to deduct from the amount due him as current compensation for services on each pay day, either monthly or otherwise, a sum not in excess of ten per cent thereof, or of such less percentage thereof applicable to all participants alike as shall be fixed by the board of directors as a maximum, and to pay the same over to the trustees to be placed in the fund to his credit; which deduction, payment over and credit on the trustee's books shall thereupon be made, provided however, that no employee shall be permitted to increase the amount of his deposits during the last six (6) months prior to the termination of this trust.

*The Company's Deposits.*—Concurrently with the making of any such deposit by or on behalf of an employee, the company or the subsidiary by which he is employed, shall, out of its own moneys, pay into the fund to the further credit of such employee a sum equal to fifty per cent of his deposits.

*Investment of Fund.*—So far as practicable, the trustees shall, from time to time, apply the moneys remaining in the fund to the purchase from the company of shares of its capital stock at prices to be fixed as herein-after provided. Such shares may be an original issue by the company, or a purchase by it of its outstanding shares.

*Price of Stock.*—The price at which the trustees may, from time to time, purchase stock from the company for the purposes of the fund shall be determined as follows: (a) In the case of stock originally issued by the company, the price shall be fixed by the Board of Directors of the company as of January 1 and July 1 in each year. Such price shall not be above nor more than ten per cent below the average market price of the stock for the previous three months. The price so fixed shall govern as to all such purchases during the succeeding six months. (b) As to stock which the company shall have purchased, the price shall be the cost to the company of such purchased shares, provided however, that the price thus payable by the

trustees shall not exceed the price currently applicable under the next preceding paragraph (a).

*Title to Stock Purchased.*—The stock so purchased shall be issued in the name of the trustees, who shall hold title to the same and shall possess all voting and other rights pertaining thereto. Said stocks shall be apportioned on the trustees' books to the participants in proportion to their deposits and entered in their respective accounts.

There are also definite rules governing failure of an employee to make deposits, withdrawals by participating employees, leaving of the company's service by participants, and death or retirement of employee participants.

The fund is to be administered by five trustees, to be appointed by the board of directors, which board shall at all times have power of removal and substitution. Three of such trustees may be officers or directors and two employees who are depositors in the trust but not officers or directors of Imperial Oil, Limited.

## Profit Sharing and Co-partnership in Great Britain

The British *Ministry of Labour Gazette*, June, 1932, contained an account of schemes of profit sharing and co-partnership that were in operation in 1931 in Great Britain. The information relates only to definite schemes under which employees participate in profits on some prearranged basis; it does not include arrangements for giving bonuses or gratuities at the discretion of the employer, without any specified basis, and schemes providing for bonuses which depend only on output, sales, etc., and not on profits. The total number of undertakings of all kinds known to have been practising profit-sharing at the end of 1931, in Great Britain and Northern Ireland, was 485. Eight firms had each two separate schemes in operation, so that the total number of schemes was 493. About 477,000 workpeople were employed in the businesses concerned, of whom about 233,000 participated, or were entitled to participate, in the benefits of the schemes.

The schemes described in the article are divided into (1) those in businesses other than co-operative societies, and (2) those in co-operative societies.

### Schemes in Non-Co-operative Societies

In this group profit-sharing has been tried in a wide variety of industries; in nearly every industry, however, the number of

schemes known to have been started is very small in comparison with the total number of firms engaged in the industry; and in all industries taken together about one-half of the schemes started have come to an end. The most conspicuous exception is the gas industry, in which a large proportion of the principal company-owned undertakings have introduced schemes; comparatively few of these schemes have been discontinued, and a number have been in operation for twenty years or longer.

The number of workpeople employed by the 316 firms with schemes in operation at the end of 1931 was approximately 441,000 of whom about 199,000 were eligible to participate in the benefits conferred by the schemes. In the previous year the number participating, or entitled to participate, in the schemes then in force was approximately 205,000, out of a total of about 467,000 persons employed.

The large proportion of employees of the firms concerned who did not come within the profit-sharing arrangements is in part due to the fact that participation in many schemes rests upon certain qualifications, such as the attainment of a certain age, or employment with the firm for a minimum number of years; but to a much greater extent it results from the fact that the figures given

include a considerable number of schemes which admit employees to participation in the profits only to the extent that they are able and willing to deposit savings with the firm, or to purchase shares in the undertaking. In many schemes profit-sharing is only available to those employees who are prepared to purchase shares in the undertakings or to deposit savings with the firm. In the case of the "share issue" schemes the employee is usually offered shares on terms more favourable than those open to the ordinary investor. The mere holding of shares by an employee is not in itself regarded, for the purpose of the Department's statistics, as an example of profit-sharing, since these shares may have been purchased in the open market, on the same terms as by the ordinary investor; and in that case the dividends on the shares have no element of special advantage to the employee, as such. But where specially favourable terms are accorded to the employee-investor the scheme is included in the statistics as being an example of profit-sharing, although of a rather special and limited kind. Similarly those schemes which give to employees who deposit money with the firm a guaranteed minimum rate of interest, together with a further dividend varying with profits, are treated as examples of profit-sharing, although not of the normal type. These two special types of arrangement account for 96 of the existing schemes, and for 36 of the defunct schemes.

Cash bonus schemes (including schemes where the bonus is placed to the credit of the employee in a savings account from which he may freely withdraw) represent about 40 per cent of the existing and about 65 per cent of the discontinued schemes. In contrast with these schemes are those under which the whole, or part, of the employee's bonus is not distributed in cash; bonuses retained in such schemes are either placed in a provident, superannuation, etc., fund or, more frequently, are invested on behalf of the employee in the capital of the undertaking.

Schemes which encourage employees to acquire shares or other capital in the undertakings with which they are connected, and

in this and in other ways to obtain some share in the control of the business, are frequently referred to under the description "co-partnership." Among the 324 schemes in operation there are 135 which provide for some form of shareholding by employees; while of the 325 defunct schemes, 63 provided such arrangements.

In the case of 251 schemes in operation in 1931 particulars are available as to the bonuses paid or credited to employees in that year. In these schemes the bonus may be regarded as that part of the dividends on the shares which represents the advantage given to employees over other shareholders; and this advantage is usually insusceptible of exact calculation.

There is another class of schemes—those which have been called "deposit" schemes—where the profit-sharing bonus can usually be stated, but is of a different character from that in other types of schemes; here the supplementary interest, over and above the fixed minimum rate, paid on sums left on deposit with the employing firms by employees, is regarded as the profit-sharing bonus.

#### Schemes in Co-operative Societies

At the end of 1931, 169 co-operative societies were known to the Department to have in operation definite profit-sharing systems. Many other societies are understood to pay to their employees additional remuneration in the form of bonuses on output, commission on sales, etc.; but such arrangements are not regarded as coming within the scope of the Department's statistics of profit-sharing, and are accordingly excluded.

Nearly 36,000 workpeople are employed by the societies mentioned above, and practically all of these workpeople participated or were entitled to participate, in the schemes. In other words, profit-sharing, when practised by co-operative societies, applies in nearly all cases to virtually the whole of the workers employed; whereas outside the co-operative movement, as explained above, many of the schemes apply to only part of the employees.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Reduction in Working Hours

The question whether and if so under what conditions, a reduction in hours of work would tend to ease the unemployment situation continues to occupy much attention in the world of industry. While employers and workers generally and in most countries take opposite views on the question, there are some signs—notably in Italy—that opinion in industrial circles, both among employers and workers, is being gradually focussed on the possibility of relieving the present situation by this method.

At the last session of the International Labour Conference a resolution was passed commending a reduction in hours of work and condemning a reduction in wages. By means of a shortening of hours, the resolution affirmed, production could be adjusted to consumption, available work could be distributed over a large number of persons, and the unemployed could be reabsorbed into employment. The International Labour Office, it was urged, should investigate the question of the establishment of a 40-hour week in all industrial countries by international agreement. This resolution which was submitted by representative of the workers was opposed by representatives of employers and of certain Governments, chiefly on the ground that a reduction in hours of work would increase the cost of production and so defeat its own object. It was adopted only by a small majority.

Since then, the controversy has proceeded vigorously, by speeches, resolutions and articles in the press. Reference is made in *Industrial and Labour Information*—the weekly publication of the International Labour Office—in its issue of July 18, to discussions in the Italian National Council of Corporations leading to the adoption of a resolution favourable to a forty-hour week, and also to a pronouncement by the head of the well-known F.I.A.T. automobile manufacturing works favourable to the reduction of working hours to thirty-six a week without diminution of wages.

### Meeting of the Governing Body

A special meeting of the Governing Body of the International Labour Office was held in Geneva on June 30 at which tributes were paid to the memory of Albert Thomas, late Director of the International Labour Office. The texts of these addresses were published later in pamphlet form. A committee was appointed to investigate the best practical means of perpetuating Mr. Thomas' memory.

The Governing Body considered a report by the Director on the decisions of the Council of the League of Nations affecting the International Labour Organization. One of these decisions referred to the action to be taken on the resolution of the last Session of the International Labour Conference concerning the world economic crisis, and the means of dealing with it. This resolution, which the Council of the League of Nations decided to submit to the next Assembly, suggested among other things the convening of an International Economic Conference—an idea which has been expressed in various forms in a number of countries since that time. With a view to the possibility of such a conference being held, and the further possibility of a request being made to the International Labour Office for assistance, the Governing Body decided to appoint a delegation of three members (one from the Government group, one from the Workers' and one from the Employers' group) which would collaborate, if necessary, with the proposed World Economic Conference.

*Industrial and Labour Information*, the weekly publication of the International Labour Office, in its issue of June 27, published the substance of a memorandum dealing with the laws of Canada and its provinces bearing on the various Conventions and Recommendations of the International Labour Conference. A previous memorandum prepared in March, 1930, was published by the International Labour Office in 1931. The information now published deals with amendments and new legislation and regulations which have been adopted since 1930.

### Membership of Turkey

On July 18, 1932, the Special Session of the Assembly of the League of Nations admitted to membership the Turkish Republic, which thus automatically becomes a member of the International Labour Organization, making 57 countries in all. Very cordial relations of a semi-official nature already existed between Turkey and the International Labour Office. At first these relations were limited to the exchange of information, but a few months ago the Turkish Government's Draft Labour Code was referred to the Office for examination, and this gave rise to regular correspondence. For the past five years Turkey has regularly sent an observer to attend the sessions of the International Labour Conference.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1932

EMPLOYMENT conditions, as indicated by the work of the offices of the Employment Service of Canada during the quarter April to June, 1932, were only slightly less favourable than those reported during the corresponding quarter of 1931, as there was a decrease of 2 per cent in the vacancies offered, and of 1 per cent in the placements effected in regular and casual employment. All industrial divisions, except construction and maintenance and farming, where marked gains were recorded, showed declines under each comparison. Increased placements in these two groups were the direct result of efforts made by the Government to relieve unemployment by providing work on highways and in sending men to farms under the Unemployment and Farm Relief Act. The heaviest losses reported were in services and manufacturing, followed by others of lesser degree in all remaining groups. Provincially, New Brunswick, Quebec, Manitoba and British Columbia registered gains, both in vacancies and placements, while in Nova Scotia, Ontario, Saskatchewan and Alberta declines were shown under both comparisons. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1932.

From the chart on page 901, which accompanies the article on the work of the employment offices for the month of June, it will be seen that the trend of the curves of vacancies and placements in relation to applications showed no marked variation from April through June, following a slightly downward course throughout the quarter, except during the latter part of April and also of June, when an upward tendency was manifested. Both curves at the close of the period

under review were, however, on considerably higher levels than those recorded at the end of June, 1931. During the period April to June, 1932, there was a ratio of 59.2 vacancies and 57.2 placements for each 100 applications for employment, as compared with 58.5 vacancies and 55.8 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,271, of applications registered 2,147, and of placements effected 1,228, in contrast with a daily average of 1,334 vacancies, 2,280 applications and 1,273 placements in regular and casual employment during the same quarter of 1931.

During the three months April to June, 1932, the offices reported that they had made 98,743 references of persons to positions and had effected a total of 93,315 placements, of which 37,353 were in regular employment and 55,962 in casual work. Of the placements in regular employment, 26,248 were of men and 11,105 of women, while casual work was found for 46,357 men and 9,605 women. A comparison with the same period of 1931 shows that 94,175 placements were then made, of which 35,285 were in regular employment and 58,890 in casual work. Applications for employment during the period under review were received from 126,981 men and 36,141 women, a total of 163,122, in contrast with a registration of 168,665 persons during the same period of 1931. Employers notified the Service during the quarter April to June, 1932, of 96,574 vacancies, of which 73,078 were for men and 23,496 for women, as compared with 98,657 opportunities for work offered during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1932.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1, was 7,994, the employees on their payrolls numbering 811,972 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,791, having an aggregate mem-

bership of 175,006 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of July, 1932, as reported by Employers

Employment at the beginning of July showed a slightly downward tendency, according to statements tabulated by the Dominion Bureau of Statistics from 7,994 firms employing 811,972 workers, or 3,935 fewer than on June 1. This decrease brought the index number to 88.7, as compared with 89.1 in the preceding month, and 103.8 on July 1 of last year. On the same date in the ten preceding years, the index, on the basis of the 1926 average equals 100, was as follows:—1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6.

Gains were reported in services, construction and transportation. On the other hand, manufacturing as a whole, logging, mining, communications and trade showed contractions; in some cases, the losses were seasonal in character. The declines in manufacturing were on a smaller scale than those recorded on the same date in 1930 and 1931, chiefly as a result of more moderate seasonal curtailment in the textile and iron and steel industries.

#### Employment by Economic Areas

The trend was unfavourable in Quebec and Ontario; in the Prairie Provinces improvement was indicated, while the general situation in the Maritime Provinces and British Columbia was unchanged.

*Maritime Provinces.*—Statements were tabulated from 610 firms employing 66,364 workers, as against 66,415 in the preceding month.

This minor decline (which was not sufficiently large to alter the index number for June 1) compared unfavourably with the increase noted on July 1, 1931; the general index was then higher. Construction, particularly highway construction, recorded considerable improvement on the date under review, but there were also gains in lumber mills, iron and steel plants and services; on the other hand, manufacturing as a whole was slacker, chiefly in the electric current and fish-preserving industries, and mining and transportation showed seasonally reduced activity.

*Quebec.*—Building and highway construction and manufacturing, reported curtailment in Quebec, while shipping, railway construction and services showed heightened activity. Within the manufacturing group, pulp and paper, animal food and lumber mills reported increases, but the textile, leather, iron and steel and some other industries were slacker. The forces of the 1,904 co-operating employers aggregated 233,440 persons, compared with 236,531 on June 1. A similar decline had been registered on the same date of last year, but the index then was higher.

*Ontario.*—There was a falling-off in activity in Ontario, where the 3,539 firms whose statistics were tabulated reported 333,424 employees, or 2,400 fewer than on June 1. Gains were shown in construction, transportation and mining, but manufacturing as a whole (especially of iron and steel, textile, pulp and paper and leather products) was seasonally quiet, and there were losses in

communications, services and trade. Much larger decreases had been indicated on July 1, 1931, but the index then was many points higher.

*Prairie Provinces.*—The most noteworthy advances in this area were in construction, but services, manufacturing and transportation also showed improvement; on the other hand, mining and logging recorded seasonally reduced activity. Data were compiled from 1,146 employers with an aggregate staff of 110,674 workers, as against 109,126 in their last

Table I gives index numbers by economic areas.

### Employment by Cities

In Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, reductions in employment were reported, while improvement was indicated in Winnipeg.

*Montreal.*—Employment in Montreal showed a decline, there being seasonal losses in manufacturing, notably of textile, leather and iron and steel products, while construction also

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

report. This increase of 1,548 workers was smaller than that registered on the same date of last year, when employment was in greater volume.

*British Columbia.*—Practically no change as compared with June was reported in British Columbia, where the index stood at 83.7 as compared with 97.9 on July 1, 1931, when very little change had also been indicated. A total working force of 68,070 persons was employed on the date under review by the 795 firms whose data were received. Manufacturing, particularly of food products, was seasonally busier, but logging and highway construction recorded declines.

released employees; on the other hand, shipping reported heightened activity. A combined working force of 130,304 persons was indicated by the 1,070 co-operating employers, who had 135,007 workers on June 1. Decreases were also noted on July 1, 1931, but employment then was more active.

*Quebec.*—A falling-off was reported in Quebec, where statements were tabulated from 144 firms with 12,759 employees, compared with 12,836 in the preceding month. Services registered advances, but manufacturing and construction were slacker. The index was lower than at the beginning of July, 1931, although a larger decline had then been shown.

*Toronto.*—There were seasonal losses in employment in manufacturing, mainly in textiles and iron and steel, while construction, trade, services and communications also showed curtailment. The 1,178 employers furnishing data reduced their staffs by 2,641 workers to 112,432 at the beginning of July. A contraction had also been reported on the same date of last year, when employment was in greater volume.

*Ottawa.*—Statistics were received from 160 employers with 12,666 persons on their pay-lists, compared with 12,790 in the preceding

month. There were comparatively small reductions in manufacturing, transportation and trade. Larger losses had been indicated on July 1, 1931, but the index was then higher than on the date under review.

*Hamilton.*—There was a further but slight decrease in Hamilton, where employment was in less volume than on the same date of last year; 56 workers were let out from the forces of 235 firms furnishing information, bringing them to 26,354 at the beginning of July. Manufacturing reported considerable improvement, especially in the iron and steel, textile

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

and food groups, but construction released employees.

*Windsor and the Adjacent Border Cities.*—Curtailment in employment, mainly in automobile plants, caused a decline of 198 persons in the staffs of the 133 reporting employers, who had 11,452 in their employ on the date under review. The index was lower than on July 1, 1931, although much larger losses had then been reported.

*Winnipeg.*—Manufacturing, construction and trade registered moderate advances, while other industries showed only slight changes.

An aggregate working force of 35,705 employees was reported by the 386 co-operating firms; this was 659 more than on June 1. The improvement noted on the same date of a year ago involved a smaller number of persons, but employment then was generally more active.

*Vancouver.*—The trend of employment in Vancouver was unfavourable, according to information from 337 establishments employing 27,734 workers, as against 27,941 in the preceding month. There were losses in shipping and construction, while other groups

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative Weight of employment by Cities as at July 1, 1932.....	16.1	1.6	13.9	1.6	3.2	1.4	4.4	3.4

reported only slight changes. A decrease had also been recorded by the firms making returns for July 1, 1931, but the index then was higher.

Index numbers by cities are given in Table 2.

### Manufacturing Industries

Food canning, lumber and mineral product factories registered heightened activity, but seasonal curtailment was shown in textile and iron and steel plants; this, however, involved the release of a smaller number of persons

from these two important groups than that noted on July 1 of 1931 and other years of the record. The leather, pulp and paper, chemical and clay, glass and stone groups also recorded contractions in employment. The 4,914 co-operating manufacturers employed 423,023 operatives, as against 426,158 in the preceding month. Much larger decreases were indicated in this division on July 1, 1931, though the index then was higher.

*Animal Products, Edible.*—Large additions to staffs were recorded in this group, 1,567

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

persons being taken on by the 257 establishments making returns, which had 20,515 in their employ. Improvement was noted in fish-canning in British Columbia, but there were losses in the same industry in the

Maritime Provinces; dairies and meat-packing plants in the other provinces also afforded increased employment. The index on July 1, 1932, was higher than on the same date in 1931, when only a small gain had been indicated.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	Relative weight	July 1, 1932	June 1, 1932	July 1, 1931	July 1, 1930	July 1, 1929	July 1, 1928	July 1, 1927

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Leather and Products.*—Statements were received from 249 manufacturers in this division, employing 17,543 workers, as compared with 18,415 in the preceding month. The bulk of the decrease took place in boot and shoe factories in Quebec and Ontario. The situation was not quite so good as that recorded on the same date in 1931, when smaller losses were indicated.

*Lumber and Products.*—Rough and dressed lumber mills showed heightened activity, but other lumber-using factories were slacker, notably furniture works. Reductions had been noted on July 1, 1931, but the index then was much higher. A combined working force of 33,768 employees was reported by the 773 firms co-operating on the date under review; this was 310 more than at the beginning of June. The Maritime Provinces, Quebec and Ontario shared in the upward movement, while losses were indicated in the Western Provinces.

*Musical Instruments.*—The production of musical instruments showed a decrease, according to data from 35 factories employing 839 persons, or 85 fewer than on June 1. Most of the reduction took place in Quebec. Employment in this group was less than on July 1, 1931.

*Plant Products, Edible.*—The resumption of operations in canneries caused an advance, which, however, was not so great as that registered on July 1 of a year ago. Returns were received from 387 manufacturers of vegetable foods, having 28,501 operatives, as against 27,446 in their last report. The improvement in Ontario was most noteworthy. The index was lower than it was last summer.

*Pulp and Paper Products.*—There was a decline in this group, chiefly in printing and publishing houses, while pulp and paper mills were rather busier. The 558 co-operating employers in the Dominion reported 52,833 workers, compared with 53,040 on June 1. Curtailment had also been indicated on July 1, 1931, but the index of employment was then higher.

*Rubber Products.*—Very little general change was registered in rubber factories, in which employment was lower than in the summer last year. Statistics were tabulated from 43 firms with 10,957 employees on the date under review, as compared with 10,981 in the preceding month.

*Textile Products.*—Seasonal curtailment of operations, mainly in Quebec and Ontario,

was reported by the 835 co-operating textile manufacturers, who employed 81,158 workers, or 2,417 fewer than at the beginning of June. The largest losses were in garment, cotton, woollen, silk, headwear and knitting mills. Much greater declines were indicated on the corresponding date in 1931, but the level of employment then was practically the same as on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Employment in this division showed a moderate decrease, according to statistics from 154 establishments, employing 14,460 persons, compared with 14,523 in the preceding month. There were minor increases in Quebec, but employment in Ontario declined. An advance had been noted on the same date last year, when the index was higher.

*Chemicals and Allied Products.*—There was a falling-off in activity in chemical factories; 140 firms reported 8,094 employees, compared with 8,350 on June 1. All provinces shared in the downward movement. A decrease had also been shown at the beginning of July, 1931, when employment was in greater volume.

*Clay, Glass and Stone Products.*—Contractions took place in building material plants, the 181 co-operating establishments reducing their forces by 528 persons to 8,427 on the date under review. Most of the reduction was in Quebec and Ontario. The level of employment was lower than on July 1 of a year ago, when the trend was upward.

*Electric Current.*—A small loss was registered in electric current plants, 92 of which reported a combined working force of 14,368 persons, as against 14,421 at the beginning of June. The index was lower than on the same date in 1931, improvement having then been indicated.

*Electrical Apparatus.*—There was a decrease of 70 in the staffs of the 86 manufacturers furnishing data, who had 12,112 employees on July 1. Quebec reported a loss, while the tendency in Ontario was upward. The number engaged in the production of electrical apparatus was less than on July 1 in the preceding year, although a larger decline had then taken place.

*Iron and Steel.*—The trend in iron and steel factories was seasonally downward in Quebec and Ontario; the losses were on a much smaller scale than on July 1 a year ago, when employment was, however, in larger volume. The greatest falling-off on the date under review was in the railway car, structural

iron and steel, foundry and machine shop groups, while rolling mills showed improvement. Returns were compiled from 757 employers whose forces aggregated 89,076 workers, as against 90,745 in the preceding month.

*Non-Ferrous Metal Products.*—Small reductions were registered on the whole in non-ferrous metal products; the smelting and refining and aluminum product divisions showed increases which were offset by losses in the precious and base metals group. The 130 co-operating manufacturers employed 12,085 operatives, or 29 fewer than in the preceding month. A considerable decrease had been reported on the same date last year, but the index was then higher.

*Mineral Products.*—A gain was shown in this division, but the situation was not so good as in July, 1931. Statistics were received from 97 employers whose staffs rose from 11,978 on June 1, 1932, to 12,138 on July 1.

### Logging

There was a falling-off in logging, 1,110 persons being released from the staffs of the 221 reporting firms, who employed 9,364 on July 1. Most of the decline occurred in British Columbia. The reduction involved a much smaller number of workers than that noted on the corresponding date a year ago, but the index then was higher by some four points.

### Mining

*Coal.*—There was a seasonal decrease in employment in coal mines, 87 of which employed 22,309 men, as compared with 23,106 in their last report. There were losses in the Eastern and Prairie coal fields, but employment in this industry showed little general change in British Columbia. A decline had also been noted on July 1 of last year, when employment was in greater volume.

*Metallic Ores.*—A minor reduction was reported in metallic ore mines; statements were tabulated from 68 operators employing 15,657 persons, or 48 fewer than on June 1. The index, at 132.2, was lower than on July 1, 1931.

*Non-Metallic Minerals, other than Coal.*—There was a small increase in the payrolls of the 77 co-operating non-metallic mineral mines, which employed 5,009 workers, or 76 more than in the preceding month. Employment was in lesser volume than at the beginning of July a year ago, although a considerable reduction had then been recorded.

## Communications

A decrease in staffs was registered on telephones and telegraphs, according to the reporting companies and branches, which had 24,150 persons on their payrolls, compared with 24,394 in their last report. The index was at a lower level than on July 1, 1931, when very little general change had been indicated.

## Transportation

*Street Railways and Cartage.*—Employment in the local transportation group increased, 167 firms reporting 23,367 workers in their employ, as against 23,154 in the preceding month. There were general gains, the largest being in the Prairie Provinces. Improvement had also been noted on the same date in 1931, when the index was higher.

*Steam Railways.*—Statistics tabulated from 93 companies and divisional superintendents in the steam railway operation group showed that they employed 61,321 workers at the beginning of July, or 366 more than in the preceding month. A decline had been recorded on July 1 last year, when employment was above its level at the time of writing. The Maritime Provinces, Ontario and British Columbia reported improvement on the date under review, but there were losses in Quebec.

*Shipping and Stevedoring.*—There was a decrease in employment in water transportation on the date under review; 87 companies reduced their staffs by 187 employees, bringing them to 15,724. The situation was not so good as at the beginning of July 6, 1931, although the falling-off then indicated had involved a greater number of workers. On the date under review, there were declines in the Maritime Provinces, and British Columbia also showed a very slight reduction as compared with June 1, while improvement was indicated in Quebec and Ontario.

## Construction and Maintenance

*Building.*—Curtailement in employment was noted in building construction, in place of the advances usually indicated at midsummer. The index was lower than at the beginning of July of last year. The 646 co-operating contractors employed 23,156 workers, as compared with 24,563 in the preceding month. The Maritime and Prairie Provinces reported expansion, but elsewhere the trend was unfavourable.

*Highways.*—The number of men engaged on road construction and maintenance increased on the date under review, when the 374

firms furnishing data had 52,533 employees, or 657 more than at the beginning of June. There were large advances in the Maritime and Prairie Provinces and Ontario, with losses in Quebec and British Columbia. Employment in this group was not so active as on July 1, 1931, when an exceptionally large program of road work and improvement were being carried out in connection with unemployment relief.

*Railway.*—A combined working force of 36,881 persons was reported by the 36 contractors and divisional superintendents whose statistics were tabulated, and who had 29,573 employees on June 1. Quebec, Ontario and the Prairie Provinces shared in the increase. Larger additions to staffs were noted on July 1 a year ago, and the index then was higher than on the date under review.

### Services

Continued and greater expansion was shown in the service group, according to returns from 286 employers with 22,370 persons on their staffs, as compared with 21,705 in the preceding month. The opening of the

summer-hotel season caused most of the gain, which was on a smaller scale than that reported on July 1, 1931, when employment was at a higher level. The tendency was favourable in all provinces except Ontario, but the largest increases were in the Prairie Provinces.

### Trade

Wholesale houses showed decreased activity, while retail stores reported little general change. Statements were tabulated from 858 firms having 83,108 persons in their employ, as against 83,400 in the preceding month. The largest losses took place in Ontario. The index was lower than in the summer of 1931, when very little general change had been recorded.

### Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

## (2) Unemployment in Trade Unions at the Close of June, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in employment outside their respective trades, or who are idle owing to illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment deals with the situation among local trade unions at the close of June, 1932, and is based on the returns received from 1,791 labour organizations with a combined membership of 175,006 persons. Of these 38,372, or 21.9 per cent, were reported idle on the last day of the month, contrasted with percentages of 22.1 in May and 16.3 in June a year ago. Manitoba and Alberta unions registered employment advances from May, of around 3 per cent, the gains in the former province being of rather general distribution throughout the various industries, and in the latter being confined chiefly to the coal mining industry, though unemployment in the mines still remained at a high level and short time work

was prevalent. In New Brunswick also somewhat greater activity was noted, while in Ontario the situation varied but slightly from May, the tendency being in a more favourable direction. Declines in employment of a largely offsetting nature, however, were recorded by British Columbia, Nova Scotia, Quebec and Saskatchewan unions, none of which were particularly noteworthy. An unfavourable employment balance was reflected in all provinces as compared with June a year ago, the curtailment evident in Quebec, Ontario, British Columbia and New Brunswick being particularly marked.

Each month a separate tabulation is made of unemployment in the largest city in each province, with the exception of Prince Edward Island. During June, Montreal unions reported the most substantial percentage of idleness of the cities compared, closely followed by Toronto and Vancouver percentages, which were in all three cities slightly above those registered in May. In Regina also employment recessions of moderate proportions occurred. The Saint John situation, however, showed noteworthy improvement, with gains of lesser magnitude among Halifax, Winnipeg and Edmonton unions. A pronounced drop in the volume of work available was indicated by Saint John and Toronto unions from June of last year and activity for Vancouver, Hal-

fax, Montreal, Winnipeg and Regina unions was also notably reduced. From Edmonton the declines in employment recorded were on a considerably smaller scale.

Appearing with this article is a chart which shows the trend of unemployment by months from January, 1926, to date. In January of the present year the curve traced a course slightly upward from that of December, showing a somewhat greater unemployment prevalence, while in February conditions as indicated by the curve were slightly better, this improvement continuing throughout March. The April situation was, however, again less favourable, the projection of the curve showing a slightly upward movement and reaching

last day of the month. General labourers reported employment gains from May involving the greatest number of members; and among glass, hat, cap and fur workers, and cigar makers the improvement was pronounced when viewed from a percentage basis, but these workmen formed but a small share of the membership included in the manufacturing industries. Employment for textile workers also tended upward, though the change was slight. Counteracting this improvement, however, was the curtailment evident among leather and wood workers, pulp and paper makers, printing tradesmen, garment and iron and steel workers, the curtailment being slight except for the first two classes named. An

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

the peak of unemployment for the first half of this year. A gradual and favourable employment tendency, however, has been noted from April until the close of the month reviewed. More depressed conditions as shown by the curve have prevailed during the first six months of this year than in the corresponding period in 1931, the level of the curve being in each month above that indicated a year ago.

For the manufacturing industries, as a whole, the percentage of idleness in June remained the same as was indicated in May, namely, 24.2 per cent, though fluctuations were apparent in the various trades. Returns for June were received from an aggregate of 470 organizations with 47,883 members, 11,585 of whom were without employment on the

adverse situation was shown in the manufacturing industries from June last year when 18.4 per cent of the membership included was without work, unemployment for iron and steel workers being a large factor in this unfavourable movement, though heavy contractions were also registered by wood workers, general labourers and textile, fur and leather workers. Declines on a more moderate scale, however, were reported by printing tradesmen. On the other hand, the situation for pulp and paper makers, garment, hat and cap workers and metal polishers was substantially improved and lesser gains occurred for cigar makers and glass workers.

The level of activity for coal miners in June was slightly higher than in the previous month as shown by the returns tabulated

from 47 unions embracing a membership of 16,864 persons. Of these, 2,084 were reported idle on the last day of the month, being a percentage of 12.4, as contrasted with 14.3 per cent of inactivity in May. The improvement in June was confined entirely to the Province of Alberta, British Columbia unions reporting the same percentage of idleness as in May, while in Nova Scotia unemployment was in slightly greater volume. Alberta unions were also responsible for the better employment trend indicated in the mining industry as compared with June, 1931, when 13.0 per cent of the members reported were without

work. Nova Scotia and New Brunswick miners, however, were afforded slightly less activity than in June a year ago.

From unions in the building and construction trades 243 reports were received in June covering a membership of 23,448 persons, 14,264 of whom, or 60.8 per cent, were unemployed on the last day of the month, contrasted with percentages of 57.2 in May, and 38.6 in June, 1931. Electrical workers and painters, decorators and paperhangers reported the most pronounced declines in activity from May and among carpenters and joiners, bricklayers, masons and plasterers, bridge and structural iron workers and hod carriers and building labourers the employment level was also somewhat reduced. The situation for granite and stone cutters, tile layers, lathers and roofers, and plumbers and steamfitters, however, showed some improvement from May. Among steam shovel and dredge-men the same volume of unemployment was reported in both months compared. Much quieter conditions than in June last year prevailed for bridge and structural ironworkers, bricklayers, masons and plasterers, carpenters and joiners, electrical workers, granite and stone cutters, and plumbers and steamfitters, hod carriers and building labourers also showing a noteworthy drop in work afforded. Nominal contractions of activity only were reflected by painters, decorators and paperhangers. Tile layers, lathers and roofers alone reported a more favourable situation than in June of last year.

The employment trend in the transportation industries during June was upward from the previous month, the change, however, being slight. This was manifest by the returns tabulated from 781 unions, with a membership aggregate of 62,785 persons, 11.8 per cent of whom were idle on the last day of the month, contrasted with 12.5 per cent in May. Steam railway employees, whose returns included about 80 per cent of the entire group membership reporting, navigation workers, teamsters and chauffeurs, and street and electric railway employees all shared in this slight advance. Compared with the situation for June last year in the transportation industries, when the unemployment percentage stood at 9.5, navigation workers showed a noteworthy drop in activity during the month reviewed. Less favourable conditions also were indicated by steam railway employees, and among teamsters and chauffeurs the curtailment evident was on a much smaller scale. Street and electric railway employees reported an unchanged employment volume, the percentage of idleness in each month standing at less than one per cent.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

Retail clerks with 5 uniops in June, combining a membership of 1,193 persons, indicated 2.3 per cent of their members idle on the last day of the month, the same percentage as was shown in May, while in June, 1931, 0.4 per cent of unemployment only was reported.

Civic employees were better engaged during June than in the preceding month according to the returns tabulated from 72 associations with a membership total of 7,799 persons. Of these 396 or 5.1 per cent were idle on the last day of the month, in contrast with 9.5 per cent in May. Some falling off in activity, however, was noted from June last year, when 0.4 per cent of the members reported were idle.

Employment in the miscellaneous group of trades was slightly retarded during June, the 125 unions from which returns were tabulated, with a total membership of 4,980 persons, showing 1,057, or a percentage of 21.2 idle on the last day of the month, compared with 20.5 per cent of unemployment in May. Theatre and stage employees reported contractions of activity from May of nearly 4 per cent, a 2 per cent decline being shown by stationary engineers and firemen. Among hotel and restaurant employees and barbers the tendency was also toward lessened activity, the changes, however, being but fractional. Unclassified workers, on the contrary, reported a slightly better situation. Unem-

ployment in the miscellaneous group of trades was in greater volume than in June, 1931, when 17.2 per cent of the membership involved was idle, stationary engineers and firemen showing marked increases in slackness. A less favourable situation also obtained for theatre and stage employees and barbers. Hotel and restaurant employees, on the other hand, were afforded a considerably greater volume of work than in June, 1931, and among unclassified workers gains in activity on a smaller scale were indicated.

Among fishermen an unemployment percentage of 7.6 was registered in June, compared with a fully engaged situation in May, and with 1.5 per cent of inactivity in June, 1931.

The 5 unions of lumber workers and loggers making returns in June, comprising a membership of 1,334 persons, reported 48.7 per cent of their members idle on the last day of the month, contrasted with percentages of 26.7 in May and 27.9 in June, 1931.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931, inclusive, and also the percentage of unemployment by provinces for June of each year from 1919 to 1929, inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for June, 1932

The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1932, as shown by the average daily placements effected, was 8 per cent lower than that of the preceding month, but 10 per cent above the average daily placements effected during the corresponding month a year ago. All industrial divisions showed declines from May, except farming and transportation, the gain in farming being fairly substantial, and the greatest decreases noted taking place in services and construction and maintenance. In comparison with June last year, a marked gain occurred in construction and maintenance, where was shown the major number of placements made in relief of unemployment. Increases also were registered in farming and logging, but in a much smaller degree. Of the losses reported, those in services and manufacturing were the largest, although fewer placements also were made in all remaining groups.

The accompanying chart shows the trend of employment from January, 1930, as rep-

resented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications showed little variation throughout the month, following in both instances a slightly lower trend during the first half of June and rising a little over two points during the second half of the period under review. At the close of June, however, the levels attained were over fourteen points higher than those recorded in the corresponding month a year ago. The ratio of vacancies to each 100 applications was 57.0 during the first half and 59.4 during the second half of June, 1932, in contrast with the ratios of 52.1 and 45.1 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review were 55.1 and 57.8 as compared with 49.5 and 43.3 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1932, was 1,177, as compared with 1,289 during the preceding month and 1,088 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,022 in comparison with 2,190 in May, 1932, and with 2,245 during June last year.

The average number of placements made daily by the offices of the Service during June, 1932, was 1,142, of which 511 were in regular employment and 631 in work of one week's duration or less, as compared with a total daily average of 1,242 during the preceding month. Placements in June a year ago averaged 1,039 daily, consisting of 444

women, a total of 29,404, while applications for work numbered 50,547, of which 38,780 were from men and 11,767 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o-o-o

placements in regular and 595 in casual employment.

During the month of June, 1932, the offices of the Service referred 30,357 persons to positions, and effected a total of 28,532 placements. Of these, the placements in regular employment were 12,777, of which 9,017 were of men and 3,760 of women, while placements in casual work totalled 15,755. The number of vacancies reported by employers was 22,237 for men and 7,167 for

NOVA SCOTIA

There was a decrease of 41 per cent in the number of positions offered through employment offices in Nova Scotia during June, when compared with the preceding month and of over 27 per cent in comparison with the corresponding month last year. Placements also declined nearly 41 per cent when compared with May, and were over 26 per cent less than in June, 1931. All industrial divisions participated in the reductions in

\*166 Placements effected by offices since closed.

placements from June of last year, those in construction and maintenance and logging being the largest. Construction and maintenance and services were the only groups in which work was available to any considerable extent, there being 156 placements in the former and 376 in the latter. Of the placements in the services' division 249 were of household workers. During the month 72 men and 64 women were placed in regular employment.

#### NEW BRUNSWICK

Employment opportunities, as indicated by orders received at employment offices in New Brunswick during June, were over 37 per cent better than in the preceding month and over 56 per cent in excess of the corresponding month last year. There was a gain also in placements of over 38 per cent when compared with May, and of 67 per cent in comparison with June, 1931. The large gain in placements over June of last year was due to work provided in relief of unemployment on highway construction, as construction and maintenance was the only group to show any gain under this comparison. Of the declines in all other groups, those in logging were the largest. There were 696 placements in construction and maintenance and 461 in services. Of the latter, 342 were of household workers. Placements in regular employment numbered 95 of men and 61 of women.

#### QUEBEC

During the month of June, positions offered through employment offices in the Province of Quebec were nearly 18 per cent less than in the preceding month, but 18 per cent above the corresponding month last year. There was a decline of nearly 10 per cent in placements when compared with May, but a gain of nearly 20 per cent in comparison with June, 1931. A large increase in placements in the services' division was mainly responsible for the gain over June of last year, although all groups, except construction and maintenance, manufacturing and transportation showed improvement. Placements by industrial divisions included: manufacturing, 66; logging, 142; farming, 71; construction and maintenance, 152; trade, 59; and services, 1,116, of which 905 were of household workers. Regular employment was found for 397 men and 862 women.

#### ONTARIO

There was a decrease of nearly 8 per cent in the number of positions offered through employment offices in Ontario during June,

when compared with the preceding month, but a gain of over 4 per cent in comparison with the corresponding month of last year. Placements were nearly 8 per cent less than in May, but nearly 7 per cent above June, 1931. A substantial increase in placements under construction and maintenance, with smaller gains in farming and logging, accounted for the improvement reported over June of last year. Of the declines in all other groups, those in services and manufacturing were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 418; logging, 526; farming, 1,314; construction and maintenance, 7,735; trade, 309; and services, 3,502, of which 1,842 were of household workers. During the month 3,672 men and 1,424 women were placed in regular employment.

#### MANITOBA

The demand for workers, as indicated by orders received at employment offices in Manitoba during June, was nearly 18 per cent better than in the preceding month and about 98 per cent in excess of the corresponding month of last year. Similar percentages of gain were reported in placements under both comparisons. The increase in placements over June, 1931, was almost entirely due to gains in the highway and building divisions of construction and maintenance, although farm placements also were more plentiful and manufacturing showed a slight improvement. These increases were offset in part by declines in all other groups. The only reduction of importance, however, was in services. Placements by industrial divisions included: manufacturing, 33; farming, 421; construction and maintenance, 2,533; trade, 42; and services, 986, of which 820 were of household workers. There were 1,165 men and 450 women placed in regular employment during the month.

#### SASKATCHEWAN

During June, orders received at employment offices in Saskatchewan called for over 11 per cent less workers than in the preceding month, but nearly 14 per cent more than during the corresponding month last year. There was a decline of nearly 11 per cent in placements when compared with May, but a gain of nearly 16 per cent when comparison is made with June, 1931. Farm placements during the month under review were considerably higher than during the corresponding month of last year, while services showed the largest loss. The changes in other groups were unimportant, there being gains in construction and maintenance, trade and trans-

portation, and losses in manufacturing and logging. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 31; farming, 575; transportation, 44; construction and maintenance, 548; trade, 59; and services, 699, of which 458 were of household workers. Placements in regular employment numbered 819 of men and 334 of women.

#### ALBERTA

Orders received and placements effected through employment offices in Alberta during June were nearly 31 per cent less than in the preceding month, and there was also a decline of over 29 per cent in comparison with June, 1931, in both orders received and placements made. A decrease in placements on relief work was responsible for the decline from June of last year, although there were fewer placements in all other groups except farming and logging, the increase in logging being quite small. Placements by industrial divisions included: logging, 31; farming, 749; construction and maintenance, 736; and services, 569, of which 358 were of household workers. There were 1,269 men and 275 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Opportunities for employment, as indicated by orders received at employment offices in British Columbia during June, were over 15 per cent less favourable than in the preceding month and over 5 per cent below the corresponding month last year. There was a decline in placements of nearly 15 per cent when comparison was made with May, and of over 5 per cent in comparison with June, 1931. Construction and maintenance showed the only gain of importance in placements over June last year. Of the declines, those in services and farming were the largest, with somewhat smaller losses in manufacturing, logging, trade and transportation. Industrial divisions in which most of the placements were made during the month were manufacturing, 24; logging, 23; farming, 242; construction and maintenance, 2,248; trade, 30; and services, 532, of which 341 were of household workers. Placements in regular employment numbered 1,528 of men and 290 of women.

#### Movement of Labour

During the month of June, 1932, the offices of the Employment Service of Canada effected 12,777 placements in regular employment, 5,630 of which were of persons for whom the employment found was outside the immediate

locality of the offices at which they were registered. Of the latter 249 were granted the Employment Service reduced transportation rate, 234 going to points within the same province as the despatching office and 15 to other provinces. The reduced transportation rate, which is 2-7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Ontario 12 persons secured certificates for reduced transportation during June, all of whom were going to provincial employment. Of these, Port Arthur transferred 4 bush workers and one restaurant cook, and Sudbury one lumber piler to centres within their respective zones. The Timmins zone was the destination of one carpenter and one hotel clerk journeying from North Bay and of one farm hand conveyed from Niagara Falls. Travelling from Toronto 3 hotel workers were bound for employment in the Peterborough zone. Transfers at the reduced rate from Manitoba centres in June numbered 126, of which 112 were to provincial situations and 14 to outside points. The latter were effected by the Winnipeg office which despatched one boatman, one waitress, one cookee and one domestic to Port Arthur, two cooks to Estevan, 2 hotel workers and one town general to Regina and 3 farm hands and 2 farm housekeepers to various Saskatchewan rural centres. Provincially from Winnipeg one farm housekeeper proceeded to Dauphin and 94 farm hands, 13 sheet metal workers, one fire ranger and 2 carpenters to employment at points within the Winnipeg zone. To a point within its own zone St. Boniface transferred one farm hand. At Saskatchewan offices 24 certificates for reduced transportation were granted during June, all of which were to points within the province. Of these, 21 were issued to farm help, 15 workers travelling from Saskatoon, 4 from Regina and 2 from Moose Jaw to the agricultural districts of the province. The balance of this provincial movement was to the Saskatoon zone, which received 2 hotel workers sent from Regina, and one blacksmith from Saskatoon. Workers taking advantage of the Employment Service reduced transportation rate in Alberta during June were 75 in number, 74 of whom were bound for employment within the province. From Edmonton 9 highway construction workers, 10 mine workers, 6 saw-mill workers, 2 fishermen, 2 steamship cooks, 2 hotel employees, 2 building construction workers, one teamster, one

cafe waitress and one labourer went to centres within its own zone; 3 highway construction teamsters to Calgary and 17 farm hands and 2 farm domestics to rural areas, particularly around Edmonton. The Calgary office was instrumental in transferring one highway construction cook within its own zone, and 13 farm hands and 2 farm household workers to various provincial points. The one interprovincial transfer was of a farm hand who received a certificate at Edmonton for transportation to Saskatoon. The movement of labour from British Columbia centres in June was entirely provincial and comprised the transfer of 12 persons, 11 of

whom secured their certificates at Vancouver. These included one cook going to Kamloops, and 8 mine workers and 2 domestics destined to employment at points within the Vancouver zone. In addition, one farm hand was despatched from Nelson to Penticton.

Of the 249 workers who profited by the Employment Service reduced transportation rate in June, 127 were carried by the Canadian National Railways, 116 by the Canadian Pacific Railway, 3 by the Pacific Great Eastern Railway, 2 by the Northern Alberta Railway and one by the Timiskaming and Northern Ontario Railway.

#### (4) Building Permits Issued in Canada in June, 1932

The value of the building permits issued by 61 cities during June was \$4,386,349; this was a decrease of \$903,157 or 17.1 per cent, as compared with the May total of \$5,289,506, while in comparison with June, 1931, there was also a decline of \$4,207,609, or 49.0 per cent, the value for that month having been \$8,593,958. The aggregate for the first six months of 1932, viz., \$22,577,143, was lower than in 1931 and also than in any other year of the record; in this connection, however, it is important to note the considerable decline in the wholesale costs of building materials, the Bureau's index having fallen from 144.5 in January-June, 1920, to 78.6 during the first half of the present year, or by 45.6 per cent. The 1926 average equals 100 in calculating these index numbers.

Some 50 cities furnished detailed statements showing that they had issued nearly 400 permits for dwellings valued at over \$1,100,000 and some 2,100 permits for other buildings estimated to cost approximately \$3,200,000. During May, authority was given for the erection of over 400 dwellings and some 2,700 other buildings, valued at approximately \$1,250,000 and \$3,800,000, respectively.

Improvement over May, 1932, was recorded in Quebec and Ontario, where there were increases of 4.7 per cent and 36.5 per cent, respectively. Of the declines elsewhere, that of \$973,147, or 87.8 per cent, in Manitoba was largest.

As compared with June, 1931, there were decreases in all provinces except Nova Scotia, Ontario reporting the greatest loss of \$1,903,971 or 48.0 per cent.

Of the larger cities, Montreal recorded an increase in the value of the permits issued as compared with the preceding month, but a decline as compared with the corresponding month in 1931, while Toronto, Winnipeg and Vancouver reported decreases in both com-

parisons. Of the other cities, Sherbrooke, Guelph, Niagara Falls, Sault Ste. Marie, Windsor, Woodstock and Nanaimo indicated improvement over May, 1932, and June, 1931.

*Cumulative Record for First Half-Year, 1920-1932.*—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given.

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1926=100)	Average indexes of wholesale prices of building materials in first six months (1926 average=100)
1932.....	\$ 4,386,349	\$22,577,143	28.7	78.6
1931.....	8,593,958	58,950,508	74.8	83.6
1930.....	18,621,487	85,413,985	108.4	98.6
1929.....	27,816,592	124,609,267	158.2	99.6
1928.....	22,751,960	102,036,987	129.6	97.0
1927.....	18,363,239	80,842,719	102.6	96.6
1926.....	18,718,050	78,760,419	100.0	101.0
1925.....	14,915,884	65,899,717	83.7	103.1
1924.....	13,967,006	60,674,154	77.0	110.8
1923.....	14,286,252	73,047,496	92.7	111.4
1922.....	17,052,582	71,281,496	90.5	108.0
1921.....	14,240,934	55,771,084	70.7	132.0
1920.....	14,113,794	61,754,710	78.4	144.5

The aggregate for the first six months of this year was very much lower than in the first half of 1931 or any previous year of the record; the cost of building, as indicated by the index number of wholesale prices of building materials, was also lower than in any of the last twelve years.

The accompanying table gives the value of the building permits issued by 61 cities during May and June, 1932, and June, 1931; the 35 cities for which records are available since 1910 are marked with asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

## Great Britain

THE British Ministry of Labour Gazette, July, 1932, summarized the employment situation as follows:—

Employment at June 27 showed a slight decline on the whole as compared with May 23. There was an improvement in a number of industries, but this was offset mainly by a substantial increase in the numbers temporarily stopped in the coal mining industry.

Among workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed in all industries taken together was 22·3 at June 27, 1932, as compared with 22·1 at May 23, 1932, and 21·2 at June 22, 1931. For males alone the percentage at June 27, 1932, was 25·7, and for females 13·5. At May 23, 1932, the corresponding percentages were 25·3 and 13·9.

It is estimated that on June 27, 1932, there were approximately 9,394,000 insured persons aged 16 to 64 in work in Great Britain. This was 8,000 less than a month before, and 32,000 less than a year before.

At June 27, 1932, there were 1,961,769 persons on the registers of Employment Exchanges in Great Britain who were out of a situation. This was 39,358 less than a month before, but 110,348 more than a year before. The total on June 27, 1932, included 1,617,509 men, 51,233 boys, 255,799 women and 37,228 girls. It was made up of 684,661 insured persons with claims for insurance benefit, 969,284 applicants for transitional payments, 195,840 other insured persons not in receipt of insurance benefit or transitional payments, and 111,984 uninsured persons.

At June 27, 1932, there were registered as unemployed in Great Britain 503,467 men, 16,462 boys, 159,132 women and 9,317 girls who were on short time or were otherwise suspended from work on the definite understanding that they were shortly to return to their former employment. The total of 688,378 was 57,714 more than a month before, and 26,237 more than a year before. It included 587,114 insured persons with claims for insurance benefit, 47,618 applicants for transitional payments, and 53,646 persons not in

receipt of insurance benefit or transitional payments.

At June 27, 1932, there were on the registers in Great Britain 95,631 men, 101 boys, 1,455 women and 9 girls who normally seek a livelihood by means of jobs of short duration; these are mainly employed in dock, harbour, river and canal service. The total of 97,196 was 12,319 less than a month before. It included 63,087 insured persons with claims for insurance benefit, 33,209 applicants for transitional payments, and 900 persons not in receipt of insurance benefit or transitional payments.

Comparisons of the numbers on the registers and of the percentages unemployed with those for a year ago are affected by the results of legislative and administrative changes.

Employment improved in a large number of industries and services, including principally the cotton and jute industries, textile bleaching, dyeing, finishing, etc., the boot and shoe industry, iron and steel manufacturing, general engineering and ironfounding, the building, printing and publishing, rubber, and distributive trades, and the transport, dock and harbour, and hotel and boarding-house services. There was a substantial increase in temporary stoppages in coal mining, and there was also some decline in employment in the pottery, woollen and worsted, and linen industries, in motor vehicle and in tinplate manufacture, and in tailoring and public works contracting.

### United States

The Bureau of Labour Statistics of the United States Department of Labour, reports the changes in employment and earnings in June, 1932, as compared with May, 1932, based on returns made by 64,014 establishments in 16 major industrial groups, having in June, 4,246,037 employees, whose combined earnings in one week were \$84,206,424. The combined totals of these 16 groups show a decrease of 3.0 per cent in employment and 6.4 per cent in earnings.

The canning and preserving group reported a substantial seasonal increase in employment and earnings from May to June and the dyeing and cleaning group reported a small gain in employment combined with decreased earnings. The remaining 14 industrial groups reported decreases in both employment and payrolls. The decreases in employment in five groups—crude petroleum producing, telephone and telegraph, power and light, electric railway and motor bus operation, and laundries—were less than 1 per cent. Decreases of less than 2 per cent were reported in the wholesale and retail trade and building and

construction groups, and decreases of less than 3 per cent were shown in the quarrying and non-metallic mining and the hotel groups. The bituminous coal mining group reported 3.3 per cent fewer employees in June as compared with May, and the group of manufacturing industries reported a decrease of 3.7 per cent in employment over the month interval. The most pronounced decreases in number of workers from May to June, 16.0 and 20.8 per cent, respectively, were reported in the metalliferous and anthracite mining groups.

The Bureau of Labour Statistics also published reports of building permits issued from 354 cities of the United States having a population of 25,000 or over for the month of May, 1932, and June, 1932. The estimated cost of all buildings for which permits were issued in these cities during June was \$49,452,379. This was 26.3 per cent less than the estimated cost of building operations in these cities during the month of May. The number of permits for all building operations decreased 10.8 per cent, comparing these two periods. Comparing June, 1932, with May, 1932, there was a decrease of 15.4 per cent in the number and an increase of .3 of 1 per cent in the estimated cost of new residential buildings. New non-residential buildings decreased 13.4 per cent in number and 38.3 per cent in estimated cost. Additions, alterations and repairs decreased 9.4 per cent in number but increased 2.7 per cent in estimated cost. During June, 1932, two thousand four hundred and eighty-eight family dwelling units were provided in new buildings. This is a decrease of 5.9 per cent as compared with May. Comparing permits issued in 343 cities in June, 1931, and June, 1932, there was a decrease of 64.5 per cent in the number and a decrease of 75.6 per cent in the cost of new residential buildings. New non-residential buildings decreased 36.7 per cent in number and 34.5 per cent in estimated cost. Additions, alterations and repairs decreased 18.8 per cent in number and 43.0 per cent in estimated cost. Total construction decreased 30.0 per cent in number and 52.3 per cent in indicated expenditures. The number of family dwelling units provided decreased 73.9 per cent.

The *Monthly Survey of Business*, published by the American Federation of Labor, in its issue of July 25, estimates the number of unemployed as about 10,800,000. "Through the first half of this year," it is stated, "lay-offs in industry were still averaging over 200,000 a month, and in spite of temporary work found on farms the number out of work in June approached 11,000,000. Trade union figures for July show another large increase in unemployment."

## FAIR WAGES SCHEDULES FOR PUBLIC WORKS IN MANITOBA, 1932-1933

UNDER the provisions of Section 10 of Chapter 69, Consolidated Amendments, 1924, of the Province of Manitoba, being "An Act to Establish and Protect the Wages of Workmen Employed on Public Works," the Minister of Public Works of the Province has approved of the rate per hour and working hours set forth in the following schedule as the minimum rate per hour payable to any employee engaged in the respective trades, and the maximum number of hours during which an employee engaged in the respective trades shall be required to work. The schedules will apply and be effective from August 1, 1932, until April 30, 1933, or until such times as another order may be made by the said Minister of Public Works. The previous schedules, effective from September 14, 1931, until April 30, 1932, were given in the LABOUR GAZETTE, October, 1931, page 1130.

### Fair Wage Schedule for Winnipeg

The following schedule shall apply to the city of Winnipeg, and a radius of thirty miles therefrom, effective from the first day of August, 1932, to the thirtieth day of April, 1933.

—	Rate per hour		Hours per week
	\$	cts.	
1. Asbestos workers—			
(a) Journeymen.....	0 85		44
(b) First class improvers.....	0 70		44
2. Asphalters—

NOTE.—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City Schedule, excepting where other agreements for specific work are in effect.

Whereas certain contracts exist between contractors and the Government and the City of Winnipeg for unemployment relief works, which works are not completed and for which contracts were let during the existence of fair wage rates higher than those now proposed, it is recommended that the old rate of wages shall continue unless an agreement to the contrary mutually agreeable to all parties concerned is negotiated.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent

workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication of manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be

payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and

working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and

that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of a public building at Windsor, Ont. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, May 28, 1932. Amount of contract, \$695,929 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$1 25	8
Carpenters.....	1 00	8
Cement finishers.....	0 70	8
Concrete mixer (steam) operators..	1 00	8
Hoisting engineer (1 and 2 drum)..	1 00	8
Lather, metal.....	1 10	8
Linoleum layers.....	0 60	8
Marble and tile setters.....	1 25	8
Marble and tile setters' helpers.....	0 60	8
Painters and glaziers.....	0 75	8
Plasterers.....	1 25	8
Plasterers' helpers.....	0 60	8
Plumbers and steamfitters.....	1 00	8
Plumbers' and steamfitters' helpers	0 50	8
Roofers, felt and gravel.....	0 85	8
Sheet metal workers.....	1 00	8
Structural iron workers.....	0 80	8
Terrazzo layers.....	0 80	8
Terrazzo layers' helpers.....	0 50	8
Waxers and polishers.....	0 60	8
Labourers.....	0 45	8
Teamsters, team and wagon.....	1 00	8
Teamsters.....	0 45	8
Truck drivers.....	0 50	8
Steam shovel operators.....	1 20	8
Cranemen.....	0 96	8
Firemen.....	0 72	8
Elevator constructors.....	1 37	8
Elevator constructors' helpers.....	0 87½	8
Stone cutters.....	1 12½	8
Electricians.....	1 25	8

Demolition and reconstruction of part of the existing wharf at St. Charles de Caplan, Bonaventure Co., P.Q. Name of contractors, Ludger Lemieux, Ltée., Quebec, P.Q. Date of contract, July 25, 1932. Amount of contract, approximately \$12,995.25. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Timbermen.....	0 42	8
Blacksmiths.....	0 50	8
Labourers.....	0 35	8

Construction of a Customs and Immigration building at Beebe, P.Q. Name of contractor, J. R. Royer Limitée Sherbrooke, P.Q. Date of contract, July 18, 1932. Amount of contract, \$8,325 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 50	8
Stone masons.....	0 80	8
Stone cutters (granite).....	0 90	8
Stone cutters (limestone).....	0 70	8
Brick and hollow tile layers.....	0 80	8
Structural steel workers.....	0 80	8
Carpenters and joiners.....	0 55	8
Sheet metal workers.....	0 60	8
Roofers, felt and gravel.....	0 50	8
Lathers, metal.....	0 55	8
Plasterers.....	0 80	8
Painters and glaziers.....	0 55	8
Plumbers and steamfitters.....	0 60	8
Electricians.....	0 60	8
Labourers.....	0 35	8
Motor truck driver.....	0 40	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Teamsters.....	0 35	8

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 60	8
Blacksmiths' helpers.....	0 45	8
Carpenters.....	0 75	8
Cableway operators.....	1 10	8
Dragline operators.....	1 10	8
Chauffeurs.....	0 45	8
Compressor operator.....	0 60	8
Concrete finishers.....	0 50	8
Steam shovel engineer.....	1 10	8
Steam shovel cramenen.....	0 88	8
Steam shovel firemen.....	0 65	8
Drill runners (machine).....	0 50	8
Electricians.....	0 70	8
Concrete mixer operator.....	0 55	8
Firemen.....	0 45	8
Steam hoist engineer.....	0 75	8
Electric hoist engineer.....	0 60	8
Structural ironworker.....	0 80	8
Locomotive crane operators.....	0 40	8
Labourers.....	0 70	8
Machinists.....	0 65	8
Painters.....	0 65	8
Pipe fitters.....	0 65	8
Powdermen.....	0 45	8
Pumpmen.....	0 45	8
Riggers.....	0 60	8
Teamsters.....	0 40	8
Welders and burners.....	0 55	8
Pile driver engineer.....	0 75	8

Dredging harbour, Kincardine, Ont. Name of contractor, W. R. Forest, Goderich, Ont. Date of contract, July 14, 1932. Amount of contract, approximately \$4,800. The General Fair Wages Clause was inserted in the contract.

Dredging harbour, Yarmouth, N.S. Name of contractors, Beacon Dredging Co., Ltd., Halifax, N.S. Date of contract, July 23, 1932. Amount of contract, approximately \$45,580.05. The General Fair Wages Clause was inserted in the contract.

Dredging in Kaministiquia river, Fort William, Ont. Name of contractors, Great Lakes Dredging & Contracting Co., Ltd., Ottawa, Ont. Date of contract, June 29, 1932. Amount of contract, approximately \$36,023.75. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF RAILWAYS AND CANALS

##### Contract in Group "A" (Construction, etc.)

Contract for the removal of the existing dock on the east side of the Welland Ship Canal at Welland South, Ont., and the construction of a reinforced concrete pile dock on the site of the existing dock. Name of contractors, Messrs. Cameron & Phin, Welland, Ont. Date of contract, July 22, 1932. Amount of contract, approximately \$169,643.50. A fair wages schedule was inserted in the contract as follows:—

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in July, 1932, for supplies ordered by the Post Office Department under contract which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

### Association of Workmen's Compensation Boards of Canada

The Association of Workmen's Compensation Boards of Canada held their annual convention at Quebec City early in August for the purpose of considering administrative problems. Mr. N. R. Craig, chairman of the Saskatchewan Board, presided, representatives attending also from Nova Scotia, New Brunswick, Quebec, Ontario, Alberta and British Columbia. It was decided that a conference of the medical officers of the various Boards would be held in connection with the next convention, which will meet at Regina next year.

In reference to the recent decision by Mr. Justice de Lorimier (LABOUR GAZETTE, June, 1932), which declared the Quebec Workmen's Compensation Act to be *ultra vires* of the Provincial Legislature, Mr. Craig stated that the Association had considered the situation that had been created by this decision, but that the matter could only be dealt with by the judiciary.

Reports to the Association from various Boards showed that despite the existing conditions through the Dominion, expenditures upon wages in the different provinces had been maintained proportionately with employment, and generally, the number of accidents which had been dealt with by the different boards had sensibly decreased during the past two years.

### AGREEMENTS AS TO WAGES AND WORKING CONDITIONS FOR COAL MINERS IN NOVA SCOTIA, AT GLACE BAY, SYDNEY MINES, SPRINGHILL AND STELLARTON

AS stated in the issue of LABOUR GAZETTE, June, 1932, page 647, agreements were signed on May 31 by the representatives of the United Mine Workers of America, District 26, and of the four coal mine operating companies of the Dominion Steel and Coal Corporation Limited, effective from March 15, 1932, to January 31, 1934. The agreements provide for reductions in wage rates of twelve and one-half per cent for those on piece rates and ten per cent for those on day rates, etc., except that no rate for adult miners is reduced below \$3.25 per day. The result is to bring down to this figure, which had been the rate for surface labourers since 1925, the rates for underground labourers and many other classes for which there had previously been differentials over the surface labourers' rate.

These agreements were the result of the recommendations of a Royal Commission appointed by the government of Nova Scotia, the report of which appeared in the LABOUR GAZETTE, March, page 270. The Commission also recommended that in the agreements provision should be made for an umpire to settle those disputes which were not settled by negotiations between the representatives of the miners and the management. The Department is informed that when these agreements were signed it was arranged that the provisions for such an umpire would be negotiated later. The text of the principal clauses of the agreement between the Dominion Coal Company and the union is given herewith, and also the schedules of rates for men paid by the day and the hour, "datal men," the schedules of mining

or contract rates, per ton, yard, etc., being omitted owing to limitations of space. The clauses of the Dominion Coal Company's agreement apply to the other mines with certain exceptions.

#### Agreement between the Dominion Coal Company Limited and District No. 26 of the United Mine Workers of America

*Preamble.*—This agreement with respect to wage rates and terms of agreement is made on the basis of the report of the Royal Commission, composed of Sir Andrew Rae Duncan, Chairman, Reverend H. P. McPherson, D.D., and Professor John D. MacMillan, D.D., dated February 18, 1932.

The parties hereto agree that during the period of this agreement, the scale of wages for labour shall be as set forth in the schedules attached hereto.

#### AGREEMENT

*No. 1. Hours of Labour.*—The collieries will commence to hoist coal at 7 a.m., at which time all the men must be in the mine. The day's work will cease at three o'clock, when all arrangements will be available for conveying men to the surface. The surface men around the bankhead and screens, associated with the handling of coal, are to be on duty between the hours of 7 a.m. and 3 p.m., and for a short time after, if necessary, for the purpose of attending to such duties as will facilitate their own work, such time not to exceed a half hour. The standard of other surface labour around the collieries to be from 7 a.m. to 4 p.m. with half an hour for dinner. Where continuous attendance is required, the shifts will be eight (8) hours, both surface and underground.

*No. 2. Observance of Mining Laws.*—This contract shall conform to existing mining laws in the province of Nova Scotia, and both parties

agree to co-operate in the observance of said laws.

**No. 3. No stoppage of Work.**—It is distinctly understood and agreed that in case of all disputes and grievances of every nature arising under this contract, the mines shall continue to work, pending settlement.

**No. 4. Method of Settling Disputes.**—(a) There shall be a Pit Committee consisting of three men at each mine; two of them must be practical coal miners.

(b) The duties of the Mine Committee shall be confined to the adjustment of disputes between the mine manager and the miners or mine labourers arising out of this agreement, or any district or local agreement made in connection therewith.

(c) When any grievance or grievances arise between the mine manager and the miners or mine labourers and they fail to reach an agreement, the miners or mine labourers shall refer the grievance or grievances to the Pit Committee, and should they fail to reach an agreement with the mine manager, they shall refer grievance or grievances to the local superintendent and the district executive; should they fail to reach an agreement, the grievance or grievances shall be referred to the general superintendent and the district executive.

(d) It is contrary to the spirit and intent of this clause for any employee to attempt to, or to lay any mine or section of the mine idle for the purpose of forcing a settlement of any grievance.

**No. 5. Duties of the Pit Committee.**—The Pit Committee in the discharge of its duties shall under no circumstances go around the mine for any cause whatever unless called upon by the mine manager or his representatives and by a miner or company man who may have a grievance he cannot settle with the mine manager or his representative; however, it is mandatory for the mine manager or his representative and the miner or company man affected to make a request for the Pit Committee to come to the place or places where the grievance is at once, so that a thorough investigation can be made and adjustment of grievance made, if possible.

Any Pit Committee-man who shall attempt to execute any local rule or procedure in conflict with any provision of this contract, or any made in pursuance hereof, shall be forthwith deposed as a committeeman. The foregoing shall not be construed to prohibit the Pit Committee from looking after the matter of membership, dues and initiation in any proper manner.

Members of the Pit Committee shall not leave their places of duty during working hours, except by permission of the company, or in cases involving a stoppage of the mine.

**No. 6. Hiring, Discharging and Time to be Paid For.**—(a) Management: The management of the mine and the direction of the working force is vested exclusively in the operator and the U.M.W. of A. shall not abridge this right.

(b) Discharge and Hire: The right to hire and discharge is vested exclusively in the operator, but no man shall be discharged except for sufficient cause, other than personal prejudice or activity in matters relating to the United Mine Workers of America. It is not the intention of this provision to encourage the discharge of employees or refusal of employment to applicants because of personal prejudice or activity in matters affecting the United Mine Workers of America.

(c) Discharge and Suspension: If any employee shall be discharged or suspended by the management and it is claimed that an injustice has been done him, an investigation, to be conducted by the parties and in the manner set forth in section 4, shall be taken up promptly and if it is proved an injustice has been done, the management shall reinstate said employee and pay him full compensation for the time he has been suspended and out of employment.

(d) Provided that, if at the end of five days after the discharge of an employee who claims an injustice has been done him, and an investigation has not been made, a final decision reached within that time, such discharged employee will be given employment pending the final disposition of the case.

If the discharged employee be a miner, the employment given under this clause will be his regular working place, and, if a day man, he will be given such employment, at day work, as the management elects and that he is competent to perform, if such employment takes a lower rate of wages than that at which he was employed at the time of his discharge and the final decision of the case be in his favour, he will be paid in the final compensation and the adjustment of the case at the same rate of wages he was receiving at the time he was discharged.

(e) In order that no dispute will arise, it is hereby agreed that the foregoing paragraph of this section shall be construed that day men shall receive the scale wage for the work at which they were employed when suspended and miners \$3.74 per day.

(f) When the foreman directs an employee to do labour, the scale of wages being lower than this regular scale, he shall be paid the wage scale as paid for labour from which he was transferred during time employed.

(g) No member of the United Mine Workers of America shall be denied employment, except for sufficient cause, other than personal prejudice or activity in matters affecting the United Mine Workers of America, and when an applicant for work is denied employment and it is claimed by him an injustice has been done said applicant, investigation shall be conducted by the tribunals and in the manner set forth in section No. 4 for the adjustment of grievances and shall be taken up promptly. If it is proven an injustice has been done, the mine management shall give employment to said applicant. The reasons assigned for not employing said applicant shall be set forth during the investigation. It is understood and agreed that the taking up and investigation of discharge of applicant case will take precedence over all other cases except shutdowns, and no list shall be kept for the purpose of regulating the employment of applicants in violation of this contract.

(h) It is provided, however, the above provisions of this section shall not apply to a man that is a menace to the safety of the lives of himself or other employees in such mine. Neither shall it apply to an applicant who is incompetent to perform such labour or to men who continue to neglect their work, or for any other justifiable cause, for such refusal of employment, and no one shall be considered as coming under the provisions of above paragraphs who, when making application for work, is at the time employed elsewhere or has an application for work pending at another mine.

(i) It is understood and agreed that the company shall select its day and monthly men, based upon their qualifications and fitness for the work to be performed, provided, however, an applicant claiming he has been discriminated against shall have the right of appeal as provided for in paragraph "G" of this section and a hearing and final disposition of said appeal shall be made in conformity with paragraphs "g" and "h" of this section. It is further provided that no day or monthly man employed at such work shall be transferred to mining ahead of an applicant waiting for employment as a miner, at the time said day or monthly man was employed.

(j) It is agreed that when a boy reaches the age of eighteen years, the management has the right to move him along to a higher classification of work, provided he is capable of performing such work.

**No. 7. Day Men to Perform Work Assigned Them.**—All day men shall do any class of work in or around the mine that the management may require of them; provided, however, he is paid scale price for such work; no man transferred to other work shall be paid less than his regular wages; any man transferred to other work carrying a higher rate of wages shall be paid the higher rate.

**No. 8. Miners Requested to Fill Place of Other Employees.**—When a miner shall be requested to fill the place of another employee, he shall receive the rate of wages paid for miners, which is \$3.74, and each and every miner when called upon, who is competent to perform such work, shall take his turn in performing the work assigned him by the management for the day in question.

**No. 9. Regular Attendance at Work.**—Employees are expected to attend work when it is available and the places of men habitually absenting themselves from work may be filled at the discretion of the management.

**No. 10. In case men refuse to continue at work because of a grievance.**—If any man refuse to continue at work because of a grievance which has not been taken up for adjustment in the manner provided herein, and such action shall seem likely to impede the operation of the mine, the Mine Committee, when called upon by the Mine Manager, shall immediately furnish a man or men to take such vacant place or places, in order that the mine may continue at work, and it shall be the duty of any member or members of the United Mine Workers who may be called upon, provided he is competent, when called upon by the Mine Manager, and the Mine Committee, to immediately take the place or places assigned to him or them in pursuance thereof.

**No. 11. No grievance to be taken up when mine is idle in violation of contract.**—Under no circumstances shall a grievance be taken up for adjustment during a suspension of work in violation of this contract.

**No. 12. Falls in working places.**—Where a fall occurs in any working place, and which prevents the miner or miners from working at the face, the official in charge of the section, on being notified by the workmen, will immediately make arrangements to have the same cleaned up, providing he deems it advisable to do so. This work, when done by the miner, to be paid at rate of miners taken out of place.

**No. 13. Deficient work.**—If any place in a mine becomes deficient for any reason other than the intervention of stone, the management and the men affected shall agree on a rate to be paid, while the place is deficient. Should they fail to agree, the men concerned shall continue to work in the place at the rate paid miners taken from place, which is \$3.74 per day, until such time as they elect to go on the regular rate of the place.

**No. 14. Check weighman.**—Miners may elect a check weighman, who must be an employee in or around the mine at the time and for at least three (3) months previous to his election, and the Company shall furnish him with a check number and he shall credit to his number the portion of coal checked off or deductions made from each and every man due to pay the check weighman for his day's work, or part of day, to pay his wages.

The Company shall give any man so elected a place in or around the mine at the end of his labours as check weighman.

**No. 15. Re-employment of officers.**—The Company agrees that all men leaving their employment to accept elected or appointed positions with the United Mine Workers of America, will, at the expiration of their official duties, be given employment at the mine.

**No. 16. Maintenance men during suspension of mining.**—In case of either local or general suspension of mining, either at the expiration of this contract or otherwise, the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines shall not suspend work, except at the option of the operator, but shall fully protect all the Company's property under their care and operate fans and pumps and lower and hoist such men or supplies as may be required to protect the Company's property and any and all coal necessary to keep up steam at the Company's coal plants. But, it is understood and agreed that the operator will not ask them to hoist any coal produced by non-union labor for sale in the market. The operator, at his option, to retain only such engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines as are required, but with the understanding that all of the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines employed at the time of the suspension shall be those regularly engaged at maintenance work. The operator will not employ officials on continuous service positions.

Should the interest of the engineers, firemen, pumpmen and such other maintenance men necessary to protect the mines be directly involved in any issue at the expiration of this contract, and any engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines cease work, the United Mine Workers of America will provide competent men to perform the emergency work above recited at the scale price in effect at the time of the suspension, subject to any subsequent settlement.

**No. 17. Changes of contract.**—It is agreed that during the life of this contract nothing shall be done to decrease the earning power of the employee, or to increase the cost of production to the Company, also it is hereby understood that no custom or condition in effect at any mine can be changed unless mutually agreed to by both parties to the contract.

**No. 18. New Work.**—When the development of a new mine is begun during the period of this agreement or new machinery or methods of handling the products is installed, a scale of wages covering the labor at such new mines and under such changed conditions will be the same as in other mines in the neighborhood where similar conditions exist. Where no similar conditions exist, a scale of wages and conditions will be made by the District Executive and the representatives of the Company.

**No. 19. Placing men now on local contracts.**—Men who are working on Local Contract will be given an opportunity to get to the coal face wherever and whenever possible.

**No. 20. Recognizing the Pit Committee.**—The Company will recognize the Pit Committee in the discharge of their duties, as provided for in this agreement.

**No. 21. Check-Off.**—(a) The Company agrees to check off all dues, fines and initiations from all members of the United Mine Workers of America, employed in and around the collieries, also check-offs for assessments or levies for strictly U.M.W. purposes, authority to make such deductions to be given the Company by the President and Secretary of District No. 26, United Mine Workers of America, such authorities to state the purpose for which the assessment or levy is to be made.

(b) The Maximum amount to be deducted for U.M.W. purposes in any one month shall not exceed Five Dollars.

**No. 22. Deaths and Funerals.**—(a) In the event of an instantaneous death by accident in the mine, employees shall have the privilege of discontinuing work for the remainder of that day only. Work, at the option of the operator shall be resumed the day following and continue thereafter.

(b) In case the operators elect to operate the mines on the day of the funeral of the deceased, as above, or where death has resulted from an accident in the mine, individual employees may, at their option, absent themselves from work for the purpose of attending such funeral, but not otherwise, each member of the United Mine Workers of America, employed at the mine at which the deceased member was employed, shall contribute Fifty Cents (50c) and the Operators Fifty Dollars (\$50.00) for the benefit of the family of the deceased or his legal representatives, to be collected through the office of the Company.

(c) Except in case of fatal accidents, as above, the mine shall in no case be thrown idle because of any death or funeral, but, in the case of the death of any employee of the Company or member of his family, any individual miner may at his option, absent himself from work for the purpose of attending such funeral, but not otherwise.

**No. 23. Violation of Agreement.**—No laws or rules shall be made by any Local Union or group of Local Unions in violation of this contract, joint agreements to have precedence over National, District and Local constitutions.

**No. 24. Preparation of Coal.**—The ability of the Company to sell coal and to pay wages being recognized as largely dependent upon the coal being clean and marketable, it is mutually agreed and understood that the miners will produce their coal in such manner as not to increase the percentage of fine coal, either by carelessness or the use of unnecessarily large quantities of powder, and will load coal free as possible from all impurities.

**No. 25. Price of Workmen's Coal.**—Workmen will be supplied with run-of-mine coal at \$3.25 per ton at the mine or coal yard.

Where it is necessary to transport the coal over a railway in order to make delivery, the cost of transportation shall be added to the price.

**No. 26. Sections of Mines Shut Down Indefinitely.**—It is agreed wherein any section of a mine is shut down for an indefinite period, that the opportunity of a division of the work will be given to each and every man thrown out of employment. However it is understood the question must be taken up with the management and an understanding reached as to the method that may be put into effect.

**No. 27. Application of this Agreement.**—The terms of this agreement apply only to men who are members of the United Mine Workers of America, working in and around the mines and all who are eligible to membership in the United Mine Workers of America, as set forth in the Constitution of the International Union.

**No. 28. Expiration of Contract.**—The contract is in effect from March 15th, 1932, and will continue in full force and effect until January 31st, 1933, and from year to year thereafter, unless notification to reopen contract is served by either of the parties hereto, such notification to be served not later than October 1st in any year later than the year 1932.

Upon receipt of such notification, the parties hereto agree to meet immediately thereafter with the object of adjusting any matters requiring attention in the present contract or of making a new contract.

**No. 29. Obligations.**—(a) All provisions and terms of this contract are hereby mutually agreed to by and between the Coal Company and all the miners of District No. 26 and signed by the representatives of the parties hereto, who have been duly authorized to execute the same on behalf of the Dominion Coal Company and on behalf of District No. 26, of the United Mine Workers of America, respectively.

(b) That the fulfillment of this agreement entered into is guaranteed by the International Union and the fulfillment of joint agreements entered into is guaranteed by the officers of the District, and it is their duty to see that all such agreements are carried out, both in the letter and in the spirit.

### Datal Wage Schedules

#### DOMINION COAL COMPANY LIMITED, GLACE BAY DISTRICT

SURFACE	Rate per Day
Tally boys; boys under 17 years (except as otherwise classified) . . . . .	\$2 34
Lamproom boys; machinists' apprentices; compressor oilers; boys between 17 and 18 years (except as otherwise classified, see note) . . . . .	2 61
Labourers; masons' helpers; washhouse tenders (where not tending boilers); bank and screenmen; pit tub oilers; pickmen; ash wheelers and coal to fires; blacksmiths' helpers; single teamsters; checkers and car haul men No. 1-B bankhead; double teamsters; tippelen; unhookers and grabmen at head of slopes; washhouse and boiler tenders; fan enginemens, small steam engines and motor fans . . . . .	3 25

	Rate per Day		Rate per Day
Tippelmen, 1B bankhead; conveyormen; headmen (attending man cages and coal hoisting cages where men are lowered and dumping cage men); box car enginemen; fan enginemen, (large steam fans or fan men doing extra work except at No. 2); screen and bank mechanic; brook and reservoir pumpmen; tubmen and 2nd class carpenters; lamp-room men; compressormen with oilers..	3 36	Haulage enginemen, single drum 6 to 8-in. cyl. incl.; assistant examiners; trappers, men; general labourers; drivers (railroad drivers on levels), spraggers; couplers; pit tub oilers; material men; electric enginemen up to 45 H.P., single drum; conveyor enginemen; pan movers; jig and balance onsetters; haulage enginemen (single drum 9 to 12-in. cyl. and double drum 6 to 8-in.); trip riders (except main deep and main and tail); drivers, from all faces; pit stablemen; electric enginemen, up to 45 H.P., double drum and over 45 to 75 H.P., single drum..	3 25
Stokers (ordinary); car shunters and trimmers..	3 45	Head stablemen; landing tenders; on-setters' helpers; pickmen (except No. 2); man cage onsetters (except No. 2); bratticemen, timbermen, chockers and couplers (No. 1-B pit bottom), chock drawers' helpers; pack and chock builders..	3 36
Blacksmiths, 2nd class; main endless haulage enginemen; fan enginemen (Nos. 2 and 9 combined); machinists, 2nd class; electricians; carpenters; 1st class, bank and screen mechanics, No. 12..	3 49	Haulage enginemen, double drum over 8-in. and up to 12-in. cyl.; haulage enginemen, single drum over 12-in; trip riders, main deep and main and tail or on headways where 300 or more tons are handled per shift; trip riders, Waterford when handling coal from four pairs of men or over; roller men; electric enginemen, over 45 to 75 H.P., double drum and over 75 to 100 H.P., single drum..	3 40
Blacksmiths, 1st class; head stokers; head screenmen..	3 65	Drop hoist enginemen, No. 1-B; boss drivers; motor generator men, Nos. 1-B and 24; haulage enginemen, 2 drums or over with 12-in. cyl. or over and long headways No. 2; man rake enginemen; onsetters, headmen (hoisting cages); pumpmen (doing ordinary repairs); machine repairers; man cage onsetters, No. 2; pipemen; underground masons and plastering stoppings; electric enginemen over 100 H.P., single drum..	3 54
Compressormen (doing own oiling or looking after fans or dynamos); machinists, 1st class..	3 74	Electric enginemen 75 to 100 H.P.—double drum..	3 60
Man enginemen, shafts 1-B, 2, 4, and man rake haulage, 12, 14, 16; hoisting enginemen, not otherwise specified..	3 83	Man rake enginemen (Back Deep Nos. 2, 4, 11 and 24); pickmen (No. 2); electric enginemen over 100 H.P., double drum	3 65
Hoisting enginemen, Nos. 4 and 10..	4 05	Rope examiners and splicers; mine mechanics; miners taken from face to do other work; moving pans (man in charge); longwall equipt. (man in charge) ..	3 74
Shaftmen..	4 19	Electric loco. brakeman..	3 92
Hoisting enginemen, Nos. 12, 14 and 16.	4 28	Dispatchers..	3 92
Masons (surface) hoisting enginemen (No. 2 colliery and 1-B, day shift) ..	4 50	Roadmakers (in charge of sections, see note), electric loco. drivers, brushing stone and steel booming, chock drawers.	4 50
Stablemen (monthly) ..	95 25		

#### Hours of Labour

Surface men around Bankhead and Screens associated with the handling of coal are to be on duty from 7 a.m. until 3 p.m. and for a short while after, if necessary, for the purpose of attending to such duties as will facilitate their own work such time not to exceed one half-hour.

The standard of other surface men around the colliery to be from 7 a.m. until 4 p.m., with one half-hour for dinner.

Where continuous service is required the shift will be eight hours.

Where more than one shift is in effect the hours of labour will conform to the above.

#### Boys' Rates

Boys over seventeen years of age capable of performing to the satisfaction of the management the duties of any classified job at which they may be employed will be paid the schedule rate applicable to such job.

#### Payment for Overtime

Time and one-half for overtime and double time for Sundays and Statutory Holidays will be paid to the undernoted classes:—

Machinists, carpenters, blacksmiths, electricians; shaftman, No. 2 colliery; masons, No. 4 colliery.

This does not apply to continuous service men or to men supplying for absentees.

UNDERGROUND	Rate per Day
Trappers, boys..	\$2 25
Boys under 17 years, except as otherwise classified..	2 61
Pick boys, boys between 17 and 18 years, except as otherwise classified (see note)	2 79

*Note.*—The collieries will commence to hoist at 7.00 a.m. at which time all men must be in the mine. The day's work will cease at 3.00 p.m., when all arrangements will be available for conveying men to the surface.

Where more than one shift is in effect the hours of labour will conform with the above.

Miners out of places will be paid the classification rate applicable to work at which they are employed.

When men are taken from their ordinary occupation to do other work they shall be paid the higher of the two classification rates. This applies to both full shifts and broken time.

**Roadmakers.**—The Manager reserves the right to place helpers with roadmakers and pay helpers at labour or other classification rate.

**Boy's Rate.**—Boys over 17 years of age capable of performing, to the satisfaction of the management, the duties of any classification job at which they may be employed will be paid the schedule rate applicable to such job.

**Payment for Overtime.**—Roper slicers who work less than four hours overtime will be paid a half shift and if over four hours will be paid a full shift.

All other classes employed underground will be paid only for the actual time worked after regular shift, or on Sundays or Legal holidays.

**Payment for Taking Injured Men out of Mine.**—Datal men will be paid the classification rate and if on the day shift they arrive on the surface before one o'clock or on the afternoon shift before ten o'clock, they will return to their duties in the mine. If they arrive on the surface after the hours mentioned they will be paid the full shift.

Should it be necessary to detail Contract men they will be paid the rate for miners taken from places, on the same basis as applies to datal men.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements, with their schedules of wages and working conditions, that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

#### CALGARY, EDMONTON AND LETHBRIDGE, ALBERTA.

—THE BREWERIES OF ALBERTA AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL NOS. 124 (CALGARY), 314 (EDMONTON) AND 354 (LETHBRIDGE).

Agreement to be in effect from April 1, 1932, to March 31, 1933. Notice of any change to be given before expiration date. Employers to meet a negotiating committee before expiration date.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1930, page 968 and December, 1928, page 1375, with the following changes:—

Hours: 8 per day, 4 on Saturdays, a 44-hour week during the whole year (Previously the hours were 44 per week from January to April inclusive and 50 per week during the other months.).

Wages in engineering department: chief or acting engineers \$189 per month (formerly \$210), second class engineers 75½ cents per hour, third class engineers 73 cents, general mechanics 72 cents, pipefitters 69 cents (reductions of 6 cents per hour for these four classes); firemen 66½ cents, mechanics and pipefitters' helpers 62½ cents (no change for these three classes).

The hourly wage rates for employees in the brewery department, bottling department, co-operating department and for special men are the same as previously paid.

Wages for employees paid by the month: first cellar man of brewery department \$157

(formerly \$169); first bottle yard man \$145 (formerly \$156); truck drivers \$135 (formerly \$150); truck drivers' helpers \$125; teamsters \$120 (formerly \$130).

#### FERNIE AND CRANBROOK, B.C.—TWO BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL NO. 308.

Agreement to be in effect from June 1, 1931, to May 31, 1933.

Only union members, or if none available men with permits from the union, to be employed. No discrimination against employees on account of union activities. All materials used to be made by union men if possible.

The union label to be furnished to firms who employ only union labour.

Hours: 8 per day, 6 days per week except for engineers.

Overtime: time and one half; work on Sundays and holidays double time except for engineers.

Wages per day: brewers, cellarmen, kettle-men and coopers \$5.75, washhouse men and other men employed in the brewery \$5.50; men in bottle shop \$5.15, slack barrel coopers \$5.15; new men \$4.15 for first six months and \$4.65 for second six months. Teamsters \$137.50 per month, first engineers \$175, second engineers \$165.

If necessary to reduce the staff in the dull season, men to be laid off in rotation in an impartial manner for not longer than one week at a time.

Any disputes to be referred to a board consisting of two members of each party, and if necessary, a fifth disinterested party, the majority decision of this board to be binding.

#### VANCOUVER AND VICTORIA, B.C.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL NO. 300 (VANCOUVER) AND LOCAL NO. 280 (VICTORIA).

The agreement, which was summarized in the LABOUR GAZETTE, December, 1931, page 1354, and August, 1929, page 924, is continued in effect (with minor changes at Victoria) until December 31, 1932.

Wages are unchanged: \$29.50 per week for brewhouse, workhouse and cellarmen; \$29 for bottlers, machine operators and packers; \$26 for spare help, \$19 and \$21 for apprentices; \$29.50 for truck drivers, \$28.50 for helpers on trucks, \$28.50 for firemen; \$33.50 for second engineers, \$29 for third engineers.

**Manufacturing: Printing and Publishing**

**BRANTFORD, ONTARIO.—A CERTAIN NEWSPAPER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 378.**

Agreement to be in effect from September 30, 1931, to September 30, 1934.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, January, 1929, page 91, with the following exceptions:

The number of apprentices is limited to one to every four journeymen (formerly one to every three) but never more than five apprentices at any one time.

In case of discharge, the employee may appeal to the joint standing committee.

Hours are unchanged at 48 per week for day work and 45 for night work.

Wages for compositors, make-ups and journeymen proofreaders are unchanged at \$37 for day work and \$39 for night work; foremen \$41.

**BRANTFORD, ONTARIO.—CERTAIN JOB PRINTING FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 378.**

Agreement to be in effect from September 30, 1931, to September 30, 1934.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, January, 1929, page 91, with the following exception:

The number of apprentices is limited to one to every four journeymen (formerly one to every three).

Hours are unchanged at 44 per week for both day and night work.

Wages are unchanged at \$33 per week for day work for hand compositors, make-ups, proofreaders, machine operators, etc., and \$35 for night work; machinist operators \$3 per week extra; foremen \$37 per week. It is now provided however that in case of a general wage reduction in printing offices under the jurisdiction of the International Typographical Union, employers reserve the right to negotiate the wage scale after sixty days' notice.

**Construction: Buildings and Structures**

**HALIFAX, N.S.—MASTER PLUMBERS, MEMBERS OF THE CONSTRUCTIVE MECHANICAL TRADES' EXCHANGE AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 56.**

Agreement to be in effect from May 1, 1932, to April 30, 1933, and from year to year thereafter until notice.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1930, page 715, with the following exception:

Wages: a temporary deduction of 15 cents per hour from the previous rate of \$1.00 per hour to be made for the year ending April 30, 1933, and the wage rate for 1933 to be determined by conditions then prevailing on the basis of the 1931 rate of \$1.00 per hour.

**MONCTON, N.B.—MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 600.**

Agreement to be in effect from May 1, 1932, to May 1, 1933, and from year to year thereafter until either party gives notice of change.

Only union members to be employed. No union member will work for anyone but an established sanitary and heating engineer.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. For work out of town, a 9-hour day to be optional.

Overtime: all work after 6 p.m. on other days and after 1 p.m. Saturdays, until midnight, time and one-half. Work after midnight and on Sundays and holidays, double time.

Wages for journeymen plumbers and steamfitters: 80 cents per hour (a reduction of 10 cents per hour).

For work out of the city, board and fare to be paid by employer and travelling time at straight time rate.

Apprentices to serve five years and be registered with the New Brunswick Examining Board and the union. One apprentice allowed to every five journeymen employed.

Disputes to be referred to arbitration.

**OTTAWA, ONTARIO.—OTTAWA MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 71.**

Agreement to be in effect from June 1, 1932, to April 30, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, October, 1929, page 1160, with the following exceptions:

Wages for journeymen plumbers and steamfitters are reduced from \$1.05 to 92½ cents per hour. Wages for improvers 45 cents during first six months and 60 cents during second six months (a reduction of 10 cents per hour).

**OTTAWA, ONTARIO.—OTTAWA STONE CONTRACTORS AND THE OTTAWA STONECUTTERS' ASSOCIATION.**

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1929, page 926, with the following change:

Wages for journeymen stonecutters: 90 cents per hour (a reduction of 15 cents per hour).

**EDMONTON, ALBERTA.—EDMONTON SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS, INCORPORATED AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 488.**

Agreement (made following the strike and conciliation by the Department of Labour reported in the *LABOUR GAZETTE*, June, page 651) to be in effect from May 20, 1932, to April 30, 1933, and from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1931, page 934, September, 1928, page 1014 and July, 1927, page 792, with the following exception:

Wages per hour for plumbers and steamfitters: \$1.05 (a reduction of 15 cents per hour).

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was slight, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being practically unchanged.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities showed little change at \$6.78 for July as compared with \$6.79 for June; \$8.11 for July, 1931; \$10.91 for July, 1930; \$10.98 for July, 1929; \$10.27 for July, 1922; \$16.92 for June, 1920 (the peak); and \$7.42 for July, 1914. The prices of milk, butter, cheese and coffee were lower, while the prices of beef, eggs and potatoes were higher. Including the cost of fuel and rent with that of foods the total budget averaged \$16.21 at the beginning of July as compared with \$16.20 for June; \$18.28 for July, 1931; \$21.26 for July, 1930; \$21.26 for July, 1929; \$20.67 for July, 1922; \$26.92 for July, 1920 (the peak); and \$14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was unchanged at 66.6 for July, the same figure as for June, as compared with 71.7 for July, 1931; 85.3 for July, 1930; 97.2 for July, 1929; 98.7 for July, 1922; 164.3 for May, 1920 (the peak); and 64.4 for July, 1914. Sixty-five prices quotations advanced, eighty-three declined and three hundred and fifty-four were unchanged.

In the classification according to chief component materials five of the eight main groups were lower and three were higher. The Vegetable and Vegetable Products group and the Animals and their Products group advanced, the former due to higher prices for bran, shorts, coffee and potatoes which more than offset lower prices for barley, corn, flax, rye, flour, oatmeal and rolled oats, and the latter because of higher prices for hides, cured meats, butter, eggs, calves and hogs which more than offset declines in the prices of fish, furs, leather, steers and lambs. The Chemicals and Allied Products group was also slightly higher. The groups which declined were: the Fibres, Textiles and Textiles Products group because of reduced quotations for raw silk, cotton yarn, and grey and bleached cotton; the Wood, Wood Products and Paper group, due mainly to lower prices for certain lines of lumber and for pulp; the Iron and its Products group, owing to lower prices for steel sheets,

steel tank plates and automobile body plates; the Non-Ferrous Metals and their Products group, due to lower quotations for lead, silver and zinc which more than offset higher prices for copper and tin; and the Non-Metallic Minerals and their Products group, owing mainly to lower prices for hollow building blocks and granite.

In the grouping according to purpose consumers' goods were slightly higher, due to increased prices for coffee, potatoes, bran, shorts and fresh and cured meats, which more than offset lower prices for tea, flour, fish and gasoline. Producers' goods declined somewhat owing to lower prices for rye, flax, corn, steers, lambs, furs and lumber, which more than offset higher prices for bran, shorts, rubber, calves and hogs.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were slightly higher, the former due mainly to increased quotations for potatoes, calves, hogs, eggs, raw wool, coffee and tin, and the latter due to higher prices for bran, shorts, canned vegetables, cured meats and butter. Canadian farm products advanced, while articles of marine origin, articles of forest origin and articles of mineral origin were lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the *LABOUR GAZETTE*, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915

(Continued from page 924)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued on page 932)

when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those

employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food,

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

## Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

The slight upward movement in beef prices which commenced in June was continued, sirloin steak being up from an average price of 25.5 cents per pound in June to 25.8 cents in July and rib roast from 19 cents per pound in June to 19.2 cents in July. Veal and mutton were also slightly higher, the former averaging 13.4 cents per pound and the latter 22.2 cents. Salt pork was down from an average price of 15.3 cents per pound in June to 15 cents in July.

Eggs were higher in most localities, fresh being up from an average price of 19.2 cents per dozen in June to 21.4 cents in July and cooking from 15.1 cents per dozen in June to 16.8 cents. Milk was again slightly lower at an average price of 9.6 cents per quart. Decreases were reported from Charlottetown, Fredericton, Ottawa, Winnipeg, Trail and Nanaimo. Butter prices were somewhat lower in practically all localities, dairy being down from an average price of 19.5 cents per pound

in June to 17.8 cents in July and creamery from 22.6 cents per pound to 21.6 cents. Prices in July, 1931, were 23.3 cents per pound for dairy and 26.8 cents for creamery. Cheese was also lower averaging 20.1 cents per pound in July as compared with 20.7 cents in June.

Canned vegetables were again slightly higher, tomatoes averaging 11.1 cents per tin in July as compared with 10.8 cents in June, peas 11 cents as compared with 10.8 cents and corn 11.3 cents as compared with 11 cents. Potatoes showed little change at an average price of 66 cents per ninety pounds. Decreases in rent were reported from Prince Albert and New Westminster.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 54.7 cents per bushel in July as compared with 55.1 cents in June. The low price for the month was 52.6 cents per bushel reached on the 12th and the high 59.5 cents on the 28th. The advance toward the end of the month was said to be due to the improved export demand and to reports of damage to western Canadian crops, as well as to European crops. Coarse grains for the most part were lower, western barley averaging 36.5 cents per bushel as compared with 37.8 cents, American corn 75.8 cents per bushel as compared with 77.9 cents, flax 68.2 cents per bushel as compared with 71.7 cents, and rye 33.1 cents per bushel as compared with 33.8 cents. Western oats were slightly higher at 35.2 cents per bushel as compared with 33.8 cents. Flour at Toronto was 10 cents per barrel lower at \$4.80, while rolled oats were down from \$2.55 per ninety pound bag to \$2.40. Bran and shorts at Montreal advanced, the former being up from \$17.83 per ton to \$17.96 and the latter from \$18.83 per ton to \$19.38. Raw sugar at New York advanced from 86.8 cents per cwt. to \$1.30 (Canadian funds), while granulated at Montreal was up from \$4.28 per cwt. to \$4.37. The higher prices occurred following the announcement of a substantial reduction in European crop estimates as compared with a year ago and to the restrictions on the export of the Cuban crop to the United States. Coffee at Toronto was 1 cent per pound higher at 19 cents. Ceylon rubber at New York was up from an average price of 3.1 cents per pound to 3.3 cents. In livestock prices steers at Toronto were slightly lower at \$6.14 per hundred

pounds, while at Winnipeg the price declined from \$5.27 per hundred pounds to \$5.09. Bacon hogs at Toronto advanced from \$4.58 per hundred pounds to \$5.03, at Montreal from \$4.78 to \$5.19 and at Winnipeg from \$3.87 to \$4.38. Lambs at Toronto declined from \$8.07 per hundred pounds to \$7.39 and at Winnipeg from \$6.48 per hundred pounds to \$5.98. Creamery butter at Montreal advanced from 18.1 cents per pound to 19.6 cents. Eggs were slightly higher, fresh at Montreal being up from 24.1 cents per dozen to 24.5 cents, at Toronto from 20.4 cents to 21.5 cents and at Winnipeg from 15.6 cents to 16 cents. Raw cotton at New York advanced from an average price of 6.1 cents per pound to 6.7 cents (Canadian funds). The increase was said to be due to unfavourable weather conditions for the crop

in the United States and to the improved export demand. Raw silk at New York was 4 cents per pound lower at \$1.64. Raw wool was  $\frac{1}{2}$  cent per pound higher at 8-8 $\frac{1}{2}$  cents. The downward tendency in the price of lumber continued, a grade of white pine being down from \$80-\$90 per thousand board feet to \$75-\$80, while common fir timber was down from \$15 per thousand board feet to \$13. In non-ferrous metals electrolytic copper at Montreal advanced from \$6.79 per hundred pounds to \$6.85 and tin from 27 cents per pound to 28 $\frac{1}{2}$  cents, while silver was somewhat lower at 30.7 cents per ounce as compared with 31.7 cents in June. The price of gasoline at Montreal was down from 18 $\frac{1}{2}$  cents per gallon to 17 cents and at Toronto from 18 $\frac{1}{2}$  cents to 18 cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for July.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 59.0 for June, a fall of 2.6 per cent for the month. Foods were 2.4 per cent lower, showing a fall of 4.8 per cent in cereals and of 3.3 per cent in meat and fish. Non-foods were 2.6 per cent lower with lower figures for all groups except coal which showed a slight advance.

The *Statist* index number, on base 1867-1877=100, was 77.0 at the end of June, a fall of 4 per cent for the month due to substantial declines in the food groups. Non-foods as a whole were unchanged, the small decline in minerals was offset by advances in textiles and sundries.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 143 at July 1, an advance of one point for the month. The food group was higher due to seasonal advances in the prices of potatoes and eggs, although other articles including meat, fish, butter and cheese were lower. Declines were shown in clothing,

fuel and light and sundries, while rent was unchanged.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 83 for June, a decline of 2.4 per cent for the month. Except for the sugar, coffee and cocoa group, all groups were included in the decline for the month.

### Germany

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 121.4 for June, an advance of 0.2 per cent for the month. A small advance in food was partly offset by declines in clothing and sundries. Rent and heat and light were unchanged for the month.

### Italy

WHOLESALE PRICES.—The Milan Chamber of Commerce index number on the base 1913=100 (pre-war currency), was 80.9 for June, a fall of 3.1 per cent for the month. The downward movement of prices extended to all groups.

COST OF LIVING.—The index number of the cost of living, Milan, on the base 1927=100, was 80.68 for May, a decline of 1.5 per cent for the month.

### New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1357 for May, a decline of 0.6 per cent for the month.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 63.9 for June, a decline of 0.8 per cent for the month. There was an advance in the fuel and lighting materials group, but all other groups were lower for the month.

Dun's index number, which is based on wholesale commodity quotations proportioned to the *per capita* consumption of each of the many articles included, was \$128.761 at August 1; an advance of 2.74 per cent for the month.

Of the seven groups, five were higher for the month; the two which declined were clothing and metals.

**COST OF LIVING.**—The Bureau of Labour Statistics' index number of the cost of living of the workingman's family, on the base 1913=100, was 137.7 for June, a decrease of 6.9 per cent from the December level. In this six months' period, food decreased 12.4 per cent, clothing 5.7 per cent, rent 6.2 per cent, fuel and light 6.5 per cent, house-furnishing goods 8.2 per cent and miscellaneous items 1.6 per cent.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1932

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the second quarter of 1932, was 209, there being 65 in April, 61 in May and 83 in June.

The report for the first quarter of 1932 was given in the LABOUR GAZETTE, May, 1932, page 625. In the second quarter of 1931, 283 fatal accidents were recorded (LABOUR GAZETTE, August, 1931, page 948). The supplementary lists of fatal industrial accidents on page... contain 12 fatalities for the first quarter of 1932 and 5 fatalities for 1931. In this series of reports it is the custom to record industrial accidents on the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada, from certain other official sources, and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1932 were as follows: agriculture, 28; logging, 15; fishing and trapping, 5; mining, non-ferrous smelting and quarrying, 27; manufacturing, 22; construction, 50; electric light and power, 5; transportation and public utilities, 31; trade, 7; finance, 1; service, 18.

Of the mining accidents, 20 were in "metalliferous mining," 5 in "coal mining," 1 in "non-metallic mineral mining and quarrying, n.e.s.," and 1 in "structural materials."

Of the accidents in manufacturing, 5 were in "vegetable foods, drink and tobacco," 1 in

"animal foods," 2 in "textiles and clothing," 1 in "saw and planing mill products," 1 in "wood products," 3 in "pulp, paper and paper products," 2 in "iron, steel and products," 3 in "non-ferrous metal products," and 4 in "non-metallic mineral products."

In construction there were 5 fatalities in "buildings and structures," 26 in "shipbuilding," 8 in "highway and bridge," and 11 in "miscellaneous construction."

In transportation and public utilities, there were 15 fatalities in "steam railways," 1 in "street and electric railways," 11 in "water transportation," 3 in "local transportation," and 1 in "storage."

In trade there were 3 fatalities in "wholesale," and 4 in "retail."

Of the fatalities in service, 13 were in "public administration," 3 in "custom and repair," 1 in "personal and domestic," and 1 in "professional establishments."

The most serious disaster occurring during the period under review was caused by a double explosion which wrecked the oil tanker *Cymbeline* and also the dry dock at the plant of the Canadian Vickers Company, Limited, at Montreal, Quebec, on June 17, and as a result of which thirty men lost their lives, twenty-six of whom were employees of the Canadian Vickers Company, and the other four were Montreal firemen who perished while fighting the fire. This oil tanker had been brought to the Vickers dry dock where workmen were making repairs owing to damage which occurred when she grounded on her way up the St. Lawrence. The first explosion occurred on the dry dock and was followed by another terrific explosion when tanker burst into flames. The crew on the tanker numbering more than thirty all escaped. In addition to the men killed a further number were injured, but most of them have

since been discharged from hospital. Mr. S. A. Baulne, civil engineer and professor at the Montreal Polytechnical School has been appointed by the Federal Government to make an enquiry into the explosion, but his report had not been issued at the time of going to press, and the cause of the explosion has not been officially made known.

Other accidents involving the loss of two or more lives were as follows:—

Two log drivers were drowned when they fell into the Montmorency River, Quebec, on May 10.

Two fishermen were drowned off Lower Saulnierville, N.S., on May 28, when their dory capsized.

Two miners were killed at Kirkland Lake, Ontario, on April 5, by an explosion from drilling into a missed hole. Two miners were killed in a blasting accident at Timmins, Ontario, on April 13. Two other miners were asphyxiated by gas at Britannia, B.C., on April 23, and two miners lost their lives when struck by falling rock at Kimberley, B.C., on June 9.

Three sectionmen were killed by an explosion from lighting a fire in a section house where gasoline was stored, at Welland, Ontario, on April 30.

When an oil train jumped the track and took fire near Lethbridge, Alberta, on May 20, the engineer and fireman lost their lives.

Two fire fighters were drowned when their canoe upset on Onion Lake, Ontario, on June 14.

*Supplementary Lists of Accidents.*—The supplementary list of accidents occurring during the first quarter of 1932, to be found after the main table of accidents, contains 12 fatalities, of which 5 were in manufacturing, 2 in construction, 3 in transportation and public utilities, 1 in trade, and 1 in service. Two of these accidents occurred in January, 1 in February and 9 in March.

Concluding the lists is a supplementary list of accidents occurring during 1931. This includes 5 fatalities, of which 1 was in fishing and trapping, 1 in manufacturing, 2 in transportation and public utilities, and 1 in service. One of these accidents occurred in July, 1 in August, 1 in October, and 2 in December.

#### FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1932.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCK-RAISING—</b>				
Farmer.....	Calgary, Alta.....	April 5..	64	Train struck his truck.
Farmer.....	Near Barrie, Ont.....	" 6..	60	Struck by piece of fly wheel of wood sawing machine when it broke.
Farmer.....	Sheenboro, Ont.....	" 7..	20	Thrown from sleigh when horses took fright. Died April 14.
Farmer.....	McCreary, Man.....	April 14..	about	Explosion of gasoline engine.
Farmer.....	Near Milner, B.C.....	" 19..	47	Leg caught in gearing of donkey engine.
Farmer.....	Hyde Park, Ont.....	" 19..	about	Fell under chicken house while being moved.
Farmer.....	Near Pine Ridge, Man.....	" 28..	76	Killed when team ran away while being hitched to seeder.
Farmer's son.....	Near Orillia, Ont.....	" 29..	15	Electrocuted by fallen high tension wire.
Farmer.....	Near Taber, Alta.....	May 3..	47	Gored by bull. Died May 5.
Farmer.....	Sardis, B.C.....	" 5..	59	Struck on head by swinging pole. Died May 8.
Farmer.....	Near Bulyea, Sask.....	" 14..	23	Injured when team bolted.
Farmer.....	Near Aultsville, Ont.....	" 16..	about	Injured when his horses ran away.
Farmer.....	St. Zacharie, Que.....	" 18..	40	Burning tree fell on him while fighting fire.
Farmer.....	Near Pictou, Ont.....	May 20..	about	Run over by roller. Died May 27.
Farmer's son.....	Near Goderich, Ont.....	May 25..	about	Fell from spraying outfit and was run over.
Farmer.....	South Colchester Twp., Ont.....	" 26..	33	Struck by lightning.
Farm hand.....	South Hull, Que.....	" 31..	35	Fell under wheel of his wagon.
Farm hand.....	Grey Nuns' Island, Montreal, Que.....	June 1..	22	Tractor overturned on him.
Farmer.....	Near Morris, Man.....	" 2..	45	Drowned when boat upset crossing river.
Farmer's son.....	Near Peterborough, Ont.....	" 4..	21	Fell from tree he was about to cut down.
Farmer.....	Near Clinton, Ont.....	" 6..	68	Trampled by horses.
Farmer's wife.....	Les Escoumains, Que.....	" 18..	50	Gored by bull while milking cows.
Farmer.....	Stoney Creek, Ont.....	" 25..	42	Fell from roof of barn.
Farmer.....	Near Edmonton, Alta.....	" 28..	about	Gored by bull.
Farmer.....	Near Galt, Ont.....	" 28..	about	Fell from load of hay. Died June 29.
Farm hand.....	Near Nipawa, Sask.....	June 28..	about	Crushed by falling tree.
Farmer.....	Near Lucky Lake, Sask.....	" 29..	20	Fell from tractor.
Farmer.....	Near Derwent, Alta.....	" 29..	19	Struck by lightning.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>LOGGING—</b>				
Farmer.....	Near Fortierville, Que.....	about April 11.....	28	Crushed by falling tree.
River driver.....	Near Sussex, N.B.....	" 15.....	26	Log fell on his leg. Died April 16.
Chokerman.....	Rock Bay, B.C.....	" 22.....	35	Struck on head by boom stick.
Faller.....	Cumberland, B.C.....	May 5.....	51	Struck by falling snag.
Log driver.....	Montmorency River, Que.....	" 10.....	30	Fell into river and were drowned.
Log driver.....	Beauce, Que.....	" 10.....	30	Fell into river and were drowned.
Labourer.....	Opeongo River, Ont.....	" 17.....	22	Head crushed by falling tree.
River driver.....	Mission, B.C.....	" 23.....	22	Fell from log and was drowned.
Logger.....	Harrison, B.C.....	" 28.....	26	Struck by sapling.
Loader.....	Gatineau River, Que.....	" 30.....	23	Log rolled off car on him.
Labourer.....	Crescent Inlet, B.C.....	June 2.....	23	Drowned while working on log drive.
Logger.....	Sullivan Bay, B.C.....	" 5.....	35	Slack puller broke and fell on him.
Chokerman.....	Ha Ha River, Que.....	" 10.....	23	Struck by log.
Logger.....	Temiskaming, Que.....	" 21.....	20	Drowned from log drive.
River driver.....	Temiskaming, Que.....	" 25.....	25	Drowned.
<b>FISHING AND TRAPPING—</b>				
Fisherman.....	Off Lunenburg, N.S.....	April 4.....	45	Drowned when dory was swamped.
Fisherman.....	Off Glace Bay, N.S.....	" 16.....	37	Drowned when dory capsized in storm.
Fisherman.....	Lower Saulnierville, N.S.....	May 28.....	35	Drowned when dory capsized.
Fisherman.....	Digby, N.S.....	" 28.....	32	Struck on head by bucket of clams when he fell.
Clam digger.....	Digby, N.S.....	" 31.....	31	Struck on head by bucket of clams when he fell.
<b>MINING, NON-FERROUS</b>				
<b>SMELTING AND QUARRYING—</b>				
<b>Metalliferous Mining—</b>				
Miner.....	Kirkland Lake, Ont.....	April 5.....	36	Explosion from drilling into missed hole.
Miner.....	Britannia, B.C.....	" 5.....	29	" 5.....
Car repairer.....	Britannia, B.C.....	" 9.....	32	Body of car fell off truck while removing dump wheel.
Miner.....	Timmins, Ont.....	" 13.....	23	Killed in blasting accident.
Miner.....	Timmins, Ont.....	" 13.....	31	Fell 60 ft. down ore pocket.
Shaft repairer.....	Kirkland Lake, Ont.....	" 15.....	37	Fell 60 ft. down ore pocket.
Miner.....	Britannia, B.C.....	" 23.....	37	Asphyxiated by gas.
Miner.....	Britannia, B.C.....	" 23.....	39	Asphyxiated by gas.
Machine runner.....	Timmins, Ont.....	" 29.....	34	Silicosis. First laid off June 3, 1930.
Labourer.....	Timmins, Ont.....	" 30.....	33	Silicosis. First laid off Nov. 20-1931.
Drill runner.....	Kirkland Lake, Ont.....	May 5.....	40	Premature explosion while loading drill holes. Died May 6.
Machine runner.....	Timmins, Ont.....	" 5.....	55	Silicosis. First laid off April 10, 1928.
Loco. conductor.....	Copper Cliff, Ont.....	" 19.....	47	Fell from locomotive and was run over.
Miner.....	Finlay River, B.C.....	" 22.....	29	Fell under log jam and was drowned.
Miner.....	Britannia, B.C.....	" 26.....	42	Struck by falling rock.
Miner.....	Anyox, B.C.....	June 7.....	28	Struck by rock.
Miner.....	Kimberley, B.C.....	" 9.....	40	Struck by falling rock.
Miner.....	Kimberley, B.C.....	" 9.....	37	Struck by falling rock.
Miner.....	Capelton, Que.....	" 15.....	23	Crushed between skipper and ore wagon.
Miner.....	Kirkland Lake, Ont.....	" 26.....	24	Fell 30 ft. down dump.
<b>Coal Mining—</b>				
Miner.....	Canmore, Alta.....	April 19.....	42	Niggerhead fell on him from face of mine. Died April 22.
Miner.....	Corbin, B.C.....	" 20.....	44	Roof caved in on him when timber gave way.
Miner.....	Hillcrest, Alta.....	" 22.....	48	Struck by falling prop.
Miner.....	Nanaimo, B.C.....	" 25.....	20	Struck by trip of coal cars. Died April 27.
Miner.....	Coleman, Alta.....	May 31.....	43	Struck by falling rock.
<b>Non-metallic Mineral Mining and Quarrying, n.e.s.—</b>				
Sawyer in granite quarry.....	Stanstead, Que.....	April 19.....	40	Head crushed between saw and platform.
<b>Structural Materials—</b>				
Worker in sand pit.....	Near St. Eustache, Que.....	April 6.....	18	Struck by sliding block of frozen sand.
<b>MANUFACTURING—</b>				
<b>Vegetable foods, drink and tobacco—</b>				
Worker in macaroni products plant.....	Montreal, Que.....	April 1.....	19	Fell into machine, fractured spine.
Dough mixer.....	Toronto, Ont.....	about April 1.....	22	Arm caught in dough mixer.
Mill worker.....	Near St. Antonin, Que.....	" 2.....	22	Injured in elevator crash when cable broke.
Worker in cereal plant.....	Galt, Ont.....	" 7.....	50	Killed when cooker exploded.
Oilier at flour mill.....	Midland, Ont.....	June 10.....	56	Fell with elevator when rope broke.
<b>Animal foods—</b>				
Worker in dairy plant.....	Courtland, Ont.....	May 19.....	26	Injured when powdered milk container exploded.
<b>Textiles and Clothing—</b>				
Mill worker.....	Magog, Que.....	May 17.....	23	Struck by belt of spinning wheel when it broke.
Washer.....	Montreal, Que.....	" 19.....	25	Skull fractured on elevator. Died May 21.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND  
QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Contc.</b>				
Saw and planing mill products— Farmer.....	St. Antonin de Kamouraska, Que.....	April 2..	.....	Struck by circular saw when belt snapped.
Wood products— Engineer at barrel factory.....	Falmouth, N.S.....	" 11..	29	Crushed between belt and driving pulley on engine.
Pulp, Paper and Paper Products— Mill worker.....	Riviere du Loup, Que.....	" 5..	42	Fell backward on saw. Died April 6.
Mill worker.....	Millbank, N.B.....	" 15..	.....	Crushed between conveyor and overhead tramway.
Mill worker.....	Temiskaming, Que.....	June 23..	30	Fell into coal bunker and was smothered under coal.
Iron, Steel and Products— Carpenter with car builders.....	Hamilton, Ont.....	April 26..	27	Injured when door of shop fell on his leg on Nov. 26, 1929.
Labourer.....	Hamilton, Ont.....	about April 26..	50	Benzol poisoning from fumes while cleaning out sludge from empty oil storage tank.
Non-Ferrous Metal Products— Worker in brass factory.....	London, Ont.....	May 13..	45	Electrocuted when he came in contact with high tension power line.
Foreman at electric supply factory.....	Georgetown, Ont.....	" 20..	53	Pneumoconiosis. First laid off Mar. 25-1930.
Fitter with electric plant.....	Peterborough, Ont.....	" 27..	54	Killed while repairing generator when it started.
Non-Metallic mineral products— Carpenter at oil refinery.....	Montreal, Que.....	" 14..	42	Burned by boiling asphalt when boiler exploded.
Carpenter at oil refinery.....	.....	" 14..	38	Second man died May 22.
Worker in abrasives factory.....	Niagara Falls, Ont.....	June 8..	40	Caught in heavy electric crusher.
Stone cutter.....	Toronto, Ont.....	" 30..	48	Pneumoconiosis. First laid off Mar. 24, 1923.
<b>CONSTRUCTION—</b>				
Buildings and Structures— Roofer.....	St. Thomas, Ont.....	April 6..	52	Fell from scaffold, fractured skull. Died April 7.
Worker.....	Hamilton, Ont.....	" 18..	36	Fell from scaffold. Died April 22.
Worker.....	Montreal, Que.....	May 11..	41	Fell from scaffold. Died May 13.
Machinist.....	Montreal, Que.....	June 10..	68	Fell from fourth story window.
Carpenter.....	Joliette, Que.....	" 27..	45	Electric shock while disconnecting light connection.
Shipbuilding— Dock shipwright.....	Montreal, Que.....	June 17..	50	Explosion which wrecked oil tanker and drydock at plant. One man died June 19, one on June 25, one on June 26, and one on July 1.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—Contc.</b>				
<i>Highway and bridge—</i>				
Bridge worker.....	Valleyfield, Que.....	April 1..		Fell from bridge into canal and was drowned.
Truck driver on tunnel construction.....	Montreal, Que.....	" 1..	34	Fell 30 ft. down embankment.
Worker in sand pit.....	Near Stratford, Que.....	" 27..	56	Crushed under falling gravel in pit following blast.
Timekeeper.....	Clearwater Bay, Man.....	May 1..		Burned in fire at camp.
Foreman.....	Toronto, Ont.....	" 31..	59	Caught in belt.
Labourer.....	Rock Creek, B.C.....	June 4..	67	Run over by truck.
Labourer.....	Near Callander, Ont.....	" 14..	35	Run over by truck while loading stone.
Farmer's son.....	Richmond, Que.....	" 17..	17	Fell off stone carriage and was run over.
<i>Miscellaneous—</i>				
Carpenter on canal construction.....	Near Welland, Ont.....	April 6..	53	Fell from scaffold. Died April 7.
Worker on sewage canal.....	Jonquieres, Que.....	April 12..	40	Crushed by stone falling from side of excavation.
Worker on power development.....	Masson, Que.....	" 19..	32	Fell 100 ft. into shaft of tunnel when beam broke.
Contractor on breakwater construction.....	Glace Bay, N.S.....	April 20..	52	Injured while lifting heavy object. Died April 24.
Locomotive operator in power tunnel.....	Near Buckingham, Que.....	" 22..	22	Cave-in of roof of tunnel.
Labourer on dam construction.....	Champlain, Que.....	May 20..	29	Drowned in river.
Worker on power development.....	Beauharnois, Que.....	June 4..	30	Killed by explosion during blasting operations.
Worker on wharf construction.....	Point Tupper, N.S.....	" 16..	33	Drowned when stone laden boat swamped and sank.
Lineman on telegraph line construction.....	Montreal, Que.....	" 21..	27	Fell 40 ft. from pole.
Worker on intake installation.....	Toronto, Ont.....	" 28..	52	Crushed by steel girder when it fell from crane while hoisting intake pipe.
Lineman on telegraph line construction.....	Montreal, Que.....	" 30..	40	Electrocuted and fell from pole.
<b>ELECTRIC LIGHT AND POWER—</b>				
Painter.....	Montreal, Que.....	April 28..	44	Fell from ladder.
Lineman.....	Wilton, Ont.....	May 9..	24	Fell 30 ft. from pole when he touched live wire. Died May 10.
Electrician.....	Montreal, Que.....	" 25..	41	Electrocuted when he touched high tension wire.
Lineman.....	Near Beachgrove, Que.....	" 29..	42	Fell 45 ft. from steel tower.
Power Co. manager.....	Near Gleichen, Alta.....	" 29..	33	Electrocuted when he touched power line.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways—</i>				
Sectionman.....	Charlottetown, P.E.I.....	April 5..	42	Crushed between car and platform. Died April 7.
Yard inspector.....	Montreal, Que.....	" 5..	62	Crushed between cars.
Car shop worker.....	Montreal, Que.....	" 7..	64	Struck by steel plate. Died April 9.
Sectionman.....	Welland, Ont.....	" 30..	46	Explosion on lighting fire in section house where gasoline was stored.
Sectionman.....	" ".....	" 30..	40	
Sectionman.....	" ".....	" 30..	39	
Fireman.....	Limerick, Sask.....	May 3..	40	Fell from car and was run over.
Section labourer.....	Near Jones, Ont.....	May 4..	32	Train struck track speeder.
Switchman.....	Toronto, Ont.....	" 7..	41	Run over by train.
Engineer.....	Near Lethbridge, Alta.....	" 20..	45	Oil train jumped track and took fire.
Fireman.....	" ".....	" 20..	40	
Section labourer.....	Blackfoot Sub. mile 75, Alta.....	" 21..	45	Struck by train.
Sectionman.....	Near Marshall, Sask.....	about May 23..	45	Struck by freight train.
Labourer.....	Montreal, Que.....	May 28..	55	Fell from freight car, fracturing skull. Died June 1.
Signalman.....	L'Epiphanie Stn., Que.....	June 14..	36	Fell off back of motor car on sudden stop.
<i>Street and Electric Railways—</i>				
Worker.....	Winnipeg, Man.....	April 30..	22	Crushed between two street cars while replacing trolley.
<i>Water Transportation—</i>				
Sailor.....	Montreal, Que.....	April 30..	38	Fell into canal and was drowned.
Longshoreman.....	Montreal, Que.....	May 11..	52	Fell down hold of ship and was smothered under avalanche of grain.
Watchman.....	Lake Ontario, Ont.....	" 22..	19	Fell into hold of ship.
Deckhand.....	Toronto Bay, Ont.....	June 3..	24	Fell into water and was drowned.
Deckhand.....	Kingston, Ont.....	" 5..	21	Buried under pile of grain in hold of ship.
Fireman on scow.....	Halifax, N.S.....	" 10..	39	Injured when boiler exploded.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND  
QUARTER OF 1932—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Con.</i>				
<i>Water Transportation—</i>				
<i>Con.</i>				
Worker on oil tanker.	Toronto, Ont.....	" 11..	24	Explosion on gasoline loaded tanker.
Worker on scow.....	Petitcodiac, River N.B.....	" 12..	about 25	Drowned when scow sank on collision with another scow.
Lumberman.....	Port-a-Pique, N.S.....	about June 13..	55	Drowned from wharf while supervising loading of pulp wood.
Labourer at shipyard.	Richelieu, Que.....	June 20..	31	Drowned.
Engineer on tourist launch.....	Nipigon River, Ont.....	" 22..	about 33	Fell into river and was drowned.
<i>Local transportation—</i>				
Truck driver.....	Three Rivers, Que.....	April 29..	38	Truck struck tree when avoiding hole in road.
Labourer.....	Near Grand Falls, N.B.....	May 7..	60	Fell down gorge when lumber landing collapsed.
Truck driver.....	Lemsford, Sask.....	" 16..	.....	Burned when barrel of gasoline exploded on truck.
<i>Storage—</i>				
Elevator operator....	Loverna, Sask.....	April 2..	.....	Caught in machinery.
<b>TRADE—</b>				
<i>Wholesale—</i>				
Agent.....	Near Cobden, Ont.....	May 4..	54	Train struck his car.
Worker in fruit warehouse.....	London, Ont.....	" 5..	17	Explosion in storage plant.
Truck driver for oil distributors.....	Sarnia, Ont.....	June 9..	31	Splinter of steel in arm while repairing truck, infection. Died June 15.
<i>Retail—</i>				
Stableman for bakery	Windsor, Ont.....	April 19..	66	Kicked while putting calks in horse shoe on Nov. 4, 1930.
Storekeeper.....	Tetagouche, N.B.....	" 20..	85	Shot by robbers.
Wood merchant.....	Pierreville, Que.....	May 17..	64	Struck by door of shed in lumber yard when it flew open.
Drug store messenger	Montreal, Que.....	" 22..	35	Collision of fire truck with his motorcycle.
<b>FINANCE—</b>				
Bank manager.....	Lotbiniere, Que.....	June 8..	.....	Slain by bandits who broke into bank,
<b>SERVICE—</b>				
<i>Public Administration—</i>				
Diver.....	Angliers, Quinze River, Que.	April 7..	36	Trapped under water when foot became jammed at gate of storage dam and was drowned.
Traffic officer.....	Near Brampton, Ont.....	May 12..	54	Auto struck his motorcycle. Died May 13.
Forest fireman.....	Megantic, Que.....	" 17..	.....	Struck by truck.
Constable.....	Montreal, Que.....	June 5..	35	Collision of auto with his motorcycle.
Mail driver.....	Near Woodstock, Ont.....	June 11..	61	Crushed under his truck when it overturned.
Fire fighter.....	Union Lake, Ont.....	" 14..	50	} Drowned when canoe upset.
Fire fighter.....	" " " " " "	" 14..	19	
Fire chief.....	Montreal, Que.....	" 17..	.....	} Killed while fighting fire following explosion which wrecked oil tanker and drydock at plant.
Fireman.....	" " " " " "	" 17..	40	
Fireman.....	" " " " " "	" 17..	35	
Fireman.....	" " " " " "	" 17..	24	} Fell into manhole.
Works employees.....	Regina, Sask.....	" 21..	about 58	
Constable.....	Chesterville, Ont.....	" 29	58	Collapsed from making an arrest.
<i>Custom and Repair—</i>				
Garage worker.....	Carseland, Alta.....	April 21..	23	Burned when petrol-soaked clothing took fire from explosion.
Garage worker.....	Chesterville, Ont.....	May 10..	24	Injured when blow torch exploded. Died May 11.
Blacksmith.....	Near Cainsville, Ont.....	June 30..	32	Struck by piece of emery wheel when it burst.
<i>Personal and Domestic—</i>				
Maid-servant.....	St. Jerome, Que.....	May 7..	27	Fell from platform while hanging clothes on line.
<i>Professional establishments—</i>				
Window cleaner at collegiate.....	Toronto, Ont.....	April 2..	30	Fell 50 ft. from window.

# SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING THE FIRST QUARTER OF 1932

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—</b> <i>Vegetable Foods, Drink and Tobacco—</i> Baker.....	Toronto, Ont.....	Mar. 25..	22	Arm crushed when drawn into rollers of dough mixer. Died March 31.
<i>Saw and Planing Mill Products—</i> Mill worker.....	Grand Prairie, Alta.....	Jan. 15..	54	Kicked by horse. Died April 29.
<i>Printing and Publishing—</i> Superintendent.....	Toronto, Ont.....	Mar. 18..	49	Fell out window when he slipped from platform.
<i>Iron, Steel and Products—</i> Foreman at stove factory.....	London, Ont.....	Mar. 21..	70	Fell from truck. Died April 22.
<i>Chemical and Allied Products—</i> Pipefitter.....	Hamilton, Ont.....	Mar. 31..		Scratched finger while threading pipe, infection. Died April 17.
<b>CONSTRUCTION—</b> <i>Shipbuilding—</i> Riveter.....	Collingwood, Ont.....	Jan. 21..		Gassed while hammering a stiffening bar after being heated by acetylene torch. Died Jan. 22.
<i>Highway and Bridge—</i> Tractor driver.....	Scotty Springs, Ont.....	Feb. 26..	35	Crushed between tractor and flat car.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b> <i>Steam railways—</i> Equipment inspector.....	Toronto, Ont.....	Mar. 20..	50	Struck and run over by car. Died Mar. 22.
Labourer.....	Toronto, Ont.....	" 28..	66	Struck by falling plank. Died April 15.
<i>Storage—</i> Millwright at grain elevator.....	Vancouver, B.C.....	" 14..	63	Internal injuries. Died April 27.
<b>TRADE—</b> <i>Retail—</i> Watchman for fish dealers.....	North Sydney, N.S.....	Mar. 29..	56	Struck by flying object in warehouse fire. Died March 31.
<b>SERVICE—</b> <i>Recreational—</i> Theatre manager.....	Yarmouth, N.S.....	Mar. 27..	54	Overcome by smoke while attempting to save theatre from fire.

# SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>FISHING AND TRAPPING—</b> Trapper.....	About mile 400, H.B. Rly., Man.....	about Dec. 27..		Accidental discharge of his rifle.
<b>MANUFACTURING—</b> <i>Saw and Planing Mill Products—</i> Filer.....	Vancouver, B.C.....	Dec. 5..	63	Infection from amputated finger. Died May 9, 1932.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b> <i>Steam Railways—</i> Signalman.....	Near Fredericton, N.B.....	Oct. 29..		Fell from bridge and was drowned.
Fireman.....	Brockville, Ont.....	Aug. 7..	about 42	Struck by coaches while getting out of engine. Died March 7, 1932.

## RECENT LEGAL DECISION AFFECTING LABOUR

### Unlawful Interference with Contract by Trade Union Officials

Action for damages against the officers of a trade union was taken in Ontario recently by workmen who claimed that the defendants had induced their employer to break his contract of employment with the plaintiffs. The case was heard before Mr. Justice Rose and a jury, who awarded the plaintiffs \$1,400 damages.

The plaintiffs were bricklayers and the defendants were officers of a trades union organization. The action was in tort for interference with contractual relations which existed between the plaintiffs and one Haggarty, whereby the plaintiffs were alleged to have suffered loss. The plaintiffs claimed that such interference occasioned a breach of the contract by Haggarty. The defendants denied that there was any breach by Haggarty of his contract, and claimed that all the defendants did was that by lawful means they induced Haggarty to terminate (without breaking) the existing contract.

The questions put to the jury and their answers were as follows:—(1) Did Haggarty break his contract with the plaintiffs?—A. Yes. (2) If so did the defendants or either of them intentionally induce the breach of contract?—A. Yes—both defendants. (3) If one but not both of the defendants intentionally induced such breach of contract which one did so? (4) Damages: \$400, balance of profit to Klein Bros.; \$1,000, penalty for interference—total \$1,400.

The following arguments were advanced on behalf of the appellants:—

1. The object of the defendants in inducing Haggarty to break his contract with the plaintiffs was not to injure the plaintiffs but to protect the bricklaying trade against the employment of cheaper non-union labour. Reliance on the statement of Viscount Cave in *Sorrel v. Smith*, (1925) Appeal Cases, 700, at page 712, that "if the real purpose is not to injure another but to forward or defend the trade of those who enter into it, then no wrong is committed, and no cause of action will lie, although damage to another ensue." (Reference to this case was made in the LABOUR GAZETTE, November, 1925, page 1157.)

2. The trial judge did not properly direct the jury on the question of punitive damages.

On appeal by the defendants, the Ontario Court of Appeal allowed the appeal in part, and ordered a new trial.

Mr. Justice Riddell, in a written judgment, said that he recognized the propriety and necessity of the trades union movement and that while in some respects the law has changed as to trades union proceedings it remains as it has been for years in respect of interference with contracts. It is a violation of legal right to interfere with contractual relations recognized by law if there is no sufficient justification for the interference. *Lumley v. Gye* (1853), 2 E. & B. 216, *Jasperson v. Dominion Tobacco Co.* (1923), Appeal Cases, 709, at 712. A wrongful act cannot be excused on the ground that there was no intention to injure anyone, *Polhill v. Walter* (1832), 3 B. & Ad. 114, *Hutton v. Jones* (1910), Appeal Cases, 20, *Indermaur v. Dames* (1866), L.R. 2 C.P. 311. As to the judgment in *Sorrel v. Smith*, referred to above, Viscount Cave was careful to add that in his statement he had not "included cases where the defendants had procured a breach of contract." The learned Justice of Appeal was of the opinion that the defendants were guilty of a wrongful act for which they must pay damages.

As to the punitive damages, Judge Riddell continued, it is elementary that a jury may award punitive damages where the defendant has not only committed a wrongful act but has also acted wantonly and oppressively without any reasonable ground for belief that he had the right to act as he did. However, the learned trial judge did not properly or adequately instruct the jury on the question of punitive damages. Therefore a new trial should be directed confined to the question of punitive damages.

Mr. Justice Masten, in a separate written judgment, agreed that there should be a new trial as to the question of punitive damages only. Chief Justice Mulock and Mr. Justice Magee agreed.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of August showed a downward movement, according to statements tabulated by the Dominion Bureau of Statistics from 8,028 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. These firms employed 791,622 workers, compared with 812,871 on July 1. The index (based on the average in the calendar year 1926 as 100), stood at 86.3 on August 1, compared with 88.7 in the preceding month, and with 105.2 on the same date in 1931. On August 1 of the ten preceding years, the index was as follows: 1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

At the beginning of August, 1932, the percentage of idleness reported to the Department of Labour by local trade unions stood at 21.8 contrasted with percentages of 21.9 at the beginning of July, 1932, and 16.2 at the beginning of August, 1931. The August percentage was based on the reports received by the Department of Labour from 1,806 labour organizations, with a combined membership of 171,831 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decline in the volume of business transacted in July, 1932, as compared with that of the preceding month and also with that of July, 1931, this computation being based upon the average number of placements recorded daily in the offices of the Employment Service throughout Canada. During July, 1932, there were listed 25,917 vacancies, 46,692 applications, and 25,191 placements in regular and casual employment.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was higher at \$7.01 for August as compared with \$6.78 for July; \$8.20 for August, 1931; \$10.65 for August, 1930; \$11.63 for August, 1929; \$10.44 for August, 1922; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); and \$7.68 for August, 1914. In wholesale prices the index num-

ber calculated by the Dominion Bureau of Statistics was slightly higher at 66.8 for August as compared with 66.6 for July; 70.5 for August, 1931; 83.7 for August, 1930; 98.4 for August, 1929; 97.1 for August, 1922; 160.2 for August, 1920; 164.3 for May, 1920 (the peak); and 66.1 for August, 1914.

The loss in working time caused by industrial disputes in Canada during August was considerably more than in July, although the number of strikes was less and fewer workers were involved. Sixteen disputes were in progress at some time during the month, involving 4,972 workers, and resulting in the loss of 62,492 working days. Corresponding figures for July, 1932, were: twenty-six disputes, 6,121 workers, and 50,397 working days; and for August, 1931, eleven disputes, 847 workers, and 9,172 working days.

### Labour Day message of Minister of Labour

In connection with the celebration of Labour Day, the Hon. W. A. Gordon, Minister of Labour, issued a message in the course of which he said:—"The observance of Labour Day serves to emphasize the part which the workers of Canada play in the affairs of communities and the nation. In recent years, mainly as a result of the organized labour movement, the field of the workers' interests and activities has been immensely widened. The aspirations of labour are no longer confined merely to the questions of wages and hours and conditions of labour, important as they are and must always be. Matters that affect the general interest now engage the intelligent consideration of workers, and the impress of their influence is reflected in the policies of governments. In the administration of the Department of Labour, I have before me daily evidence of many of the achievements in the field of social and labour reform which have in recent years been effected in this country."

The Minister proceeded to outline the activities of the Department in connection with conciliation and the arbitration of industrial disputes, fair wages, old age pensions, the Employment Service, Government annuities, vo-

cational education, unemployment relief and the various publications issued for the purpose of labour information.

Referring to the existing industrial conditions Mr. Gordon said: "These conditions constitute a challenge, and the problems which they have created are only capable of solution in so far as there may emerge from labour and all other classes a sufficient degree of wisdom and courage to overcome them. The present depression is now nearing the end of its third year. It would probably be agreed that the problems which have arisen therefrom, both in their magnitude and complexity, are the most serious with which we have been confronted for many years. Hardship and suffering have inevitably been the outcome of the economic disorganization which has taken place, and labour has inevitably had imposed upon it a substantial share of sacrifice. The spirit in which this sacrifice has been borne by the workers of Canada reflects the courage and the wide community outlook which one would expect of Canadian workers. It is hoped that we have reached the depth of this depression. There are many indications to-day that we are beginning to emerge from it. Not the least among these indications is the spirit of optimism which the recent Imperial Economic Conference has stimulated in our country. If we will now all put our shoulders to the wheel, there is abundant reason to justify the conviction that prosperity is not far away.

"I wish to take this opportunity to compliment labour on the patient, courageous and loyal manner in which the hardships imposed by the present depression have been borne; to encourage labour, to continue to intelligently study and wisely direct its efforts toward the improvement of general conditions in order that the standard of living may be raised and the measure of happiness be increased, and to express the hope that long before another Labour Day rolls around, a period of prosperity greater than Canada has ever yet known may have been ushered in."

Labour Day messages were issued also by Mr. Tom Moore, president of the Trades and Labour Congress of Canada, Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, and other labour leaders, recapitulating the policies for which their organizations stand.

#### **"Labour Legislation in Canada in 1931"**

Under this title the Department of Labour has published the third annual supplement to the consolidated volume issued three years ago under the title:

"Labour Legislation in Canada as existing December 31, 1928." The supplement brings

down to the end of last year the legislation enacted by the Dominion Parliament and the Provincial Legislatures. It contains a cumulative index to the whole series, this index serving as a guide to the entire body of labour laws in force in Canada. The new issue follows the lines of the former reports and includes certain orders in council and a number of regulations made under statutory authority, notes being added to the text to interpret new amendments.

The volume of consolidated statutes may be obtained from the Department of Labour for one dollar, the charge for each of the three supplements being 25 cents.

#### **Canada Year Book, 1932**

The Dominion Bureau of Statistics recently issued the 1932 edition of the Canada Year Book, the official hand-

book of facts relating to Canada. The chapter dealing with population embodies the main results obtained by the census of 1931, while other new features include an account of the development of radio, and a section on foreign exchange. The Labour and Wages section gives an analysis of the occupations of the people; a summary of the activities of the Federal and Provincial Departments; statistics of organized labour; sections on fatal industrial accidents, workmen's compensation, strikes and lockouts, employment and unemployment, old age pensions, co-operation, labour legislation, legislation respecting combines, wage rates, wages and hours of labour under Minimum Wage laws, and cost of living of wage earners.

The chapter on prices treats of wholesale and retail prices of commodities, and includes index numbers of security prices, interest rates and import and export valuations. Average daily hospital charges in Canada are estimated in this chapter.

The titles of chapters of the Year Book indicate its wide scope, these being as follows:—Physiography; History and Chronology; Constitution and Government; Population; Vital Statistics; Immigration; Survey of Production; Agriculture; Forestry; The Fur Trade; The Fisheries; Mines and Minerals; Water Powers; Manufactures; Construction; External Trade; Internal Trade; Transportation and Communications; Labour and Wages; Prices; Public Finance; Currency and Banking; Loan and Trust Companies; Insurance; Commercial Failures; Education; Public Health and Benevolence; Judicial and Penitentiary Statistics; Miscellaneous Administration; Sources of Official Statistical and other Information Relative to Canada; the Annual Register, 1931.

The Canada Year Book is sold at the price of \$2.

**Significance of the "I.L.O." as world-wide institution**

The *American Economic Review* for September contains an article by Mr. C. J. Ratzlaff, of Harvard University, which discusses the significance of the International Labour Organization in the world situation, with special reference to the United States. The Organization, in the writer's judgment, "presents an important experiment in the field of international economic relations. Due to its world-wide membership, its unique balancing of conflicting economic interests, its peculiar breadth of program, and its possibility of adaptation, it deserves careful attention. And in that it is an experiment of this character lies its real significance. The importance of the work of the I.L.O. is to be found not in the work it has done but rather in laying the foundation for, and in the 'shaping of,' a method of international economic collaboration which the experience of recent years has proved to be increasingly necessary. Needless to say, anything which assists in such collaboration and contributes even to a small degree to economic stability and progress in other countries is highly important to the United States, although the effects, in the first instance, are indirect rather than direct".

The I.L.O., Mr. Ratzlaff points out, is already making a substantial contribution towards the establishment of an "international economic community," its benefits being fourfold: first, it is concerned with world economic, as distinct from political, considerations; second, its operation is continuous and regular; third, it provides unique facilities for economic research; and lastly, it is based on the collaboration of all social classes—workers, employers and governments.

**Accident records of certain firms investigated in Ontario**

About two years ago the committee of the Industrial Accident Prevention Associations of Ontario arranged with the Workmen's Compensation Board of the Province to supply certain information relating to the accident records of the firms included in the membership of the Associations, or, roughly, 9,500 plants in all. These "cost ratio cards," give information regarding the adjusted assessment and awards for compensation and medical aid, and show at a glance whether the firm has paid its way or thrown a load on other industries in the same class of work. Most of these cards relate to a five-year period, so that a fair picture of the plant experience is available. When the cards are received from the Workmen's Compensation Board they are subjected to a careful scrutiny, and under instructions from the directors of

the Associations, surveys are carried out when the experience of a firm is unfavourable. It is stated that in many cases active accident prevention work in a plant only begins after the executive head has learned the amount of the awards for compensation to his employees.

Inspectors of the Associations are now being sent out on special survey work in order to find out, first, why costs have been so high in connection with certain firms, and secondly, what can be done to improve the position of these firms in the future. The inspectors will make every effort to assist the employer, laying stress on the fact that firms with a high accident cost have had that cost paid for by other employers in their own class.

**Co-operative control of coal mines at Inverness, N.S.**

An arrangement has been made between the rate-payers of Inverness, and the workmen of the Inverness Mines for the continuance of the operation of the coal mines in that district by a co-operative company entitled the Inverness Coal Co-operative Company, Limited.

From 1919 to 1924 these mines, with the railway from Inverness to Point Tupper on the Canadian National Railways, were operated by the Eastern Trust Company as receivers and manager for the bondholders, the owner, the Inverness Railway and Coal Company controlled by Canadian Northern Railway interests, having been insolvent since 1915. In 1924 the railway was leased to the Canadian National Railways and sold to that system in 1929. The mines were closed in June, 1924, until October in that year, when operation of the mines was resumed by the Trust Company, the Provincial Government guaranteeing a portion of the losses until this year as the mines constituted the principal industry in the district, employing approximately 500 men. In the meantime the Government attempted to have the property taken over by an operator with financial resources for its development and operation. Failing in this, owing to the depressed condition of the coal markets, an arrangement for a co-operative company followed. The members of the company are employees in the mines and tax-payers of Inverness. The directors appointed by the members of the company are:—Rev. Father R. L. MacDonald, P.P., Chairman; A. L. McIsaac, John Y. McNeil and John L. Fraser, miners; and J. B. Henderson, merchant.

**Problem of transient boys in United States**

The Children's Bureau of the United States Department of Labour was requested by the President's Organization for Unemployment Relief to make a survey of unemploy-

ment conditions as affecting young people in the United States. The report of the inquiry, recently published in bulletin form, calls attention to the "new social phenomenon," presented by the great number of transient boys between the ages of 12 and 20 years, who are now roaming over the country in search of work or food. This number is estimated to be between 200,000 and 300,000, and to be constantly increasing. "Boys accustomed to decent standards of living," the report states, "find themselves going for days at a time without taking off their clothes to sleep at night, becoming dirty, unkempt, a host to vermin. They may go for days with nothing to eat but coffee, bread and beans. In winter they suffer from exposure. Last winter, in one western city, thirty-five young men and boys were removed from box cars, seriously ill, some in an advanced stage of pneumonia."

In the course of the bureau's survey, visits were paid to twenty-five communities in widely scattered parts of the United States, and much information was gathered through correspondence with responsible organizations. Railroad men in Kansas City told investigators that in May no fewer than 1,500 men and boys a day rode freight trains through that city alone. In Yuma, Arizona, on the main line of the Southern Pacific Railway, 30,000 men and boys were fed at public soup kitchens between November 1, 1931, and March 15, 1932. The Salvation Army reported that during April and May it fed and lodged 9,551 men and boys at El Paso, Texas, alone, 2,059 of these being under 21 years of age. It is pointed out that the proportions of the problem grow even greater when it is realized that those boys who come in contact with agencies that keep statistics are only the barest minority of the whole—that the great mass of them shun the cities.

The Children's Bureau suggests that welfare agencies undertake a co-ordinated program for the purpose of arresting the movement of boys away from their homes and of rehabilitating those who have become waifs and strays. It is further proposed that national and local authorities should endeavour to provide higher standards of food and shelter and to assimilate transient into permanent surroundings; and that boys who have homes should be returned to them.

#### Old age pensions and insurance in U.S.A. and other countries

A bulletin entitled "Public Old-Age Pensions and Insurance in the United States and in Foreign Countries" has been published by the U.S. Bureau of Labor Statistics. The subject of old-age

pensions, it is shown, has of late years been receiving more and more attention. Although, in the United States, the first active step towards the passage of a State law providing public pensions for aged citizens was taken as early as 1907, with the appointment of an investigative commission in Massachusetts, the actual passage of such a law was not accomplished until 1916, when Alaska enacted legislation on the subject. Then followed an interval of eight years. In 1923, Nevada, Montana, and Pennsylvania passed pension laws, but that of Pennsylvania was declared unconstitutional and that of Nevada was repealed, leaving only that of Montana. In 1925 the Nevada Legislature acted again on the subject, and Wisconsin also passed a pension law. One law (that of Kentucky) was passed in 1926, and two laws (those of Colorado and Maryland) were enacted in 1927. The year 1928 elapsed without action except in Massachusetts where what might be called a "public bequest" law was passed, providing for the payment of pensions out of any gifts which public-spirited citizens might make for the purpose; this law was never of any practical effect. Beginning with 1929, legislative action in this field has been increasingly wide. In that year four pension acts (those of California, Minnesota, Utah, and Wyoming) and in 1930 two acts (those of Massachusetts and New York) were passed. In 1931 five additional States (Delaware, Idaho, New Hampshire, New Jersey, and West Virginia) acted in this field, while in Indiana a measure passed by the legislature was vetoed by the governor. Thus there are now on the books old-age pension or relief acts in Alaska and in 17 States, though not all of these States have actually begun the payment of pensions. No Federal action has as yet been taken in the United States, though several bills have been introduced into recent sessions of Congress. All the systems established under State laws in the United States are straight pension plans, the entire cost being borne by the public through taxation.

Study of the experience in 39 other countries shows that while a few have similar pension schemes, and some have both pension and insurance plans, in the great majority of these countries the system is conducted on an insurance basis, with (in most cases) the workers, the employers, and the State all contributing in fixed proportions. Another point of difference is that under the majority of the earlier old-age pension laws in the United States the adoption of the pension system is optional with the county or local authorities, while most of the laws in other countries make the pension or insurance plan compulsory for all citizens or certain classes. The

trend in the United States in the past few years, however, has also been toward the mandatory form of law.

(References to the progress of Old Age Pensions in the United States have been made in previous issues of the LABOUR GAZETTE: May, 1932, page 520; May, 1931, page 507, etc.)

#### **State plan to relieve depression in Germany**

A state plan to deal with the depression in Germany took effect early in September, its central purpose being to lessen unemployment and to relieve smaller business undertakings. The sum of 750,000,000 marks (approximately \$187,500,000) is to be available in the immediate future for public works, while private industry will be helped by negotiable tax certificates, by 50,000,000 marks (about \$12,500,000) appropriated for house repairs, and by an early lowering of the interest rate. The certificates will be issued on taxes paid in, and they will provide additional financial backing. Farmers will be aided by cancellation of the tax on pasteurized milk and by measures designed to assist in holding the German market.

In the matter of social measures, the program provides for simplification and cheapening of the administration of social insurance. The principle of wage agreements remains, but these contracts between employers and workers may be amended to suit local conditions and emergencies in certain trades. Each employer who engages additional workers may coincidentally lower wages, but only in such a manner as to insure that pay for the 31st to 40th hour will not be cut by more than 50 per cent. The total wage must not be lowered more than 20 per cent. The employer receives 400 marks annually for each new employee, the payment being in negotiable tax certificates.

Concerning credit measures, the program provides greater elasticity in allotting welfare funds among communes, and stipulates a reduction in the so-called *per capita* tax. The miscellaneous provisions bring salaries in concerns subsidized or controlled by the Reich down to the ordinary civil service pay.

#### **Plans for spreading work in the United States**

"the spreading of available work.....is the most fruitful field for immediate unemployment relief." Subsequently a committee was appointed to study this practice as it

is carried out by firms in the United States. The report of this committee, recently published, describes the methods and experience of a large number of companies in spreading work. Some companies have adopted temporary expedients such as shortening the working period, others have adopted permanently the 5-day week, while still others have set up more or less permanent procedures for spreading employment during all periods of slackened business activity.

"The spreading of employment," it is stated, "has assumed a major rôle as an unemployment relief measure during the present depression. The policy of spreading employment allows distribution of available wages among as many employees as possible and tends to reduce the number who would necessarily have to apply to charity if deprived of their jobs. While it is unfortunate that some companies have been forced to lay off some of their workers, and others have done so as a matter of policy, it is encouraging to know that an increasing number of organizations are making strenuous efforts to keep as many men and women on the pay roll as possible.... Reduction in the working time is the principal method of spreading employment. This lessening of the working time is accomplished in one of several ways; viz. reduction in the days worked per week, reduction in the hours worked per day, alternating individuals or shifts, shortening shifts in continuous operation, or the rotation of time off. All of these methods have been widely used, some companies having employed two or more in their efforts to spread employment as equitably as possible.....A great many companies have adopted the 5-day week, having temporarily or permanently abandoned the former 5½ or 6 day working week. In so doing, these companies have continued to operate the normal number of hours per day. When it becomes necessary to further reduce the number of working hours, some companies continued to work the full number of hours per day, reducing the number of days worked per week; while others reduced the hours per day, continuing to operate for 5 days per week."

The committee summarize their findings as follows:—"There is no one fixed method for spreading employment which is applicable to all organizations. Some companies find it more economical to reduce the number of days worked per week, while others in order to insure prompt deliveries prefer to operate five or six days per week but with a fewer number of hours per day. Some companies prefer to operate only part of their equipment, and spread employment by alternating individuals or shifts, or by shorter shifts in continuous

operation. Increased maintenance and construction, development of new products and new uses for old products, training and transfer of employees, limitation of time worked or wages received, and other methods are all used in an attempt to keep as many people on the pay roll as possible and at a wage which will at least provide sustenance for employees and their dependants."

### Proposed methods for reducing hours of labour

The following plans for distributing employment so as to include all available workers have been suggested for discussion at the New England conference on shorter working hours, in which President Hoover agreed recently to participate (LABOUR GAZETTE, August, 1932, page 842):—(1) Five-day week; (2) Six-hour day; (3) Thirty-hour week; (4) Dismissal of married women whose husbands are employed; (5) "Rotating plan" which calls for four or five eight-hours shifts, taking turns at working; (6) "Stagger plan," which provides for two or three days' work each week for all employees; (7) "Swope plan," adopted by the General Electric Company, for switching employees from dull departments to busy departments and for splitting the week so as many employees as possible may get part-time work; (8) "Kellogg-plan," employed by a food manufacturing company, embodying the six-hour day with a 12½ per cent wage increase; (9) The latest to be proposed is the "New Hampshire plan," submitted recently to President Hoover. It provides for a 10 per cent cut in the working time of all the 32,000,000 workers in the country. Its advocates say this will provide work for 3,000,000 additional men and women.

### Number of "gainful workers" in United States

Figures from the Fifteenth Census of the United States showing the number of "gainful workers" classified by sex and industrial groups, were published recently by the Bureau of the Census (Washington). In the population of the United States as returned for April 1, 1930, there were 98,723,047 persons 10 years of age and over. Of these, 48,832,589 were returned as gainful workers, that is, as persons usually working at a gainful occupation. The gainful workers therefore represented 49.5 per cent of the population 10 years old and over, or 39.8 per cent of the total population (122,775,046).

Of the whole number of gainful workers, 38,053,795 were males, forming 76.2 per cent of the male population 10 years old and over, or 61.2 per cent of the total male population.

The 10,778,794 female gainful workers formed 22.1 per cent of the female population 10 years old and over, or 17.8 per cent of the total female population.

Of the whole number of male gainful workers returned in 1930, 11,901,247, or 31.3 per cent, were engaged in manufacturing and mechanical industries; 9,568,347, or 25.1 per cent, were engaged in agriculture; 5,820,642, or 15.3 per cent, in trade; and 3,990,875 or 10.5 per cent, in transportation.

Of the whole number of female gainful workers, 3,149,391, or 29.2 per cent, were engaged in domestic and personal service; 2,416,288, or 22.4 per cent, were employed in manufacturing and mechanical industries; 1,762,795, or 16.4 per cent, were engaged in professional service, mainly in teaching; and 1,716,384 or 15.9 per cent, were employed in trade.

### The "Vegetable Products Group" in Canada

The "Vegetable Products Group" of industries, as carried on in Canada during the years 1928-1930, is described in a bulletin recently issued by the Dominion Bureau of Statistics as part of the Census of Industry, which is taken each year by mail under the Statistics Act of 1918. This industrial census includes fisheries, mining, forest operations, and general manufacturing. In 1930, it is stated, the vegetable products group of industries ranked first in importance as regards the gross value of production and cost of materials used, while in the number of people employed and salaries and wages paid it ranked fourth. With the exception of rubber, coffee and spices, sugar factories and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. This group occupies an important position in the industrial life of Canada; in 1930 it produced 19.6 per cent of the total manufacturing production and employed 13.1 per cent of persons engaged in the manufacturing industries.

The flour milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest industries, but it is only within recent times that its progress has become spectacular. The war and the demand it created gave a great impetus to this trade. The 383 flour mills, many of them of the most modern type and highest efficiency, have now attained a capacity far in excess of Canada's demands.

The rubber industry is one of much importance to the industrial life of the country.

Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930, Canada was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France and Germany.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another important industry of this group. The development of the canned foods trade has affected great change in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original flavour and freshness. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. This industry has made rapid strides in the past few years. During the period of 1923-29 the volume of fruit and vegetable preparations produced increased 121·4 per cent. This growth is stated to be indeed remarkable as it represents a corresponding increase in the domestic demand of these products, the foreign trade being relatively small as compared with the domestic production..

The sugar refining industry is another large industry of this group. The demands created by the war also gave it a great impetus. In 1930 the 8 sugar refineries reported a capital investment of \$43,855,155 and a value of production of \$42,935,722. They also employed 2,281 persons who received \$3,560,260 in salaries and wages and paid out \$30,610,701 for materials.

The beverages industry—breweries, distilleries and wineries—which are important elements of the vegetable products group, have expanded from a production of \$30,000,000 in 1922 to \$87,000,000 in 1930, owing partly to the modification of prohibition laws in Canada and also to the fact that a large part of their production is exported directly or indirectly to the United States. The tobacco industry, another important factor in the vegetable products group, had a total production in 1930 of nearly \$86,000,000 and a payroll of 8,905 persons, who received \$7,837,711 in salaries and wages.

In the Fair Wages schedules for public works in Manitoba, published on page 908 of the last issue, the rate for Steamfitters' Helpers was omitted in Class 18. The rate per hour for helpers in this class is 50 cents in Winnipeg, with 44 hours of work per week.

The Federal Relief Act, adopted by the United States Congress and signed by President Hoover in July, makes \$300,000,000 available to the States through the Reconstruction Finance Corporation in interest-bearing loans for a period of two years. Responsibility for the applications for loans and for their administration is placed on the Governors of the several States. The second section of the Act permits the Corporation to lend a billion and a half dollars to public and private bodies for the construction of self-liquidating projects of public utility, and "for the purpose of providing housing for families of low income or for the reconstruction of slum areas." The third section provides \$322,000,000 for federal public works of various kinds.

---

## World Social and Economic Planning

The complete report of the World Social Economic Congress which was held last year at Amsterdam, has now been published in book form. (A review of certain sections of this report was given in the LABOUR GAZETTE, February, 1932, page 169, and the purposes of the Congress were outlined in the issue for April, 1931, page 385). The congress was organized by the International Industrial Relations Institute, with headquarters at The Hague, Holland. The present volume represents the first attempt so far undertaken to review the entire field of world social economic planning. It sets forth the opinions of economists, managers of industry and workers from twenty-six countries throughout the world, and includes a report, presented for the first time from an international platform, by a group of experts from the planning institutions of the Soviet Union, in which an account is given of the methods and premises of social economic planning under the new system in that country. The technique of planning is also presented in material on the subject of scientific management as conceived in the United States and in Europe. The material has been published in the original language in which it was presented (English, French or German). For the sake of readers unacquainted with the original text, many translations, either in full or in an abridged form, have been included in an Addendum which, for the sake of convenience in handling the volume, has been bound separately. The material is preceded by a comprehensive analysis and review in the English, French and German languages. The volume consists of over 1,000 pages and includes a number of valuable tables and charts.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of August was reported by superintendents of the Employment Service of Canada to be as follows:—

Farmers in Nova Scotia reported excellent harvest results. Grain and root crops were good, and there was an abundance of garden truck. Fish receipts were good, but prices continued low. Logging operations remained quiet. Coal mines in the New Glasgow zone worked from one to five days during the last week in August, except one mine which was idle. In Glace Bay and vicinity all mines worked two days, while at Sydney two mines operated three and four and a half days respectively. Manufacturers of mineral waters, ice cream and confectionery reported business good, and sugar refineries were fair. There were, however, indications of improvement in factories and machine shops, but idleness still continued in some departments of the iron and steel industry at Sydney. Building construction was confined to dwellings already under-way and repair work. Small gangs were employed on city streets and sidewalks. Automobile tourist traffic was good, as also was railway and steamship transportation. The movement of freight was fair. Trade, both wholesale and retail, was reported as moderately fair. There was a small increase in the demand for domestics and char workers.

In New Brunswick all field crops were reported good with the exception of potatoes in the Saint John district, where considerable blight was shown. Great catches of cod prevailed along the New Brunswick shores. Fall mackerel and herring were scarce, although it was rather early in the season for the latter. Large shipments of lobsters were being made but prices were lower than in past years. Logging continued inactive, and some of the saw-mills had completed their cut for the summer. Pickling plants were quite busy, as also were aerated water and ice cream manufacturers. Good progress was being made with building contracts commenced in earlier months, and civic road work and water mains were being continued to relieve unemployment. Tourist traffic was heavy and longshore work quite good. Railway passenger and freight traffic was fair. Trade, both wholesale and retail, was reported as fair. The demand for domestics was light, but a fair number of day workers had been placed.

Calls for farm help in the Province of Quebec were not numerous except at Hull where orders were received daily, and in Montreal

where there was a fair demand. Very little activity was reported in the logging industry, although there were indications of revival in the Quebec office. No orders for men were received. A few placements in manufacturing were made in Hull although conditions continued to be dull. In Montreal all industries continued to show little activity. Factories in Quebec were operating on half time, while at Sherbrooke and Three Rivers general slackness prevailed. At the latter point, however, some improvement in paper making was predicted. Somewhat better conditions were indicated in building construction, although experienced tradesmen were idle throughout the province. Sidewalks, street paving and sewer construction continued to provide relief employment for a large number of workers. There were no calls for workers in the transportation group, but trade was fair for this time of the year. There was an increase in orders received for women domestic workers, but applicants were always available in large numbers.

Threshing and general farm work were in progress in most districts in Ontario, creating a fair demand for help. Tobacco cutting was also going on in the Brantford zone, and was giving employment to numbers of workers. While there was little activity going on in logging, there were indications that an improvement may be looked for this fall, with a substantial increase in the number of men employed over last year. The mines in the vicinity of Timmins and Sudbury were taking on men occasionally, but large numbers of miners were still unemployed. Automobile plants were quiet, and no new developments occurred in other lines so that most factories were still running below normal capacity. Those firms which were working steadily were not adding to their staffs. Unfortunately there were no prospects in view so far that would indicate any revival in the building and construction industry. There were few calls for women domestic workers, although cooks and cooks general continued to be placed in fair numbers.

Harvesting operations in the Province of Manitoba were proceeding, with fairly brisk demands for harvest help being registered at the employment offices. The logging and mining industries were not showing any demands for additional workers. Requirements for tradesmen and labourers in the construction industry were at a low ebb, with relief work providing some employment in the City of Winnipeg. Very few requests for men for casual labour were notified to the employment

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

	1932			1931		
	August	July	June	August	July	June
Trade, external aggregate..... \$		78,742,242	82,444,180	97,202,442	99,019,813	107,828,379

(2) For group figures, see articles elsewhere in this issue.

(7) Including lines east of Quebec.

(3) Bradstreet.

(8) MacLean's Building Review.

(4) Figures for end of previous month.

(5) Figures for four weeks ending August 27, 1932, and corresponding previous periods.

(9) Sugar production given in periods of four weeks ending August 13, July 16 and June 18, 1932; August 15, July 18 and June 20, 1931.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

offices. Although some orders for women domestic workers were still being received, there was a decline in the number.

A fairly good demand for farm hands was reported from all offices in Saskatchewan, with no difficulty in filling all requirements for harvest help. Vacancies in the building and construction industries were at a minimum, as were also the calls for general labour. Some women domestic workers were placed, though the demand was not heavy.

Harvesting operations proceeding in Alberta accounted for quite a number of farm placements, although the offices reported that the number of vacancies listed with them was being considerably reduced by men canvassing personally among the farmers for locations. Apart from some small jobs being carried forward in the various cities, requirements in the building and construction industry were very small. Coal mining activities were still slack, but there were prospects of improvement with the approach of winter. The demand for women domestics was not heavy, and there was no difficulty in filling vacancies. The general situation remained quiet, though industrial plants did not show notable reductions in staffs.

Logging and lumbering in British Columbia showed practically no demand for men. The construction industry did not show any improvement, and jobs being proceeded with, other than relief work, were quite small. Manufacturing continued very quiet with no improvement registered. Requirements for casual and general labour were small. Generally speaking, British Columbia did not register any change during the month of August.

#### EMPLOYERS' REPORTS

Employment at the beginning of August showed a further downward movement, according to statements tabulated by the Dominion Bureau of Statistics from 8,028 firms, whose payrolls aggregated 791,622 persons, as compared with 812,871 on July 1. The index number stood at 86.3 on the date under review, as compared with 88.7 on July 1, 1932, and 105.2 on the same date in 1931. On August 1 of the ten preceding years, the index was as follows:—1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

Employment declined in all provinces, establishments in Ontario releasing the greatest number of workers. In the Maritime Provinces, coal mining and building construction showed moderate gains, but there were reductions in manufacturing, highway and railway construction, transportation and logging. In

Quebec, manufacturing, logging, construction, retail trade and services reported smaller payrolls, while transportation indicated considerable improvement, and metallic ore mining and wholesale trade were also rather more active. In Ontario, improvement was noted in tobacco, leather and animal food factories and in wholesale trade and railway construction, but iron and steel plants reported large reductions, and textile, lumber, rubber, pulp and paper, clay, glass and stone and some other factories, logging, mining, transportation, services and retail trade also showed curtailment, in some cases of a seasonal nature. In the Prairie Provinces, the decrease took place mainly in railway construction, while building, services and manufacturing as a whole were also slacker. On the other hand, highway construction showed an important increase, and transportation also recorded improvement. In British Columbia, a reduction was registered, chiefly in construction and lumber mills; logging, mining and services, however, also showed lowered activity, but food factories and shipping were busier.

Losses were indicated in the eight cities for which separate tabulations are made, the losses in Montreal and Toronto being greatest. In Montreal, employment improved in road construction and in vegetable food and musical instrument factories, while manufacturing as a whole, transportation and retail trade released employees. In Quebec, further reductions were shown; building was rather more active, but manufacturing and services recorded curtailment. In Toronto, there was a falling-off in activity on August 1, 1932, repeating the downward movement noted on the same date of last year. Manufacturing (especially of iron and steel and textile products), services, retail trade and construction were slacker than on July 1, but wholesale trade recorded moderate improvement. In Ottawa, employment declined, mainly in manufacturing, while other groups showed little general change. In Hamilton, manufacturing registered general curtailment, with the greatest losses in iron and steel, and construction was also quieter. In the Border Cities, further losses were indicated, largely in automobile and other iron and steel works. In Winnipeg, there were increases in transportation, but construction reported curtailment, while other groups showed little general change. In Vancouver, manufacturing and construction recorded curtailment; on the other hand, transportation was rather more active. Other industries fluctuated only slightly.

An analysis of the data by industries shows that further reductions were made in manufacturing establishments; the contractions were in some cases due to the usual shutdowns for

midsummer holidays, the importance of which for this record was emphasized this year by the fact that the end of the month coincided with the week-end. Increases were recorded in vegetable food, leather footwear, woollen and musical instrument plants, but the garment and iron and steel industries were seasonally slack, and losses were also indicated in the lumber, pulp and paper, rubber, cotton, knitting, chemical and allied products, clay, glass and stone, electrical apparatus and mineral products divisions. In the non-manufacturing industries, there were gains in telegraphic communications and wholesale trade. On the other hand, seasonal dullness continued to affect employment in logging camps, and there were also losses in construction, retail trade, transportation and services.

An article elsewhere in this issue gives in greater detail the employment situation as at the beginning of August, 1932.

#### TRADE UNION REPORTS

Unemployment among local trade unions remained on practically the same level during July as in the previous month, according to returns tabulated from a total of 1,806 labour organizations, including 171,831 members. Of these 37,508 were reported idle on the last day of the month, a percentage of 21.8, compared with 21.9 per cent of inactivity in June. The situation was, however, less favourable than in July last year when 16.2 per cent of the members reported were idle. The changes in the various provinces from June were quite slight, the curtailment evident among New Brunswick, Ontario, Manitoba and Alberta unions in a large way offsetting the improvement recorded in Nova Scotia, Quebec, Saskatchewan and British Columbia. Extensive losses in employment from July of last year were indicated by Quebec, Ontario and New Brunswick unions, and in Manitoba and British Columbia lesser, though noteworthy declines, were apparent. Fractional recessions only were reflected by Nova Scotia and Alberta unions. In Saskatchewan the trend was toward greater activity, the change being nominal only.

An article in greater detail with tabular statements on unemployment at the close of July, 1932, will be found elsewhere in this issue.

During the month of July, 1932, the offices of the Employment Service of Canada made 26,304 references of persons to positions and effected a total of 25,191 placements. Of these, the placements in regular employment were 11,484, of which 8,263 were of men and 3,221 of women. Placements

in casual work numbered 13,707. The offices of the Service were also notified of 25,917 vacancies, of which 19,660 were for men and 6,257 for women. Applications for work were registered from 35,262 men and 11,430 women, a total of 46,692. Business transacted during July, 1932, showed a decline in all transactions from the previous month, as well as from the corresponding month a year ago, the reports for June, 1932, showing 29,404 vacancies offered, 50,547 applications made, and 28,532 placements effected, while in July, 1931, there were recorded 28,025 vacancies, 66,281 applications for work and 27,002 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1932, may be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada, during July, 1932, was \$4,227,173 as compared with \$4,388,274 in the preceding month, and with \$11,042,609 in July, 1931.

The *MacLean Building Review* states that construction contracts awarded during August throughout Canada had an estimated value of \$12,688,500, slightly ahead of either June or July. While the totals are low as compared with recent years construction is stated to be better than holding its own.

For August the greatest value of contracts awarded appears in the Engineering group, which accounted for 38.6 per cent of all construction and was valued at \$4,899,000. Business Buildings had \$3,092,800 worth or 24.4 per cent. Industrial shows 18.9 per cent, or \$2,397,500. Residential had 18.1 per cent, valued at \$2,299,200.

Quebec Province led in August with contracts valued at \$6,857,800, which was 54.1 per cent. Ontario accounted for 26.5 per cent, valued at \$3,360,200. The Maritime Provinces shared to the extent of \$961,300 worth, or 7.6 per cent, while the Prairie Provinces show 6.5 per cent, or \$830,200, and British Columbia 5.3 per cent, or \$679,000.

#### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 953.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statis-

tics, states that business operations failed to follow the lead of the stock markets in July, several important industries showing marked contraction. Production in general was consequently at a lower level than in the preceding month. Moderate improvement, after seasonal adjustment for the low midsummer scale of operations, was shown in the production of steel ingots and castings, the output being 27,506 tons, compared with 18,118 tons in June. The production of pig iron was limited to 7,317 tons, the blast furnace in Hamilton being the only unit in operation during July. A better showing was made by the construction industry in obtaining new business, contract awards being at an absolutely higher level than in June, as against the usual seasonal decline.

The output of motor cars at 7,472 showed an adjusted increase of 19 per cent, the decline in employment in the industry being slightly greater than normal for the season. The rubber industry was less active, imports of crude rubber being 3,425,000 pounds, compared with 6,349,000 in June. The decline in the imports of crude petroleum was less than normal for the season, the total in July being 104,209,000 gallons.

The lumber and paper industries were less active in July, exports of lumber showing a sharp decline, while the output of newsprint reached a new low level on the present movement. The output of flour in June, the latest month for which statistics are available, was 1,151,286 barrels, compared with 1,040,693 in the preceding month. The production of sugar showed marked gain in the latest four-week period. Slaughtering of cattle and hogs were less than the relatively high levels of June and the slaughter of sheep and lambs showed an increase less than normal for the season. Cold storage holdings of cheese, beef and mutton were greater at the beginning of July, more than counterbalancing declines in most other lines. Imports of raw cotton and wool were at a much lower level in July than in the preceding month, the total of raw cotton imported being 3,590,000 pounds, compared with 4,487,000 in June, a decline of nearly 17 per cent after seasonal adjustment.

The index of manufacturing production based on 16 significant factors, with seasonal adjustment was 114.4 in July compared with 125.1 in June.

Factors indicating the trend of the mining industry were mainly reactionary in July. Shipments of gold to the Mint and to external markets amounted to 251,175 ounces compared with 287,951, while silver shipments, after seasonal adjustment, also showed decline. Copper exports were 10,486,000 pounds, com-

pared with 6,896,200, recording a substantial gain. Exports of nickel at 2,254,000 pounds, showed decline from the 2,279,900 pounds exported in June. Zinc shipments to external markets were 13,521,700 pounds compared with relatively low point of 8,103,400 pounds. Exports of the better grades of asbestos showed a gain contrary to seasonal expectations. The index of mineral production was 116.9 compared with 128.6 in June.

*Coal.*—Canadian coal output during July amounted to 652,587 tons, a 43.5 per cent falling-off from the average for the month during the past five years of 1,155,640 tons. This decline was general in all producing provinces except New Brunswick. Bituminous coal production in July totalled 577,644 tons, sub-bituminous coal, 16,541 tons, and lignite coal, 58,402 tons. Nova Scotia mines produced 307,282 tons or 22.5 per cent below the July 1931 total of 396,284 tons. Alberta's output was 197,590 tons as compared with 267,268 tons in the corresponding month of last year. This decrease was made up as follows: bituminous coal 15.7 per cent, sub-bituminous coal 62.3 per cent, and lignite coal 28.6 per cent. Production from British Columbia mines totalled 114,437 tons as against 138,555 tons a year ago. New Brunswick produced 14,815 tons and Saskatchewan 18,463 tons as compared with the July, 1931, output of 13,426 tons and 16,082 tons, respectively.

Coal imports into Canada decreased 36.5 per cent to 1,054,454 tons from the five-year average for July of 1,659,923 tons. Receipts of anthracite coal were recorded at 318,528 tons consisting of 213,835 tons from Great Britain, 97,620 tons from the United States, and 7,073 tons from Germany. During the past three months imports of anthracite coal into Canada from Great Britain were 52.2 per cent above the importations from the United States. Bituminous coal to a total of 735,926 tons was brought into Canada during the month; of this tonnage the United States supplied 95.6 per cent and Great Britain the remainder.

Exports of Canadian coal totalled 27,878 tons or 44.6 per cent below the July 1927-1931 average of 50,305 tons. Nova Scotia and New Brunswick ports cleared 21,974 tons of Canadian coal in July and the western ports, 5,904 tons.

#### EXTERNAL TRADE

A summary of Canadian trade in July, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$35,710,571, as compared with \$40,743,105 in the preceding month and \$48,379,235 in July, 1931. The chief imports in July, 1932, were: Non-metallic minerals

and products, \$9,367,126; Agricultural and vegetable products, mainly foods, \$5,406,374; Iron and its products, \$5,129,888.

The merchandise exported from Canada during July, 1932, amounted to \$42,321,284 as compared with \$40,945,490 in the preceding month and with \$49,645,120 in July, 1931. The chief exports in July, 1932, were: Agricultural and vegetable products, mainly foods, \$16,073,995; Wood, wood products and paper, \$10,350,513; Animals and animal products, \$6,242,726.

### Strikes and Lockouts

The time loss due to industrial disputes during August showed a substantial increase over that recorded for the previous month, although the number of disputes recorded and the number of workers involved showed a decided decline, an important dispute involving upwards of 3,000 clothing factory workers in Montreal accounting for the greater part of the increased time loss. In comparison with the figures for August, 1931, while an increase appears in the number of disputes on record, the figures for workers involved and time loss incurred show a much more decided increase owing to the dispute above mentioned. There were in existence during the month sixteen disputes, involving 4,972 workers, and resulting in a time loss of 62,492 working days, as compared with twenty-six disputes involving 6,121 workers resulting in a time loss of 50,397 working days in July, 1932. In August, 1931, the record included eleven disputes, involving 847 workers and resulting in a time loss of 9,192 working days. At the end of the month there were on record seven disputes involving approximately 765 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities showed the first advance since December, 1931, at \$7.01 for August as compared with \$6.78 for July; \$8.20 for August, 1931; \$10.65 for August, 1930; \$11.63 for August, 1929; \$10.44 for August, 1922; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); and \$7.68 for August, 1914. The most important change was a seasonal increase in the price of potatoes, while the prices of eggs, butter, fresh and salt pork and bacon were also higher. The prices of beef, veal, mutton and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.42 at the beginning of August, as compared with \$16.21 for July;

\$18.30 for August, 1931; \$21.01 for August, 1930; \$21.90 for August, 1929; \$20.88 for August, 1922; \$26.92 for July, 1920 (the peak); and \$14.41 for August, 1914. In fuel anthracite coal was somewhat higher while wood declined slightly.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher, this being the first increase since November, 1931. The index stood at 66.8 for August, as compared with 66.6 for July; 70.5 for August, 1931; 83.7 for August, 1930; 98.4 for August, 1929; 97.1 for August, 1922; 160.2 for August, 1920; 164.3 for May, 1920 (the peak); and 66.1 for August, 1914. In the classification according to chief component materials five of the eight main groups were higher and three were slightly lower. The groups which advanced were: the Animals and their Products group, because of higher prices for calves, hogs, hides, cured meats, butter and eggs which more than offset lower prices for fish, steers, lambs and leather; the Fibres, Textiles and Textile Products group, due mainly to higher prices for raw cotton, raw jute, raw silk and raw wool; the Non-Ferrous Metals and their Products group, mainly owing to increases in the prices of copper, lead, silver, tin and zinc; the Non-Metallic Minerals and their Products group, due to higher prices for coal; and the Chemicals and Allied Products group, because of higher quotations for copper sulphate, shellac and fertilizers. The Vegetables and Vegetable Products group was slightly lower, decreases in the prices of oats, barley, potatoes, hay, straw and onions more than offsetting higher prices for corn, flax, rye, wheat, bran, shorts and raw rubber. The Wood, Wood Products and Paper group and the Iron and its Products group were also lower, the former because of lower prices for pine lumber and the latter because of reduced quotations for steel sheets, scrap iron and scrap steel.

The Women's Minimum Wage Commission of Quebec has decided to hold a conference at the end of September to investigate the wages and working conditions of female employees in restaurants. It will be recalled that the provincial legislature, at its session this year, amended the Women's Minimum Wage Act to include those employed in "Commercial establishments," in addition to those in industrial establishments who were already provided for under the Act (LABOUR GAZETTE, March, 1932, page 298). Restaurant helpers are stated to form the largest section of the commercial establishments group. If the commission should find that existing wages are insufficient, a conference will be held later for the purpose of fixing a minimum wage.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

AN application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was reported in the August issue of the *LABOUR GAZETTE* (page 854) as having been received during July from certain employees of the London Street Railway Company, being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and other miscellaneous employees, members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America. The dispute in question came directly within provincial jurisdiction and, the statute enacted by the Legislature of the Province of Ontario in March of this year, which was designed to give effect to the provisions of the Industrial Disputes Investigation Act within the province, not having been proclaimed, a board could be established at that time only with the joint consent of both parties concerned. No action was taken during the month of July looking to the establishment of a board in this case, the company having refused concurrence in such procedure. In the month of August, however, proclamation was issued naming Monday, August 15, 1932, as the day on which the provincial enabling Act would come into force and take effect. A new application was thereupon submitted to the Department by the employees. Subsequently Mr. M. S. Campbell, Chief Conciliation Officer of the Department, visited London and endeavoured by conciliation to bring about an adjustment of the dispute. A settlement was not, however, effected, and the Minister of Labour established a Board of Conciliation and Investigation on September 3, members thereof being appointed as follows:—on the employees' recommendation, Mr. Fred Bancroft, of Oakville, Ontario; on the company's recommendation, Mr. A. B. Ingram, of Toronto, Ontario. The board had not been completed by the appointment of a chairman at the time of going to press.

Two Boards of Conciliation and Investigation were also established by the Minister early in September to deal with disputes which had been made the subject of applications during recent months, the two disputes in question being as follows:—

(1) Between the Niagara, St. Catharines and Toronto Railway and certain of its shop employees. Twenty-nine employees were stated to be directly affected by this dispute, which related to a 10 per cent wage reduction proposed by the company. Messrs. C. W. Bell,

K.C., of Hamilton, Ontario, and Joseph Gibbons, of Toronto, Ontario, were appointed members of the Board of Conciliation and Investigation established in this matter on the recommendation of the company and employees, respectively.

(2) Between the Niagara, St. Catharines and Toronto Railway and certain of its employees being passenger car operators. This dispute also related to a 10 per cent reduction in wages which the company proposed putting into effect, the number of employees directly affected being given as 61. Mr. C. W. Bell, K.C., of Hamilton, was appointed on the company's nomination as a member of the Board of Conciliation and Investigation established to deal with this dispute, and Mr. Fred Bancroft, of Oakville, Ontario, was appointed board member on the employees' recommendation.

The July issue of the *LABOUR GAZETTE* (page 753) contained the texts of the majority and minority reports of the Board of Conciliation and Investigation which dealt with a dispute between various coal operators in the Drumheller district and certain of their employees being members of District 18, United Mine Workers of America. The recommendations contained in the majority report were not accepted by the coal operators and direct negotiations with the miners were reopened. A deadlock being reached, the operators and miners on July 19 jointly requested the assistance of the western representative of the Department of Labour, Mr. F. E. Harrison, in an endeavour to effect an adjustment of the dispute, and Mr. Harrison was instructed to proceed to Drumheller and confer with the parties concerned. Each side made certain proposals which, however, were not favourably considered by the other party to the dispute and joint conferences failed to reach a settlement. Mr. Harrison kept in close touch with the situation and on August 18 and 19 attended further joint meetings between the coal operators and miners.

On the latter date an agreement was entered into between District 18, United Mine Workers of America, representing the employees, and five of the coal mining companies concerned, namely, the Newcastle Coal Co., Ltd., Western Gem Coal Co., Ltd., Midland Coal Mining Co., Ltd., Thomas Coal Co., Ltd., and Jewel Coal Co., Ltd., renewing, until March 31, 1933, the terms and provisions for the agreement between each operator and the union

which had recently expired. In accordance with its terms, the agreement was submitted by the union for ratification to a vote of its membership in District 18 on August 25 and was carried by an overwhelming majority. Subsequently the contract was also signed with the Rosedale Coal Co., Ltd., and the Great

West Coal Co., Ltd. The new agreement is subject to thirty days' notice of termination in writing from either party. In the case of notice of termination by the operators, however, the notice must be given by a majority of the employers who are or may become parties to the agreement.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1932

THE following table shows the number of disputes, workers involved and time loss for August, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1932...	16	4,972	62,492
*July, 1932...	26	6,121	50,397
Aug., 1931...	11	847	9,192

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

A substantial decrease appears in the number of disputes occurring in August as compared with July. The decline in the number of workers involved was less marked owing to the occurrence during the month of a dispute involving upwards of 3,000 clothing factory workers in Montreal. The marked increase in time loss for August was due to the same dispute. As compared with August, 1931, a month when no disputes of any magnitude were recorded, the figures for August, 1932, show substantial increases in both the number of disputes on record, and the number of workers involved, as well as in the time loss involved.

Twelve disputes, involving approximately 1,843 workers, were carried over from July, including one dispute of motion picture pro-

jectionists at Edmonton, Alta., information as to which reached the Department too late for inclusion in the August issue of the LABOUR GAZETTE. Four disputes commenced during August. Of the sixteen disputes in progress during the month nine were recorded as terminated, three resulting in favour of the workers involved, three in favour of the employers concerned and three resulting in a compromise. At the end of August, therefore, there were seven disputes recorded as strikes or lockouts in progress, namely: coal miners, Blairmore, Alta., coal miners, Bellevue, Alta., fur factory workers, Toronto, Ont., women's clothing factory workers (cutters), Montreal, P.Q., lithographers, Toronto, Ont., carpenters, Niagara Falls, Ont., and motion picture projectionists, Saskatoon, Sask.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., February 29, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto, London, Ont., Montreal, Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; women's clothing factory workers, Montreal, P.Q., August 1, 1932, one employer, this last being added this month. The dispute involving cooks and waiters employed by one firm in Edmonton, Alta., commencing September 29, 1931, and carried in this list since January, 1932, is considered to have lapsed by the end of August and has consequently been removed from the list.

In the LABOUR GAZETTE for August reference was made to a reported strike of pulpwood loaders in the Pigeon River District on July 19, 1932. Details as to the dispute have been received showing that the strike occurred in the Nipigon district and involved fifty loaders

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1932

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to August, 1932</b>			
MINING, NON-FERROUS SMELTING, AND QUARRYING—			
Coal miners, Blairmore, Alta...	300	8,100	Commenced Feb. 23, 1932; against dismissal of worker; untermiated.
Coal miners, Bellevue, Alta.....	330	8,910	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore, Feb. 23, 1932 untermiated.
Coal miners, Little Bras d'Or, N.S.....	200	4,800	Commenced July 4, 1932; against discharge of check weighman; terminated Aug. 29, 1932; compromise.
MANUFACTURING—			
<i>Fur, Leather and Other Animal Products—</i>			
Fur factory workers, Toronto, Ont.....	24	500	Commenced July 4, 1932; against reduction in wages and sending work to outside shops; lapsed by August 31, 1932; in favour of employer.
Fur factory workers, Toronto, Ont.....	39	800	Commenced July 12, 1932; for removal of foreman; lapsed by August 31, 1932; in favour of employer.
Fur factory workers, Toronto, Ont.....	800	12,000	Commenced July 29, 1932; for union wages and working conditions; untermiated.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cutters), Montreal, P.Q.....	10	270	Commenced July 15, 1932; for recognition of union; untermiated.
Men's clothing factory workers, Montreal, P.Q.....	75	900	Commenced July 28, 1932; for recognition of union; terminated August 15, 1932; in favour of workers.
<i>Other Wood Products—</i>			
Shingle mill workers, New Westminster, B.C.....	40	100	Commenced July 12, 1932; for increase in wage rates and for agreement; terminated August 5, 1932, compromise.
<i>Printing and Publishing—</i>			
Lithographers, Toronto, Ont..	7	189	Commenced April 15, 1932; against reduction in wages; untermiated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Carpenters, Niagara Falls, Ont.....	14	378	Commenced July 19, 1932; alleged violation of agreement <i>re</i> wage rates; untermiated.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Edmonton, Alta.....	4	8	Alleged lockout; commencing July 23, 1932; <i>re</i> union wages and working conditions; terminated August 2, 1932; in favour of workers.
<b>(b) Strikes and Lockouts Commencing during August, 1932</b>			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Drumheller, Alta.....	25	25	Commenced August 10, 1932; for continuance of checkoff for union dues; terminated August 11, 1932; in favour of workers.
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers, Montreal, P.Q.....	100	500	Commenced August 1, 1932; against certain wage reductions; employment conditions no longer affected by August 31, 1932; in favour of employer.
Men's clothing factory workers, Montreal, P.Q.....	3,000	25,000	Commenced August 4, 1932; for recognition of union and for union agreement; terminated Aug. 20, 1932; compromise.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Saskatoon, Sask.....	4	12	Alleged lockout; commenced August 29, 1932; <i>re</i> employment of members of one union at union wages; untermiated.

demanding an increase in wages from 30 cents per hour for an eight-hour day to 35 cents per hour with pay for the fifteen-minute lunch period. The employer stated that no previous demand for an increase had been made and as a boat was to be loaded, the demands were granted and work was resumed the following day.

Disputes involving employees in two or more motion picture theatres in Toronto are reported to have occurred in July, the union employees being dismissed and replaced, the theatres being afterwards picketed. Particulars as to these disputes have not yet been received, but it appears that between two and four projectionists have been involved since July 9.

A strike of harvesters at Quill Lake, Sask., about August 13, 1932, has been reported in the press. Information secured by the Department is that nine harvesters arriving in the locality refused to work at \$1.25 per day and board, demanding \$1.50. Within a day or so nearly all accepted work at \$1.25, the prevailing rate in the district, the remainder leaving the locality.

A cessation of work in one coal mine at Drumheller, Alta., from August 22 to August 24, involving 100 workers, occurred following the employer's proposal of a wage reduction of 7½ per cent. Both parties agreed to suspend work pending negotiations and reached a settlement providing for the wage scales in other mines in the district. Negotiations between other operators in the district and the United Mine Workers of America had been in progress following the report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and a settlement providing for the renewal of the previous agreement until March 31, 1933, was reached on August 19.

A minor strike involving electrical workers on the construction of a pumping station and filtration plant occurred at Hamilton, Ont., involving between two to six workers for one day, August 24. The dispute arose apparently about August 15 owing to the employment of non-union electricians by one contractor, union employees of another contractor on the same job threatening to strike when required to work together. When this occurred the contractor concerned agreed to employ union members only and work was resumed next day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, BLAIRMORE & BELLEVUE, ALTA.—**These disputes arising out of the dismissal of an employee, alleged to be connected with

the sharing of work and discrimination, had been in progress since February 23, 1932. Following the meeting with a delegation of miners referred to in the August issue of the *LABOUR GAZETTE*, on August 22 the premier of Alberta visited the mines. After conferences with the Mine Workers' Union of Canada and with the management, the premier made certain proposals for a settlement. These included the renewal of the agreement expiring on March 31, 1932, a guarantee of the right of miners to join any union they desired, no discrimination against the alleged agitators, and no general layoff, but, recognizing that some miners could not be given work immediately, these would be cared for by the government. These proposals were not accepted by both parties immediately, but early in September a settlement on this basis was reached.

**COAL MINERS, LITTLE BRAS D'OR, N.S.—**This dispute, arising out of the removal by the management of the checkweigher elected by the miners, resulting in a cessation of work on July 4, was settled on August 29, through the mediation of the Deputy Minister of Mines of Nova Scotia. It was arranged that the checkweigher would be re-instated in the employ of the company, and that after the usual notice a checkweigher would be elected by the miners, the former checkweigher being eligible.

**FUR FACTORY WORKERS, TORONTO, ONT.—**Three disputes involving fur workers in Toronto were in progress during August, two of which are considered to have lapsed during the month, a settlement of the third being reported early in September.

As stated in the August issue of the *LABOUR GAZETTE* one dispute began on July 4, 1932, twenty-four employees in one establishment ceasing work protesting against a reduction in wages and sending work to outside shops. Employment conditions being no longer affected by the end of August, the dispute is recorded as lapsed.

In another establishment, where thirty-nine out of fifty-four employees ceased work on July 12, 1932, demanding the removal of the foreman, conditions being no longer affected, the dispute is also recorded as lapsed by the end of the month.

Of the eight hundred employees involved in approximately seventy establishments at the commencement of the strike on July 29, 1932, to secure an agreement, approximately seven hundred had resumed work by the end of August, various employers having signed individual agreements with the union from time to time. Early in September it was reported

that an understanding between the parties had been reached and it was expected work would be resumed in all establishments by September 6.

**WOMEN'S CLOTHING FACTORY WORKERS (CUTTERS), MONTREAL, P.Q.**—This dispute, involving workers in three establishments operated by one firm in a demand for recognition of the Montreal Dress Cutters' Union, was terminated at the end of August. Toward the end of the month, however, workers arrested shortly after the commencement of the dispute on charges of obstructing traffic, etc., in violation of a city by-law appeared for trial. This was stated to be a test case involving the right to obstruct traffic. Later, however, it was reported that the case was being dropped as unsuitable for a test case.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—The seventy-five workers involved in this dispute, commencing July 28, 1932, to enforce a demand for the recognition of the United Clothing Workers of Canada in the establishment of a sub-contractor for men's factory clothing, are reported to have resumed work on August 15, their demands having been granted by the employer. This dispute became connected with that involving over one hundred establishments commencing August 4, 1932, for the same object, dealt with in a later paragraph.

**SHINGLE MILL WORKERS, NEW WESTMINSTER, B.C.**—This strike, commencing July 12, 1932, to secure an increase in wages, that is a restoration of rates reduced in April, was terminated August 5, at rates substantially equivalent to those demanded, through the mediation of the Deputy Minister of Labour for British Columbia and the resident conciliation officer of the Dominion Department of Labour at the request of the Mayor. A complete resumption of work was delayed for a day by a dispute as to the employment of a certain number of Chinese workers to replace strikers who had secured work elsewhere. The strikers had also demanded a signed agreement with a union said to be connected with the Lumber and Agricultural Workers' Industrial Union, but this was not conceded.

**MOTION PICTURE PROJECTIONISTS, EDMONTON, ALTA.**—Information as to this dispute, in progress from July 23, 1932, to August 2, 1932, reached the Department too late for inclusion in the August issue of the *LABOUR GAZETTE*. The employer involved replaced four motion picture projectionists in his employ, members of the International Alliance of Theatrical Stage Employees, with non-union operators at a reduced rate. The union, however, picketed

the theatre, and on August 2, the employer re-engaged the four men concerned, signing an agreement with the union for rates and conditions as prior to the dispute.

**COAL MINERS, DRUMHELLER, ALTA.**—On August 10, 1932, twenty-five miners employed by one company operating in Drumheller ceased work as a protest against the failure of the employer to continue the checkoff for union dues for the United Mine Workers of America. Pending the completion of negotiations for a new agreement following the report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act (*LABOUR GAZETTE*, July, 1932, page 753) the operators of several mines involved had arranged to continue operation under the terms of the expired agreement. The operators of this mine made an exception as to the checkoff, but when the miners ceased work they agreed to continue the deduction of dues from pay and work was resumed on the next day.

**LADIES' CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—This dispute commenced on August 1, 1932, in three establishments operating under the agreement between the cloak and suit manufacturers' association and the International Ladies' Garment Workers' Union which provides for reference to an impartial arbitrator of matters in dispute (*LABOUR GAZETTE*, May, 1932, page 611). These three firms had made certain downward changes in piece-rates, which they state were approved by the Impartial Arbitrator under the terms of the agreement, the union refusing to accept the decision and calling the workers out. The employers state that the majority of the strikers, however, returned to work within a few days at the reduced rates, but that owing to a shortage of work they were unable to re-employ all who wished to return, also that they were no longer operating under the union agreement. The union, however, claims the strike is still in existence, and as working conditions are no longer affected, the strike has been added to the list of such disputes in a previous paragraph.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees in approximately one hundred clothing contractors' shops ceased work on August 4, 1932, demanding recognition of the United Clothing Workers of Canada, a new organization, and an agreement providing for uniform wages in all shops, the forty-four hour week, restriction of apprentices, etc. The employers, members of the Montreal Clothing Contractors' Association, had been operating under agreements with the Amalgamated Clothing Workers of America, which

also had agreements with many of the manufacturers and jobbers who sent out work to the clothing contractors to make up. A large number of the workers, however, had recently joined the new union which had secured recognition from a number of the clothing manufacturers and jobbers in July, strikes having occurred in some of these establishments to secure recognition. The clothing contractors claimed that owing to poor trade and severe competition the jobbers were allowing them such low prices for work done that they were unable to pay the wage rates or observe the working conditions demanded by the workers. By August 20 the union officials stated that the contractors and jobbers had agreed to recognize the union and sign agreements as to wages and working conditions and

work was resumed in nearly all the establishments involved. Details of the agreements were to be settled by further negotiations.

**MOTION PICTURE PROJECTIONISTS, SASKATOON, SASK.**—This dispute, an alleged lockout, commenced on August 29, 1932, when four motion picture projectionists, members of the International Alliance of Theatrical Stage Employees (Motion Picture Machine Operators) employed in one theatre, were replaced by members of the National Union of Theatrical Employees. Changes in working conditions as well as a reduction in wages had been proposed by the employer and refused by the union. The men affected were under an agreement until September 1, 1932, and the management paid wages due up to that date. At the end of the month no termination had been reported.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in July was 30, and 19 were still in progress from the previous month, making a total of 49 disputes in progress for the month, involving 40,400 workers with a time loss of 248,000 working days for the month. Of the 30 disputes beginning in July, 16 were over proposed reductions in wages, 5 over other wages questions, 4 on questions respecting the employment of particular classes or persons, 3 on questions of working arrangements, and 2 on questions of trade union principle. During July, settlements were reached in 27 disputes, of which 10 were in favour of workers, 7 in favour of employers and 10 ended in compromises. In 4 other disputes, work was resumed pending negotiations.

*Dispute in the Cotton Manufacturing Industry in Lancashire.*—This industry employs about 200,000 workers in yarn spinning and

about the same number in cotton cloth manufacturing in the County of Lancashire. The general agreement as to wages and hours in the spinning section of the industry was terminated at the end of the year 1931, but work has continued since then with few changes from the 1931 wages and conditions. About the middle of August the master cotton spinners' associations gave a month's notice of proposed reductions in wages of about 13 per cent, and early in September the spinners' unions voted to go on strike if this took effect.

In the cloth manufacturing section which also employs about 200,000 workers in the county, the majority of whom are weavers, following unsuccessful negotiations with the weavers' union and a strike at Burnley (reported in the *LABOUR GAZETTE*, March and April, 1932) the employers' association temporarily abandoned the introduction of the more-loom-per-weaver system as a means of reducing costs, but later proposed to reduce wages. The general wages and hours agreement was therefore terminated on June 11. Some employers then gave notice of wage cuts in different mills ranging from 6 to 12 per cent, which were accepted by employees of some mills but which resulted in strikes in other mills where in many cases the strikers were replaced. At Burnley however a general strike began July 25, as reported in the last issue, which involved about 22,000 workers when employers attempted to enforce a wage reduction of 12½ per cent. Two strike ballots for a general strike in the county were taken by the federation of unions in this section of the industry, one in June and the other in July, but both were indecisive. Negotiations

for a new general agreement were again opened in July, during which the employers' associations offered to make an agreement with a wage reduction of about 10 per cent. Negotiations however broke down when they refused to guarantee the immediate reinstatement of all their employees who had gone on strike either against wage reductions or in the more-ooms-per-weaver dispute. A general strike of all workers in the cotton cloth manufacturing industry in Lancashire was then called for August 27, and about 145,000 came out on strike. On September 5, the dispute was still in progress but the Ministry of Labour had begun conciliation proceedings.

### Belgium

The strike in coal mines mentioned in the last issue of the LABOUR GAZETTE is reported to have been settled September 8, through government intervention. An increase in the minimum rate of wages was reported to have been granted and a general review of wages and working conditions is to be made.

### United States

The number of disputes beginning in June was 46 and 62 were in effect at the end of the month. The number of workers involved in

disputes in effect at the end of the month was 22,871 and the time loss for the month 950,972 working days.

A strike of about 4,000 fur workers in New York City was in progress from July 27 to August 19 when an agreement was signed, providing, it is reported, for the five-day week, an increased wage scale and for an unemployment fund.

A two weeks' strike of about 6,000 unorganized hosiery workers at Highpoint, North Carolina, was settled at the beginning of August by arbitration when a compromise was reached over the wage reduction.

A strike of 15,000 men's clothing workers in New York City and vicinity began August 4 in non-union shops to secure union wages and conditions.

The dispute in the bituminous coal mining industry was reported in the LABOUR GAZETTE, April, May and August. In Illinois an agreement was reached and work resumed in some sections at a reduction in the basic wage from \$6.10 to \$5 per day. This settlement was rejected by other sections and serious disorders occurred during August, when several thousands of the miners still on strike marched to the towns where work had been resumed in an unsuccessful attempt to close down these mines.

## Plans of American Executives for Economic Recovery

At a meeting of industrial, banking and business leaders, held at Washington in the last week of August at the request of President Hoover, a program of future action was adopted consisting of six lines of policy. The President declared that the "major financial crisis" had been overcome, and asked those who controlled the credit of the nation to see that it should be applied to productive enterprise so as to aid employment. The six lines of policy which were approved, and the principal members of the committee in charge of each policy, were as follows:—

1. Problem of making available credit affirmatively useful to business. Chairman of committee, Owen D. Young.

2. Increased employment on railroads and stimulation of industry through expansion of maintenance of equipment and purchase of new equipment in co-operation with the Interstate Commerce Commission and the Reconstruction

Corporation. Committee consisted of Daniel O. Willard and George H. Houston, of the Baldwin Locomotive Works, Philadelphia.

3. Expansion of capital expenditures by industry in the way of replacement of obsolete and worn out equipment and otherwise. Chairman, A. W. Robertson, of the Westinghouse Electric Co., Pittsburgh, Pa.

4. Increased employment through sharing work. Chairman, Walter C. Teagle, of the Standard Oil Company of New Jersey, New York.

5. Possibility of stimulating repair and improvement of homes. Chairman, Sewell Avery, of the United States Gypsum Co., of Chicago; and C. M. Woolley, of the American Radiator and Standard Sanitary Corporation.

6. Organization of committees in the several districts to assist home owners with maturing mortgages.

## THE RELIEF SETTLEMENT PLAN OF THE DOMINION GOVERNMENT

THE relief settlement plan adopted by the Dominion Government and initiated by the Department of Immigration and Colonization, under the direction of the Hon. W. A. Gordon, has been described in previous issues of the *LABOUR GAZETTE* (July, 1932, page 789; May, 1932, page 478, etc.). In furtherance of this plan the co-operation of the Colonization Departments of the Canadian National Railways and the Canadian Pacific Railway was secured, and for the first time the three chief colonization agencies in Canada applied themselves to the settlement of Canadians on the land instead of the encouragement of immigration from outside sources. From October, 1930, to March 31, 1932, the three organizations were instrumental in placing on farms 7,046 families formerly resident in Canadian cities and other centres of population, and in placing 14,568 formerly unemployed men in farm employment. On the basis of five members to a family this represents a movement to the land of 49,798 persons—a substantial contribution to the relief of unemployment and the stabilization of conditions.

Family settlement under this movement was confined to those who had sufficient capital to establish themselves on the land and no financial assistance was extended. It soon became evident, however, that there were many families eager for an opportunity to gain a subsistence on the land who could not qualify for such settlement because of lack of capital. As a contribution toward relieving this situation the Dominion Government in May last decided to bear a portion of the cost of settlement on the land of selected families who could qualify for such assistance in all localities where the province and municipality concerned were prepared to make a similar contribution, and an agreement to that effect was offered to each of the provincial governments. The stipulations of this agreement may be summarized as follows:—

The Dominion Government would contribute one-third of an amount not to exceed \$600 per family for the purpose of providing a measure of self-sustained relief, to families who would otherwise be in receipt of direct relief, by placing such families on the land, the remaining two-thirds of the expenditure to be contributed by the province and the municipality concerned as might be decided between them. The Dominion Government contribution was to be regarded as a non-recoverable expenditure. The total expenditure on behalf of any one family during the first year was not to exceed \$500 for all purposes inclusive of sub-

sistence and establishment, a minimum amount of \$100 being withheld to provide subsistence if necessary during the second year. No part of the above-mentioned expenditure was to be used for the purpose of acquiring or renting land.

It was stipulated that all families who might be assisted under the terms of this agreement should be residents of Canada and should be selected from those who would otherwise be in receipt of direct relief, the selection of families to be made without discrimination by reason of political affiliation, race, or religious views.

The province was to be responsible for administration of relief settlement, including the location and inspection of suitable farms, and the selection of families who should be physically fit and qualified in other respects. Expenses of administration were to be paid by the province, and no part of the cost of administration and supervision was to be deducted from the maximum amount of \$600 set aside for subsistence and settlement of each family. Disbursements of funds to the families assisted were to be made by the province, which was required to set up an Advisory Committee, including representatives of the Dominion Land Settlement Branch, the Colonization Branch of the Canadian Pacific Railway, and the Colonization Branch of the Canadian National Railways. Provision was made for the furnishing, certification, and verification of accounts. The Dominion Government at that time indicated the amount it had set aside for expenditure under this scheme in each province, such amount being based upon population of the province.

Up to September 10, eight provinces—New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—had signed the agreement and had begun active relief settlement work under it.

Settlement this year is believed to represent only the beginning of the movement, as the agreement covers a period of two years which does not expire until March 31, 1934, and only those families whose position can be immediately improved by settlement on the land are being located at the present time. Therefore, while some immediate relief of unemployment conditions may be expected, the full effectiveness of the scheme will not be in evidence until at least 1933. The plan is not put forward as a complete solution of unemployment, but it is undertaken as a constructive measure, to assist the unemployed to attain self-dependence on the farm.

## Co-ordination of Relief Work in Alberta

During August the Government of Alberta appointed the Hon. O. L. McPherson, Minister of Public Works, to take charge of relief work in the province. Conferences with municipal authorities will be held at regular intervals to deal with any difficulties in administration that may arise, and a provincial advisory committee will be appointed, consisting of two representatives from the urban and business interests, one representative of labour, one representative of the rural interests, and two women to represent the women and children of the province. The function of the advisory committee will be to assist in co-ordination and making more uniform relief measures in the various units, and to make a study on

the best methods of dealing with the various relief problems.

The former practice as to the residential qualification of applicants for relief has been amended. By this amendment, as from May 1 last, no person can become a charge on any municipality unless he has been a resident of the municipality and self-sustaining for a period of one year before making application. The purpose of this amendment is to safeguard all municipalities, whether urban or rural, against the possibility of families moving into the municipality and immediately becoming a charge upon that district. This regulation will apply to relief to married men. The question of relief to single men will be dealt with as a separate matter.

## Voluntary Relief Organization in Saskatchewan.

A voluntary organization to assist the Saskatchewan Relief Commission in carrying on relief work in the province has been undertaken on the suggestion of Premier T. M. Anderson. Representatives of churches, service clubs, fraternal societies and other charitable bodies met the premier at Regina on August 31, and adopted plans for the work

to be carried on during the coming winter. It was announced that the new organization would take measures to provide the necessities of life for farmers and their dependants in the central and southern portions of the province in which the crop conditions had been unfavourable for the fourth successive year.

## Consolidation Proposed in British Columbia

Consolidation of relief work in British Columbia to place the responsibility on one official was being considered by the provincial government at the end of August. The proposal was submitted to Premier S. F. Tolmie by Hon. R. W. Bruhn, Minister of Public Works, who drew up the details after discussions with Hon. J. W. Jones, Minister of Finance. The proposal provides for one man, appointed by the British Columbia Government, to head relief work projects and be responsible for relief expenditures. Under him

would be two supervisors of whom one would assume responsibility for provincial commitments on civic relief, and the other be responsible in the unorganized districts. The province would be divided into relief areas, and relief costs in each area would be estimated, and provision made for each district budget. The scheme aims at closer control over the distribution of relief funds and more effective results. Representatives from each municipality would have a voice in the works to be carried out.

A prominent group of thread manufacturers in the United States have adopted what is regarded as one of the largest pension retirement programs entered into by an industrial organization on behalf of its employees. The plan, which is being underwritten by the Metropolitan Life Insurance Company, will provide a pension retirement for over 5,500 employees as well as accident and health benefits for mill employees. The firms covered are the Clark (O.N.T.) Thread Co., Newark, N.J.;

J. & P. Coats (R.I.) Inc., Pawtucket, R.I.; the Spool Cotton Co., New York City, their selling agents, and the John MacGregor Corporation, of Maine. It is planned that retirement benefit for service prior to March 1, 1932, will be provided entirely by the employer; the cost of retirement benefits for service after that date will be shared by the employer and participating employees. Pensions being paid to employees already on retirement, under previous arrangements, will be continued.

## METHODS OF RELIEF ADMINISTRATION IN ONTARIO

### Recommendations of Provincial Advisory Committee

A REPORT on "Provincial policy on Administrative methods in the matter of direct relief in Ontario," was presented to the provincial government on August 26 by the Advisory Committee which had been appointed to consider the problems involved in direct relief in the province. The Provincial Government has endorsed the report and recommends to the municipalities the adoption of its requirements and procedures. The committee was instructed "to assist the government in dealing with the problems arising out of unemployment, including the distribution of relief to the needy, and the special assistance that may be required by municipalities which have difficulty in meeting their percentage of the cost of unemployment relief."

The committee was composed as follows: Messrs. Wallace R. Campbell, Windsor, chairman; C. Gordon Cockshutt, Brantford; A. G. Storie, Oshawa; Stuart K. Watt, St. Catharines; Alexander C. McFarlane, Hamilton; Allan Ross, Toronto; H. Stanley Higman, Ottawa; David B. Harkness, Toronto.

The committee assume that the government desires to continue along the general lines already followed in meeting the emergency, but they recognize that certain adaptations have become necessary owing to the increasing pressure of unemployment and the necessary curtailment of public works enterprises. The committee accept the view, which they believe now widely prevails, that all normal governmental works enterprises should be dissociated from relief planning and administration, and consider that "any services planned for or rendered by persons receiving direct relief, in consideration of such relief, should be provided and administered separately from and independently of ordinary public works programs."

The report lays stress on provincial responsibility in matters of administration, supervision, and standards of relief. "It is noted that while the Provincial and Dominion Governments have been for some time participating heavily in relief-giving, little attention has been devoted by these Governments to the details and standards of administrative policy. It has become increasingly apparent that there is urgent need for provincial assistance and guidance in these matters. This report therefore has given special attention to organization and methods of administration and supervision."

The recommendations of the Committee are grouped in Sections as follows:—

#### Section 1—Direct Relief

This term is defined as "the issuance of the materials and assistance necessary to relieve the needs and safeguard the health and well-being of those who are indigent and which are issued without charge to the recipients." Direct relief has been taken to include food, fuel, clothing and shelter, and the instructions given to the municipalities by the provincial government were based on this definition. In practice there has been a wide divergence among the municipalities as to the interpretation of "adequate relief," and the committee therefore amplifies the definition so as to include the following particulars:—

(1) Food—suitable as to quality, quantity, and dietary variety so as to adequately safeguard the health of all recipients.

(2) Clothing—adequate to protect and ensure the health and comfort of the recipients and sufficiently varied to meet the climatic conditions throughout the Province.

(3) Shelter—including provision of water and light, of such quality as will safeguard family life from the standpoints of health, self-respect and general morale.

(4) Fuel—issued with due consideration to the types of fuel most easily available in the area concerned and to the varying climatic conditions of the Province.

(5) Medical Services and Supplies—such as are necessary to protect families in need of assistance against the inroads of disease, malnutrition and deterioration of health generally.

In addition to the foregoing items the Committee recommend (a) careful investigation on the part of the municipal welfare department as to the needs of families applying for relief and continuous supervision of each family receiving relief, both as regards relief issues and the general well-being of such families; and (b) continuous supervision on the part of the provincial authorities charged with welfare administration of municipal administrative methods and standards in order to ensure reasonable uniformity in policy and practice in all parts of the Province.

#### Section 2—Administrative Methods and Organization Policy

Pointing out that three governments—Dominion, Provincial and Municipal—are interested in efficient administration, the com-

mittee assume that "the Dominion Government, having designated the avenues through which its views may be conveyed to the provincial authorities and having arranged the conditions on which participation in the supply of funds may continue, will be satisfied to leave the continuous relations with the municipalities to the Province. This course appears logical and desirable in view of the fact that municipal powers and procedures rest upon provincial legislation. Responsibility for the routine and detail of the administration of direct relief appears to rest therefore with the provincial and the municipal authorities."

The administrative responsibility of the Province includes (1) the determination of the general standard of assistance to municipalities (at present this is on the basis of one-third from each government); (2) policy respecting special treatment of embarrassed or bankrupt municipalities (special treatment should be decided by the province subject to Dominion approval); (3) method of distributing funds (the committee considers that this should continue as formerly in charge of a committee of ministers); (4) policy as to provincial supervision of municipal welfare methods and administration (such supervision, it is believed, would be welcomed by municipal officials, owing to the existing diversity of standards and methods of relief).

The committee suggest that such matters should be under the direction of the provincial Department of Public Welfare, with the co-operation of other departments including those of Health, Public Works, and Labour.

The administrative duties of municipalities are discussed in the remaining paragraphs of this section. The general principles that should govern relief are stated and recommendations are made as to their practical application. These recommendations are as follows: (1) Establishment of a Public Welfare Board in each municipality, composed, at the option of the provincial government, of persons representing the sources from which the funds are supplied; (2) Organization in the larger municipalities of existing social service agencies, into a community association or league; (3) Preservation of existing organization where efficient; (4) The Public Welfare Board should control relief expenditures, directing the staff, hearing complaints, etc.; co-operate with the Community association or league in inaugurating special services such as clothing bureaus, hostels, etc.; and in organizing special service committees; and organizing voluntary workers to support the permanent staff; (5) The community association or league should nominate private citizen representatives

on the Public Welfare Board; arrange for campaigns for private funds where approved and for disbursements of such funds; and function as a council for the discussion of welfare questions; (6) In bankrupt municipalities where provision of direct relief falls wholly or almost wholly upon provincial and federal funds there should be set up a Public Welfare Board of not less than three members who shall be appointees of the Provincial Government; (7) The powers of "The Department of Public Welfare Act, 1931," should be invoked for the purpose of issuing governmental regulations setting out the residence requirements, supervision policies and powers of inspection which are deemed necessary in order to make provincial and municipal relief administration effective.

### Section 3—Residence and Registration Requirements

The diversity in residence requirements and the haphazard movements of families have been matters of grave concern to municipalities. The committee believe that uniform residence and registration requirements applicable to all persons applying for or receiving direct relief should be set out by the Provincial Government, and that adequate provision should be made for consistent adherence to and enforcement of such requirements.

The committee therefore recommend as follows:—

(1) That all such persons be required to establish and maintain a definite municipal residence.

(2) That all changes in residence on the part of such persons shall be a matter of orderly record and subject to regulations governing such changes.

(3) That all persons eighteen years of age and over in Ontario applying for or receiving direct relief be required to carry a residence certificate card which shall be uniform throughout the Province.

(4) That a uniform residence qualification of having resided three months in a municipality be adopted by the Province as constituting eligibility for becoming an applicant for relief in any municipality.

(5) That as a preliminary to establishing the proposed residence requirement plan a registration be taken of all persons eighteen years of age and over in the municipalities of Ontario applying for or receiving direct relief, such registration to be made on uniform registration forms to be supplied to the municipalities by the Provincial Government.

(6) That registration and residence certificate cards be issued in all organized municipal areas, by the municipal officer in charge of public welfare services or the person designated by the Municipal Council for such purposes, and in unorganized areas by the persons charged with the administration of direct relief in such areas.

(7) That registration by any person in a given municipality shall be accepted as a *prima facie* indication that such person is entitled to residence in the said municipality.

(8) That the Provincial Government make special provision for an official review of registrations in cases of dispute or where revisions or transfers are sought and for determining all such cases.

(9) That the Provincial Government recommend to the Federal Government that such registration policy together with the residence certificate card plan be made national through co-operation with other provinces.

The special problems in connection with the relief of families, single women, and single men are severally dealt with, recommendations being made as to special action that would be necessary for giving effect to the proposed registration policy and the residence certificates in connection with unemployed single men.

#### Section 4—Standardization of Relief Allowances

The committee was impressed with the wide divergencies in the standards of relief in different municipalities, and they express the belief that relief "maxima" should be drawn up. This question is discussed in relation to relief issues of food; clothing and footwear; shelter, including water and light; fuel; and medical services and medical supplies.

*Relief Issues of Food.*—The various methods of distribution in practice are noted, the committee concluding that the method to be followed must take account of local conditions. They recommend, however, a partial application of the commissary or community depot idea, particularly in regard to certain non-perishable local products. "A well-administered commissary system," the report states, "may supply foods at somewhat lower costs than they can be obtained through regular avenues, especially in city municipalities of moderate size." The committee express doubt as to the suitability of such a system to meet all cases, and suggest as an alternative the appointment of small committees of persons familiar with the foodstuff trade to advise the municipal Public Welfare Bureau.

The maximum food allowances proposed by the Committee are given in the following schedules:—

##### Summer schedule.

For one adult per week .....	\$1.50
For the second adult in a family, per week an additional .....	95
For the third member of the family, per week an additional .....	90
For the fourth member of the family, per week an additional .....	85
For the fifth member of the family, per week an additional .....	80
For the sixth member of the family, per week an additional .....	75
For the seventh member of the family, per week an additional .....	70
For the eighth member of the family, per week an additional .....	65
For the ninth member of the family, per week an additional .....	60
For the tenth member of the family, per week an additional .....	55

This will work out to a standard wherein the full food supply needs of families can be made as follows:—

Family of one per week .....	\$1.50
Family of two per week .....	2.45
Family of three per week .....	3.35
Family of four per week .....	4.20
Family of five per week .....	5.00
Family of six per week .....	5.75
Family of seven per week .....	6.45
Family of eight per week .....	7.10
Family of nine per week .....	7.70
Family of ten per week .....	8.25

The winter schedule should not exceed the foregoing amounts by more than 10 per cent in any instance.

*Clothing and Footwear.*—The committee make the following recommendations in regard to clothing and its distribution:

(1) That the Department of Government dealing with such matters should prepare and issue to Municipal Welfare Boards lists and information as to suitable garments for all classes of persons on relief, the sources from which they may be obtained and the terms of purchase.

(2) That a special agency or committee be set up within each municipal relief organization to handle the distribution of clothing and it is suggested that such agency or committee be composed largely, if not wholly, of responsible women who have shown an interest in relief problems.

(3) That in the cases of all municipalities whose needs will justify purchasing in sufficiently large quantities to enable them to deal directly with the manufacturers this course should be pursued.

(4) That smaller municipalities, particularly, be instructed that smaller purchases may be made from wholesale sources and that the

prices of clothing so purchased for relief issues should not exceed the manufacturer's selling price by more than 10 per cent; and further, that in cases where relief organizations deal directly with the retail store, account should be taken of the prices shown in the departmental list since these will constitute a guide as to reasonable charges for specified relief articles.

(5) That wherever it is convenient, economical and socially desirable to do so, encouragement should be given to the making, remaking and repairing of garments by women of voluntary service societies or by women belonging to families receiving relief.

(6) That in the case of footwear it is desirable that the services of the retailer be retained if possible on a cost-plus basis. While it is possible to arrange for certain standard types of shoes which can be recommended as relief issues it is impossible to obtain expert fitting services at a reasonable cost except through the retail dealer. It is also recognized that owing to the multiplicity of sizes the utilization of such services has a bearing on health and efficiency.

Recommendations are made as to methods of obtaining clothing and shoes at the lowest prices, and as to supplementing the supply by means of organized private donations.

*Shelter.*—The committee propose that the government fix a monthly maximum for shelter at one-twelfth of the total to which the annual tax-bill amounts, plus an additional sum of 50 per cent of such tax bill; but in no case should the cost of shelter (including water) for any family exceed \$15 per month. Monthly costs for light should not exceed \$1 per family.

*Fuel.*—In the opinion of the committee the cost of supplying fuel would be reduced if municipalities were to purchase the necessary stocks at summer prices. This subject should be referred to the Municipal Welfare Board, for study.

*Medical Services and Supplies.*—This item deserves a place in the relief program; and the government should, the committee suggests, increase the scope of direct relief to include emergency medical services and that each municipality be empowered to enter into an arrangement with resident doctors for services in the care of indigent cases, at the request of the person in charge of direct relief, on a basis of cost not to exceed half of the standard medical charges existing in that locality.

This recommendation, however, may be subject to modification.

### Section 5—General Recommendations

The committee is of the opinion that in addition to the checks on monthly expenditure provided by the foregoing proposals in respect to maximum charges the Province should establish a general rule under which it shall be reckoned that food costs may properly amount to 60 per cent of the total in municipal relief statements of expenditures; and it is recommended that the Provincial Government should rule that for the time being and until experience indicates the advisability of change, the total charges for all relief services other than food supplies shall not constitute more than 40 per cent of the total expended for relief by the municipality.

Other recommendations in this section are to the effect that earning by the head of the family should be encouraged; that no cash be issued in connection with direct relief orders; that there should be community work planning in order to utilize the services of persons on relief in special undertakings; that the Dominion Government should consider the question of applying the provisions of the Immigration Act to unnaturalized persons who are at present receiving relief; that prosecutions should be made in cases of fraud; and that relief officers be empowered to take affidavits in connection with relief; that provision be made for encouraging gardening facilities for the unemployed next season; and finally that there should be a more permanent organization within the provincial government to take care of direct relief.

In the latter connection the Committee expresses the belief that "in some measure unemployment problems will continue to challenge the resources of the Government for a long time to come and that the need of an indeterminate amount of direct relief is likely to make demands upon the public treasury indefinitely. Your committee therefore advocates that your Government give attention to the establishing of a more permanent provision through which the Provincial Government's relationship with municipalities in all welfare and relief matters may find expression. Such a permanent structure will enable the Provincial Government to cope more effectively with existing unemployment and relief conditions if these are prolonged and with similar conditions and needs if and when they may arise in the future."

## Regulations for Road Labour in United States

The Bureau of Public Roads (Washington) recently published regulations governing contracts for highway construction work under the Emergency Relief Act of the United States. These regulations are designed to give effect to the intentions of the Act concerning wages, hours of labour, the hiring of local labour, and the preference for qualified ex-service men with dependants.

**1. Selection of Labour.**—It is provided that special provisions must be inserted in the contracts designed to insure that the maximum distribution of employment be obtained, that employment be furnished to persons most in need of it, and that preference in employment be given, when they are qualified, to ex-service men with dependants. Such special provisions must call for the selection of unskilled labour by the contractor from lists furnished by special agencies, where such agencies are available. Such provision must, however, permit the contractor to obtain needed employees elsewhere when such agencies fail to function and to terminate the services of employees deemed by him to be inefficient and unsatisfactory.

The use of clauses designed to forbid the employment of skilled labour not residents of the State in which the work is being done will not be approved.

The use of clauses designed to limit the employment of unskilled labour to residents of the State will be approved, provided such clauses permit the employment of labour not resident in the State, when a sufficient number of satisfactory labourers, residents of the State, is not found to be available.

**2. Wages and Labour Conditions.**—Provisions must be made fixing the minimum wages which contractors must pay to both skilled labour

and unskilled labour. Such rates must also be stated in the invitation for bids. The minimum wages for both skilled and unskilled labour will be fixed at an hourly rate. In fixing such minimum wages, a minimum may be fixed for each of the various classes of skilled labour, or a single minimum may be fixed to cover all classes of skilled labour. These minimum wages are to be fixed by State authority, subject to concurrence by the federal District Engineer, but must not exceed the prevailing wage ordinarily existing for such labour in the locality. The District Engineer of the Bureau so far as possible will check any wage so fixed by the State for reasonable conformity with wages paid on other Federal-aid projects in the vicinity, and base his approval or disapproval of the rate thereon.

Provision must also be made limiting the hours of work for all employees (except those in executive, administrative and supervisory positions) to not more than 30 hours in any one week.

**3. Limitation of Machine Labour.**—All proposals for work to be done by the States under the effect will be examined by the district engineers to see that sufficient and suitable provisions, as outlined in the Regulations, to insure "the maximum employment of local labour consistent with reasonable economy of construction," are included. The Bureau will approve only such projects as carry sufficient and suitable "special provisions" in the contracts for the work. Approval will not be given to any procedure or requirements designed to prevent the award of contracts to qualified contractors non-resident of a State or to restrict the use of materials to those produced within a State.

## Organized Labour and Unemployment in New Zealand

At an industrial conference held in New Zealand recently under the auspices of the New Zealand Alliance of Labour, the New Zealand Trades and Labour Council, and the New Zealand Civil Service Organizations consideration was given to the problem of unemployment in the Dominion. The conference adopted the report of a committee which recommended that, as the Unemployment Board and the Government had failed to provide work of a permanent or productive nature for the unemployed, a permanent Employment Commission should be appointed, representative of the organization of farmers, the organization of workers and the organization of employers who control secondary industries; this Commission should advise and assist the Govern-

ment on questions of land development, development of secondary industries, and the methods by which profitable and continuous work could be found for the unemployed workers.

The Committee suggested that secondary industries should be developed in line with the development of primary industries, particularly those industries which are natural and necessary to New Zealand. These are specified as follows: (1) textiles—flax and wool; (2) coal-distillation; (3) cement for road construction; (4) engineering and implement making; (5) the timber industry; (6) canning of products, produced in New Zealand; (7) the fishing industry; (8) the leather industry.

## LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1931

THE administrative activities of the Department of Labour of British Columbia during the calendar year 1931 are described in the fourteenth annual report of the Department. Established under the Department of Labour Act of 1917, the Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees in respect to wages, hours of work, etc., and to obtain from any available source information as to the cost of living, the relations of prices to labour and industrial conditions in the province. Under departmental administration are the employment offices and the Factories Act. The Deputy Minister of Labour is *ex-officio* chairman of the Board of Adjustment under the Hours of Work Act, 1923, which provides for an eight-hour working day in the industries of the province, with the exception of those expressly exempted by the Board. He is also chairman of the Male Minimum Wage Board, administering The Male Minimum Wage Act, and of the Minimum Wage Board (for female employees) which administers the Minimum Wage Act.

Since the publication of the report for 1930, Mr. J. D. McNiven, Deputy Minister of the department since 1918, retired from that office (LABOUR GAZETTE, July, 1931, page 736), Mr. Adam Bell succeeding to the vacancy. In a preface to his first report as deputy minister Mr. Bell comments on the extent to which human labour has been displaced by machines and cites several impressive illustrations. Dealing with the problems that are raised by this displacement he makes the following observations:—

"It is occasionally stated that prosperity will not return unless wage-rates are brought to pre-war levels; that labour conditions when wages ranged from \$3 to \$5 per day were better than the conditions existing in subsequent years when wages had reached much higher levels. There might be justification for this contention if living conditions were the same, but the worker to-day would not be satisfied to return to pre-war standards, nor would it be fair to suggest such a retrograde step.

"By the manufacture of commodities, by advertising, and by efficient sales methods on the part of manufacturers, the home of the working man has been greatly improved during the last two decades. In this improvement increased wage-rates have been a very important factor, and had wages remained at their pre-war level, sales of many of the

articles now considered necessary in every home would have been infinitesimal, and it is a well-known fact that the wage-earning section of our province has by far the greatest purchasing-power. Wage reductions, therefore, means reduction of purchasing-power which would be felt in every line of business.

"Accepting, therefore, the principle of the wage-rate being from \$4 to \$8 per day, how can manufacturers under present conditions pay this rate? This is probably impossible under present-day methods of production, but the majority of manufacturers have in their own particular line an organization for the promotion of their industries. It might therefore be suggested that they get together in a friendly way and decide to set up methods which bring order out of the present chaos which has resulted in stagnation and distress throughout the world. New business methods must be introduced, otherwise a repetition of our present situation will be only a matter of a few years. The time to put well-conceived reforms into effect is now. The initial expenditure will be small, and mistakes, if any are made, will be less costly. Each industry should grapple with the problem peculiar to itself and, having arrived at a solution, bend every effort to bring it to a successful conclusion, and while working out their problems industrialists should ever have before them that old saying, 'Capital is useless without labour; labour is useless without capital.'"

Discussing the hardship suffered by workers who are unable to collect their wages without action in the courts, Mr. Bell suggests that "it might be timely to consider whether statutory powers should be given the Department of Labour to make collections on behalf of those unfortunate employees who find themselves, through no fault of their own, deprived of their earnings. If such powers were granted to this Department, it would prove of great assistance to many wage-earners, enabling them to meet their liabilities, at the same time affording protection for the employer who meets his pay-roll regularly in the face of such unfair competition."

*Unemployment Relief.*—Referring to the Unemployment and Farm Relief Act and its operation in the province, the Deputy Minister states that the total value of works, including material allocated, in organized territory, as at April 30, 1932, was as follows: Dominion Government share, \$1,375,000; provincial government share, \$493,947; municipalities' share, \$881,053; man-day's work provided, 606,689. In unorganized territory the

total value of works was \$3,250,000 (shared equally by the Dominion and the province) and the man days' work provided was 656,480. The total value of works created under this Act in British Columbia, was, therefore, \$6,000,000, giving approximately 1,263,169 man-days' work.

The number of families, dependants, and single persons who received direct relief under the Act up to April 30, 1932, totalled 106,550, classified as follows: heads of families, 17,716; dependants, 52,769; individual cases, 36,065. The amount paid in direct relief totalled \$2,264,172, of which amount \$1,219,860 was disbursed in municipalities and \$1,044,312 in unorganized territory.

The amount of \$1,044,312 disbursed in unorganized territory was divided equally between the Provincial and Dominion Governments, while the \$1,219,860 distributed by municipalities was made up by the Provincial Government and the Dominion Government each paying one-third, and the municipality concerned paying one-third towards the cost of residents with dependants, but the cost of men without dependants in municipalities was borne equally between the Provincial and Federal Governments.

The total number of persons having registered as unemployed since the commencement of registration until April 30, 1932, was 73,628, distributed as follows: Vancouver, 25,643; Victoria, 2,554; other municipalities, 25,541; unorganized districts, 19,890.

The report points out that with respect to relief-work carried out by the Province a schedule of subsistence allowances to be paid was arranged in August, 1931. In arriving at the rate the Government did not regard the rates set "as wages," but as subsistence allowance to carry the unemployed through an emergency. The basic rate for unskilled labour was fixed at \$2 per day, which was graded to higher levels for more highly skilled occupations, 85 cents per day being deducted for board and accommodation. A standard week of six days at eight hours per day was set. Work was continued on this basis until November, 1931, when owing to increased registrations it was realized, in view of financial conditions, that it would be impossible to continue to provide relief-work for all the unemployed at the existing rates of remuneration. It was felt advisable that, so far as the Provincial Government was concerned, all applicants should be put on a system of direct relief and that a commensurate amount of work should be performed in return. This included men in camps, and such direct relief was provided so that there would be no suffering owing to the

lack of the necessities of life in the way of food, clothing and shelter. The men in camps were provided with food, shelter, hospital, and medical requirements, necessary clothing, and a cash allowance of \$7.50 per month in return for which twenty days' work per month at six hours per day was required.

The Province has extended relief to needy unemployed outside of camps according to their individual merits and requirements, having regard to the number of dependants.

*Pay-roll and Wages.*—The statistics of trade and industries indicate that the pay-roll shown by 4,088 reporting firms (616 less than the previous year) amounted to \$96,296,567.77—a decrease of \$30,863,899.76 from 1930, or 24.27 per cent. Since the pay-roll total of \$96,296,567.77 was based on employers who made returns to the department, it is obvious that this amount does not represent the gross total from all other sources. Accordingly, an estimate of other branches of industry, not covered in the questionnaire to employers, together with returns received too late to be classified, places the grand total pay-roll of all industries at \$131,941,008.68 as compared with \$167,133,813.71 in 1930. This estimate is divided by districts as follows: Greater Vancouver, \$58,964,436.78; rest of mainland, \$52,143,086.62; Vancouver Island, \$20,833,485.28.

Of the pay-roll of \$96,296,567.77, the amount paid to officers, superintendents and managers during 1931 was \$11,135,711.82; to clerks, stenographers and salesmen, \$12,950,859.47; and to wage earners, \$72,209,996.48, the percentage being 11.57, 13.45 and 74.98 respectively. The percentage over a five year period show that the amount paid to wage earners has, with the exception of 1928, decreased since 1927, while the level of the other two classes was greater in 1931 than in 1927. Commenting on this trend, the report states "the percentages indicate clearly that there has been a steady decline in the amounts paid to wage-earners and a corresponding increase in the amounts paid to the other two classes, and there seems no room for doubt that the citizen who depends on the weekly pay envelope is the one who has suffered during the last two years. As a further indication of the tendency of lowering wages, there were 16,264 adult males receiving less than \$19 per week, as compared with 7,253 in 1930."

Each of the twenty-five groups shows a decrease in the pay-roll. The lumbering industry again suffered most, with a loss of \$12,000,000, followed by metal-mining with \$3,600,000; food products, \$2,600,000; contracting and metal trades with \$2,500,000 each.

Coal-mining again lost, having a decrease of \$1,000,000; Coast shipping and public utilities were down \$900,000 each. Pulp and paper manufacturing, \$800,000; printing and publishing, \$700,000; oil-refining, \$470,000; manufacturing of wood, \$450,000; limestone and cement, \$400,000; ship-building, \$330,000; miscellaneous trades and industries, \$300,000; laundries, \$250,000; breweries and smelting, \$200,000 each; leather and fur goods, \$150,000; house-furnishing, \$130,000; explosives and chemicals and garment-making, \$120,000 each; followed by paint-manufacture, jewellery-manufacture, and cigar and tobacco manufacture with losses of \$80,000, \$50,000, and \$7,300 respectively.

The number of firms having a pay-roll of over \$100,000 totalled 145, being a reduction of 74 from previous year's total. This total is exclusive of any public authorities (Dominion, Provincial, or municipal), wholesale or retail merchants, transcontinental railways, or deep-sea shipping.

The effect of foreign trade was again shown in the lumbering industry, the number for 1931 being 32, a decrease of 40 from the previous year. Food products totalled 22; contracting, 14; coast shipping, 9; public Utilities, 7; coal-mining, 9; metal-mining, 8; garages, 4; printing and publishing, 6; lime, stone, and cement, pulp and paper manufacturing, 5 each; ship-building, 4; breweries, laundries, oil-refining, 3 each, machine-shops, miscellaneous metal trades, miscellaneous trades and industries and smelting, 2 each; and one each in house-furnishing, jewellery-manufacturing, and paint-manufacture.

Nine of the 145 firms had a total pay-roll of over \$1,000,000; two paying out between \$2,000,000 and \$3,000,000, one between \$4,000,000 and \$5,000,000, and one over \$5,000,000.

*Weekly Wage Rates.*—The average industrial wage of a full week's work for the 73,811 adult males (95,165 in the previous year) as indicated in the general summary was \$26.17 compared with \$28.64 in 1930. The highest average weekly wage was \$31.51 in 1920. The average is computed from figures supplied by each firm for the week of employment of the greatest number. As previously stated, this represents the average wage for a full week's work, and it is pointed out that the average earnings covering the year would likely be lower, due to stoppages, broken time and various other conditions. The average full week's wages of adult males in each industry for the years 1925, 1930, and 1931 are given in the accompanying table.

AVERAGE WEEKLY WAGES OF MALE EMPLOYEES IN BRITISH COLUMBIA IN 1925, 1930 AND 1931

Industry	1925	1930	1931
Breweries.....	\$ 27 41	\$ 27 40	\$ 27 58

Manufacturing of wood (N.E.S.)...	23 92	26 03	23 67

Of the total of 73,877 adult male employees, 16,264 were receiving less than \$19 per week as compared with 7,253 in 1930. In the 25 wage groups there were six increases and 19 decreases in average weekly wages. The largest decrease

in the weekly wage rate was in the jewellery manufacturing group with \$6.56; followed by garment making with \$5.83; cigar and tobacco manufacture with \$4.66; lumbering, \$4.60; food products, \$4.36; metal mining, \$3.29; contracting, \$2.93. The remaining reductions ranged from \$2.50 to 63 cents per week. The greatest increase was in the oil refining group with \$1.46 per week; followed by printing and publishing with 44 cents, smelting, 39 cents; paint manufacture, 26 cents; breweries, 18 cents and explosives and chemicals, 12 cents.

Statistics in the report indicate the number of wage earners in each industry grouped according to the weekly wages received. The table on page 974 is a summary of all such tables and shows the number of employees by weekly wage groups in 1931.

*Decrease in Apprentices.*—The number of apprentices employed during 1931 decreased by 376, the number employed being 905. Groups in which the heaviest reductions took place were: metal trades, 88; miscellaneous trades and industries, 64; public utilities, 51; printing and publishing, 33; food products, 21; contracting, 15; metal-mining, 12. Several increased the number of apprentices during the year. In the manufacture of wood an increase of 17 is shown; garment-making, 11; ship-building, 7; and coal-mining, 5.

*Employment Service.*—The report of the provincial branch of the Employment Service reviews the work carried on in 1931, which was a difficult year. General conditions were such that there were fewer opportunities of employment, and staff reductions affected practically every industry. The number of placements was 46,944, all but ten being within the province. Of this number, 272 were transferred from one employment zone to another, 161 transfers being made by the Vancouver offices to various outlying parts of the province. Of the 46,944 placements, 22,947 went to employment where the duration ranged from one week to permanent positions. The balance, 23,997, were sent to positions expected to last less than seven days, but which frequently extended for longer periods. In both groups are included men sent to relief-work either in camps or elsewhere. In the Vancouver and Victoria offices separate divisions are maintained for women, and 5,765 were sent out during the year, 2,720 going to work lasting more than one week and 3,045 to "casual" employment. The majority of the latter group were employed in domestic service. The seasonal demands for fruit pickers, packers, and canners was less pronounced this year, due to the surplus of labour in the districts in which this work is carried on,

which reduced the employment opportunities of many young women living in the urban centres. It was pointed out that employment opportunities for handicapped ex-service men and those whose efficiency has been impaired by industrial accidents were greatly reduced owing to the surplus of physically fit men and the contraction in the industries of the province.

With reference to the work of the handicap section the report states that the handicapped men had first choice in filling 18,895 vacancies listed in the Vancouver and Victoria offices, but owing to the nature of the work required and the physical condition of the handicapped applicants, only a relatively small number of the jobs were filled by this type of applicant. Of the placements, 1,388 in number, 142 ex-service men and 40 industrials were sent to employment where the duration was not less than one week and frequently for much longer periods. The remainder, 1,206, went to casual employment which was expected to last less than one week. In the Victoria area some of this number were employed on relief projects.

Concluding his report the Employment Service superintendent states:

"One of the most important problems facing the Employment Service during the year has been the maintenance of the proper relationship between public employment work and social service. Experience has demonstrated that if a public employment office becomes known as a relief agency, or closely associated with the distribution of direct relief, employers conclude that vacancies are being filled from the ranks of the most necessitous rather than from those qualified by experience for the work to be performed. The placement of men on relief projects is, however, an entirely different matter, and this work comes within the legitimate scope of our activities, without impairing the efficiency or injuring the reputation of the employment offices with either employers or workmen. There has, however, been the closest co-operation with other departments, both provincial and municipal, in connection with the special registration and the handling of the records arising out of the adoption of this system, which has had the effect of reducing the migration of unemployed men from one part of the province to another."

*Factory Inspection.*—The report of the chief factory inspector reviews the work of this branch, which includes the inspection of all factories under the Factories Act, industrial plants designated by the Workmen's Compensation Board, passenger and freight elevators,

and laundries. The inspector's duties cover a wide field, from checking over the sanitary and lighting arrangements in industrial plants, safeguarding machinery and elevator inspections, to dealing with applications for juvenile employment in factories and extensions of hours of work for female employees. The factory inspector observes that there is still existent "the employer who gives the impression that he resents the visit of the Inspector, and in times such as we passed through last year this type of individual, if frequent surveillance was lacking, would not hesitate to attempt to introduce working conditions which were contrary to statutory requirements. Fortunately this class of employer was very rare and almost without exception came from a country where the working conditions do not require a very high standard."

During the year 1,329 inspections were made in various parts of the province of which 298 were of passenger and 278 of freight-elevators. Also during 1931, 553 males and 413 females renewed their licences and 126 males and 48 females wrote examinations and obtained licences as elevator operators.

The Factories Act provides for extension of working hours where the exigencies of the trade require such extension. Under this provision, 34 permits were granted to applicants for such purpose.

Only two applications were made during the year for children to be employed in factories—one for a boy for summer work in a cannery and the other a girl for employment in a laundry. In explanation of the great decrease in applicants it was stated that employers are endeavouring to provide employment for a greater number of adult workers. "It is seldom," the report states, "that we

find an employer who shows a tendency to substitute children for adult workers, and we believe they realize that a child who leaves school at an early age to enter industry has not the chance to develop mentally and physically in the manner demanded by society to-day."

*Nationality of Workers.*—Natives of English-speaking countries accounted for 73·60 per cent of the wage earners employed in the province in 1931, and natives of continental Europe for 15·48 per cent. The employees from other countries and nationality not stated, 3·85 per cent., and for Asiatics 7·07 per cent. The actual number of Asiatics employed was 6,283, as compared with 9,978 for 1930.

*Labour Disputes.*—The number of working days lost by strikes during 1931 is reported as being the highest since 1924, eleven strikes being recorded, employees affected numbering 2,322 and the working-days lost being 79,310. Of this number, 49,715 working-days can be traced to the activities of a certain unaffiliated union, which has been very active in the lumbering industry.

"There can be no doubt," the report states, "that during the coming period of readjustment there will be instances when a great amount of tolerance and understanding will be required from both workers and their employers in order to safely bridge the gap between present conditions and the return of normal times, but we feel confident that by following a course fair to each other industry and its employees will rise above any small differences, and tackle the problem of reconstruction in a manner which will react to the benefit of all concerned."

### British Columbia Hours of Work Act in 1931

Included in the report of the British Columbia Department of Labour is the annual report of the Board of Adjustment administering the Hours of Work Act. With the retirement from the Civil Service of the chairman, Mr. J. D. McNiven, deputy minister of the department, the personnel of the Board now consists of Messrs. Adam Bell, chairman, Robert Morrison, and Norman de W. Lyons, members. It will be recalled that the Hours of Work Act was passed by the Legislature in 1923 and became effective on January 1, 1925 (LABOUR GAZETTE, January, 1924,

page 24). It established a normal working day of 8 hours (48 hours per week) in industrial undertakings in the province, except agriculture, with provisions for certain other exceptions under special conditions.

The forty-eight hour week is regarded by the Board of Adjustment as being on a sound footing, the report stating that "only in those industries not coming within the scope of this legislation, or those having been granted special exemption because of climatic or other consideration, do the hours exceed forty-eight in the week." The average weekly hours, as

calculated for the 4,088 firms reporting, decreased during the past year to 47.37 hours; the average being 48.62 in 1930, 48.25 in 1929. As further evidence that this legislation is being observed, it is pointed out that 83.77 per cent of all employees reported were working forty-eight hours or less per week; 6.79 per cent were working between eight, but not more than nine, hours per day; and 9.44 per cent were working in excess of nine hours per day. It should be stated, the report observes, that the 9.44 per cent of all employees are working in industries which do not come within the scope of the Act, while the 6.79 per cent cover such operations as smelting, pulp and paper, metal-mining, where employees, because of some phase of the operations necessitating continuous process, are allowed under sections 7 of the Act to operate seven days per week.

The following table shows the trend of average weekly hours in all industries covered in this report for the past three years:

AVERAGE WEEKLY HOURS OF WORK BY INDUSTRIES IN BRITISH COLUMBIA

Industry	1929	1930	1931

### British Columbia Male Minimum Wage Act in 1931

The annual report of the British Columbia Male Minimum Wage Board, which forms a part of the annual report of the Department of Labour of the Province, presents a review of the administration of the Act during 1931. The first act, passed by the Legislature in 1925 (LABOUR GAZETTE, January, 1926, page 17) was repealed following a decision by the Supreme Court of Canada, which declared the Act invalid (LABOUR GAZETTE, November, 1928, page 1310). Subsequently in March, 1929, a new Male Minimum Wage Act was adopted (LABOUR GAZETTE, June, 1929, page 607). It is pointed out in the report that due to prevailing conditions, the activities of the Board in 1931 have been confined to dealing with two applications, and the enforcement of the existing order covering stationary steam engineers (The provisions of this order, which became effective on March 2, 1930, were given in the LABOUR GAZETTE for March, 1930, page 282).

One difficulty which the Board had to contend with during the period of unemployment was that some engineers agreed to work for less than the rate established by the Board Order and later requested the Board to collect

arrears in wages. Dealing with these cases, the Board outlines its attitude as follows:

"Instances are on file where engineers had agreed to work for less than the minimum wage and had continued on the job until a disagreement had taken place between employer and employee, resulting in the dismissal of the engineer, who then appealed to the Board to collect the difference between the amount received and the minimum rate set forth in the Order. While the Board is at all times ready to enforce any Order made, it is of the opinion that where an employee agrees to work for less than the rate set by the Board, the employee has no right to expect the Board to take action on his behalf. In cases like the one quoted the Board keeps in close touch in order that a repetition does not occur. Employees should recognize that, the Board having set a rate covering their occupation, it is part of their duty to assist in the enforcement of the Order. In adopting this stand the Board does not do away with the right of the employee to recover arrears, this being fully covered in section 14:

"If any employee is paid less than the minimum wage to which he is entitled under this

Act, the employee shall be entitled to recover from his employer, in a civil action, the balance between the amount paid and the amount of the minimum wage, with costs of action. But in the case of an employee whose services have terminated, no action shall be brought by the employee under this section unless the action is commenced within sixty days next after the termination of the services."

### Minimum Wages for Women in British Columbia in 1931

The fourteenth annual report of the Minimum Wage Board of British Columbia, which forms part of the annual report of the provincial Department of Labour, reviews the administration of the Minimum Wage Act during the year ended December 31, 1931. Referring to economic conditions, the report states:

"During the year 1931, which has been a very unsettled period with regard to wages and wage regulation in all industrial countries throughout the world, we have had evidence of the solid foundation upon which minimum-wage legislation in British Columbia is based, and the spirit of equity and fairness which has characterized its administration since the time of its inception in this Province. The nine Orders of the Board still remain in force in their original form with only slight variation. Perusal of the statistical tables in the annual reports of the Minimum Wage Board since 1918 reveals that fluctuations in rates of pay have occurred in the various occupations and industries covered by the nine Orders in force.

"It is not the object of the minimum-wage legislation to eliminate such fluctuations. These will always occur with varying industrial and economic conditions, but the underlying principle of the minimum-wage legislation is to prevent wage scales falling to subnormal levels out of fair proportion to living costs, thereby creating a condition prejudicial to the well-being of women and girls. It must be borne in mind that the rates fixed are minimum rates, and the contention occasionally put forward that legal minimum rates tend to become standard rates has been abundantly disproved. Added strength may be given to the belief that minimum wage regulation by statute in Canada has become an institution of permanent establishment by the fact that during 1930 Nova Scotia put its minimum-wage law of 1920 into active practice; leaving New Brunswick and Prince Edward Island the only Provinces in the Dominion not having this type of legislation in force.

"While the depressed business and industrial conditions experienced during the past year have to some extent rendered the administra-

The Board received applications to establish a minimum wage for window cleaners and taxicab-drivers in Victoria, but it was decided in both cases that the legislation did not authorize the fixing of a minimum in one locality unless the Order was applicable throughout the Province.

tion of minimum wage more difficult, there has been no relaxation upon the part of the Board or its officials in maintaining due observance of the regulations. It is gratifying to be able to record that the attitude of employers generally has been one of helpful co-operation. In the case of the few exceptions, which always occur, the Board reluctantly found it necessary to exercise the penalization provisions of the Statute."

The returns from employers showed a considerable decrease in the number of employees under the Act, the total being 18,154 as compared with 20,461 in 1930, a reduction of 2,307, or 11.27 per cent. The number of employers submitting returns was 3,112, a decrease of 344, or 9.95 per cent.

**Wages and Hours.**—The average weekly wage for all employees over 18 years of age dropped from \$17.37 in 1930 to \$16.71 during 1931; for employees under 18 years of age the rate fell from \$10.57 in 1930 to \$9.99 in 1931.

"There can be no doubt", the report states, "that the rates paid to female workers in the Province would have been very much lower but for the steady effect of the Orders of the Board." Of the 18,154 females employed, 10,060 were in receipt of a rate higher than the legal minimum, 3,919 employees received the minimum rate payable under the various orders, and 4,175 employees were paid less than the minimum rate. However, the latter includes employees under 18 years of age, for whom lower rates are set; and employees who worked less than 48 hours per week and were paid on a *pro rata* basis.

The statistics show that average weekly wages of experienced employees fell below the levels of the previous year in seven of the nine groups. In the public housekeeping group the average weekly wage for experienced employees was \$15.72 as compared with \$15.60 in 1930; while in the telephone and telegraph occupation the average for experienced female operators was \$18.32 as compared with \$18.20 in the previous year.

In an endeavour to chart the changing conditions, the Board placed several additional questions on the statistical form requesting in-

formation from employers. The additional information inquired particularly as to whether any changes had been made in the number employed, whether employees had been laid off or placed on short time; also if cuts had been made in wages, and if so, the amount of the reduction. From the information received, it was shown that 2,215 firms made no change in their staff during the year; 433 firms made a reduction in the number employed; while 464 made a wage reduction of from 2 per cent to 45 per cent. These wage reductions affected only those receiving an amount in excess of the legal minimum rate for the industry concerned. The replies also revealed that 1,765 of such employees received wage reductions. Of this total, 1,413 received a cut of 13 per cent or less, by far the largest number (1,037) receiving 10 per cent. Those receiving 15 per cent numbered 115; those receiving 20 per cent totalled 105; while only two were reduced 45 per cent in wages.

During the year, the Board recovered \$3,581.44 (the largest amount ever collected in any one year) in wages for employees covered by the Act in nine industrial groups. This amount represents the difference between the wages to which the employees were entitled and the amounts they actually received. In connection with the enforcement of the Act, twenty employers were summoned to appear in Court for failure to comply with the Orders of the Board. Fifteen of these were under the public housekeeping order; the nationality of the fifteen being: Greek, 4; Chinese, 3; Italian and Swedish, 2 each; French, Spanish, Russian, and Hindu, 1 each. Two cases were listed under the personal service and mercantile orders and one under the manufacturing order.

The following is a summary of the minimum wage orders in force, showing the weekly and hourly rate for experienced workers in the various classes:—

Mercantile industry, \$12.75 (hourly rate, 26 $\frac{1}{4}$  cents).

Laundry, cleaning and dyeing industries \$13.50 (hourly rate, 28 $\frac{1}{2}$  cents).

Public housekeeping, \$14 (hourly rate 29 $\frac{1}{2}$  cents).

Office occupations, \$15 (hourly rate 31 $\frac{1}{4}$  cents).

Personal service occupation, \$14.25 (hourly rate, 29 $\frac{1}{4}$  cents).

Fishing industry (canneries), \$15.50 (hourly rate, 32 $\frac{1}{4}$  cents).

Telephone and telegraph occupation, \$15 (hourly rate, 31 $\frac{1}{4}$  cents).

Fruit and vegetable industry, \$14.40 (hourly rate, 30 cents).

Manufacturing industry, \$14 (hourly rate, 29 $\frac{1}{2}$  cents).

The following table presents the average weekly rates in the various industries before the Act came into effect in 1918, and the rates in 1931 after 14 years practical testing of the legislation:

#### MERCANTILE INDUSTRY

Average weekly wages—	1918	1931
Employees over 18 years.....	\$12 71	\$14 20
Employees under 18 years.....	7 70	9 07
Percentage of employees under 18 years..	15.49%	10.88%

#### LAUNDRY INDUSTRY

Average weekly wages—		
Employees over 18 years.....	\$11 80	\$13 76
Employees under 18 years.....	9 78	9 48
Percentage of employees under 18 years..	21.80%	6.76%

#### MANUFACTURING INDUSTRY

Average weekly wages—		
Experienced employees.....	\$12 54	\$15 45
Inexperienced employees.....	9 57	9 66
Percentage of inexperienced employees...	28.64%	11.39%

#### TELEPHONE AND TELEGRAPH

Average weekly wages—		
Experienced employees.....	\$15 55	\$18 32
Inexperienced employees.....	11 90	7 85
Percentage of inexperienced employees...	8.70%	0.94%

#### PERSONAL SERVICE OCCUPATION

Average weekly wages—		
Employees over 18 years.....	\$13 83	\$15 22
Employees under 18 years.....	6 96	10 97
Percentage of employees under 18 years..	15.38%	5.54%

#### OFFICE OCCUPATION

Average weekly wages—		
Employees over 18 years.....	\$16 53	\$19 15
Employees under 18 years.....	10 88	11 73
Percentage of employees under 18 years..	7.45%	1.81%

#### PUBLIC HOUSEKEEPING OCCUPATION

Average weekly wages—		
Employees over 18 years.....	\$14 23	\$15 72
Employees under 18 years.....	11 77	11 67
Percentage of employees under 18 years..	5.51%	2.45%

The accompanying table gives a summary of the chief statistics dealing with all occupations covered by the regulations:—

## SUMMARY OF ALL OCCUPATIONS

	1931	1930	1929	1928	1927
Number of firms reporting.....	3,112	3,456	3,602	3,425	3,455
Total number of employees.....	18,154	20,461	20,766	19,377	17,507
Over 18 years, or experienced.....	17,079	18,450	18,390	17,191	15,697
Under 18 years, or inexperienced.....	1,075	2,011	2,376	2,186	1,810
Total weekly wages—					
Employees over 18 years, or experienced.....	\$285,396 50	\$320,517 66	\$324,376 19	\$301,223 03	\$267,787 44
Employees under 18 years, or inexperienced.....	\$10,739 50	\$21,266 00	\$24,757 00	\$23,470 00	\$18,820 00
Average weekly wages—					
Employees over 18 years, or experienced.....	\$16 71	\$17 37	\$17 64	\$17 52	\$17 06
Employees under 18 years, or inexperienced.....	\$9 99	\$10 57	\$10 42	\$10 74	\$10 40
Percentage of employees under 18 years, or inexperienced.....	5.92%	9.83%	11.44%	11.28%	10.34%
Average hours worked per week.....	43.03	43.95	43.87	44.05	43.92

The proportion of married, widowed and single employees varied but slightly during the year. For married women employed the percentage was 19.49 as compared with 19.67 in

1930; for widowed employees the percentage was 3.80 in 1931 and 3.68 in 1930; while the percentage of unmarried employees increased from 76.65 in 1930 to 76.71 in 1931.

## MINING IN ALBERTA IN 1931

THE annual report of the Mines Branch of Alberta for 1931 indicates that during the year the total coal production of the provinces was 4,564,290 tons with a valuation of \$13,415-745—a reduction of over 1,200,000 tons from the 1930 output, and the smallest production tonnage since 1915. Included in the total output there were some 981 tons produced by farmers under permits granted for the purpose of obtaining coal for their own use. There was also a considerably larger tonnage taken out by farmers, without permits or lease, of which the department has no record. It is explained that this factor, accompanied by the mild weather, the reduced consumption by the railroads due to the lack of grain movement, together with the fact that improvements in the stoking and mechanism of locomotives has curtailed the amount required for locomotive fuel, largely accounted for the reduction in the figures of output during 1931.

Of the total output produced, 1,020,694 tons were sold for consumption in the Province of Alberta, 1,547,081 tons in other Provinces of Canada, and 30,434 tons for consumption in the United States, 1,668,451 tons were sold to railroad companies; 14,123 tons were used in making briquettes; 195,081 tons were used under colliery boilers; 6,679 tons were used by colliery railroads, 31,046 tons were put to stock; and 89,465 tons were put on the waste heap. The above tonnage shown as sold for use in Alberta includes the 981 tons produced by the farmers. In addition to the coal mined, there were 23,855 tons of shale and clay mined,

from which 7,091,080 bricks and 2,825 tons of tile were manufactured.

There were in operation during the year 5 open pits producing shale and clay for the manufacture of brick, hollow tile, etc., also 316 coal mines; of the latter, 34 were opened, 22 reopened and 29 abandoned. In addition to the mines abandoned, there were 26 closed temporarily, leaving 271 mines in operation at December 31, 1931.

The coal production by the province during 1931 was classified as follows: domestic, \$2,246,544 tons; sub-bituminous, 471,389 tons; bituminous, 1,846,357 tons. No anthracite coal has been produced in Alberta since 1923. During 1931 there was a total of 27,036 tons of coal disposed of in Ontario as compared with 29,784 tons in 1930. According to the statistics the average number of tons of coal mined per man employed was 577 while the average per man employed underground was 761 tons.

*Number of Employees.*—The total average number of employees in all the coal districts was 8,070, as compared with 8,889 in 1930. Of the total of 8,070 there were 5,969 employed underground. The employment of the 8,070 miners was classified according to the nature of the coal area as follows: 4,400 in domestic fields; 3,023 in bituminous fields; and 647 in sub-bituminous fields. While the average number employed during the year was 8,070 still the number employed during December, 1931 was 9,905, which was 1,294 less than in December, 1930.

There were fifty-three prosecutions instituted for contraventions of the Coal-mines

Regulations Act, made up as follows: 40 workmen, 7 officials, 6 operators, convictions being obtained in all but one case. In this case the decision of the magistrate had not yet been rendered, at the time of the report's publication.

Following examinations conducted by inspectors at various centres throughout the province, certificates of competency as coal miners were issued to 324 successful candidates, making a total of 12,443 certificates issued to December 31, 1931.

In 1931 there was a considerable decrease in the use of purchased power, there having been only 16,918,625 k.w. hours used as compared with 25,003,506 k.w. hours in 1930. The decrease was attributed to the reduced output of coal.

*Accidents.*—During the year, there was a total of 164 accidents, of which 16 were fatal, 75 classed as "serious" and 73 as "slight." On a ratio basis, the total number of accidents was 35.92 per million tons of coal mined and 20.32 per thousand men employed. Of the 16 fatal accidents, 15 were below ground, while the number of slight and serious accidents underground totalled 128. Of the total of 164

accidents, 48 occurred in haulage operations, and 32 were caused by falls of rock. In addition to the fatal accidents in producing mines, there occurred three fatal accidents at places where illegal mining was being conducted.

*Safety Measures.*—The usual safety precautions were taken during the year of having samples of mine air taken at intervals from various mines in the bituminous areas and forwarded to the chemistry branch of the Department of Mines, Ottawa, for analysis. In addition, tests were made with the Burrell and McLuckie gas detectors at the various mines throughout the Province. Samples of rock dust were collected from mines in the bituminous areas, and forwarded to the Provincial Analyst to be tested for silica content, the rock dust being used for rock-dusting the roadways.

*Other mineral products.*—In addition to coal production, other operations that yielded substantial returns were as follows: natural gas, \$4,384,694; petroleum, \$4,025,000; cement, \$1,286,080; clay products, \$529,714; sand and gravel, \$353,787; lime, \$25,185; stone, \$18,407; gold, \$4,031; bituminous sands, \$4,060.

## REPORT OF BRITISH CHIEF INSPECTOR OF FACTORIES FOR 1931

THE Chief Inspector of Factories of Great Britain for 1931 states that at the end of the year there were 15,354 factories and 95,714 workshops on the register of the Factory Department showing an increase of 1,252 factories, but a decrease of 7,657 workshops, as compared with 1930 ("Factories" are equipped with mechanical power; "workshops" are not so equipped.) This increase in factories and decrease in workshops has continued for many years.

The number of factories working during the year was 127,768, the workers numbering 4,988,721.

The report refers to the severe depression of last year, modified to some extent, in certain trades, by a partial recovery in the autumn following on the departure from the gold standard, the imposition of tariffs, etc. The worst sufferers were again the heavy industries of iron and steel manufacture and shipbuilding. The average number of blast furnaces in operation in Scotland during the year was only 5 out of a total of 83; in the Middlesbrough district only 17 were working, as compared with 43 in 1929. The production of steel during the year was reduced by 500,000 tons, or about 30 per cent. In shipbuilding the tonnage launched on the Clyde was 70 per cent less than in 1930, which was

itself a bad year; and many shipyards on the North-East Coast had not a single ship on the stocks.

By contrast, the textile industries, and especially the woollen and worsted industries, benefited greatly towards the end of the year from the departure from the gold standard and the imposition of tariffs. In many cases full-time employment and even shift employment became possible, especially in the spinning of hosiery yarns, and in the weaving of the lighter tweeds and cloths previously imported. In the hosiery trade there was an abnormal increase of work in the autumn and employment to the extreme legal limits and on the shift system became general.

Reference is again made in the Report to the great industrial development in and around Greater London. In spite of the general depression, many employers were able to remove to new and larger premises, and new methods of manufacture were adopted. Some engineering firms showed enterprise in finding new work. Developments were recorded in connection with the manufacture of light aeroplanes, gliders, radio apparatus, metal window casements, Diesel oil engines, paper board, paper bags for cement, and in the glass silk industry. There was great progress during the year in the vegetable and fruit can-

ning trade, eight new factories being put up, while others were extended. There was also a great extension in the film industry; large new studios were erected around London, and others were extended and enlarged. The use of automatic looms increased in the textile trades; and other new textile machines were introduced experimentally, and in some cases were used successfully under manufacturing conditions. The use of electricity as a motive power continued to increase; many large works have changed over from steam to electricity.

*Five-day week.*—It is stated in the report that this system of working continues to be very popular, more especially in areas where workers travel long distances to their work; at least a hundred firms, in addition to those mentioned in last year's Report, were stated to be working the five-day week. Some firms have worked on this system for a considerable period, and few firms that have once adopted it revert to Saturday working.

*Two-shift system for Women, etc.*—Women and young persons are allowed to be employed, under certain conditions, on a system of two shifts, under Section 2 of the Employment of

Women, Young Persons and Children Act, 1920. Orders can only be granted on the joint application of the employers and of the workers concerned, and great care is taken to ascertain that the majority of the workers are really in favour of it.

Orders under the Act, which had averaged rather more than 100 a year during the six years 1925-1930, advanced to 227 during the year 1931. The greatest advance occurred in the last quarter of the year, in consequence of the rush of work that occurred in certain industries after the departure from the gold standard.

*Accidents.*—The number of industrial fatalities in 1931 was 755, compared with 899 in 1930. It is pointed out that the decrease in accidents, following on a similar decrease in the previous year, was doubtless due largely to the continued depression in industry; but the reports of the factory inspectors show that the development and activities of safety organizations have also had their effect in reducing accident rates in various industries. Special attention is drawn to this development in the Chief Inspector's introduction to the Report.

## CENSUS OF MERCHANDISING AND RETAIL ESTABLISHMENTS IN CANADA

**A**DDITIONAL preliminary reports on the census of merchandising and Service Establishments, taken by the Dominion Bureau of Statistics in 1931, were recently issued. Toronto, Calgary, Edmonton, Saskatoon, Port Arthur, Fort William, Quebec, Hull and Sherbrooke are the cities dealt with in the latest series. Reference was made to similar reports for Winnipeg and Ottawa in the July issue of the *LABOUR GAZETTE*, page 788; and for Hamilton and Regina in the August issue, page 870.

*Toronto.*—According to a preliminary tabulation for Toronto there was indicated a retail business for that city during 1930 of more than \$400,000,000. There were 8,769 retail stores with sales of \$369,861,300 and 3,403 service establishments with gross receipts of \$44,122,100. The 8,769 merchandising establishments employed 45,539 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$52,482,800 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$47,580,600.

*Calgary.*—Similar statistics for Calgary show a retail business for the city during the

year 1930 of more than \$49,000,000. There were 1,008 retail stores with sales of \$44,756,600 and 378 service establishments with gross receipts of \$4,641,000. The 1,008 retail merchandising establishments employed 4,605 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$5,657,200 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$7,239,000.

*Edmonton.*—In Edmonton, the retail business during 1930 amounted to more than \$37,000,000. There were 947 retail stores with sales of \$33,722,500 and 370 service establishments with gross receipts of \$3,709,600. The 947 retail merchandising establishments employed 3,775 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$4,325,300 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$5,645,000.

*Saskatoon.*—The retail trade in the city of Saskatoon during 1930, according to the preliminary tabulation, was in excess of \$27,000,000. There were 492 retail stores with sales of \$25,520,300 and 216 service establishments

with gross receipts of \$2,178,700. The 492 retail merchandising establishments employed 2,682 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$3,101,700 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$4,301,800.

*Quebec.*—In Quebec City during 1930 the retail business was more than \$43,000,000. There were 1,614 retail stores with sales of \$40,143,900 and 523 service establishments with gross receipts of \$3,248,100. The 1,614 retail merchandising establishments employed 5,599 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$4,946,900 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$8,559,500.

*Hull.*—Hull's retail business in 1930 amounted to over \$6,000,000. There were 402 retail stores with sales of \$5,999,900 and 122 service establishments with gross receipts of \$356,300. The 402 retail merchandising establishments employed 881 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$651,500 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,077,400.

*Sherbrooke.*—The retail business in Sherbrooke totalled over \$10,000,000 in 1930. There were 366 retail stores with sales of \$9,545,100

and 162 service establishments with gross receipts of \$771,900. The 366 retail merchandising establishments employed 1,138 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$1,140,600 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,899,500.

*Fort William.*—The merchandising census indicated that the retail business in Fort William during 1930 approximated \$9,000,000. There were 298 retail stores with sales of \$8,153,900 and 116 service establishments with gross receipts of \$794,800. The 298 retail merchandising establishments employed 827 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$846,500 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,393,100.

*Port Arthur.*—In Port Arthur the retail business during 1930 exceeded \$8,000,000. There were 213 retail stores with sales of \$7,842,000 and 108 service establishments with gross receipts of \$581,000. The 213 retail merchandising establishments employed 780 persons (including full-time and part-time employees and also proprietors and firm members receiving a fixed salary) who received \$900,800 as salaries and wages. The merchandise carried in stock by these establishments at the end of 1930 was valued at \$1,584,600.

## The Primary Iron and Steel Industry in Canada, 1931

The Dominion Bureau of Statistics has published a report entitled "Primary Iron and Steel Industry in Canada, 1931." This industry, it is stated, covers the operations of plants engaged chiefly in the manufacture of (a) pig iron, (b) ferro-alloys, (c) steel ingots and direct steel castings, (d) rolled and drawn iron and steel products, such as bars, strips, plates, sheets, rails, wire rods, structural shapes, etc. Figures for 1931 include data for one plant which produced cold rolled steel bars and strips, and two which made cold drawn steel shapes; formerly these concerns were classified in the castings and forgings group.

Factory sales from the industry in 1931 were valued at \$36,911,245 which was 30 per cent under the sales figure for 1930 and the lowest total reported for any year since 1925.

Thirty-seven firms in this group in 1931 operated 53 different plants or departments including 4 pig iron, 2 ferro-alloy, and 28 steel plants

and 19 rolling and drawing mills. The 22 works in Ontario accounted for 59 per cent of the total sales for Canada, 6 in Nova Scotia took care of 22 per cent, 14 in Quebec, 15 per cent, while the remaining 4 per cent was accounted for by 4 plants in Manitoba, 4 in British Columbia, and 3 in Alberta.

Capital employed in 1931 was given at \$104,512,104, a decline of 7.5 millions from 1930. Over 70 per cent of this total or \$73,945,195 represented the value of lands, buildings and equipment.

The average number of employees was 8,026 as compared with 9,723 in 1930 and 11,218 in 1929. About 632 workers were employed in iron blast furnace departments, 195 in ferro-alloys, 2,945 on steel furnaces, and 4,254 in rolling mills. Salaries and wages for the year totalled \$11,072,054 as compared with \$14,934,325 in 1930.

## RECENT LABOUR UNION CONVENTIONS

### Federation of Catholic Workers of Canada

The eleventh annual convention of the Federation of Catholic Workers of Canada was held in Sherbrooke, the preliminary proceedings including a banquet on August 6, at which the speakers included the Hon. C. J. Arcand, provincial Minister of Labour, and Mgr. A. O. Gagnon, bishop of Sherbrooke. Mr. Pierre Beaulé, the president, presented the report of the executive. This report showed that the federation is composed of 8 central councils, 4 trades councils, 6 study circles, 40 directly affiliated local syndicates, 4 federations, viz.:—building trades, with 24 syndicates; printing trades, 9 syndicates; pulp and paper trades, 3 syndicates, and boot and shoe trades, 9 syndicates, making a total of 107 organizations in affiliation with the Federation of Catholic Workers, with a total membership of 25,202.

The financial report showed receipts of \$8,967.50 and expenditures amounting to \$8,724.25, leaving a balance of \$243.25.

It was decided to amend the constitution by giving the executive officers power to defer the holding of an annual convention, in which event a joint meeting of the executive officers, chaplains, business agents and presidents of affiliated bodies or their representatives would be held to examine requests to be submitted to public bodies; this meeting would have the same powers as a regular annual convention, the expenses being borne by the bodies taking part. It was also decided to reduce the number of convention committees from eight to four, as it was found that many delegates who were on committees were prevented from taking part in the general convention meetings. In future each centre not represented on the executive board or in the executive office by an official is to be represented thereon by a member of the board.

The convention adopted a resolution submitted by the executive, urging the Federal government to convene an inter-provincial conference in order that Canada might frame its reply to the questionnaire of the International Labour Conference on invalidity, old age and death insurance, and at the same time endorse the principle of social insurance based on equity. The Quebec Provincial authorities were requested to participate in such a conference and to give effect to the resolutions of the convention in favour of compulsory social insurance and the adoption of a national compulsory scheme of unemployment insurance. It was further suggested that the Quebec com-

mission on social insurance take into account the views of the convention in its studies and the preparation of its recommendations.

A resolution was approved in favour of the federation undertaking a study of the question of minimum wages for men and the general application by legislation of a system of collective agreements.

Other resolutions adopted by the convention were as follows:—

Requesting the Provincial Government to reopen the colonization bureaus and to promote the "back-to-the-land" movement as a means of improving the present condition of the unemployed;

Favouring the establishment of a hydro-electric system similar to that operating in Ontario;

Asking the Provincial Government to give effect to the Dominion Old Age Pension Act;

Recommending recourse to moral suasion in order to induce municipal councils to protect their own citizens against outside labour;

Against granting the franchise to women, adhering to the decision of last year to await an official statement from religious leaders on the subject;

Requesting the provincial Government to implement the report of the Social Insurance Commission on hygiene in industrial establishments (LABOUR GAZETTE, August, 1932, page 864);

In favour of a provincial scheme of social service;

Recommending that the outside service of the Provincial Department of Labour should have equal privileges with those of the inside service in the matter of retirement pension, life insurance, etc.;

Favouring the adoption of a provincial labour code;

Requesting the provincial authorities to exclude the Workers' University from Montreal;

Favouring the formation of study circles or clubs;

Asking that the administration of the Workmen's Compensation Act be placed under the Department of Labour;

Asking the federal and provincial authorities to amend the Companies' Acts with a view to preventing the exploitation of the people;

In favour of the establishment by the Federal Government of a national economic council, acting in an advisory capacity, and including representatives of the Government, the

basic industries, organized labour, trade, economists and the judiciary;

Requesting the Provincial Government to appoint a superior labour council as soon as the Commission on Social Insurance has completed its work;

Proposing that the Provincial Department of Labour should convene employers and workers in the various industries of Quebec with a view to establishing joint industrial councils;

Suggesting to the Quebec Department of Education that book prizes to students be printed in Canada;

That the Federal Government should increase the tariff on commercial printed matter;

Protesting against a resolution adopted by the Union of Municipalities of Quebec, which recommended that unemployed men receiving direct relief should be required to make a contribution in labour to the extent of 25 per cent of the amount of assistance they receive.

Officers were elected as follows:—

President, Pierre Beaulé, Quebec;

Vice-presidents, Osias Filion, Montreal, and H. Quevillion, Hull;

Secretary, Ferdinand Laroche, Quebec.

Directors, Alfred Charpentier, Montreal; G. A. Gagnon, Chicoutimi; Adelard Colette, Sherbrooke; E. Tellier, Three Rivers; A. Blanchard, St. Hyacinthe, and J. Comeau, Lachine.

### Ontario Provincial Council of Carpenters

The twentieth annual convention of the Ontario Provincial Council of Carpenters was held at Hamilton in August, approximately twenty-five delegates, representing thirty-one local unions, with a membership of 1,500 attending. President John Cottam, of Toronto, occupied the chair.

The report of the executive committee referred to the amendments to the Apprenticeship Act passed by the Ontario Legislature at its last session. These amendments were endorsed by the Council.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, addressed the delegates, referring to unemployment insurance and stating that while it would not cure the unemployment situation it would assist the individual and help to stabilize industry. Mr. Moore stated that the Congress had gone on record as favouring contributory insurance.

The report of the secretary-treasurer showed total receipts from all sources, including balance brought forward, of \$4,590.98, and expenditures amounting to \$1,727.13, leaving a balance on hand of \$2,863.85.

The report of the committee on apprenticeship, endorsing the course of instruction and study as sent out by the Apprenticeship Board of Ontario, was adopted by the con-

vention, as was also the recommendation of the committee that all local unions establish apprenticeship committees which would act in conjunction with the District Inspector of the Apprenticeship Board.

Among the resolutions adopted were the following:—

Protesting against the methods used by foreign manufacturers to evade the tariff;

Recommending the Dominion and Provincial Governments to pay no more than bank interest on all future loan issues;

Asking the Federal and Provincial Governments to inaugurate a six-hour day on all government contracts let in future as relief measures;

Favouring the enactment of health insurance legislation;

Petitioning the Federal Government to enact contributory unemployment insurance legislation as outlined by the Trades and Labour Congress of Canada.

Officers elected were: President, William Thompson, Windsor; vice-presidents, A. E. Edgington, Hamilton, J. Cottam, Toronto, and Charles Nichols, Ottawa; secretary-treasurer, T. Jackson, Toronto.

Cornwall was selected as the convention city for 1933.

### Quebec Provincial Council of Carpenters

The annual convention of the Quebec Provincial Council of Carpenters was held at Valleyfield, on July 7-9, 1932, President Omer Fleury, Quebec City, presiding. Addresses were delivered by Tom Moore, President of the Trades and Labour Congress of Canada, Arthur Martel, executive board member of the Brotherhood for Canada, and James Marsh, general representative for the province of Quebec.

The reports submitted showed the council to be in a satisfactory financial position.

Resolutions were adopted as follows: Requesting the Provincial Government to appoint a labour representative on the Workmen's Compensation Board;

Recommending that the fair wage Order in Council be extended to cover all contracts awarded by any department of the Provincial Government; also that the fair wage clause

be enforced on any work towards which the government makes a grant or subsidy; and that contractors violating fair wage regulations be debarred from contracting on government works until they furnished proof of their willingness to observe the terms of the contract;

Approving the policy of the Trades and Labour Congress of Canada respecting contributory unemployment insurance;

Protesting against the long hours and other conditions of employment obtaining in the cotton mills at Valleyfield.

### **International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada**

The thirty-first convention of the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada was held at Columbus, Ohio, June 6-10, with approximately 825 delegates in attendance.

President W. C. Elliott outlined the activities of the Alliance since the last convention. These included the negotiations leading up to the signing of a new agreement covering the studios at Los Angeles, by which recognition of the unions was secured for propertymen and grips, east and west coast laboratory technicians, and cameramen. The president also referred to the problem of "dual bodies," and urged that the utmost caution and judgment should be exercised by the local unions in combatting such organizations.

The secretary-treasurer reported that, notwithstanding the paying back of a large loan, which had been used to defray the expenses of the Los Angeles convention, the revenue of the Alliance had increased from \$145,370.31 for the period ending May 15, 1931, to \$202,985.36 for the period ending May 14, 1932. The delegates were informed by this officer that as a measure of protection a blanket insurance policy to cover the entire finances of the organization had been secured. Subsequently the auditing and finance committee of the convention commended the secretary-treasurer for this action, and recommended that the delegates urge upon their local unions to follow this procedure.

### **Brotherhood of Railroad Signalmen of America**

The sixth biennial and twenty-first regular convention of the Brotherhood of Railroad Signalmen of America was held at Chicago, on August 15-19, and was attended by approximately one hundred and twenty delegates.

President D. W. Helt reported that better working conditions and the establishment of agreements on a number of railroad systems

Officers elected were: President, Omer Fleury, Quebec City; vice-presidents, E. Toussaint, J. Fraser, E. Larose, V. Francœur; secretary, Pierre Lefebvre, Montreal; treasurer, P. Blanchandin, Montreal.

On the evening of the opening date, delegates and guests attended a banquet given to celebrate the 25th anniversary of the institution of the Provincial Council. Among those present were Joseph Ainey, one of the founders of the Council, as well as a number of civic officials.

Resolutions were adopted as follows:—

Favouring legislation compelling all theatres to employ a minimum of one man to each sound projector in the operating rooms;

Instructing the general executive board to request the International Brotherhood of Electrical Workers to give positive adherence to the agreement of 1926, and to notify their Los Angeles locals;

Recommending that regulations made by district conventions or State associations and approved by the general executive board be binding upon all affiliated locals until repealed by convention of the International Alliance or subsequent district or State convention;

Pledging moral and financial support to the construction of the building and installation of the new national super-power transmitter for radio station WCFL-W9XAA (The Voice of Labour), Chicago;

Favouring the repeal of the 18th amendment;

Recommending that the International Alliance be represented at the opening ceremonies of the 1933 Chicago World's Fair.

Chief officers elected were: President, W. C. Elliott, 1450 Broadway, New York, N.Y.; secretary-treasurer, Fred. J. Dempsey, 1450 Broadway, New York, N.Y. W. P. Covert, Toronto, Ont., was elected second vice-president.

had been secured. He urged that continued efforts be made by the membership to increase employment. The president informed the delegates of the steps that had been taken to secure the 6-hour day.

A special committee on finance recommended the eliminating of unnecessary visiting of all Grand Lodge Officers at the expense of

Grand Lodge; and that an investigation be made to ascertain if a reduction in the cost of the administration of the protective fund could be made.

Resolutions were adopted as follows:—

Recommending that efforts be continued to secure the 6-hour day in conjunction with other railway labour organizations;

That the danger of the non-use of signals be brought to the attention of the proper authorities;

Endorsing the bill now pending in Congress providing for inspection of signal apparatus on railroads;

Endorsing the formation of the United States Exchange Corporation as a means of relief for the unemployed;

Advocating the pension plan as proposed by the Chief Executives' Association.

Chief officers elected were: President, D. W. Helt, 3455 Lawrence Ave., Chicago, Ill.; secretary-treasurer, T. A. Austin, 3455 Lawrence Ave., Chicago, Ill., W. J. Pettit, La Salette, Ont., was elected a member of the board of trustees.

Chicago was selected as the next convention city.

### International Stereotypers and Electrotypers Union of North America

The thirty-first annual convention of the International Stereotypers and Electrotypers Union of North America was held at Cleveland, Ohio, on July 18-23, 1932, with approximately seventy-five delegates in attendance.

A review of the many problems which had confronted the organization since the last convention was made by President W. T. Keegan, in his address to the convention.

The delegates adopted the recommendations of the Union Label Committee, that the membership endeavour to increase the demand for label articles; that apprentices should be educated in regard to union labels; that ladies' auxiliaries be encouraged and union label committees established in connection therewith.

A number of changes were made in the constitution, one of which was, that a foreman or superintendent could not transfer a member from a day shift to a night shift or *vice versa* in any office unless agreed to by the member affected and with consent of the local union.

Resolutions were adopted recommending the formation of technical education committees in every local; and advocating the purchase of school and text books manufactured under union conditions, and replacement of these books every year.

President Keegan and vice-president Frey informed the delegates that they would not be candidates for re-election.

Atlantic City was selected as the convention city for 1934.

### International Association of Fire Fighters

The eleventh convention of the International Association of Fire Fighters was held at San Diego, Calif., on August 1-5. Several addresses were delivered at the opening session to which President F. W. Baer, who presided, made brief response on behalf of the association.

According to the report of the trustees, the membership and number of locals had increased during the past two years.

Resolutions were adopted recommending the enactment of new legislation and vigorous enforcement of existing fire prevention laws; recommending that aid be given to safety education in schools and to all efforts to end hazardous fire conditions; favouring the

preparation and distribution of pension statistics; and the repeal of the 18th amendment.

An amendment to the constitution providing for an audit of the books once a year and giving the trustees power to name a certified public accountant, was adopted by the convention.

Officers elected were: President, F. W. Baer, A.F. of L. Bldg., Washington, D.C.; secretary-treasurer, Geo. J. Richardson, Room 207, A.F. of L. Bldg., Washington, D.C. Neil MacDonald, Vancouver, B.C., was elected vice-president of the fifth district, while Arthur Beaulieu, Montreal, Que., was elected one of the three trustees.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Protection of Workers in Lead and Benzol in Ontario

The Ontario government, on the recommendation of the Minister of Public Works and Labour of the Province, approved on August 23 the following regulations under the Factory, Shop and Office Building Act, section 57.

#### REGULATIONS

1. Where lead or its compounds or benzol are prepared for use or used in any industrial process, special precautions must be taken.

2. Manufacturers and distributors of substances containing benzol as an ingredient for use in any industrial process must label in easily legible type with distinct visibility the packages or containers of this substance to show that benzol is present.

3. Manufacturers and distributors of substances containing lead or its compounds as ingredients for use in any industrial process must label in easily legible type with distinct visibility the packages or containers of these substances to show that lead or its compounds are present.

Exception is made where lead compounds are used only as dryers in the preparation of paint products and where paint products are prepared for use by brush or by dipping process only.

4. (a) Employers and others making importations of substances containing benzol or lead or its compounds for resale or for use in any industrial process must comply with Section 57 of the Act and with these regulations.

(b) Manufacturers, distributors and employers using substances dangerous to health, when required by the Chief Inspector of Factories on advice of the Director of the Division of Industrial Hygiene, must post in a conspicuous place printed forms to be approved by the Department of Health setting forth these dangers and indicating the precautions necessary for the protection of their employees.

(c) Manufacturers, distributors and others offering for use in any industrial process substances which may contain ingredients harmful to health must provide accurate information regarding the percentage of these ingredients when requested by the Chief Inspector of Factories or by the Director of the Division of Industrial Hygiene, Provincial Department of Health.

(d) The Chief Inspector of Factories on the advice of the Director of the Division of Industrial Hygiene, Provincial Department of Health, may require at specified intervals by qualified physicians at the expense of employers, physical examinations of workmen employed at the time of inspection or within the previous six months, in any industrial process, which is considered to be detrimental to health. The reports of these examinations shall be forwarded forthwith to the Director of the Division of Industrial Hygiene, Provincial Department of Health, and shall meet their requirements.

(e) The fees for these physical examinations, if conducted in groups of five or more from one factory shall not be in excess of \$2 each for physical examination and report; \$3 per

film for X-ray examination and report; \$2 each for blood count and report; \$2 each for blood smear examination and report. Where less than five examinations are required by one factory at one time, these fees may be increased by not more than 50 cents each.

(f) All duly qualified physicians in the Province shall report forthwith to the Director of the Division of Industrial Hygiene, Provincial Department of Health, any case of specific industrial disease or of suspected specific industrial disease coming to their attention on report forms to be supplied by the Department of Health.

### Safety Course in Technical Schools in Quebec

The Hon. Athanase David, Provincial Secretary of Quebec, recently announced that a course in industrial safety would be given in the technical schools in Montreal, Quebec, Three Rivers and Hull. The lecturer will be Mr. Arthur Gaboury, who has had a long experience in accident prevention work, having been Secretary General of the Province of Quebec Safety League for several years. Mr. Gaboury will lecture to the pupils in French and English. If this experiment should meet with success it is anticipated that courses in industrial safety methods will become a permanent feature of instruction in technical schools in the Province.

### Eastern Division of Accident Prevention Associations of Ontario

An Eastern Ontario Division of the Industrial Accident Prevention Associations of Ontario was organized at a meeting held at Ottawa during August. The meeting was attended by representatives of industries in Ottawa and Cornwall, and by a representative of the central provincial organization.

Mr. H. H. Ward, Deputy Minister of Labour (Canada), in a brief address, spoke of the value of the safety movement from both the humanitarian and the economic standpoint, and congratulated the Associations on the results that had followed their efforts to keep down the accident record and the rates of assessment levied by the Workmen's Compensation Board on the various industrial groups.

Mr. Percy J. Wood, of Canadian Bank Note Company, and first vice-president of the Accident Prevention Associations of Ontario, was elected president of the new organization, the other officers being as follows: vice-president, D. P. Cruikshank; secretary, Gordon T. Southam; directors, Rolla Crain, Jr., F. A. Sim, D. B. Robb and G. T. Southam.

### Industrial Accidents in Ontario in August

There were 3,483 accidents reported to the Ontario Workmen's Compensation Board during the month of August, as compared with 3,313 in July. The fatal accidents during August numbered 20, as against 19 in July. The total benefits awarded during August amounted to \$429,785.99, \$368,901.53 of this being for compensation and \$60,884.46 for medical aid, as compared with \$409,647.17 awarded in benefits during July. This year's record to date shows 28,673 reported accidents, as compared with 35,472 for the same period of 1931, and total

benefits awarded \$3,508,151.29, as against \$3,980,287.88 to the end of August, 1931.

### Accommodation of Seamen in British Cargo Vessels

The Committee appointed by the Shipping Federation of Great Britain in 1929 to work out a standard accommodation for seamen in cargo steamers, with special reference to hygiene, has now issued its report. The report contains a definite plan providing for better lighting and ventilation and greater space in the sleeping quarters. A number of other proposals are made showing the increasing interest now taken in the comfort of crews.

### Standard Oil Company Adopts Forty-Hour Week

The Standard Oil Company of New Jersey recently announced its intention of adopting the 40-hour week for its entire domestic operations. The reason given for this change in policy was the desire to give the staff all practicable assurance of continued employment and to provide occupation for a greater number of workers.

The readjustment of hours of work will not involve a change in the hourly rates of pay, which will remain on the basis of time actually worked as heretofore. Salaried employees, however, who up to the present have been on a 5½-day schedule, will go on a five-day basis with one-eleventh less pay. This reduction will not affect salaries of one hundred dollars or less a month, nor result in a cut below one hundred dollars for those receiving more than that amount.

The President of the Company, Mr. W. C. Teagle, in a letter addressed to the workers, stated that the company expected that the adoption of this program would result in giving work to a substantial number of those now out of employment and thus be a real contribution by the company and its present employees towards the solution of one of the most serious problems now confronting the country.

Although the readjustment of working hours applies only to domestic operations, the question of extending it to the foreign departments

of the Company is being considered. The new policy will cause the transfer of some employees from departments in which sufficient work is no longer available to keep the entire force busy to other departments. After such employees have so far as practicable been placed elsewhere, new employees will be engaged to the number required.

The official publication of the company, *The Lamp*, in a recent editorial declared that all the reasons but one which could be advanced against a shorter week could be satisfactorily answered. This one reason was the uncertainty as to its general acceptance by all employers within competitive groups. No employer could operate indefinitely on shorter hours per individual if a competitor insisted on retaining the customary schedule of working time at a resulting lower unit of labour cost.

Advocating the program of fewer hours in the working week, *The Lamp* says it would permit bringing the unemployed of all classes back into their regular occupations, while the alternative suggestion of vast public construction jobs would make places almost exclusively for manual labour and engineers. Increased production, made possible by science and invention, creates prosperity, but only because it is counterbalanced by corresponding reductions in the average number of hours worked.

In the last decade the use of water power as a source of energy in Canada has more than doubled. The Dominion Water Power and Hydrometric Bureau estimates that between 1921 and 1931 the amount of power used rose from 31 to 64 h.p., or over 106 per cent. Approximately 93 per cent of the electric power generated in Canada comes from central electric stations, which develop it for

sale, and over 98 per cent of the power generated by the central electric station industry is derived from water power. Of the total water power equipment installed in Canada, 84 per cent is in central electric stations, 9.5 per cent in pulp and paper mills and the remaining 6.5 per cent in saw mills, grist mills and other industries.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Special Meeting of the Governing Body to Consider Shorter Hours

A special meeting of the Governing Body of the International Labour Office is being held in Geneva on September 21, on the request of the Italian Government representative, to consider the calling of a special session of the International Labour Conference for the purpose of dealing with proposals for the reduction of hours of work in industry, in view of the widespread unemployment now prevailing throughout the world.

At its 56th session the Governing Body adopted a resolution put forward by the Unemployment Committee (LABOUR GAZETTE, February, 1932, page 165) which, in connection with the regulation of the hours of work during the existing depression, noted the desires of the workers' organizations and the opinion expressed by certain manufacturers as to the possibility of a permanent reduction of hours of work in industries where technical progress is very advanced. The Governing Body consequently requested the Office to make a minute study of this question in order to be in a position to furnish it with precise details.

Subsequently, the Sixteenth Session of the Conference adopted a resolution (LABOUR GAZETTE, May, 1932, page 576) affirming the necessity of putting an end to unemployment by reducing the hours of work without reduction of wages. The resolution requested the Governing Body to study the question of the introduction of a forty-hour week in all industrial countries, with a view to the adoption in the near future of international legislation.

The Italian Government representative on the Governing Body, in his letter asking that a special meeting should be held, mentions that the armies of unemployed are rapidly increasing and observes that the social consequences, which are already serious, will become intolerable. The necessary redistribution of labour can, he feels, only be ensured by international agreements which would guarantee the industries of each country against foreign competition and thus secure a decrease in hours of work without lowering the standing of living. It is necessary, he declares, to lay down immediately a uniform international scale of working hours, which, even though only approximate, would allow of the reduction of hours of work as a means of combating unemployment and of reabsorbing part of the employed in the machinery of production.

On June 15 last the National Council of Corporations of Italy adopted a resolution calling for international agreements with a view

to obtaining a permanent reduction in hours of work as a consequence of technical progress and as a means of combatting the lamentable results of the crisis. The Italian representative maintains that a similar solution is required in other countries and that the International Labour Organization is the only body which could initiate such action. He urges that a special session of the International Labour Conference be held within the next few months, before the crisis becomes worse and before the World Economic Conference is convened, in order to draw up proposals which could be put into immediate operation as regards hours of work.

### Enlargement of Governing Body

As a result of recent ratifications an amendment to Article 393 of the Treaty of Versailles, which determines the composition of the Governing Body of the International Labour Office, may be expected to come into force in the near future.

At an early stage in the working of the International Labour Organization it was found necessary to increase the size of the Governing Body in order to enable a larger number of States to participate in its work. Accordingly the Conference adopted in 1922 an amendment to Article 393 of the Treaty increasing the number of Government representatives on the Governing Body from 12 to 16 and the number of employers' and workers' representatives from 6 to 8 each. The amendment stipulates that 6 of the 16 Government seats and 2 each of the employers' and workers' seats shall be reserved for representatives of extra-European countries.

In accordance with Article 422 of the Treaty, the amendment will come into force when ratified by the States represented on the Council of the League of Nations and by three-fourths of all the States Members of the League.

During the last ten years the International Labour Office has made constant efforts to secure ratification of the amendment. At one time only the ratifications of two countries represented on the Council of the League were required in order to satisfy the conditions laid down in Article 422. Subsequently, however, as a result of changes in the membership of the Council, the number of ratifications lacking was increased to three: those of Italy, Guatemala and Panama, the ratifications of three-fourths of the States Members having been registered.

The instruments of ratification by Guatemala and Italy were deposited in the Secretariat of the League of Nations in July. Only the

ratification of Panama is now required, and it may be hoped that this ratification will be effected before the election of other members to the Council by the Thirteenth Assembly, so that the provisions determining the new composition of the Governing Body may be put into effect. The desire of the oversea countries to be more intimately associated with the administration of the International Labour Office will thus receive some satisfaction.

### Ratifications of International Labour Conventions

On July 31 the number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations and officially notified to the International Labour Office was 467. By the same date 67 ratifications had been authorized by the competent national authorities but had not yet been registered with the Secretary-General of the League.

During March, April, May, June and July, 1932, 13 new ratifications were registered.

*Albania* ratified the Conventions concerning the minimum age for admission of children to industrial employment, the employment of women during the night, and the night work of young persons, adopted by the International Labour Conference at its First Session (Washington, 1919), and the Convention concerning the simplification of the inspection of emigrants on board ship, adopted by the Conference at its Eighth Session (Geneva, 1926).

*Bulgaria* ratified the Convention concerning the regulation of hours of work in commerce and offices, adopted by the International Labour Conference at its Fourteenth Session (Geneva, 1930).

*Italy* ratified the Convention concerning the minimum age for admission of children to employment at sea, adopted by the International Labour Conference at its Second Session (Genoa, 1920).

*Norway* ratified the Convention concerning the marking of the weight on heavy packages transported by vessels, adopted by the International Labour Conference at its Twelfth Session (Geneva, 1929), and that concerning forced or compulsory labour, adopted by the Conference at its Fourteenth Session (Geneva, 1930).

*Poland* ratified the Convention concerning the markings of the weight on heavy packages transported by vessels.

*Portugal* ratified the Conventions concerning the employment of women during the night, the night work of young persons, and the marking of the weight on heavy packages transported by vessels.

*Sweden* ratified the Convention concerning the marking of the weight on heavy packages transported by vessels.

### In Memory of Albert Thomas

Immediately after the death of Albert Thomas, late Director of the International Labour Office, a movement arose in many countries for giving material expression to the gratitude felt by the public towards him. Various suggestions have been made, for instance, for monuments, the publication of volumes, the endowment of funds, etc. At its last session the Governing Body of the International Labour Office, which itself had immediately felt that some such action would be fitting, showed itself deeply touched by this movement of universal sympathy, and appointed a committee of three members, selected from the Government, the Employers' and the Workers' Groups respectively, and instructed it to investigate the best practical means of perpetuating the memory of Albert Thomas.

### I.L.O. Exhibit at Toronto Exhibition

An interesting exhibit, illustrative of the work of the International Labour Organization, was made at the Canadian National Exhibition in Toronto. The exhibit comprised large posters indicative of the world-wide membership of the International Labour Organization, its numerous publications and studies dealing with matters of social, industrial and labour interest, and the progress made in the ratification of various Conventions which have emanated from the International Labour Conference. A special electrical display was made of the ratification of Conventions relative to the work of children and young persons.

The Department of Labour of Ontario took charge of the exhibit and included the same in its space at the Exhibition. An officer of the Provincial Department of Labour was also in attendance to furnish information to enquirers.

### "International Labour Review"

The August number of the *International Labour Review*, the monthly organ of the International Labour Office, contains special articles dealing with the 16th Session of the International Labour Conference, the Reduction of Hours in Belgium during the Depression, and World Economic Reconstruction—an analysis of the economic resolution adopted by the International Labour Conference.

### Industrial Employment in Egypt

"Industrial and Labour Information," the weekly publication of the International Labour Office, publishes in its issue of August 22 a summary of the provisions of a Bill which has been drafted by the Egyptian Government for the purpose of regulating the industrial employment of children and young persons. This Bill is the result of an enquiry undertaken by the Egyptian Government with the assistance of the International Labour Office. Mr. H. B. Butler, then Deputy Director, visited Egypt last February on the invitation of the Egyptian Government to study on the spot the actual conditions of the industry of the country and to prepare a

report for that Government on the best method of organizing its Labour Department. Mr. Butler's report has now been published by the Egyptian Ministry of the Interior in Arabic, English and French and contains precise recommendations relating to the employment of children and women, compensation for accidents, health and safety, unemployment, trade associations, hours of work, the weekly rest day, contracts of employment and conciliation and arbitration. Finally Mr. Butler recommends that the constitution of an Advisory Labour Council should be taken in hand as one of the first steps connected with the execution of the program outlined in his report.

### British Census of Seamen, 1931

The *Board of Trade Journal* (Great Britain) for July 14, 1932, contains the results of the Census of Seamen taken on April 26, 1931. It should be noted that the census does not show the total number of seamen who follow the sea service, but only those actually employed on the specified day on sea-going vessels, other than yachts, registered at ports in the United Kingdom, the Isle of Man, and the Channel Islands, under Part 1 of the Merchant Shipping Act, 1894, so far as the particulars are available. The census includes those employed on fishing vessels registered under Part I of the Act, but not those on fishing boats registered only under Part IV of the Act, which are mostly small craft engaged in local fishing.

The following table shows the total number of seamen employed on sea-going trading vessels (i.e. excluding yachts and fishing vessels) at the dates of the last three decennial censuses, and on March 31, 1930:—

—	April 3, 1911	June 19, 1921*	March 31, 1930	April 26, 1931
Seamen other than Lascars:—				
British.....	136,580	96,072	127,518	108,882
Foreign.....	28,729	11,598	14,433	11,204
Lascars.....	42,905	44,241	52,682	49,125
Total.....	208,214	151,911	194,633	169,211

\* The census of 1921 was taken in a period of acute depression in shipping, accentuated by a three months' coal stoppage (from April to June).

The Lascars were employed mostly as seamen, firemen and trimmers, and stewards.

### Census of United States Seamen

A report issued recently by the Bureau of Navigation and Steamboat Inspection of the United States Department of Commerce for the fiscal year ending June 30, 1932, shows that the proportion of American-born or naturalized seamen shipped and re-shipped on the American merchant marine by United States shipping commissioners at the fifteen largest ports, increased from 62·7 per cent in 1930 to 67·7 per cent. A total of 231,076 seamen were shipped and re-shipped during the year, of whom 156,468 were either American born or naturalized citizens. Other nationalities included 16,340 British, 10,756 Spanish and 10,635 German seamen. On the 25,156 vessels of five net tons and over documented at the end of the fiscal year there were a total of 191,846 officers and seamen employed, it was said. Steam vessels employed 134,091; motor vessels, 43,106; sailing vessels, 7,866, and unrigged vessels, 6,783.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1, was 8,028, the employees on their payrolls numbering 791,622 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 1,806, having an aggregate member-

ship of 171,831 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of August, 1932, as Reported by Employers

Employment at the beginning of August showed a downward movement, according to statements tabulated by the Dominion Bureau of Statistics from 8,028 firms, whose payrolls aggregated 791,622 persons, as compared with 812,871 on July 1. The index number, calculated on the 1926 average as 100, stood at 86.3, compared with 88.7 on July 1, 1932, and 105.2 on the same date in 1931. On August 1 of the ten preceding years, the index was as follows: 1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

Manufacturing reported a large reduction; this was partly due to the usual midsummer shutdowns for holidays, the importance of which for this record was intensified this year by the fact that the close of the month fell at the week-end. The largest losses were those of a seasonal character in iron and steel and textile mills. The tendency was also downward in construction, logging, retail trade, transportation and services. On the other hand, vegetable food and leather footwear factories, telegraphs and wholesale trade showed improvement.

#### Employment by Economic Areas

Employment declined in all provinces, firms in Ontario releasing the greatest number of workers.

*Maritime Provinces.*—Statements were tabulated from 616 firms in the Maritime Provinces employing 62,161 persons, compared with

66,550 in the preceding month. A smaller loss had been indicated on August 1, 1931, and the index then was much higher than on the date under review. Coal mining and building construction showed moderate gains at the beginning of August, 1932, but the trend of employment was downward in manufacturing, notably in fish-preserving, textile, iron and steel, electric current and lumber works, and in highway and railway construction, transportation and logging.

*Quebec.*—Curtailement was shown in Quebec, according to returns from 1,917 employers with 227,401 workers, as against 233,585 on July 1. Manufacturing, logging, construction, retail trade and services reported smaller payrolls, while transportation indicated improvement, and metallic ore mining and wholesale trade were also rather more active. Within the manufacturing division, the greatest losses took place in the textile and iron and steel groups, although lumber, clay, glass and stone, electrical apparatus, rubber and some other factories also showed reductions. On the other hand, the food and musical instrument industries reported increased activity. Employment was in smaller volume than at the beginning of August a year ago; the contractions then indicated had involved fewer workers.

*Ontario.*—There was a further shrinkage in employment in this province on August 1, when the 3,553 co-operating firms reported 325,316 employees, a decrease of 8,535 per-

sons since July 1. Improvement was noted in tobacco, leather and animal food factories, and in wholesale trade and railway construction, but iron and steel plants reported large reductions, and textile, lumber, rubber, clay, glass and stone, pulp and paper and some other plants, logging, mining, transportation, services and retail trade also showed curtailment, in some cases of a seasonal nature. Activity had also declined on August 1, 1931, but the index then was higher.

*Prairie Provinces.*—A falling-off in employment was indicated in the Prairie Provinces,

*British Columbia.*—A reduction was registered in British Columbia, mainly in construction and lumber mills; logging, mining and services, however, also showed lowered activity, but food factories and shipping reported improvement. Returns were compiled from 789 firms employing 66,335 persons, or 1,682 fewer than in the preceding month. Little general change had been indicated at the beginning of August of last year, when the situation was more favourable.

Table I gives index numbers by economic areas.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

where 1,153 employers reported 110,409 workers, or 459 fewer than at the beginning of July; this decrease took place mainly in railway construction, while building, services and manufacturing as a whole were also slacker. On the other hand, highway construction showed an important increase, and transportation also recorded improvement; within the manufacturing group, lumber and iron and steel plants employed larger working forces. Very pronounced advances had been noted at the beginning of August, 1931, chiefly due to an important program of unemployment relief work; the level of employment was then much higher.

### Employment by Cities

Employment declined in the eight cities for which separate tabulations are made, the losses in Montreal and Toronto being greatest.

*Montreal.*—As on August 1 of the last two years, there was a decrease in Montreal on the date under review; employment in both 1931 and 1930, however, was more active than at the beginning of August of the present year. A combined payroll of 125,512 employees, or 4,464 fewer than on July 1, was reported by the 1,074 co-operating firms. Road construction and vegetable food and musical instrument factories registered improvement,

while manufacturing as a whole, transportation and retail trade released employees; the greatest losses in factory employment took place in textiles, but iron and steel, electrical apparatus and building material works were also slacker.

*Quebec.*—Further reductions were reported in Quebec City; building showed rather greater activity, but manufacturing (chiefly of iron and steel and textiles), and services recorded curtailment. Statements were received from 144 employers whose staffs aggregated

12,264 workers, compared with 12,719 in the preceding month. Very little change had been indicated on August 1 of a year ago, when the index was higher.

*Toronto.*—As on the same date of last year, there was a falling-off in activity in Toronto, according to data from 1,185 firms employing 109,709 persons, or 2,848 fewer than at the beginning of July. The level of employment was lower than on August 1, 1931. Manufacturing (especially of iron and steel and textile products), retail trade, services and construc-

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

tion were slacker than on July 1, but wholesale trade recorded moderate improvement.

*Ottawa.*—Employment in Ottawa showed a falling-off, 237 persons being released from the forces of the 156 co-operating employers, who had 12,320 workers on August 1. There were losses in manufacturing, chiefly in lumber and pulp and paper products, while other groups showed little general change. Employment at the beginning of August, 1931, had advanced, and the index then was many points higher.

*Hamilton.*—There were further reductions in staff in Hamilton, 235 establishments reporting

25,267 persons on their paylists, as against 26,460 in their last return. Manufacturing registered general curtailment, with the largest losses in iron and steel, while construction was also slacker. Employment was quieter than on the same date of last year, although decreases had also then been noted.

*Windsor and the Adjacent Border Cities.*—Continued losses were shown in the Border Cities; statistics were received from 136 firms employing 10,243 workers, or 1,258 fewer than on July 1. Automobile and other iron and steel works considerably reduced their work-

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

ing forces, and transportation was also slacker, while other groups showed little general change. Larger declines had been recorded on smaller volume.

*Winnipeg.*—A decrease was indicated in Winnipeg, according to 388 firms who had 35,440 employees, as compared with 35,741 at the beginning of July. There were increases in transportation, but construction showed curtailment, while other industries reported little general change. An unfavourable trend had

also been in evidence on the same date last year, but the index then was higher.

*Vancouver.*—In Vancouver, manufacturing and construction showed contractions, but transportation was rather more active, while other industries fluctuated only slightly. Returns were compiled from 336 employers with 27,146 persons on their staffs, as compared with 27,535 in the preceding month. No general change had been indicated on August 1, 1931, when the level of employment was higher.

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

Index numbers of employment by cities are given in Table II.

### Manufacturing

Further reductions were made in manufacturing establishments, 4,944 of which reported

409,927 operatives on their payrolls, as compared with 423,706 on July 1. As already stated, the contractions were in some cases due to the usual shutdowns for midsummer holidays, the importance of which for these statis-

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

tics was emphasized this year by the fact that the end of the month coincided with the week-end. Increases were recorded in vegetable food, leather footwear, musical instrument and woollen plants, but the garment and iron and steel industries were seasonally slacker, and losses were also indicated in the lumber, pulp and paper, rubber, cotton, knitting, chemical and allied product, clay, glass and stone, electrical apparatus and mineral product industries. A general decrease had also been registered on the same date of last year, when employment was in much greater volume.

*Animal Products.*—Dairies registered gains, while fish-preserving plants were seasonally slacker in the Maritime Provinces, off-setting the increases recorded in the same industry in British Columbia, and resulting in a general decline in the group. Statistics were received from 262 firms employing 20,540 workers, as compared with 20,773 in the preceding month. The trend on August 1 in other years of the record has frequently been downward; the index on the date under review stood at 113.3, compared with 112.2 on August 1, 1931.

*Leather and Products.*—An increase in employment was shown in the leather group, 467 persons being added to the staffs of the 246 co-operating manufacturers, who employed 18,039 on August 1. Most of the improvement occurred in shoe factories. A smaller gain had been reported by the firms making returns for the same date a year ago, but the level of employment was then rather higher.

*Lumber and Products.*—Rough and dressed lumber mills, container, furniture, vehicle and other branches of the lumber group were slacker, the industry as a whole showing a considerably larger decline than that recorded on August 1, 1931, when the index was higher. The payrolls of the 776 firms furnishing data aggregated 31,275 operatives, as against 33,918 in their last report. There were decreases in all except the Prairie Provinces, which showed moderate improvement.

*Musical Instruments.*—Employment in musical instrument factories was better than in the preceding month, but was not so active as in the corresponding month of last year. Statements were received from 36 manufacturers who had enlarged their payrolls by 174 persons to 1,012 on August 1, 1932.

*Plant Products, Edible.*—Large additions to staffs were registered in fruit and vegetable canneries, while other factories coming under this heading showed little general change; 388 employers in the vegetable food group reported 29,371 workers, or 888 more than at the beginning of July. The increase took place largely in Quebec and British Columbia. Em-

ployment was in less volume than on August 1, 1931, although rather smaller gains had then been indicated.

*Pulp and Paper Products.*—Printing and publishing and pulp and paper establishments recorded lowered activity. Statistics were received from 561 manufacturers whose payrolls were decreased by 729 persons to 52,228 on August 1. The largest losses took place in Ontario and British Columbia. A smaller reduction was noted in the corresponding month last summer, and the index then was higher.

*Rubber Products.*—There was a decline in rubber factories, 43 of which had 10,264 persons on their payrolls, compared with 10,976 on July 1. The shrinkage which took place chiefly in Quebec and Ontario, was greater than that reported at the beginning of August of a year ago, when employment was at a higher level.

*Textile Products.*—Cotton, silk, knitting, garment and other textile factories recorded reduced working forces, but woollen mills showed an improvement; there was a decrease of 3,780 persons in the staffs of the 834 co-operating manufacturers, who employed 77,380. The general tendency in all provinces was downward. Smaller losses were noted at the beginning of August, 1931, when the index stood at 92.3, compared with 91.8 on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 152 establishments in these industries, whose payrolls, aggregating 14,252 on the date under review, showed a decline of 128 persons since July 1. The losses took place chiefly in distilled and malt liquor factories. The situation on August 1 last year was better.

*Chemicals and Allied Products.*—Further contractions were noted in chemical works at the beginning of August, 318 persons having been released since the preceding month from the payrolls of the 144 co-operating manufacturers, who employed 7,838 workers. The index was lower than on August 1, 1931, although a rather greater reduction was then indicated.

*Clay, Glass and Stone Products.*—There was a falling-off in building material plants, according to 182 employers with 7,646 workers, or 778 fewer than in their last report. The bulk of the decrease was in Quebec and Ontario. Employment was in less volume than on the same date last summer, when smaller losses had taken place.

*Electric Current.*—Practically no change was noted in electric current works, 93 of which reported 14,430 employees. The index number on the date under review was lower than on August 1, 1931; a considerable advance was then recorded.

*Electrical Apparatus.*—Employment in 89 electrical apparatus works showed a decrease at the beginning of August; they employed 11,728 operatives, or 407 fewer than in the preceding month. The situation was not so good as on August 1 last year, when a smaller reduction had been indicated.

*Iron and Steel Products.*—Automobile, crude rolled and forged agricultural implement, machinery, heating appliance, hardware and other factories reported declines, largely of a seasonal character. A combined working force of 84,100 persons was indicated by the 768 co-operating manufacturers, who had 89,203 on July 1. Ontario firms recorded the greatest curtailment, but there were losses in all except the Western Provinces. Seasonal contractions on a larger scale had been noted at the beginning of August in 1931, but the index then was much higher.

*Non-ferrous Metal Products.*—No general change in employment was recorded in this group on the date under review, according to the 131 firms furnishing data, who employed 12,127 workers. Increases were shown in smelting and refining, but other branches of the group were not so busy. Employment was in smaller volume than on August 1 of a year ago, although the trend then was downward.

*Mineral Products.*—Statistics tabulated from 97 manufacturers of mineral products showed that they employed 11,810 workers, or 334 fewer than in the preceding month. Most of the decline took place in Quebec and the Prairie Provinces. The index was lower than on the same date in 1931, improvement having then been indicated.

### Logging

Seasonal dullness continued greatly to affect employment in logging camps in all provinces. Statements were tabulated from 212 firms, employing 7,944 men, or 1,168 fewer than in the preceding month. Much larger losses were reported on August 1 of last year, when the index stood at 28.8, as compared with 29.1 on the date under review.

### Mining

*Coal.*—There was an increase of 59 employees in the staffs of the 88 operators furnishing returns, bringing them to 22,400 on August 1, 1932. Losses in the Western coal fields were offset by gains in the Maritime Provinces. A reduction was registered on the same date last year, but the index then was higher.

*Metallic Ores.*—A very slight gain was recorded in metallic ore mines, in which employment was not so active as at the begin-

ning of August of last year. Returns were received from 68 mines, with 15,665 workers, as compared with 15,654 in their last report. Improvement was shown in Quebec, but the tendency was downward in Ontario.

*Non-metallic Minerals (Other than Coal).*—A falling-off was noted in this division, in which 80 employers reduced their payrolls by 164 persons to 4,888 at the beginning of August. Employment was at a lower level than in the summer of 1931; an increase had then been recorded.

### Communications

There was a small advance in the personnel of telegraph companies on August 1, but telephones released some employees; the communication firms co-operating with the Dominion Bureau of Statistics had 24,239 employees, as against 24,150 in the preceding month. The number engaged in this group was less than on August 1 a year ago.

### Transportation

*Street Railway and Cartage.*—No general change was registered in this division, according to data received from 168 employers with 23,414 workers, as against 23,389 on July 1. A slight loss had been recorded on August 1 last year, but the index then was higher.

*Steam Railway Operation.*—The trend of employment in steam railway operation was unfavourable in the Eastern Provinces, while rather greater activity was discernible in the Western Provinces. The 97 companies and divisional superintendents furnishing data reported 60,664 employees, compared with 61,318 in their last report. A smaller decrease had been recorded on the same date in 1931, when the index was higher.

*Shipping and Stevedoring.*—Statements were tabulated from 88 companies in this group, employing 15,695 workers, or 125 fewer than on July 1, 1932. There were losses in the Maritime Provinces, but gains in Quebec and British Columbia. A general advance had been noted at the beginning of August a year ago, and employment then was more active.

### Construction and Maintenance

*Buildings.*—Considerable curtailment was again reported in building construction, 656 contractors releasing 833 persons from their staffs, bringing them to 22,462 at the beginning of August. There were declines in all except the Maritime Provinces. Employment was not so brisk as in the same month of 1931, when gains had been indicated.

*Highways.*—The number engaged on highway construction and maintenance showed decreases in all except the Prairie Provinces. Data were received from 367 employers with 51,724 workers on their payrolls, as compared with 52,663 at the beginning of July. An important increase had taken place on August 1, 1931, largely as a result of the unemployment relief program then under way.

*Railways.*—A considerable reduction was recorded in this group on August 1, 1932, when 35 companies and divisional superintendents reported that they had 28,834 men on their staffs, compared with 30,874 in the preceding month. There were comparatively small gains in Quebec and Ontario, but the Western Provinces showed contractions. The index number was lower than at the beginning of August of a year ago.

### Services

Hotels reported decreases in their payrolls, while only slight changes were indicated in other groups in this division; 289 firms em-

ployed 21,870 persons, or 570 fewer than at the beginning of July. An increase had been recorded on August 1, 1931, when the situation was more favourable.

### Trade

There was a falling-off in retail trade, but wholesale houses were more active, according to 861 trading establishments, which employed 81,896 workers, as compared with 83,057 on July 1. Ontario reported the largest declines. Greater losses had occurred at the beginning of August last year, but the index then was higher.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employers reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of July, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation as reflected by local trade unions at the close of July remained practically unchanged from the previous month, the 1,806 labour organizations from which reports were received, with 171,831 members, showing an unemployment percentage of 21.8, in contrast with 21.9 per cent in June. Fluctuations, however, occurred in the various provinces, Nova Scotia, Quebec, Saskatchewan and British Columbia unions indicating a somewhat better employment trend, while in New Brunswick, Ontario, Manitoba and Alberta curtailment of activity was noted. The changes, however, were not particularly marked in any one province. Compared with the returns for July of last year when 16.2 per cent of idleness was recorded, Saskatchewan unions alone showed improvement during the month reviewed, which was but nominal,

while of the recessions in the remaining provinces, those reported by Quebec, Ontario and New Brunswick were the most pronounced.

A separate compilation is made each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Noteworthy employment advances from June, were registered by Regina unions, and in Vancouver, Montreal and Edmonton the tendency was also toward greater activity, though the gains were on a smaller scale. A less favourable employment volume however was reflected by Halifax unions as compared with the preceding month, with contractions of minor importance among Saint John, Toronto and Winnipeg unions. Regina was the only city to report a better situation than in July of last year, the improvement being substantial. On the other hand, operations in Halifax, Saint John, Montreal and Toronto were largely restricted from July a year ago, and in Winnipeg and Edmonton a considerable drop in activity was noted. From Vancouver the reductions reported were of lesser degree.

From the chart which accompanies this article it will be noticed that the curve remained on practically the same level during July as in the preceding month, showing an almost stationary unemployment volume. A distinct rise in the curve, however, was noted from July of last year when conditions were more favourable than in the month reviewed.

Practically no variation from the previous month, in the employment volume afforded was indicated in the manufacturing industries as a whole, at the close of July, the percentage of idleness standing at 24.1 in comparison with 24.2 per cent in June. The July percentage was based on the returns furnished to the Department of Labour by 481 local unions with an aggregate membership of 47,269 persons, 11,383 of whom were without work on the last day of the month. Slightly greater employment than in June, was available to iron and steel workers, and the situation for leather workers was substantially improved. Among pulp and paper makers, however, the gains reported were but fractional.

Increases in slackness were also shown by unclassified fur, garment, textile, and brewery workers. Pulp and paper makers, and glass workers, however, reported marked improvement from July of last year.

The 46 unions of coal miners making returns in July, with a membership numbering 16,077 persons, indicated that 2,020, or 12.6 per cent, were without work on the last day of the month, contrasted with percentages of 12.4 in June and 17.5 in July last year. Nova Scotia miners were afforded a slightly better employment volume than in June, though in Alberta some falling off in activity was noted. The British Columbia situation, however, remained unchanged. Noteworthy advances in

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

On the contrary, hat and cap makers and metal polishers were much slacker than in June, the workers affected, however, forming but a small share of the total in the manufacturing industries. Among textile and unclassified workers also a noteworthy falling-off in activity was recorded, and the trend of employment for glass, garment, brewery and wood workers, and printing tradesmen was less favourable. Unemployment in the manufacturing industries remained in considerably greater volume during July than in the same month a year ago when 16.1 per cent of the membership reported was idle, the majority of trades participating in this less favourable movement. Workers in the metal trades suffered the most extensive curtailment during the month reviewed, while considerable in-

employment from July of last year, were reported by Alberta miners and in Nova Scotia, as in the previous comparison, the balance was favourable, though the change but slight. In British Columbia the trend was toward lessened activity, the recessions indicated being fractional only.

Slight improvement in conditions over the previous month, was shown in the building and construction trades during July, though unemployment still remained at a very high level. This was manifest by the reports tabulated from 245 unions of building tradesmen, combining a membership of 22,334 persons, 58.6 per cent of whom were without employment on the last day of the month in contrast with 60.8 per cent in June. Electrical workers and tile layers, lathers and roofers

reported a much greater volume of activity than in June, with moderate expansion among bridge and structural iron workers. Gains of less than 1 per cent only, were recorded by plumbers and steamfitters, and granite and stonecutters. Slightly less work was afforded hodcarriers and building labourers, and painters, decorators and paperhangers, than in June, and among bricklayers, masons and plasterers, and carpenters and joiners the reductions were nominal only. All tradesmen with the exception of tile layers, lathers and roofers participated in the retrogressive employment

movement shown in the building and construction trades from July last year when 39.9 per cent of the workers reported were idle, bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters, and plumbers and steamfitters especially showing extensive employment losses. Noteworthy curtailment of activity was also evident among bridge and structural iron workers and electrical workers, while the improvement shown by tile layers, lathers and roofers was moderate.

The situation in the transportation industries during July was slightly less favourable than in the previous month, the 783 unions from which reports were tabulated with 62,265 members, showing 13.0 per cent of unemployment, contrasted with 11.8 per cent in June. This curtailment of employment noted from June was confined entirely to the steam railway division, which included about 80 per cent of the entire group membership reporting, navigation workers, street and electric railway employees, and teamsters and chauffeurs all showing somewhat heightened activity. A lower employment level was also indicated in the transportation industries from July of last year when 8.9 per cent of the members reported were idle, steam railway employees, as in the previous comparison, showing reductions in the volume of work afforded, while among navigation workers and teamsters and chauffeurs the situation also declined. Conditions for street and electric railway employees, however, were nominally improved.

Retail clerks were more actively engaged during July than in either the preceding month or July of last year, the 4 unions from which returns were tabulated, with 1,105 members, showing an unemployment percentage of 0.9, contrasted with percentages of 2.3 in June and 2.0 in July last year.

From unions of civic employees 71 reports were received in July, covering a membership of 7,788 persons, 365 or 4.7 per cent of whom were idle on the last day of the month, compared with 5.1 per cent in June. Unemployment was, however, in greater prevalence than in July, 1931, when only 0.3 per cent of the members reported were without work.

Employment in the miscellaneous group of trades during July was in somewhat lesser volume than in both the previous month and July a year ago, according to the reports tabulated from 126 unions, with a total membership of 4,859 persons. Of these, 1,190 were unemployed on the last day of the month, a percentage of 24.5 contrasted with percentages of 21.2 in June and 19.0 in July a year ago. Stationary engineers and firemen suffered the

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

July 1932.....	8.0	13.2	26.2	24.4	19.7	13.7	25.5	20.5	21.8

most severe losses in employment from June, declines on a somewhat smaller scale being shown by hotel and restaurant employees. Among unclassified workers, also, employment eased up slightly. The situation for theatre and stage employees, however, indicated some improvement, with nominal gains apparent for barbers. Stationary engineers and firemen were also the deciding factor in the adverse employment movement shown for July last year. On the other hand, activity for unclassified workers was on a considerably higher level, and slight gains were recorded by hotel and restaurant, and theatre and stage employees. Among barbers practically the same situation obtained in both months reviewed.

Fishermen, with 2 unions embracing 705 members during July, indicated an unemployment percentage of 10.6 in contrast with 7.6 per cent of idleness in June. Employment for these workers was largely restricted from

July last year when only 1.5 per cent of the members reported were without work.

Some lessening of the unemployment volume was reported by lumber workers and loggers during July from the previous month, though conditions still remained quite slack and were considerably quieter than in July a year ago. This was apparent from the returns received from 5 unions of these workers, with 1,349 members, 42.0 per cent of whom were idle on the last day of the month, as compared with 48.7 per cent in June and 33.8 per cent in July, 1931.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for July of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for July, 1932

The volume of business transacted by the offices of the Employment Service of Canada during the month of July, 1932, as shown by the average daily placements effected, showed a decline of nearly 12 per cent from the previous period, and of 3 per cent from that of the corresponding month last year. A marked gain in placements over June, 1932, was shown in farming, followed by smaller increases in transportation, manufacturing and mining, but these were more than offset by losses in construction and maintenance, services, logging and trade. In comparison with July a year ago, farming, construction and maintenance, and transportation recorded gains, the remaining groups showing declines, the largest of which was in services.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. In viewing the trend of the curve of vacancies and of placements in relation to applications, a marked decline was shown during the first half of July, but partial recovery was made during the latter half of the month, and at the close of the period the levels attained, although about two points below those of June 30, were nearly sixteen points above those recorded at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 53.8 during the first half and 57.3 during the second half of July, 1932, in contrast with

ratios of 43.1 and 41.4 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review were 52.2 and 55.7 as compared with 41.5 and 39.9, respectively, during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1932, was 1,037, as compared with a daily average of 1,078 during the corresponding month a year ago, and with 1,177 recorded daily in June, 1932.

The average number of applications for employment received daily by the offices of the Service during the month under review was 1,868, in comparison with 2,550 in July, 1931. Applications for work during the preceding month of 1932 averaged 2,022 daily.

The average number of placements made daily by the offices of the Service during July, 1932, was 1,008, of which 460 were in regular employment and 548 in work of one week's duration or less, as compared with a total daily average of 1,142 during the preceding month. Placements in July a year ago averaged 1,039 daily, consisting of 452 in regular and 587 in casual employment.

During the month of July, 1932, the offices of the Service referred 26,304 persons to vacancies and effected a total of 25,191 placements. Of these, the placements in regular employment were 11,484, of which 8,263 were of men and 3,221 of women, while placements in casual work totalled 13,707. The number of vacancies reported by employers was 19,660 for men

and 6,257 for women, a total of 25,917, while applications for work numbered 46,692, of which 35,262 were from men and 11,430 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155

1931.....	175,632	295,876	471,508
1932 (7 months).....	81,477	134,658	216,135

and maintenance was the only industrial division to show any gain in placements over July of last year. Of the declines in all other groups, that in farming was the largest. Placements by industrial divisions included construction and maintenance, 208; trade, 20; and services, 283, of which 198 were of household workers. During the month 97 men and 59 women were placed in regular employment.

NEW BRUNSWICK

During July, positions offered through employment offices in New Brunswick were nearly 13 per cent less than in the preceding month, but 46 per cent above the corresponding month of last year. There was a decrease of nearly 13 per cent in placements in comparison with June, but a gain of over 48 per cent when compared with July, 1931. Relief work on road construction provided a large

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

NOVA SCOTIA

Employment opportunities, as indicated by orders received at employment offices in Nova Scotia during July, were nearly 6 per cent less favourable than in the preceding month, and nearly 22 per cent below the corresponding month of last year. There was a decline of nearly 7 per cent in placements when compared with June, and of nearly 20 per cent in comparison with July, 1931. Construction

number of workers with employment and was mainly responsible for the gain in placements over July of last year. There were, however, increases also in transportation and manufacturing. These gains were partly offset by declines in services, logging and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 32; logging, 19; farming, 22; transportation, 62; construction and maintenance,

\*192 Placements effected by offices since closed.

nance, 538; and services, 368, of which 293 were of household workers. Regular employment was found for 127 men and 49 women.

#### QUEBEC

There was a decline of over 11 per cent in the number of positions offered through employment offices in the province of Quebec during the month of July, when compared with the preceding month and of over 4 per cent in comparison with the corresponding month of last year. Placements were nearly 12 per cent less than in June, but over 4 per cent higher than in July, 1931. There was a small change only in the number of placements made in each industrial group in comparison with July last year. The most noteworthy gains were in services and trade, while of the declines, those in logging and construction and maintenance were the largest. Placements by industrial divisions included: manufacturing, 68; logging, 140; farming, 80; construction and maintenance, 201; trade, 49; and services, 879, of which 664 were of household workers. Placements in regular employment numbered 582 of men and 651 of women.

#### ONTARIO

The demand for workers, as indicated by orders received at employment offices in Ontario during July, was nearly 21 per cent less than in the preceding month, and over 1 per cent below the corresponding month of last year. There was a decline also in placements of over 20 per cent when compared with June, but a nominal gain in comparison with July, 1931. That there was a small net gain in placements for the province as a whole, over July of last year, was entirely due to work provided in relief of unemployment on road construction, as a small increase in logging placements was the only other gain reported. Of the declines, those in services, manufacturing and farming were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 416; logging, 258; farming, 1,711; transportation, 82; construction and maintenance, 5,577; trade, 300; and services, 2,712, of which 1,553 were of household workers. There were 2,552 men and 1,131 women placed in regular employment during the month.

#### MANITOBA

Orders received at employment offices in Manitoba during July called for 7 per cent less workers than in the preceding month, but for over 24 per cent more than during the corresponding month of last year. There was a

decline of over 6 per cent in placements when compared with June, but a gain of nearly 25 per cent in comparison with July, 1931. Construction and maintenance and farming showed the largest increases in placements over July of last year, and these gains were responsible for the improvement for the province as a whole. There was a large reduction in placements in the services' group, and a small decline reported in trade. Changes in other groups were nominal only. Placements by industrial divisions included: farming, 990; construction and maintenance, 1,861; trade, 32; and services, 857, of which 708 were of household workers. Placements in regular employment numbered 1,630 of men and 425 of women.

#### SASKATCHEWAN

During July, orders listed at employment offices in Saskatchewan called for nearly 9 per cent more workers than in the preceding month and over 23 per cent more than during the corresponding month of last year. There was a gain also in placements of nearly 7 per cent when compared with June and of 19 per cent in comparison with July, 1931. Farm placements were considerably higher than during July last year, and small gains were reported in construction and maintenance and trade. The only decline of importance was in the services' group. Placements by industrial divisions included: manufacturing, 50; farming, 802; construction and maintenance, 384; trade, 67; and services, 765, of which 481 were of household workers. There were 889 men and 370 women placed in regular employment during the month.

#### ALBERTA

Opportunities for employment, as indicated by orders received at Alberta offices during July, were over 1 per cent better than in the preceding month but nearly 57 per cent below the corresponding month of last year. Placements showed a nominal decline when compared with June, but were over 57 per cent below the corresponding month of last year. The large reduction in placements from July of last year was almost entirely due to the curtailment of relief work on road construction. There was an increase in the number of workers placed on farms and in the logging industry, but declines were reported in services and manufacturing and trade. Placements by industrial divisions included: manufacturing, 21; logging, 45; farming, 706; construction and maintenance, 888; and services, 439, of which 316 were of household workers. During the month 1,365 men and 261 women were placed in regular employment.

## BRITISH COLUMBIA

There was a decline of over 1 per cent in the number of positions offered through employment offices in British Columbia during July, when compared with the preceding month and of over 10 per cent in comparison with the corresponding month of last year. Placements also were over 1 per cent less than in June and over 9 per cent below July, 1931. Fewer placements in the services' group were responsible for the decline from July of last year, although losses were also reported in manufacturing, trade and logging. Of the divisions for which gains were reported, those in transportation, construction and maintenance, and mining were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 36; logging, 28; farming, 228; mining, 33; transportation, 102; construction and maintenance, 2,084; trade, 23; and services, 550, of which 367 were of household workers. Regular employment was found for 1,011 men and 275 women during the month.

**Movement of Labour**

During the month of July, 1932, the offices of the Employment Service of Canada made 11,484 placements in regular employment, 5,521 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 312 were granted the Employment Service reduced transportation rate, 273 going to centres within the same province as the despatching office and 39 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of 4 dollars, is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers from Ontario centres in July numbered 13, of which 11 were provincial and 2 interprovincial. The former included 5 axmen and one carpenter going from North Bay to Timmins and 4 bushmen and one restaurant cook from Port Arthur to employment within its own zone. Of the workers conveyed outside the province the North Bay office was instrumental in the despatch of one bricklayer to Rouyn and Timmins of one carpenter to Amos. In Manitoba 201 persons took advantage of the Employment Service reduced transportation rate in July, 168, of whom went to situations within the province

and 33 to points outside. The provincial movement originated at Winnipeg and comprised the transfer of 5 farm domestics to Brandon and of 151 farm hands, 3 farm housekeepers, 5 bushmen and 4 construction labourers to points within the Winnipeg zone. Travelling from Winnipeg to employment in other provinces one farm hand and one farm housekeeper proceeded to Port Arthur, one hotel cook to Yorkton and 25 farm hands and 3 farm domestics to Saskatchewan agriculture centres, while from St. Boniface 2 farm hands were bound for employment also in Saskatchewan. Business transacted by Saskatchewan offices involved an issue of 21 reduced rate certificates, all provincial, 18 of which were granted to farm hands for transportation to the agricultural districts of the province. In addition, from Moose Jaw one hotel cook journeyed to Estevan and from Regina one farm housekeeper to North Battleford and one teacher within its own zone.

Alberta offices granted 69 certificates for reduced transportation in July, 65 of which were to persons going to employment within the province. Of these 56 were transferred by the Edmonton office, 6 farm hands proceeding to Drumheller and 23 farm hands, 4 farm domestics, 15 mine workers, 3 cooks, one cookee, one gas engineer, one highway construction labourer, one clerk and one town housekeeper to positions at various points within the Edmonton zone. From Calgary the movement was entirely to the rural centres and included transfers of 8 farm hands and one farm domestic. The 4 persons travelling outside the province were farm hands for Saskatchewan points, 3 of whom received their certificates for transportation at Edmonton and one at Medicine Hat. Benefiting by the Employment Service reduced transportation rate in British Columbia during July 8 persons went to employment at provincial points. Of these 6 travelled from Vancouver, one fruit packer going to Penticton, and 3 mine workers, one farm hand and one hotel cook to employment within the Vancouver zone. In addition, from Nelson one blacksmith was transported to Penticton, while to a point within its own zone Prince Rupert shipped one farm hand.

Of the 312 persons who travelled at the Employment Service reduced transportation rate in July 141 were conveyed by the Canadian National Railways, 159 by the Canadian Pacific Railway, 7 by the Timiskaming and Northern Ontario Railway, 3 by the Northern Alberta Railway and 2 by the Pacific Great Eastern Railway.

### (4) Building Permits Issued in Canada During July, 1932

The value of the building authorized during July showed a decrease of \$161,101, or 3·7 per cent, as compared with the preceding month, and there was also a decline of \$6,815,436, or 61·7 per cent, as compared with July, 1931. The aggregate for the 61 cities in July, 1932, was \$4,227,173, as against \$4,388,274 in June, 1932, and \$11,042,609 in July, 1931. The total for the first seven months of 1932, (viz., \$26,806,241), was lower than in earlier years of the record, but it should be noted that there has also been a very considerable decline in the wholesale costs of building materials, the Bureau's index (average 1926=100) having fallen from 144·3 in the first seven months of 1920 to 78·2 in the period January-July, 1932, or by 45·8 per cent.

Some 50 cities furnished detailed statistics, showing that they had issued some 450 permits for dwellings valued at approximately \$1,000,000, and some 1,800 permits for other buildings estimated at about \$3,200,000. In June, authority was given for the erection of some 400 dwellings and 2,100 other buildings, valued at approximately \$1,100,000 and \$3,200,000, respectively.

Increases over June, 1932, were reported in Nova Scotia, New Brunswick, Quebec, Manitoba, Saskatchewan and British Columbia, the largest gain being that of \$585,390, or 38·1 per cent, in Quebec. On the other hand, there were reductions of 46·0 per cent in Ontario and 23·3 per cent in Alberta.

In comparison with July, 1931, all provinces showed declines, that of \$3,843,385, or 77·5 per cent, in Ontario being greatest.

The four largest cities, Montreal, Toronto, Winnipeg and Vancouver, reported increases over June, 1932, but decreases as compared with July, 1931. Of the other centres, Sydney, Fredericton, Quebec City, Sherbrooke, Port Arthur, St. Catharines, Brandon and Moose Jaw showed gains as compared with both June, 1932, and July, 1931.

*Cumulative Record for First Seven Months 1920-1932.*—The following table gives the value of the building authorized by 61 cities during July and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the total for

<sup>1</sup> Includes Riverside, not included in report for June, 1932.

1926 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1926 average=100).

The aggregate for the first seven months of this year was less than in 1931 and earlier years of the record. The average index number of wholesale prices of building materials, however, continued lower than in any other since 1920.

The table on page 1010 gives the value of the building permits issued by 61 cities during June and July, 1932, and July, 1931; the 35 cities for which records are available since 1910 are marked by asterisk.

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued in first seven months (1926=100)	Average indexes of wholesale prices of building materials in first seven months (1926 average=100)

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

The British *Ministry of Labour Gazette*, August, 1932, summarized the employment situation as follows:—

Employment at July 25 showed a decline as compared with June 27. The principal industries that contributed to the decline were the coal-mining, iron and steel, general engineering, shipbuilding and ship-repairing, and textile industries (except artificial silk yarn manufacture), the clothing and woodworking industries, and building and public works contracting. On the other hand there was some improvement in marine engineering, in artificial silk yarn, and food and drink manufacture, and in hotel and boarding house service.

There was a considerable increase in the numbers recorded as unemployed in Scotland and in Northern Ireland, but this was due in part to holiday stoppages; there was a slight increase also in each of the other divisions. Employment was moderate in the south of England and bad in all other areas.

Among the workpeople, numbering approximately 12,770,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at July 25, 1932 (including those temporarily stopped as well as those wholly unemployed), was 22.9, as compared with 22.3 at June 27, 1932, and with 22.0 at July 27, 1931. The percentage wholly unemployed at July 25, 1932, was 17.1, as compared with 16.8 at June 27, 1932, while the percentage temporarily stopped was 5.8,

as compared with 5.5. For males alone, the percentage at July 25, 1932, was 26.3, and for females, 14.1; at June 27, 1932, the corresponding percentages were 25.7 and 13.5.

At July 25, 1932, the number of persons on the registers of Employment Exchanges in Great Britain was 1,995,453 wholly unemployed, 721,552 temporarily stopped, and 94,777 normally in casual employment, making a total of 2,811,782. This was 64,439 more than a month before, and 98,432 more than a year before. The total included 2,259,057 men, 76,120 boys, 423,765 women and 52,840 girls. Comparison of the numbers on the registers and of the percentages unemployed with the figures for a year before is affected by the results of legislative and administrative changes.

The 1,995,453 wholly unemployed included 688,957 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 985,016 insured persons with applications for transitional payments; 199,817 insured persons not in receipt of insurance benefit or transitional payments, and 121,663 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at July 25, 1932, was 2,888,633.

### United States

The Bureau of Labour Statistics of the United States Department of Labour, reports the changes in employment and earnings in July, 1932, as compared with June 1932, based on returns made by 63,417 establishments in 16 major industrial groups, having in July, 4,100,425 employees, whose combined earnings in one week were \$79,141,481. The combined totals of these 16 groups show a decrease of 3.0 per cent in employment and 6.1 per cent in earnings.

Of the 16 industrial groups, canning and preserving registered an increase of 31.5 per cent in employment and 17.2 per cent in earnings; building construction increased by 4.1 per cent in employment and 8.2 per cent in earnings; the crude petroleum producing

group increased 2.1 per cent in employment, though earnings showed a slight decline of .4 per cent; while the hotels group gained in employment to the extent of .6 per cent and lost in earnings by 3.2 per cent.

The remaining 12 industrial groups all sustained decreases in both employment and payrolls. The most pronounced decreases in employment occurred in anthracite mining with 16.1 per cent, and metalliferous mining with 8.3 per cent reduction. The other employment losses ranged from 6 per cent in retail trade to .1 per cent in quarrying and non-metallic mining.

President William Green, of the American Federation of Labour, in a statement published in the issue of *Labor* (Washington) for September 6, calculates the number of jobless workers in the United States at 11,400,000.

### Nova Scotia Fisheries in 1931

A report on the fisheries of Nova Scotia in 1931 has been published by the Fisheries Statistics Branch of the Dominion Bureau of Statistics in co-operation with the Department of Fisheries of Canada.

The product of the fisheries of the province of Nova Scotia in 1931, it is stated, had a total value of \$7,986,194, compared with \$10,411,202 in 1930 and \$11,427,491 in 1929. These totals represent the value of the fish as marketed, whether sold for consumption fresh, or canned, cured or otherwise prepared. The lobster fishery in 1931 was of first importance, with the cod fishery second, the marketed value of the lobsters amounting to \$2,725,620 and of the cod to \$1,671,201. Haddock was third in order of value, with a total of \$1,325,919.

The catch of fish of all kinds for Nova Scotia in 1931 amounted to 2,117,305 cwt. with a value to the fishermen of \$4,833,900, compared with a catch of 2,577,856 and a value to the fishermen of \$6,842,953 in 1930. The decrease from 1930 in the quantity of fish caught was 18 per cent, while the value to the fishermen and the marketed value, owing to lowered prices, were 29 per cent and 23 per cent respectively. Among the principal kinds of fish, lobsters, halibut, mackerel and smelts show increases in quantity caught but decreases in marketed value, while swordfish alone records an increase in both catch and marketed value. The other principal kinds—cod, haddock, herring, salmon and hake and cusk—show decreases in catch as well as in marketed value. The value of the capital investment of the fisheries of Nova Scotia in 1931 was \$10,232,805, to which total the value of the vessels, boats, nets and other gear used in the primary operations of catching and

landing the fish contributed \$6,813,124, or 77 per cent, and the fish canning and curing industry \$3,419,681, or 33 per cent. Compared with the preceding year, the total capital shows a decrease of \$1,011,935.

The number of men engaged in catching and landing the fish in 1931 was 15,527, while the fish canning and curing industry gave employment to an average of 1,726 persons during the year. This general average for the year is naturally much below that of the months when employment in fish canning and curing establishments is at its highest, viz., May and June—for the month of May, 1931, a total of 2,427 employees was recorded and for the month of June, a total of 3,299.

An official of the United States Department of Labour recently expressed approval of the method of unemployment relief in Hopewell, Virginia. "The Hopewell Plan," he said, "is the only plan that I have found in operation that is not promiscuous charity." There are three welfare relief organizations in Hopewell: first, the city organization for the relief of the unemployed; second, the Ladies' Auxiliary, which solicits subscriptions to a general fund from which is supplied milk, cereals and medical care for children, and collects and distributes old clothes to the needy; and third, the Associated Charities which cares for strictly charity cases. The plan comprises city work, payment in scrip which can be redeemed in groceries or cash, a placement service in various industries and a municipal store operated by a physician who is also Welfare Supervisor and upon whom falls the responsibility for the detailed operation of the plan.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication of manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the

district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representa-

tives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of

all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, etc.)*

Construction of a temporary heating plant at the R.C.A.F. Station, Trenton, Ont. Name of contractors, The Quinte Construction Ltd., Trenton, Ont. Date of contract, August 9,

1932. Amount of contract, \$3,630. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Plumbers and steamfitters.....	\$0 70	8
Electricians.....	0 70	8
Structural iron workers.....	0 80	8
Sheet metal workers.....	0 70	8
Concrete mixer operators.....	0 45	8
Bricklayers.....	0 90	8
Plasterers.....	0 90	8
Labourers.....	0 35	8
Carpenters.....	0 65	8

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of a wharf at Piers Island, B.C. Name of contractors, James McDonald Construction Co., Victoria, B.C. Date of contract, July, 1932. Amount of contract, approximately \$4,500. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Boorman.....	0 90	8
Bridgeman.....	0 90	8
Fireman.....	0 65	8
Labourers.....	0 40	8

Improvements to wharf at Montmagny, P.Q. Name of contractors, J. Elzeur Boulanger, Montmagny, P.Q. Date of contract, August 15, 1932. Amount of contract, approximately \$5,051. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 55	8
Labourers.....	0 35	8
Blacksmith.....	0 50	8
Drill runner.....	0 45	8
Quarryman.....	0 40	8
Timberman.....	0 42	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Teamsters.....	0 35	8

Reconstruction of the inner 178 lin. ft. of West Pier, also renewal of decking of inner 145 ft. of East Pier, at Oakville, Ont. Name

of contractors, The R. C. Huffman Construction Co. of Canada, Toronto, Ont. Date of contract, August 11, 1932. Amount of contract, approximately \$2,544.25. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Steam hoist engineer.....	\$0 70	8
Fireman.....	0 40	8
Diver.....	1 25	8
Timberman.....	0 45	8
Labourer.....	0 35	8
Motor truck driver.....	0 40	8

Supply, laying and waxing linoleum flooring on the first, fourth and fifth floors of the Dominion public building at Toronto, Ont. Name of contractors, The Adams Furniture Co. of Toronto, Ltd., 211 Yonge Street, Toronto, Ont. Date of contract, August 9, 1932. Amount of contract, \$2,222. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Linoleum layers.....	\$0 60	8
Waxers and polishers.....	0 60	8
Cement finishers.....	0 75	8
Painters.....	0 75	8
Labourers.....	0 50	8
Driver, team and wagon.....	1 10	8
Driver, horse and cart.....	0 85	8
Teamsters.....	0 50	8
Motor truck driver.....	0 50	8

Waxing linoleum and terrazzo floors of the National Research Laboratory, Ottawa, Ont. Name of contractors, Frank P. Lalonde, Ltd., Montreal, P.Q. Date of contract, August 12, 1932. Amount of contract, \$650 and one cent per sq. ft. for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 45	8
Varnishers.....	0 65	8
Waxers and polishers.....	0 65	8

Construction of a wharf and warehouse and graded approach thereto, and dredging slip adjacent to wharf, Midland, Ont. Name of

contractors, Russell Construction Co., Ltd., Toronto, Ont. Date of contract, August 8, 1932. Amount of contract, approximately \$106,391.60. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer.....	\$0 65	8
Firemen.....	0 45	8
Concrete mixer operator.....	0 55	8
Diver.....	1 25	8
Timberman.....	0 50	8
Labourers.....	0 40	8
Concrete finishers.....	0 60	8
Men, team and wagon.....	0 75	8
Carpenters and joiners.....	0 70	8
Blacksmiths.....	0 60	8
Quarrymen.....	0 45	8
Motor truck and driver (5 ton).....	2 50	8
Motor truck and driver (1 and 2 ton).....	1 50	8

Lighting the Interprovincial Highway Bridge over the Ottawa River, between Hawkesbury, Ont., and Grenville, Que. Name of contractors, Canadian Comstock Co., Ltd., Toronto, Ont. Date of contract, August 18, 1932. Amount of contract, \$8,952. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Electricians.....	\$0 65	8
Labourers.....	0 35	8

Laying new roof covering, etc., at the Drill Hall, Craig Street, Montreal, P.Q. Name of contractors, W. A. Moffatt & Sons, Ltd., Montreal, P.Q. Date of contract, August 17, 1932. Amount of contract, \$6,879 and \$10 per square for any new roof boarding required. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete workers.....	\$0 40	8
Concrete mixer operator.....	0 60	8
Asphalt workers (paving).....	0 60	8
Bricklayers.....	0 85	8
Ornamental iron workers.....	0 85	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 65	8
Roofers (felt and asphalt, built-up roofing).....	0 60	8
Painters.....	0 65	8
Plumbers.....	0 75	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 75	8
Teamsters.....	0 40	8
Motor truck driver.....	0 45	8

Exterior brickwork, painting and repairs to roof of Public Building at Canso, N.S. Name of contractor, Mr. Dan A. MacDonald, Stelarton, N.S. Date of contract, August 26, 1932. Amount of contract, \$4,798. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Stone masons.....	\$0 80	8	48
Bricklayers.....	0 80	8	48
Carpenters and joiners.....	0 55	8	48
Sheet metal workers.....	0 60	8	48
Sheet metal helpers.....	0 40	8	48
Roofers, ready roofing.....	0 50	8	48

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements, with their schedules of wages and working conditions, that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

TORONTO, ONTARIO.—CERTAIN EMPLOYING BAKERS (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 181.

Agreement to be in effect from May 1, 1932, to May 1, 1933, and until a new agreement has been made or this one cancelled.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1931, page 1053, and August, 1930, page 967, with the following exception:—

Wages per week: foreman or first hand \$38, second hand \$34, third hand \$30 (reductions of \$6 per week in each case). The wage rates for jobbers are unchanged at 95 cents per hour for first hands, 85 cents for second hands, and 75 cents for third hands.

TORONTO AND ST. CATHARINES, ONTARIO.—CERTAIN BREWERIES AND INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 304.

Agreement to be in effect from April 1, 1932, to March 31, 1933, and from year to year thereafter until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, November, 1931, page 1253, with the following exceptions:—

Engineers, firemen, carpenters, brewers and foremen are exempt from the agreement and are not required to be union members.

In case of discharge, a representative of the union to be entitled to investigate and the employee discharged to be entitled to a hearing. Sickness or disability resulting from an accident while at work will not be a cause of discharge if employee is capable of performing his work again within six months.

The wage scale is the same as in the previous agreement except kettlemen \$23.50 per week and washhouse men \$22.50, and engineers are not included. Extra help employed in the busy season to have a permit card from the union and be paid \$20 per week.

### Manufacturing: Iron, Steel and Products

TORONTO, ONTARIO.—CERTAIN WELDING SHOPS AND THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS AND HELPERS OF AMERICA, LOCAL No. 637.

Agreement to be in effect from July, 1931, to July, 1932, and thereafter from year to year until notice.

Only union members to be employed, and in carrying out this agreement, the employer to deal only with the union representatives.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When two shifts are worked, the second shift to be  $7\frac{1}{2}$  hours with pay for 8 hours.

Overtime: time and one-half to midnight; thereafter and all work on Saturday afternoons, Sundays and holidays, double time.

Wages: boilermakers, oxy-acetylene and electric welders \$1 per hour for field work and 75 cents per hour for shop work.

One apprentice allowed to each shop and one for each five mechanics employed.

Wages for apprentices: from 20 cents per hour for first six months to 50 cents for seventh six months, after which they will receive journeyman's rate.

In case of dispute, no strike or lockout to occur until it has been referred to arbitration as provided in the Industrial Disputes Investigation Act.

### Manufacturing: Printing and Publishing

HALIFAX, N.S.—CERTAIN JOB PRINTING FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 130.

Agreement to be in effect from April 1, 1932, to March 31, 1933.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1931, page 708.

The wage rates are unchanged at \$35 per week for day work and \$38 for night work with a 44-hour week.

QUEBEC, QUEBEC.—CERTAIN NEWSPAPER PUBLISHERS AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 302.

The agreement which came into effect February 14, 1931, and which was summarized in the *LABOUR GAZETTE*, April, 1931, page 476, is being continued until February 14, 1933, with no change.

Wages are the same at \$32.50 per week of 48 hours for day work and \$34.50 per week of 45 hours for night work.

MONTREAL, QUEBEC.—PUBLISHERS OF FRENCH NEWSPAPERS AND THE INTERNATIONAL UNION, LOCAL No. 145 (JACQUES CARTIER).

Agreement to be in effect from September 15, 1931, to September 15, 1932.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1929, page 925, and July, 1925, page 724.

Wages for journeymen are unchanged at \$43 per week of 48 hours for day work and \$47 per week of 45 hours for night work.

OTTAWA, ONTARIO.—OTTAWA NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 102.

The agreement which was summarized in the LABOUR GAZETTE, November, 1930, page 1333, November, 1928, page 1262, and April, 1927, page 442, was extended for one year to September 30, 1932.

Wages are unchanged at \$44 per week of 46½ hours for day work and \$46.50 per week of 43½ hours for night work.

TORONTO, ONTARIO.—PUBLISHERS OF DAILY NEWSPAPERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 1.

The agreement which came into effect June 1, 1928 and which was summarized in the LABOUR GAZETTE, August, 1928, page 903, has been renewed to May 31, 1933, with the following change:

Wages for night work have been reduced from \$47.50 to \$46.50 per week. Wages for day work are unchanged at \$46.50 per week.

Hours are unchanged with 48 per week for day work and 42 per week for night work.

TORONTO, ONTARIO.—PUBLISHERS OF DAILY NEWSPAPERS AND THE INTERNATIONAL STEREO-TYPERS AND ELECTROTYPERS UNION, LOCAL No. 21.

The agreement which came into effect January 1, 1928, and which was summarized in the LABOUR GAZETTE, January, 1932, page 90 and December, 1928, page 1375, was renewed from July 1, 1932, to June 30, 1933, with the following change:

Wages for night work have been reduced from \$47.50 to \$46.50 per week. Wages for day work remain unchanged at \$46.50 per week.

Hours are unchanged at 48 per week for day work and 42 per week for night work.

TORONTO, ONTARIO.—PUBLISHERS OF DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.

Agreement to be in effect from April 1, 1932, to March 31, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, January, 1926, page 58, July, 1928, page 784, which was renewed as noted in the LABOUR GAZETTE, December, 1931, page 1355, with the following change:

Hours for night work are reduced from 45 to 42 per week and the wages reduced from \$50.50 to \$47.50 per week. The hours and wages for day workers are unchanged with a wage of \$47.50 for a 46½ hour week.

TORONTO, ONTARIO.—PROPRIETOR OF A THIRD SHIFT PUBLICATION AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 91.

The agreement which was summarized in the LABOUR GAZETTE, August, 1929, page 925, and which was renewed as noted in the LABOUR GAZETTE, December, 1931, page 1355, has again been renewed without change to March 31, 1933.

Wages are \$52.50 for a 45 hour week.

WINNIPEG, MANITOBA.—PUBLISHERS OF TWO DAILY NEWSPAPERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 191.

Agreement to be in effect from May 2, 1932 to May 1, 1933.

This agreement is similar to the one summarized in the LABOUR GAZETTE, July, 1931, page 833, with the following exceptions:

All overtime on regular working days, time and one-half.

Wages per week: \$43 for day work and \$45 for night work (a reduction of \$4 per week in both cases).

Hours are unchanged at 46 per week for day work and 43½ for night work; middle shift 43½ hours except from June 1, to September 1, 42½ hours.

REGINA, SASKATCHEWAN.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 75.

Agreement to be in effect from May 1, 1932, to April 30, 1933.

This agreement is similar to the one summarized in the LABOUR GAZETTE, July, 1930, page 842, with the following exceptions:

Hours: 44 per week for both day and night work (formerly 44 for day work and 42 for night work).

Work on holidays, time and one-half for first three hours and double time thereafter for both day and night work.

The complete wage scale included in this agreement is: journeymen cylinder pressman \$39.60 per week (a reduction of \$3.55), cylinder assistant \$28.90 (a reduction of \$3.30), cylinder assistant working part time on cylinder and platens \$23.35 (a reduction of \$2.60), platen pressman \$36.90 (a reduction of \$3.55). For night work \$3 per week extra, as before.

The clause providing that in case of decrease of staff, those last employed to be laid off first is omitted.

CALGARY, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 201.

The agreement which was summarized in the LABOUR GAZETTE, October, 1929, page 1159, has been renewed from February 25, 1932, to May 15, 1933, with the following change:

Wages per hour for journeymen pressmen: 96 cents for day work and \$1.09½ for night work (a reduction of 10 per cent).

Hours are unchanged with 45 per week for day work and 42 for night work.

CALGARY, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 449.

Agreement to be in effect from May 2, 1932, and until notice is given by either party.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1929, page 676, with the following exceptions:

Wages for day work: 92 cents per hour (a reduction of 8 cents per hour); night work \$3 per week extra as before.

The hours are unchanged at 44 per week for both day and night work.

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 604.

Agreement to be in effect from March 4, 1932, to May 15, 1933.

The agreement which was summarized in the LABOUR GAZETTE, March, 1931, page 349, and May, 1927, page 556, is renewed to May 15, 1933, with the following change:

Wages for journeymen: 96 cents per hour for day work and \$1.02½ for night work (a reduction of 11 cents per hour in both cases).

Hours are unchanged at 44 per week for day work and 42 for night work.

**LETHBRIDGE, ALBERTA.**—A NEWSPAPER PUBLISHER AND CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 551.

Agreement to be in effect from May 16, 1932, to May 15, 1933.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, October, 1930, page 1210, with the following exceptions:

Wages in news office: 94½ cents per hour or \$42.50 per week for day work and \$1.00½ per hour or \$45.25 per week for night work; machinist operators \$1.06½ per hour or \$47.95 per week. Wages in job offices: 94½ cents per hour or \$41.60 per week. These are reductions of about 10 per cent from the 1929 scale.

Hours are unchanged at 45 per week for the newspaper office and 44 per week in job offices.

**VANCOUVER, B.C.**—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 69.

The agreement which came into effect September 1, 1930, for a period of four years and which was summarized in the *LABOUR GAZETTE*, August, 1931, page 931, is still in effect except that it was mutually agreed to reduce wages 10 per cent, making the day rate 90 cents per hour and the night rate 94 cents.

**VANCOUVER, B.C.**—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 69.

Agreement to be in effect from March 17, 1932, to March 17, 1933, and may be extended from year to year if wages and hours can be settled by local arbitration or conciliation.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1929, page 1051, with the following exception:

Wages per week of 44 hours: on cylinder and offset presses, journeymen pressmen \$40.50, feeders \$25.65; on platen presses, journeymen pressmen \$37.70 and feeders \$23.75 (reductions of 10 per cent). For night work pressmen receive 8 cents per hour extra and feeders and apprentices 5 cents per hour extra, as before.

### Construction: Buildings and Structures

**WELLAND, ONTARIO.**—EMPLOYING PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 595.

Agreement to be in effect from May 1, 1932, to April 30, 1933, and year to year until notice.

Only union members, and apprentices indentured under the Ontario Apprenticeship Act, to handle the tools of the trade.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

All overtime and work on Saturday afternoons, Sundays and holidays, double time. In finishing a repair job on regular working days if not more than an hour's time extra, regular rate to be paid.

Wages for journeymen plumbers and steamfitters: 90 cents per hour until present membership is fully employed when it will be raised to 95 cents. (The previous rate was \$1.05 per hour.) Wages for fifth year junior mechanics: 60 cents per hour.

Apprentices to be employed in accordance with the Ontario Apprenticeship Act.

For work out of the city, fare, board and travelling time to be paid, except within a

radius of 15 miles, when transported by automobile, when journeymen will return on their own time up to 6 p.m.

**NIAGARA FALLS, ONTARIO.**—CERTAIN CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 27.

The agreement which covers bricklayers, stonemasons, marble setters, tile setters, terrazzo workers and plasterers, and which came into effect May 1, 1929, and was summarized in the *LABOUR GAZETTE*, October, 1929, page 1160, and July, 1930, page 845, was amended November, 1931, to reduce wages from \$1.25 to \$1.12½ per hour. The new agreement which is in effect from May 1, 1932, to May 1, 1933, is the same except that the wage rate is \$1 per hour. Hours are unchanged at 44 per week.

**CALGARY, ALBERTA.**—GENERAL CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1779.

Agreement reached following conciliation by the Department of Labour as reported in the *LABOUR GAZETTE*, June, 1932, page 647, to be in effect from May 1, 1932, to May 1, 1933.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1928, page 788, and May, 1931, page 599, with the following exceptions:—

Hours: 8 per day with a 5-day week. Any necessary work on Saturday mornings to be paid at time and one-quarter. When, however, it is established that 75 per cent of the registered membership of the union are employed, the contractors to have the option of working Saturday mornings at regular rates as long as this percentage remains employed.

Wages per hour: \$1 (a reduction of 15 cents per hour).

No strike or lockout to occur pending arbitration of a dispute.

**CALGARY, ALBERTA.**—CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 496.

Agreement made following strike reported in the *LABOUR GAZETTE*, June, 1932, page 651, to be in effect from May 11, 1932, to April 30, 1933, and for another year if no notice of change is given by either party.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1931, page 1037, with the following exceptions:—

Wages per hour for journeymen plumbers and steamfitters: \$1.05 (a reduction of 20 cents per hour).

All apprenticeship conditions are under the jurisdiction of the Joint Apprenticeship Committee.

Hours are unchanged at 8 per day with a 5-day week.

### Transportation and Public Utilities: Water Transportation

**MONTREAL, QUEBEC.**—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

The agreement which came into effect May 1, 1931, and which was summarized in the *LABOUR GAZETTE*, June, 1931, page 712, July, 1929, page 807, and September, 1927, page 1004, was renewed without change for another year to April 30, 1933.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities showed the first advance since December, 1931, at \$7.01 for August as compared with \$6.78 for July, \$8.20 for August, 1931; \$10.65 for August, 1930; \$11.63 for August, 1929; \$10.44 for August, 1922; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); and \$7.68 for August, 1914. The most important change was a seasonal increase in the price of potatoes, while the prices of eggs, butter, fresh and salt pork and bacon were also higher. The prices of beef, veal, mutton and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.42 at the beginning of August as compared with \$16.21 for July; \$18.30 for August, 1931; \$21.01 for August, 1930; \$21.90 for August, 1929; \$20.88 for August, 1922; \$26.92 for July, 1920 (the peak); and \$14.41 for August, 1914. In fuel anthracite coal was somewhat higher, while wood declined slightly.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher, this being the first increase since November, 1931. The index stood at 66.8 for August as compared with 66.6 for July; 71.0 for August, 1931; 83.7 for August, 1930; 98.4 for August, 1929; 97.1 for August, 1922; 160.2 for August, 1920; 164.3 for May, 1920 (the peak); and 66.1 for August, 1914. Eighty prices quotations were higher, sixty-five were lower and three hundred and fifty-seven were unchanged.

In the classification according to chief component materials five of the eight main groups were higher and three were slightly lower. The groups which advanced were: the Animals and their Products group, because of higher prices for calves, hogs, hides, cured meats, butter and eggs, which more than offset lower prices for fish, steers, lambs and leather; the Fibres, Textiles and Textile Products group, due mainly to higher prices for raw cotton, raw jute, raw silk and raw wool; the Non-Ferrous Metals and their Products group, mainly because of increases

in the prices of copper, lead, silver, tin and zinc; the Non-Metallic Minerals and their Products group, due to higher prices for coal; and the Chemicals and Allied Products group, because of higher quotations for copper sulphate, shellac and fertilizers. The Vegetables and Vegetable Products group was slightly lower, decreases in the prices of oats, barley, potatoes, hay, straw and onions more than offsetting higher prices for corn, flax, rye, wheat, bran, shorts and raw rubber. The Wood, Wood Products and Paper group and the Iron and its Products group were also lower, the former because of lower prices for pine lumber and the later because of reduced quotations for steel sheets, scrap iron and scrap steel.

In the grouping according to purpose both consumers' goods and producers' goods were higher, the former due to increased prices for bran, shorts, canned vegetables, butter, eggs and cured meats, which more than offset lower prices for potatoes, onions, dried fruits, fresh meats and fish, and the latter due to higher prices for corn, wheat, raw cotton, raw wool, hides, calves, hogs, silver, tin and copper, which more than offset reductions in the prices of oats, barley, steers, lambs and pine lumber.

In the grouping according to origin higher quotations for wheat, corn, flax, calves, hogs, eggs, copper and tin caused an increase in the group of raw and partly manufactured goods. Fully and chiefly manufactured goods were also higher, mainly because of advances in the prices of bran, shorts, cured meats and butter. Domestic farm products and articles of mineral origin were higher, while articles of marine origin and forest origin were lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of

milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index

(Continued on page 1030)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 1022)

number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6, Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4;

1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices were slightly lower during the month, sirloin steak averaging 25.4 cents per pound in August as compared with 25.8 cents in July; rib roast 18.7 cents per pound in August and 19.2 cents in July; and shoulder roast 13.2 cents per pound in August and 13.5 cents in July. Veal and mutton also were slightly lower, the former averaging 13.2 cents per pound in August as compared with 13.4 cents in July, and the latter 21.4 cents in August and 22.2 cents in July. Pork prices were higher in most localities, fresh being up from an average price of 15.1 cents

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

per pound in July to 15.6 cents in August. Breakfast bacon was up from an average price of 16.8 cents per pound in July to 17.6 cents in August.

Eggs showed a general seasonal advance, fresh being up from an average price of 21.4 cents per dozen in July to 24.1 cents in August and cooking from 16.8 cents per dozen to 19.6 cents. The price of milk showed a slightly lower tendency, the average price being 9.5 cents per quart in August as compared with 9.6 cents in July. Butter prices were generally higher, except in the Prairie Provinces where in some localities the decline continued. Dairy butter was up from an average price of 17.8 cents per pound in July to 19.3 cents in August and creamery from 21.6 cents per pound in July to 22.1 cents in August. Cheese prices were again slightly lower, averaging 19.9 cents per pound.

Bread was unchanged at an average price of 5.9 cents per pound. Canned vegetables continued to show an advance, tomatoes averaging 11.2 cents per tin and peas 11.1 cents per tin. Onions were generally lower averaging 6.4 cents per pound in August as compared with 8.1 cents in July. Potato prices showed a substantial seasonal advance with the marketing of the new crop, the price per ninety pounds being \$1.21 in August as compared with 66 cents in July. Granulated sugar was again slightly lower at 5.8 cents per pound. Anthracite coal averaged slightly higher at \$15.30 per ton. A decrease in rent was reported from Sydney.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 56.3 cents per bushel as compared with 54.7 cents in July. The high price for the month was 59.8 cents per bushel reached on the 8th and the low 53.4 cents on the 25th. During the early part of the month prices advanced substantially influenced it was said by unfavourable crop reports from Europe. Lack of export demand, the size of visible supplies, and the favourable crop prospects in North America were factors in the downward movement later in the month. In coarse grains western barley was down from an average price of 36.5 cents per bushel to 34.4 cents, and western oats from 35.2 cents per bushel to 29.9 cents. Flax rose from an average price of 68.2 cents per bushel to 71.6 cents, rye from 33.1 cents per bushel to 33.3 cents and American corn from 75.8 cents per bushel to 80.1 cents. Flour at Toronto was un-

changed at \$4.80 per barrel. Bran and shorts advanced, the former from \$17.96 per ton to \$19.03 and the latter from \$19.38 per ton to \$21.03. Ceylon rubber at New York was up from an average price of 3.3 cents per pound to 4.2 cents (Canadian funds). In live stock choice steers at Toronto were slightly lower averaging \$6.05 per hundred pounds as compared with \$6.14 in July, while at Winnipeg the price was down from \$5.09 per hundred pounds to \$4.70. Veal calves at Toronto advanced from \$5.46 per hundred pounds to \$6.06 and at Winnipeg from \$3.90 per hundred pounds to \$4.46. Bacon hogs at Toronto were up from \$5.03 per hundred pounds to \$5.21 and at Winnipeg from \$4.38 per hundred pounds to \$4.69. Lambs declined substantially, being down from \$7.39 per hundred pounds to \$5.97 at Toronto and at Winnipeg from \$5.98 per hundred pounds to \$5.03. The price of creamery butter at Montreal advanced from 19.6 cents per pound to 21.2 cents, while at Winnipeg the price was 2 cents per pound higher at 20 cents. Fresh eggs at Montreal advanced from 24.5 cents per dozen to 28.1 cents and at Toronto from 21.5 cents per dozen to 23.5 cents. Raw

cotton at New York advanced from 6.7 cents per pound to 8.5 cents (Canadian funds). This is the highest price reached since March. Lower crop estimates and unfavourable weather conditions were said to be factors influencing the price movement. Raw silk at New York also advanced substantially, the price being up from \$1.64 per pound to \$2.06. The increases were said to be due mainly to a shortage of many of the grades required and to the slow movement of new silk to the market. The price of raw wool advanced from 8.9 cents per pound to 9.10 cents. Common white pine lumber was \$1 per thousand board feet lower at \$35-\$37, while select and better was \$5 per thousand board feet lower at \$70. In non-ferrous metals electrolytic copper at New York advanced from \$6.06 per hundred pounds to \$6.27 (Canadian funds). Tin at Toronto was up from 28.5 cents per pound to 30 cents and silver at New York from 30.7 cents per ounce to 32 cents (Canadian currency). Imported anthracite coal was up from \$12.51 per ton to \$12.76 and western domestic at Edmonton was 25 cents per ton higher at \$2.75.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index number for various countries appeared in the LABOUR GAZETTE for July, 1932, page 832.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number on the base 1924=100, was 58.8 for July, a fall of 0.2 per cent for the month. Food declined 2.8 per cent due to substantial declines in meat and fish and "other food," although cereals were higher. Non-foods were 1.1 per cent higher due to sharp advances in cotton and wool, other groups showing little change.

The *Statist* index number, on the base 1867-1877=100, was 78.9 at the end of July, an advance of 2.5 per cent for the month. The general advance extended to all groups except the sugar, coffee and tea group.

COST OF LIVING.—The Ministry of Labour index number on the base July, 1914=100,

was 141 at August 2, a decline of 1.4 per cent for the month due entirely to the decrease in food prices. Potatoes were much lower, although eggs and butter advanced.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 82 for July, a decline of 1.2 per cent for the month, due to declines in vegetable foods and miscellaneous industrial materials, which were partly counteracted by advances in animal foods and textiles. Minerals and metals and sugar, coffee and cocoa were unchanged.

### Germany

COST OF LIVING.—The index number of the Federal Statistical Office, on the base of 1913-1914=100, was 121.5 for July, an increase of 0.1 per cent for the month due to small increases in food and heat and light, partly counteracted by declines in rent, clothing and sundries.

### Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency), was 79.5 for July, a decline of 1.7 per cent for the month.

There were small increases in animal foods, textiles and miscellaneous industrial materials, but all other groups were lower for the month.

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base 1927 = 100, was 80.29 for June, a decline of 0.5 per cent for the month due to declines in food and heat and light. There were no changes recorded in clothing, rent or miscellaneous commodities.

### India

**WHOLESALE PRICES.**—The index number of the Labour Office, Government of Bombay, of wholesale prices in Bombay, on the base July, 1914 = 100, was 109 for June, a decline of 1.8 per cent for the month due to a decline in industrial materials which was partly offset by advances in all food groups.

**COST OF LIVING.**—The index number of the cost of living, Bombay, on the base July, 1914 = 100, was 109 for July, an advance of 1.9 per cent for the month due to advances in food, partly offset by a decline in clothing. There was no change recorded in fuel and lighting and house rent.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926 = 100, was 64.5 for July, an advance of

0.9 per cent for the month due to advances in farm products, foods and fuel and lighting materials and miscellaneous commodities. There were slight declines in hides and leather products, textile products, metals and metal products, building materials, chemicals and drugs and housefurnishing goods.

The *Annalist* index number of the base 1913 = 100, was 94.1 for August, an advance of 2.2 per cent for the month. Except for small decreases in fuels and building materials, all groups were included in the general advance.

*Bradstreet's* index number, which is the sum total of the prices per pound of 96 commodities of common use, was \$7.1724 at September 1, an advance of 5.6 per cent for the month, which is the third consecutive month to show an advance and is the greatest increase for any month since July, 1925. Of the 13 groups included, 11 were higher than at August 1, one was unchanged and one, live stock, declined.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in that State, on the base 1913 = 100, was 128.5 for July, an increase of 2.1 per cent for the month, showing advances in food, clothing, fuel and light and sundries.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Question of Priority of Claim of Compensation Board in Assignment

This case concerned the claim of the Nova Scotia Workmen's Compensation Board made against a trustee in bankruptcy, that it should receive, in priority to all other creditors, the amount of an assessment which had been levied against the bankrupt company prior to its assignment. The question was referred by the trial judge to the Nova Scotia Supreme Court, which rejected the claim of the Board, two judges however dissenting. The opinion of the majority, as stated by Mr. Justice Paton, supported by Chief Justice Chisholm and Mr. Justice Carroll, was that the Board had no lien upon the money received by the assignee in bankruptcy from the sale of the property upon which the Board held a lien. "The Board," he said, "had ample opportunity under its statutory lien to seize and sell the property by the authorized statutory procedure before the sale by the assignee. The assignee's sale was subject to the lien and even after the sale the Board might still have exercised its rights against the property. The contention that the

conduct of the assignee was in the nature of a tort is not sound."

Mr. Justice Hall, in a dissenting judgment, (supported by Mr. Justice Mellish) gave the following opinion:—"Section 79 (2) of the Workmen's Compensation Act gives the Board a first lien upon all property used in connection with the industry with respect to which the employer was assessed, subject only to municipal taxes. In this case the Board had made its assessment prior to the assignment, and I have no doubt its lien became fixed when the company assigned. Two days after the assignment the Board gave notice of its claim. In my opinion it was a 'secured creditor' within the meaning of the Bankruptcy Act, and when it failed to proceed under the provisions of section 106 of said Act, the trustee should have made the demand necessary for the enforcement of the procedure set out in sections 107 to 111, both inclusive. If the Board failed to comply, it would be excluded by section 112 from all share in any dividend. The custodian gave the Board notice as required by section 88, but no demand was made

by the trustee upon the Board to value its security. I find that the lien might have been exercised prior to the sale by the trustee, and under the circumstances, such sale was merely an assessment of the value of the goods. The trustee cannot claim that the wrongful conversion into cash of goods upon which a lien exists extinguishes that lien and frees the trustee from responsibility in distributing the proceeds. There is authority for holding that the Board can waive the tort and claim upon the proceeds to the extent of its lien."

*Re motor Bodies Ltd.: Workmen's Compensation Board versus Canadian Credit Men's Trust Association* (Nova Scotia), 1931, *Dominion Law Reports*, vol. 3, page 272.

### **Mechanics Lien applies to Structure for Temporary Purposes**

A contractor who was employed to erect a temporary structure in an arena at Vancouver claimed a lien against the owner of the building under the Mechanics' Lien Act for the work or service rendered and for the material used. The building was normally used as a skating and hockey rink and sports arena, and the contractor's work was to build in it a track for a 6-day bicycle race. The building had been hired for this purpose under a six-day lease of the building granted by the owner to a "cycle race association", two days being allowed the association before and after the race for erecting and removing the track.

The contractor's claim for a lien against the owner was allowed by the County Court Judge, and on appeal this decision was affirmed by the British Columbia Court of Appeal, Chief Justice Macdonald dissenting. The Appeal Court found that under the Mechanics' Lien Act (Revised Statutes of British Columbia, 1924, chapter 156) temporary alterations and changes in, or additions to, a building, which are essential to the use and purpose for which it was designed, are a proper foundation for a lien for the work done and for the materials furnished thereupon; and that this is particularly so with respect to property used in the production of shows or entertainments where the alteration and additions to the buildings and land would necessarily be continuous and relatively frequent, as in the case of a general amusement or exhibition park. It was held, therefore, that the lien was enforceable against the defendant in this case.

Chief Justice MacDonald, in a dissenting judgment, held that a lien is not enforceable against the owner of the fee simple with respect to work done, and material supplied on a

structure which has not become part of the land.

*Stirn versus Vancouver Arena Company* (British Columbia), 1932, *Western Weekly Reports*, vol. 2, page 651.

### **Chauffeur Driving Without Licence Retains Civil Rights**

A taxi-driver was killed at the Georgia Street Viaduct at Vancouver, when in avoiding a temporary barrier placed on the road by the city workmen, his car crashed through the barrier and fell to the ground below. His widow sued the city under the Families' Compensation Act, claiming that the barrier was dangerous in its position and did not carry sufficient lights. It transpired that the taxi-driver had no drivers' licence, and the city contended that he had therefore no right to be on the bridge, and was a trespasser. The case was first heard by Mr. Justice Morrison, with a jury, who awarded the plaintiff \$20,000 damages. On appeal by the city the British Columbia Supreme Court affirmed this decision on equal division.

Chief Justice MacDonald, dismissing the appeal, pointed out that the Motor Vehicle Act, under which the deceased should have obtained his licence, imposed no civil liability upon persons who commit breaches of its provisions, and that the failure of the deceased to obtain a licence could not affect his civil right to use the street; he was therefore not a trespasser, and this ground of defence on the part of the city must fail. The case, in his Lordship's opinion, depended on the evidence of negligence; the jury found that sufficient notice of the presence of barrier had not been given by the city workmen. "The respondent," he contended, "had the right of trial by jury, and if this Court were to decide upon the facts in favour of the appellants according to our own view of them we should deprive respondent of his right. The rule is well established and this case is too clearly within it to enable me to say that the jury were wrong. Like reasons prevent us from saying that there was negligence on the part of the deceased. In automobile accident cases, both civil and criminal, I cannot but think that juries are a very unsatisfactory tribunal to decide the facts, but that is for the Legislature not for the Court."

Mr. Justice Martin would have allowed the appeal, holding that the deceased could have avoided the accident had he taken reasonable precautions, while Mr. Justice McPhillips held that the accident was the result of reckless driving. *Burchill versus Vancouver* (British Columbia), 1932, *Dominion Law Reports*, vol. 3, page 287.

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 32]

OCTOBER, 1932

[NUMBER 10

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THERE was little general change in employment at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 8,007 firms, each with a minimum of 15 employees, representing practically every industry except agriculture, fishing, hunting and highly specialized business operations. These firms employed 789,321 persons, as compared with 792,149 in the preceding month. The employment index number (with the average for the calendar year 1926 as the base equal to 100), stood at 86.0 on September 1, as compared with 86.3 on August 1, 1932, and with 107.1 on the same date in 1931. On September 1 of the ten preceding years the index was as follows: 1930, 116.6; 1929, 126.8; 1928, 119.1; 1927, 111.0; 1926, 106.2; 1925, 97.8; 1924, 94.2; 1923, 101.2; 1922, 94.8 and 1921, 89.8. The record for these years shows that there is often a slackening in industrial activity at the beginning of September; the percentage falling-off on the date under review was fractionally less than the average loss reported in the last decade, but the index continued at a low level.

At the beginning of September, 1932, the unemployment percentage reported to the Department of Labour by local trade unions was 21.4, in contrast with 21.8 per cent at the beginning of August and 15.8 per cent at the beginning of September, 1931. The percentage for September was based on the returns furnished to the Department of Labour by 1,762 labour organizations involving a membership of 163,530 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada, during the month of August, 1932, indicated a nominal increase over July in the volume of business transacted, as shown by the average daily placements effected, and a slightly larger gain over the placements recorded daily during the corresponding month a year ago, there having been recorded during August this year 28,397 vacancies, 48,815 applications for work, and 27,355 placements in regular and casual employment.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at \$6.98 for September as compared with \$7.01 for August. Comparative figures for earlier dates are, \$8.03 for September, 1931; \$10.38 for September, 1930; \$11.64 for September, 1929; \$10.28 for September, 1922; \$16.92 for June, 1920 (the peak); and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was 66.9 for September as compared with 66.8 for August; 70.0 for September, 1931; 82.1 for September, 1930; 97.8 for September, 1929; 94.4 for September, 1922; 164.3 for May, 1920 (the peak); and 67.2 for September, 1914.

The loss in working time caused by industrial disputes in Canada during September showed a substantial decrease from the similar loss in the previous month. Sixteen disputes (the same number as in August) were in progress at some time during the month, involving 4,251 workers, and resulting in the loss of 10,995 working days. Corresponding figures for August, 1932, were: sixteen disputes, 4,972 workers, and 62,492 working days; and for September, 1931, twelve disputes, 3,498 workers, and 22,907 working days. Particulars of the disputes which occurred or were in progress during September will be found on another page of this issue.

### Industrial Disputes Investigation Act

During the past month the Department of Labour received the report of the Board of Conciliation and Investigation appointed in connection with the dispute

between the London Street Railway Company and certain of its employees. One new application for the establishment of a Board was received from certain employees; the dispute in this case was in an industry in connection with which a Board could be appointed only with the consent of both parties concerned, and the Department took the matter up with the employers from this point of view. Boards were completed in connection with two appli-

cations already received. A full account of recent proceedings, with the text of the report mentioned above, appears on another page of this issue.

### Re-establishment of unemployed in Canada

The Speech from the Throne at the opening of the Parliament of Canada on October 6 contained the following paragraph on the subject of unemployment and the plans of the Dominion Government for the relief of the unemployed:

"The problem of unemployment continues to receive the anxious attention of my ministers. Under the powers granted them at the last session of Parliament, they have been able to develop further, in co-operation with the provinces and municipalities, a scheme of direct relief to be put into operation during the autumn and winter months to the extent required by prevailing conditions. Plans for the re-establishment of the unemployed in various parts of the country are in preparation and will become operative as soon as, in the opinion of my ministers, the public expenditure incident thereto will be productive of commensurate benefits.

"It is a matter of gratification to us all that in those large areas of the West, where, during recent successive years, crop failure was followed by widespread distress, this season's bountiful harvest forecasts greatly improved conditions and makes possible a corresponding reduction of relief measures."

The Speech expressed the belief that "while the economic situation still weighs heavily upon all classes in the community, there are at last definite signs that the acuteness of the depression is passing."

### International Labour Office report on unemployment

The statistics compiled by the International Labour Office for the months of July, August and September, 1932, again show a general increase in unemployment as compared with the figures for the corresponding period of 1931. In Great Britain, the Netherlands and Denmark the growth of unemployment has continued throughout the summer season, when there is usually some improvement. A comparison with the figures published in July shows, however, that there has been a slight reduction in the number of unemployed in certain countries during the summer months.

"It is impossible," the report continues, "to say how far the improvement shown in several countries during the last three months is a seasonal phenomenon, and how far it may be taken as a forecast of revival. At the

moment it can only be observed that the percentage of unemployment is 28 in Germany, 23.1 in Great Britain, including Northern Ireland, and 21.5 in Austria, and the percentage of unemployment among members of voluntary unemployment insurance funds is 39.9 in Belgium, 31.7 in the Netherlands and 30.1 in Denmark. In the United States, according to trade union statistics, the percentage of unemployment has increased during the three months in question from 31 to 34."

It is pointed out that the figures presented in the report cannot be used as a basis for comparison of the situation in one country with that of another. Some States report the number of unemployed persons in receipt of benefit, while others give the total of those registered as unemployed. Many unemployed persons are neither registered nor in receipt of benefit, and the statistics thus do not show the full extent of unemployment. The figures serve, however, as an indication of the development of the situation in each country from quarter to quarter and from year to year.

### Conference of Minimum Wage Boards of Quebec and Ontario

A conference was held at Montreal early in October between the Women's Minimum Wage Commission of the Province of Quebec and the Ontario Minimum Wage Board, the purpose of this as of former meetings being to reach an understanding in regard to certain problems common to the two provinces. The Province of Quebec was represented at the conference by Mr. Gustave Francq, Chairman of the Commission, the Hon. J. C. Arcand, the Provincial Minister of Labour, also attending; while Mr. R. A. Stapells, chairman, and Mr. H. G. Fester attended on behalf of the Ontario Board.

According to a statement given to the press by Mr. Francq, it was agreed at the conference that it would be inopportune at the present time to reduce the minimum wage rates that had been fixed by the existing orders of the two Boards. Consideration was given to the claims of certain employers of female labour to the effect that the present rates are too high considering the depressed conditions of industry, but it was decided that although there had been a reduction in the cost of living since the orders were issued, this reduction was not sufficient to justify any reduction in the minimum wages as fixed by these orders.

No new minimum wage orders have been issued in either province since the depression became acute. The Quebec Legislature, at this year's session (LABOUR GAZETTE, March, 1932, page 298), amended the scope of the Act to

include stores and restaurants, but the Board has not yet issued any orders under the new legislation, although information has been gathered which will be made the basis of new orders when conditions improve.

**Suspension of Assessments for Technical Education in Ontario**

The Ontario Apprenticeship Board recently announced that the assessment of employers under the Ontario Apprenticeship Act are to be suspended for the current year, this action being taken

in order to avoid imposing undue hardships on employers in the building trades during the continuance of depressed conditions in the industry. The Board further stated that the accumulated surplus in the assessment fund was sufficient to meet the necessary expenses in connection with day classes during the coming winter.

**"Fair Wages" legislation in Manitoba**

The "Fair Wages" schedules for public works in Manitoba for the current year were reproduced in the *LABOUR GAZETTE*, August, 1932, page 908. An account of the Fair Wage Act was contributed to the *Labour Day Supplement of the Winnipeg Weekly News* by Mr. C. J. Harding, one of the employees' representatives on the Board. Mr. Harding states that although the Act covers government contribution only, the City of Winnipeg and the Winnipeg School Board have for years past adopted it in their building contracts. "This Act", he recalls, "was passed in the year 1916, the object being to establish and protect the wages of workmen employed in the construction of public works of the province, and that the earnings of such workmen should be assured. The persons to comprise the Fair Wage Board of five, as provided for in the Act, are as follows:—two representing the employees, two representing the employers, and the chairman, who shall be an official of the Department of Public Works. The duty of the Board each year, is to prepare a schedule setting forth the minimum rate per hour payable to any employee engaged in their respective trades, and the maximum number of hours during which any employee engaged in the respective trades shall be required to work, on or at the building.

"The Act declares it to be a cardinal principle governing any findings or recommendations by the Board that the wages payable and hours required to labour, shall not be less favourable to the respective classes of employees affected than the wages and hours of labour mutually agreed upon by employers

and trade societies for the next succeeding twelve months, as evidenced by the production of working agreements duly executed by the respective parties thereto, or in the absence of such working agreements, such other evidence of mutual agreement as may be deemed conclusive by the Board, failing which, the average of those which in practice prevailed amongst good employers of labour in said district during the last preceding twelve months."

**Movement for uniformity of legislation in Canada**

Recent progress in the movement towards uniformity in the legislation of the Dominion and Provinces of Canada was noted by Mr. R. M. Fisher, K.C., in a paper read before the Canadian Bar Association at their 17th annual convention, held at Calgary in August. "Appreciation of the work quietly and faithfully performed by the Commissioners on Uniformity of Legislation in Canada", he said, "is evidenced by the enactment in Saskatchewan and Manitoba of the uniform Statute of Limitations; in British Columbia by the adoption of the uniform sections dealing with the judicial notice of statutes and methods of proof of statutes and other state documents; and in Ontario and Saskatchewan by the adoption of the uniform act respecting registration of corporation securities. Several provinces adopted the 'Automobile Insurance Act' drafted by a committee of insurance superintendents and legislative counsel. Consolidation is evidenced by new Highway Traffic Acts in Saskatchewan and Nova Scotia, a new Companies Act and an Insurance Act in Manitoba, a new Fisheries Act and an Unfair Competition Act in the Dominion, and a new Factories, Shops and Office Buildings Act in Ontario." Other subjects which have been considered by the Commissioners include workmen's compensation, mechanics' liens, chattel mortgages, etc.

The "Conference of Commissioners on Uniformity of Legislation in Canada," to which Mr. Fisher refers, was organized in 1918, several of the provinces having accepted the suggestion of the Canadian Bar Association by passing statutes providing for the appointment of commissioners to attend an interprovincial conference for the purpose of promoting uniformity of legislation. The first meeting of commissioners and representatives of the provinces took place at Montreal in September, 1918, and at this meeting the Conference on Uniformity of Legislation in Canada was organized. The Commissioners receive no remuneration for their services, but some of

the provinces make contributions towards the expenses of the Conference.

### International public works

*Industrial and Labour Information*, the weekly organ of the International Labour Office (League of Nations),

in its issue of September 5, makes the following reference to efforts now being made in various countries to improve the employment situation through programs of large scale public works:—

"The campaign initiated by Albert Thomas (late director of the International Labour office), and pursued by the Office ever since the beginning of the depression, to secure the adoption by Governments of programs of large scale public works on an international basis calculated to improve the economic equipment of the countries concerned, and at the same time to provide work without delay for some of the unemployed, seems to be producing some effect. During recent months, numerous statesmen, economists and employers have given their support to the proposal, and some indications of the progress which has been made will be found in our present issue.

"An example of international collaboration for the execution of public works has now been afforded by the Governments of Canada and the United States, which have just concluded a treaty by which they undertake to carry out jointly a project which will make the Great Lakes accessible to ocean-going vessels. In France, the Minister of Public Works, in a recent speech, expressed the opinion that international agreements for the simultaneous execution of large scale public works constituted one of the most effective remedies for the dangers to which Europe was exposed, and added that France was ready to respond to the appeal of the League of Nations. It may be noted, also, that the President of the United States has signed an Act appropriating the sum of \$1,500,000,000 for the purpose of financing public works on a large scale, while the German Government has announced a vast program of works, details of which will be given in these pages in due course, providing for the expenditure of about 2,000,000,000 marks and intended to give employment to 1,750,000 persons at present out of work.

"In the meantime, the machinery of the League of Nations has not been idle. The members of the Committee of Experts set up under the auspices of the Communications and Transit Organization to examine and co-ordinate the proposals submitted by the

various States have recently considered eighteen projects, mostly emanating from countries in Central and Eastern Europe."

### A.F. of L. policy on unemployment insurance

President William Green, of the American Federation of Labour, made a further statement on September 9 as to the policy favoured by the executive council of

the Federation in regard to unemployment insurance. In the first announcement of the Council's adoption of the new policy (*LABOUR GAZETTE*, August, 1932, page 844), it was stated that the Council would recommend the adoption of a federal rather than a State plan of insurance. Owing to the constitutional difficulties involved in a federal plan, the Council now proposes the enactment of State laws, and is now drafting proposed legislation that will be submitted to the Federation for approval at the annual convention, to be held at Cincinnati, Ohio, commencing on November 21.

"Our bill will incorporate three principal features," Mr. Green said. "It must be compulsory insurance; the cost must be placed on industry and administration by the States; and working men and women must be protected in the exercise of their right to belong to a trade union. I mean by that latter principle that unemployment insurance must not become the means of forcing persons to accept employment in non-union establishments." Mr. Green pointed out that the anti-injunction bill passed by Congress last session recognized as matters of public policy the rights of collective bargaining and of the formation of trade unions, and he thought that the insurance legislation should therefore protect people who desire to exercise those rights.

### Movement for shorter hours of work in United States

The proposals of the executive council of the American Federation of Labour for the general adoption of shorter working hours as a remedy for unemployment,

and for the establishment of a federal advisory council to regulate hours of work in accordance with economic conditions, were noted in the *LABOUR GAZETTE*, August 1932, page 843. Later, President Hoover was invited by the Federation to convene a conference of representatives of industry and labour for the purpose of arranging for the early application of the five-day week and the six-hour day throughout the United States.

A similar proposal was submitted to the President by a delegation from New Hamp-

shire, headed by Governor Winant and comprising members of the New Hampshire Unemployed Committee. It was suggested that a federal organization should be formed for the purpose of putting into operation throughout the country a shorter and more flexible working week; such a measure in the opinion of the delegation would provide re-employment for at least 3,000,000 persons.

In the State of Wisconsin provision has been made that all public works are to be carried on the basis of a five-day week and a six-hour day whether such works are done under contract or by day labour.

**Co-operative organization of unemployed at Seattle, Washington**

In the September issue of *Cooperation*, the organ of the Consumers' Co-operative Movement in the United States, Professor C. J. Miller, of the University of Washington, describes the activities of the Unemployed Citizens League, an organization formed by unemployed workers in Seattle to provide for the necessities of the members. The movement began a year ago with meetings of groups of unemployed men, who finally organized the League. Having failed to induce the city to undertake an extensive program of public work, the "U.C.L." directed their efforts to securing food, clothing, and fuel and shelter for the needy. They appointed commissaries throughout the city, each manned by members of the League without compensation. Food purchased with city and county funds goes direct to these commissaries, thus saving not only the retailer's profit but his expense of doing business. Supervisors, who are responsible for six or seven commissaries, report to the executive committee of the U.C.L. Managers of the commissaries are elected by the members of the local in that district. League officials believe that their organization has made a record unsurpassed in the United States by its kind for efficiency, smoothness of operation, and fairness.

The executive committee then studied production and decided that their program could be effectively expanded to that field. The cost of bread, now 3½ cents a loaf, they figure can be lowered 50 per cent by producing it in their own plant with free labour; milk costs could be reduced from 6½ cents a quart to 3½ cents. At present the League is operating neither of these plants, despite the fact that a building with a bakery oven has been donated, because public officials have been unwilling to supply approximately \$10,000 needed capital. If the League's figures are

reasonably accurate, the milk bottling plant and the bakery would save \$10,000 of tax money each three months.

In connection with each commissary there is a sewing room where women convert donated garments into useful apparel. So extensive is this work that League officials could give no estimate of its total. Shoe repair shops manned by free labour from the League and supplied with materials from city and county funds have repaired in the past six months an average of 6,000 to 7,000 pairs monthly, or a total of 40,000 pairs. Recently a completely equipped overall factory was rented by the League. Some quilts, overalls and other work clothing have been made. Throughout the past winter, under trying conditions, unemployed men cut wood so that their families and friends might not suffer from cold. The wood is donated by the owners of the land on condition that none is sold, and the city pays the truck hire to bring the wood to the city. Some coal was mined by the League but its quality was poor, hence the League is now seeking a satisfactory mine connection. The housing problem has been vexatious at times. Sympathetic co-operation, however, has kept the families housed. If a family is evicted for non-payment of rent, a house which has fallen into disuse because of age and lack of repairs is made habitable by League members, or with paint and lumber supplied by public money and free labour from the League, a landlord is induced to accept repairs on his premises for rent.

The president of the University of Washington was approached by League representatives and, as a result, scores of faculty members have volunteered to give courses or lectures to the members. The writer comments as follows on the significance of this movement:—"To organize nearly 15,000 economically dependent men and women of all ages, occupations, and interests; to hold them together in a period of unrest; to keep up their morale and avoid disturbances; to accept full responsibility for the honest and efficient distribution of foodstuffs to 40,000 members and their families; to supply fuel and shelter for the needy; and to take the lead in forming a state organization—these are some of the accomplishments of the Unemployed Citizens League of Seattle. That they were accomplished in the face of major obstacles and some open opposition reflects more credit to the members and their leaders. Probably for the first time in their lives many men have experienced the sensation of co-operating voluntarily for the good of their group."

**Chicago  
Workers'  
Committee on  
unemployment**

This organization of unemployed workers was formed last year in Chicago under the guidance of the League for Industrial Democracy, but it is now under leaders chosen from its own ranks. The *New Republic*, in its issue of September 28, stated that the Workers' Committee was at that date composed of 15,000 men and women, divided into 49 local units, new units being formed at the rate of one each week. Each local has set up a grievance committee to investigate complaints from its dissatisfied members and to take these complaints up with the district administrators of emergency relief. There is also a central grievance committee to deal with cases which the locals cannot adjust. The Workers' Committee has, it is stated, been notably successful in securing the continuation of the public relief services, and when the local relief funds became depleted last February the Committee was able to rouse public sentiment for a further State appropriation. The Committee succeeded in obtaining the necessary publicity by stating the case of the unemployed by means of radio, and by interviews with the press, public officials, and leaders of finance.

The Speakers' Bureau, a volunteer body composed of well-informed people from every walk of life, supplies the Committee with discussion leaders who take part in the weekly meetings of the locals, where public questions are discussed from the standpoint of the unemployed. Similar movements have been reported from several other cities in the United States.

**American  
employers  
consider future  
depressions**

The *Service Letter*, published monthly by the National Industrial Conference Board (United States), in its issue of August 30, analyses various proposals that have been made for reducing the stress of business depressions in the future. The abuses that cause depressions are first enumerated—over-production, excessive instalment buying, uninformed speculation, over-optimistic expansion in boom times, inflation of credit, and war with its disorganizing effect upon national and international affairs. Remedies for these evils are suggested in the following directions: (1) the accumulation and conservation of reserve funds during prosperous times for use in periods of business stagnation; (2) a more conservative policy of expansion, under the general guidance of a national planning and control board; such a

board might be under control of the Federal Government, but preferably it would be independent of the government, and would serve in an advisory capacity only; it should be composed of men of the highest calibre assisted by a staff of economists and statisticians; (3) better indexes of business conditions should be available; (4) for the purpose of counteracting the creation of a permanent surplus of labour due to technological improvements and advances in managerial technique, normal working hours should be reduced, and all employable persons should be retained at work at a rate of wages that would correspond with the reduced hours of labour.

Female employees at Saskatoon organized the Waitresses and Shop Assistants Protective Union during September, the purpose of the new body being to safeguard the members and to bring to the attention of the Minimum Wage Board alleged violations of the regulations under the Minimum Wage Act of the Province.

During September a total of 2,855 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 14 of which were fatal cases; in Schedule 2 industries, 204 were reported, including 2 fatal cases; and 209 accidents to employees of the Crown were reported during the month, making in all 3,268, of which 16 were fatal.

The Ontario Command of the Canadian Legion, at a convention held at Sault Ste. Marie in September, adopted resolutions asking the Dominion Government to establish a system of unemployment insurance on a contributory basis; proposing subsidies to encourage coal production in the Maritime Provinces; and recommending that ex-service men should have the same priority in civil service appointments in the province as in the Dominion service.

A report by the Dominion Bureau of Statistics on the silk industry in Canada in 1931 shows that the raw silk and rayon manufacturing industry has expanded from nine establishments in 1917 to twenty-three establishments in 1931, and the number of employees engaged in the industry has grown in this period from 824 to 6,273. Imports of raw silk into Canada have increased from 138,765 pounds in 1917, to 2,260,243 pounds in 1931.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada was reported by the Superintendents of the Employment Service of Canada at the end of September to be as follows:

In Nova Scotia few requests were received for farm help, although potato digging was in progress. Garden truck and all vegetables were plentiful. Fair catches of fish were reported along the coast and a small fleet of bankers was preparing at Halifax for fall fishing. Lumber operations remained quiet. With one exception, coal mines in the New Glasgow district worked from one to six days per week, while those in Cape Breton and vicinity were in operation from one to four days. Manufacturers of confectionery and mineral waters, also oil refineries, reported a decided falling off in business due to the lateness of the season but bakeries and other lines were fair. Some idleness was in evidence in the iron and steel industry, although conditions there were slightly improved. No large building contracts were under way, but several small dwellings were in the course of construction, and street, highway and sewer work afforded employment. Transportation had declined somewhat. Local trade was stimulated through a few fall sales, but collections were slow. The usual demand for domestics and charworkers prevailed and placements were made accordingly.

In the Province of New Brunswick, farmers were busily employed in harvesting their crops and with fall ploughing. Grains showed an exceptionally good yield, but blight had played havoc with potatoes, especially on low land. Fair to good catches of fish were reported, although the season had been handicapped at its opening by high winds. Large quantities of lobsters were taken and several carloads of live lobsters shipped to outside markets. A few men were supplied for cutting cordwood, but otherwise there was no activity in logging. Lumber manufacturing was quiet, as all sawmills on the Miramichi river had finished work for the season. Planing mills were still operating but very little stock was moving. Other industries were only fairly well employed. A small amount of overhaul and general repair work was being carried on in the building construction line, as well as progress being made in larger contracts already under way. Road construction was brisk throughout the rural districts under provincial supervision, and street repairs continued in the town limits. Water transportation was good, but trade was somewhat slow. A few placements of women were made in the domestic service section.

Only a slight call for farm help was received in the Province of Quebec. Conditions were dull in logging, one district only reporting a slight renewal of activity in that industry. Quietness also prevailed in the mining areas. Manufacturing, likewise, throughout the province was slack, especially in boot and shoe, clothing, cigar and tobacco factories and in metallurgy and the rubber industries. Paper mills were somewhat busier. A very slight improvement was noted in building construction, but relief work on street and sewers was the chief means of employment in most centres. Transportation was slack and trade only moderately active. The women's section was busy and a fair demand for domestics was reported from Hull, Montreal and Quebec City, with more than sufficient applicants on hand to meet all requirements.

Harvesting was completed in the Province of Ontario, but in spite of this, the demand for farm help in some sections continued fairly good, although in other localities a falling off was reported as the season advanced. Only North Bay and Port Arthur reported any activity in logging. Other lumbering districts were very quiet, with no signs of opening up at present. An increase in mining occurred at Sudbury, but only a very few men were being taken on at the mines at Timmins. While most of the manufacturing firms continued to work on short time with reduced staffs, there were others which were operating overtime or were taking back old hands, as was the case in Guelph. In London, too, some of the factories were busy, while others were far below normal, but manufacturers were quite optimistic about a revival in the near future. This feeling prevailed also in Hamilton, but staffs and production still remained on low levels in Brantford, Oshawa, Sarnia and St. Thomas. Belleville, Pembroke and Toronto all reported a better tone, more orders for various types of skilled men having been received in the latter city than for some time previous. No new developments took place in building construction, the majority of work afforded in this line being general repairs, erection of small dwellings or alterations. Highway construction on the trans-Canada was still in progress, the camps being kept at full strength by taking on applicants as replacements occurred. Transportation and storage showed a slight decline, as the grain movement from the west had slowed down, although outward bound shipments at Fort William remained fairly steady. Elevators at Port

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(10) MacLean's Building Review.

Arthur were filled to capacity and lack of shipping orders at this point made the situation here temporarily somewhat more serious. Clerical work for women continued scarce and although casual employment for females also was not plentiful, still a number of good placements were effected.

The continued decline for farm labour throughout Manitoba indicated that threshing operations were finished, most of the orders being for men on a monthly basis for fall ploughing. Logging and mining were both quiet, but manufacturing in Winnipeg was fair. Some activity in building construction was also noted in the same city, although alterations, repairs and additions at nominal sums comprised a large portion of the construction work authorized. Railway work at Dauphin had picked up and many spare men, who had been employed at other occupations, were recalled and put to work. Retailers reported a slight improvement in the volume of trade, but little change took place in wholesale lines. The demand for women domestics for city employment remained steady, but fewer opportunities were available in country positions.

Fewer calls for harvest hands were received at the Saskatchewan Employment Offices as threshing, although retarded to a certain extent by unfavourable weather, was well advanced and outfits had their full complement of men. Very little fall ploughing had been started as yet, but some men had found work stacking and picking potatoes. Mines at Estevan showed a marked improvement and were busily engaged taking on full crews as speedily as places could be prepared for them, with promises of further openings in the near future, small mines which catered to farm trade being particularly busy. Building construction was exceptionally dull, also railway construction, although many men who had been unemployed for some considerable time were re-engaged and would be kept busy until the movement of grain was over. The call for city domestics in the women's division was fair, but other groups remained quiet.

Heavy rains in Alberta earlier in the month delayed harvesting but operations were well advanced and would soon be completed if fine weather were obtained. The sugar beet harvest at Lethbridge was also in full swing and indicated a heavy yield, estimated at about 20 per cent above the average. Pulling and topping, however, had been somewhat restricted due to the inability of the factory to handle the excessive supply. Logging was quiet, also mining, although slightly more activity was reported in the latter group. Some of the mines at Lethbridge and Edmon-

ton worked three to five days a week, thereby reducing to a large extent the financial burden of relief. Building construction remained unchanged, with little improvement noted as yet, there being few contracts of any size under way. There was an appreciable increase in the number of train crews taken on at various points, but most of the gain was confined to the running trades. There was an increase in placements in the women's domestic section with experienced applicants scarce.

Few calls for farm hands were registered in British Columbia, with sufficient labour available to meet all demands. Conditions for a good fruit crop were favourable and prices fairly good. Little activity was evident in the lumbering industry and mining also was dull. Manufacturing showed no change. Shingle mills were operating at about 65 per cent capacity, which is almost normal, as only the larger outfits having dry kiln equipment operate at 100 per cent strength, but sawmills were much below par, or were shut down entirely. Canneries, packing houses and produce companies were working full time, but this employment was seasonal only. Outside of provincial government relief work, little construction was in progress and no orders were listed for railroad workers, except at Kamloops, where slight improvement was indicated, as men had been recalled for grain hauling. Movement of wheat provided most of the work for longshoremen at Vancouver, while on the waterfront at Prince Rupert men were busy handling grain, salmon, coal, lumber and general freight. Trade was fair. Fewer orders were received for women domestics and wages were low, although a large number of women and girls continued to register at the offices.

#### EMPLOYERS' REPORTS

There was a decrease in employment at the beginning of September, when the 8,007 firms who reported to the Dominion Bureau of Statistics showed a combined working force of 789,321 persons, as compared with 792,149 in the preceding month. The index number (average calendar year 1926=100) declined slightly from 86.3 on August 1, 1932, to 86.0 on September 1, as compared with 107.1 on the same date in 1931. On September 1 of the ten preceding years, the index was as follows:—1930, 116.6; 1929, 126.8; 1928, 119.1; 1927, 111.0; 1926, 106.2; 1925, 97.8; 1924, 94.2; 1923, 101.2; 1922, 94.8 and 1921, 89.8. The record for these years shows that there is often a slowing down in industrial activity on September 1; the percentage falling-off on the date under review was fractionally less than the average

loss reported in the last decade, but the index continued at a low level.

Firms in Quebec, the Prairie Provinces and British Columbia showed gains, but contractions occurred in the Maritime Provinces and Ontario. In the Maritime Provinces, the reduction was chiefly in construction, mainly of highways and roads, but transportation and coal-mining also released employees, while logging, railway construction and manufacturing showed improvement. In Quebec, increased employment was noted, largely in manufacturing, but also in shipping and highway construction. Reductions were reported, however, in logging. In Ontario, manufacturing as a whole employed fewer operatives, and curtailment was also indicated in mining, transportation, construction and trade. In the Prairie Provinces, mining and transportation afforded more employment; manufacturing was rather slacker, notably in iron and steel; building material and lumber divisions, and construction work was also curtailed. In British Columbia, there was an increase in employment, chiefly in manufacturing, mining and building and railway construction, while logging, shipping and highway construction showed contractions.

An analysis of the returns by cities shows that employment advanced in Quebec City, Montreal, Ottawa and Vancouver, while curtailment was registered in Toronto, Hamilton, Windsor and the adjacent Border Cities and Winnipeg. In Montreal, manufactures showed general improvement, and transportation was also rather brisker, but construction and trade reported a falling-off. In Quebec City, gains took place in manufacturing, services and construction. In Toronto, manufacturing showed a contraction, and construction and trade also recorded lowered activity. In Ottawa, increases were reported in manufacturing, while construction released some help. In Hamilton, manufacturing and construction showed contractions. In Windsor and the adjacent Border Cities, automobile plants afforded less employment; other industries reported only slight general changes. In Winnipeg, manufacturing as a whole was rather slacker and work in transportation, construction and trade was also curtailed. In Vancouver, increases in personnel were reported in manufacturing, while other industries showed very little change.

The manufacturing group in the Dominion as a whole showed a slight increase, which was especially interesting because in the experience of the last decade, employment on September 1 has usually been lower than on August 1. Logging, communications, construction and retail trade showed decreased

employment. On the other hand, coal-mining, transportation and services recorded improvement.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

The consistent though very slight rise in the volume of work available to local trade union members which has prevailed since the close of April was again in evidence during August to a small degree, the 1,762 labour organizations from which reports were received, with 163,530 members, showing 21.4 per cent of idleness, compared with 21.8 per cent in July. The level of activity was, however, considerably lower than in August, 1931, when 15.8 per cent of the members reported were without work. Nova Scotia and New Brunswick unions reported declines in employment of minor importance when compared with July, while in the remaining provinces the general trend was toward greater activity, though the gains were slight, ranging from 1.5 per cent in Manitoba and Alberta to 0.5 per cent in Ontario. Much quieter conditions prevailed for Quebec and Ontario members than in August a year ago and in New Brunswick also employment was substantially curtailed. Recessions, on a smaller scale, were indicated by British Columbia, Manitoba and Saskatchewan unions. In Nova Scotia and Alberta little change occurred from August a year ago, the tendency, however, being in a favourable direction.

On another page of this issue will be found a more detailed article with tabular statements on unemployment among local trade unions at the close of August, 1932.

During the month of August, 1932, the offices of the Employment Service of Canada made 28,870 references of persons to positions and effected a total of 27,355 placements. Of these, the workers placed in regular employment numbered 15,319, of which 11,581 were men and 3,738 women. Those placed in casual work totalled 12,036. Applications for work were received at the offices from 36,950 men and 11,865 women, a total of 48,815, while vacancies reported, numbered 28,397, of which 21,114 were for men and 7,283 for women. An appreciable increase was shown in all three divisions—vacancies, applications and placements—when the above figures were compared with those of the preceding month, but in comparison with August, 1931, although vacancies and placements were considerably

#### TRADE UNION REPORTS

#### EMPLOYMENT OFFICE REPORTS

higher, applicants registered showed a marked decline, the reports for July, 1932, showing 25,917 opportunities for employment, 46,692 applications made, and 25,191 placements effected, while in August, 1931, there were recorded 26,809 vacancies, 71,383 applications for work, and 25,662 placements in regular and casual employment. A report in detail of the work of the offices for the month of August, 1932, may be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during August, 1932, was \$3,331,278, as compared with \$4,227,173 in the preceding month, and with \$8,201,879 in August, 1931.

The *MacLean Building Review* for October states that the total value of building contracts awarded in Canada in September was \$9,646,500. Each of the groups declined from the August figure of contracts awarded. Residential and Engineering almost equalled the total for the previous month. Business Building held up well, while Factories declined to a new low for the year.

Of the September contracts 48.6 per cent related to work awarded in the Province of Ontario. The estimated value was \$4,691,000. Thirty-six per cent related to work in the Province of Quebec, and was valued at \$3,474,900. The Prairie Provinces had 6.7 per cent or \$643,900 worth, while British Columbia showed \$492,700, which is 5.1 per cent, and the Maritime Provinces 3.6 per cent or \$344,000.

The September awards by groups show Engineering as having accounted for 50.7 per cent, valued at \$4,885,900. Residential shows 23.6 per cent or \$2,276,900. The same percentage is shown for Business Buildings, which had a value of \$2,276,200. Industrial amounted to 2.1 per cent or \$207,500.

### Production and Trade

**INDUSTRIAL PRODUCTION** Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 1042.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that despite the further decline in operations of the iron and steel and construction industries, the general level of production in Canada was practically maintained in August.

Production of pig iron reached the lowest point for the year, 5,992 tons being produced compared with 7,317 tons in the preceding month. The blast furnace at Hamilton which had been active was banked in August so that no furnaces were in blast at the end of the month. The output of steel ingots and castings was 26,710 tons compared with 27,506 in July. Automobile plants were less active than in the preceding month, the output being 4,067 cars and trucks compared with 7,472. The imports of iron and steel products were valued at \$4,394,000 compared with \$5,130,000 in July.

The flour milling and sugar refining industries were active in the latest month for which statistics are available. Production of flour was 1,202,000 barrels compared with 1,151,000. The output of manufactured sugar was 101,700,000 pounds compared with 92,583,000 in the preceding period. Cattle slaughterings showed a gain, while hogs and sheep were down after seasonal adjustment. Cheese exports were 167,152 pounds compared with 159,937 in July. Canned salmon exports were at a somewhat lower level.

Imports of crude rubber were 2,173,019 pounds compared with 3,424,750 in July, and the manufacture of pneumatic tires was less in the latter month. The manufacture of leather boots and shoes was 1,203,000 pairs in July, a decline of 9.8 per cent after seasonal adjustment. Imports of raw cotton showed a marked increase in August, the total being 5,995,000 pounds compared with 3,590,000 in July, and imports of cotton yarn were 669,693 pounds compared with 344,396 in July.

Output of newsprint was greater than the low level of the preceding month, the total being 157,881 tons. The gain in the exports of woodpulp was less than normal for the season. Exports of boards, planks and shingles were greater in volume than in July.

Imports of crude petroleum were 89,777,000 gallons compared with 104,209,000 in July, the decline after seasonal adjustment being 10.6 per cent. On an average daily basis, the output of electric energy was 39,710,000 k.w.h. compared with 37,350,000 in July, the gain after seasonal adjustment being about 6 per cent. Without seasonal adjustment, gains were recorded in each of the five economic areas.

**Coal.**—Coal production in Canada during August totalled 720,478 tons, a decline of 41.1 per cent from the 1927-1931 average for the month of 1,222,330 tons. The output of bituminous coal in August amounted to 570,101 tons, sub-bituminous coal, 25,146 tons, and lignite coal, 125,231 tons.

Nova Scotia' production of 309,544 tons was 7.8 per cent below the August, 1931, output of 335,837 tons. Alberta mines produced 257,935 tons or a 1.4 per cent decline from the output in the corresponding month of 1931. Coal production in British Columbia decreased 14.1 per cent to 118,807 tons as compared with 138,302 tons a year ago. Mines in Saskatchewan produced 18,796 tons and in New Brunswick, 15,396 tons; in August, 1931, the outputs were 19,452 tons and 12,245 tons, respectively.

Canadian imports of coal were recorded at 1,198,210 tons, a 34.1 per cent falling-off from the five year average for the month of 1,818,605 tons. Anthracite importations totalled 338,963 tons, consisting of 196,828 tons from Great Britain and 142,135 tons from the United States. During the past four months Great Britain has been the principal source of Canada's anthracite supply, accounting for 59.1 per cent of the importations during the period; the United States supplied 39.9 per cent and Germany, 1.0 per cent. Receipts of bituminous coal in August amounted to 859,050 tons made up of 818,376 tons from the United States and 40,674 tons from Great Britain. Customs' records show that 197 tons of lignite coal were imported into Canada in August.

Coal made available for consumption in Canada during the month was computed at 1,894,407 tons or 36.4 per cent below the August, 1927-1931 average of 2,977,821 tons. The month's coal supply included 338,963 tons of anthracite coal, 1,404,870 tons of bituminous coal, 25,146 tons of sub-bituminous coal and 125,428 tons of lignite coal.

#### EXTERNAL TRADE.

A summary of Canadian trade in August, 1932, prepared by the Department of National

Revenue, shows that the merchandise entering Canada for consumption amounted to \$36,527,262 as compared with \$35,710,571 in the preceding month and with \$47,308,079 in August, 1931. The chief imports in August, 1932, were: Non-metallic minerals and products, \$9,143,037; Fibres, textiles and textile products, \$5,586,829; Agricultural and vegetable products, mainly foods, \$4,940,019.

The merchandise exported from Canada during August, 1932, amounted to \$41,314,120 as compared with \$42,321,284 in the preceding month, and as compared with \$48,763,652 in August, 1931. The chief exports in August, 1932, were: Agricultural and vegetable products, mainly foods, \$14,564,920; Wood, wood products and paper, \$11,540,722; Animals and animal products, \$6,282,815.

#### Strikes and Lockouts

The time loss due to industrial disputes during September showed a very substantial decrease over that recorded for the previous month, although the same number of disputes were recorded and only a slight decline appeared in the number of workers involved. The decrease in time loss was largely due to the cessation during August of a dispute involving some 3,000 men's clothing factory workers in Montreal, which had caused a loss of 25,000 working days during that month. In comparison with the figures for September, 1931, while the number of strikes recorded is considerably larger, with more workers involved, the time loss incurred in September this year was less than half that recorded for the same month last year when a strike of coal miners in Estevan, Sask., caused a time loss of 12,000 working days. There were in existence during the month sixteen disputes, involving 4,251 workers, and resulting in a time loss of 10,995 working days, as compared with sixteen disputes, involving 4,972 workers and resulting in a time loss of 62,492 working days in August, 1932. In September, 1931, the record included twelve disputes, involving 3,498 workers and resulting in a time loss of 22,907 working days. At the end of the month there were on record eight disputes involving approximately 1,700 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the union.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at \$6.98 for September as compared with \$7.01 for August. Comparative figures for previous dates are: \$8.03 for September, 1931; \$10.38 for September, 1930; \$11.64 for September, 1929; \$10.28 for September, 1922; \$16.92 for June, 1920 (the peak); and \$7.83 for September, 1914. The most important decline was a seasonal fall in the price of potatoes, while the prices of beef, mutton, milk and bread were also slightly lower. A seasonal advance occurred in the price of butter and of eggs, while less important increases occurred in the prices of bacon, lard and sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$16.34 at the beginning of September as compared with \$16.42 for August; \$18.06 for September, 1931; \$20.75 for September, 1930; \$21.90 for September, 1929;

\$20.90 for September, 1922; \$26.92 for July 1920 (the peak); and \$14.33 for September, 1914. Fuel was slightly lower due to declines in the price of wood in some localities, which more than offset seasonal advances in the price of anthracite coal. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 66.9 for September as compared with 66.8 for August. The index number for earlier dates is 70.0 for September, 1931; 82.1 for September, 1930; 97.8 for September, 1929; 94.4 for September, 1922; 164.3 for May, 1920 (the peak); and 67.2 for September, 1914. In the classification according to chief component materials five of the eight main groups were higher and three were lower. The groups which advanced were: the Animals and their Products group, because of higher prices for cured meats, calves, hogs, hides, butter, cheese, lard and eggs which more than offset lower prices for canned salmon, steers, lambs and

shoes; the Fibres, Textiles and Textile Products group, due mainly to higher quotations for raw cotton, raw silk, raw wool and cotton fabrics; the Wood, Wood Products and Paper group, due to advances in the prices of lumber and cedar shingles, which more than offset declines in the prices of sulphite and ground wood pulp; the Non-Ferrous Metals and their Products group owing to advances in the prices of antimony, copper, lead, tin and zinc which more than offset reductions in the prices of aluminium and silver; and the Non-Metallic Minerals and their Products group, due to higher prices for coal. The Vegetables and Vegetable Products group was considerably lower, decreases in the prices of barley, corn, oats, wheat, flour, bran and shorts exerting a greater influence than higher prices for flax, gluten meal and coffee. The Iron and Its Products group and the Chemicals and Allied Products group were also slightly lower, the former due to lower quotations for steel sheets, steel tank plates and scrap iron, and the latter due to lower prices for carbon black.

### Workers-Management Plan of S. C. Johnson Company, Brantford

The industrial management plan in existence at the plant of S. C. Johnson and Son, Limited, manufacturers of polishes and varnish at Brantford, Ontario, was described in the *Toronto Globe*, September 10, 1932. It incorporates the principles of employee ownership, a guarantee of steady work at good wages through "level production", and protection against unfair dismissal by means of an appeal board composed of employees. The employees also enjoy the benefits of group insurance, recreational facilities, and of the company's steady dividends. The plan was introduced and established in Brantford in 1920 by Mr. J. M. Croft, who had been with the Johnson Wax Company in Racine, Wisconsin. The industry was started with a Dominion charter and capital structure featured by all common stock and no bond issues. In this undertaking Mr. Croft had the support of his former chief, S. C. Johnson, a wealthy philanthropist, who furnished the means for launching the Canadian factory. Favourable results were achieved from the start, and in its first year the company paid off its obligations from its earnings. The employees were told that there was no desire to exploit them, but it was suggested to them that they should buy stock in the company. Wages were held to the highest level the business could stand, and the stock is now largely held by the sixty men and women who work for the company.

Then a club charter was drawn up, featuring a plan to have the employees manage the business. The employees' association is named "J.F.L.A.", meaning "Johnson's First, Last, Always". A new employee is on six months' probation to determine whether he has the spirit of the place and if he should be admitted to permanent membership, but when he secures permanent placing he is guaranteed fifty weeks' work a year at top wages, plus two weeks' holidays with pay. The discipline of the plant is handled entirely by a committee of employees, whose decisions are passed on to the management.

The basis of the guaranteed employment feature is a survey made to estimate the year's production. Instead of having a rush, followed by a slack period, the production is levelled off over the twelve months and all are kept steadily at work.

Speaking of the operation of the plant and its industrial relations program under present conditions, Mr. Duff Slein, formerly mayor of Brantford and solicitor for the Johnson firm, said: "From 1920 the company has maintained its entire staff in steady employment. It would be a mistake to say that it has not felt the depression, but it is likewise true that the extra effort of the entire Johnson organization has made it possible to maintain business on such a high standard."

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**N application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour on September 30 from all classes of brewery workers employed by the Brewery Corporation of Canada, Limited, at London, Hamilton, Toronto and St. Catharines, being members of Locals Nos. 318, 312 and 304 of the International Union of Brewery Workers. About 300 employees were stated to be directly affected by the dispute, and 250 indirectly affected. The dispute was caused by a 20 per cent wage reduction which had been put into effect by the company on August 1. The industry concerned not being one to which the Industrial Disputes Investigation Act primarily applies, a board could be established only with the mutual consent of the parties concerned, and the matter of the application was immediately taken up with the employing company from this point of view.

With respect to the two Boards of Conciliation and Investigation reported in the

September issue of the *LABOUR GAZETTE* as having been established to deal with disputes between the Niagara, St. Catharines and Toronto Railway and certain of its employees being (1) shop employees and (2) passenger car operators, Mr. C. W. Bell, K.C., of Hamilton, Ontario, who had been appointed a member of each board on the recommendation of the employing company, advised the department that he would be unable to serve in this capacity, and Mr. A. B. Ingram, of Toronto, was, on the company's recommendation, appointed as board member in each case. The board member nominated by the shop employees is Mr. Joseph Gibbons, of Toronto, and the board member named by the passenger car operators is Mr. Fred Bancroft, of Oakville, Ontario. On October 8, each Board was completed by the appointment of Mr. L. B. Spencer, K.C., of Welland, Ontario, as third member and chairman, the appointment being made by the minister in the absence of a joint recommendation from the other two members.

### Report of Board in Dispute between London Street Railway Company and its Street Railway Employees

The Board of Conciliation and Investigation established to deal with a dispute between the London Street Railway Company and certain of its employees being motormen and conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and other miscellaneous employees, members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America, reported to the Minister of Labour on September 28. The personnel of the board had been completed on September 15 by the appointment of His Honour Judge L. B. C. Livingstone, of Welland, Ontario, as third member and chairman, on the joint recommendation of the other members, Messrs. A. B. Ingram, of Toronto, and Fred Bancroft, of Oakville, nominees of the company and employees, respectively. The report was signed by all three members of the board, Mr. Ingram dissenting, however, in certain respects. The text of the report follows.

#### Report of Board

To the Honourable  
the Minister of Labour,  
Ottawa, Canada.

*In the matter of the Industrial Disputes Investigation Act, and of a dispute between London Street Railway Company, Employer, and certain of its employees, being Motormen, Conductors, One-man Car Operators, Shopmen, Shedmen, Trackmen, Linemen, etc., members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America, Employees.*

The Board of Conciliation and Investigation appointed to enquire into the dispute between the London Street Railway Company and its employees met in London, Ontario, on September nineteenth, to meet the parties to the dispute, and held other sittings on September twenty-second, twenty-third, twenty-fourth, twenty-sixth, twenty-seventh and twenty-eighth, and evidence was taken at these sittings with the exception of the twenty-eighth.

The company was represented before the Board by R. G. Ivey, President, and L. Tait, General Manager; and the employees were represented by J. M. Parker, International Vice-President of the Amalgamated Association of Street Railway Employees of America; J. Colbert, President of Division 741, London; and L. P. Parker, Secretary of Division 741.

From the beginning of the enquiry the members of the Board tried earnestly to bring the parties together to an agreement. On several occasions the taking of evidence was adjourned for a short time and the parties—at the request of the Board—conferred in an endeavour to reach an understanding. These efforts to agree failed, and the Board was compelled to make an award.

The dispute consisted of two items, one being a violation by the company of an existing agreement between the company and its employees, and a proposed reduction in wages by the company.

The employees applied for a Board of Conciliation, and it was granted. A statement of the employees and the reply of the company filed with the Department of Labour were sent to the Chairman of the Board, and on this reference the Board proceeded.

The representatives of the employees strongly objected to the violation of the agreement and the proposed reduction in wages, and presented evidence to convince the members of the Board of the justice of their claim. They argued that the employees have suffered two reductions in 1931, and this proposed reduction of July 1 and again in September, 1932, was unfair, and too much of a burden.

The representatives of the company just as strongly defended their position. They presented evidence to justify their claim that they could not, under existing conditions, pay any higher rates of wages than the wages left after the two proposed reductions. They readily admitted a violation of the agreement due

to a reduction of wages without the required notice under the agreement, but insisted it was an emergency measure.

The situation is undoubtedly a difficult one.

#### *First Item*

The majority members of the Board are of the opinion that the company was wrong in violating the agreement and imposing a reduction of 3 cents an hour on July 1. And on this item the Board recommends:—

That the agreement be restored to its position before the reduction was made, and the employees be paid the wages withheld by virtue of that reduction.

Mr. Ingram takes exception to this on the grounds that it is sufficient to state that the company had no right to cancel the agreement in the way in which it did, and recommends:—

That whatever the agreement contains should be carried out.

#### *Second Item*

With respect to the proposed reduction on September 1, the majority members of the Board—in view of the fact that the representatives of the company admitted that the wage rate previous to the proposed reductions in 1932 was a reasonable one—recommend:—

That the wage rate in the agreement which prevailed in 1932, before July 1, shall continue.

Mr. Ingram takes exception to this recommendation for the reason that, in his opinion, the evidence submitted establishes the inability of the company to pay the wages at the rates claimed by the employees, and feels it is useless to support a proposition which, in his opinion, cannot be carried out.

Respectfully submitted, London, September 28, 1932.

(Sgd.) L. B. C. LIVINGSTONE,	<i>Chairman.</i>
(Sgd.) A. B. INGRAM,	<i>Member.</i>
(Sgd.) FRED. BANCROFT,	<i>Member.</i>

## SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1932, and from March 22, 1907, to March 31, 1932.

TABLE I.—PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1931, TO MARCH 31, 1932

Industries affected	Number of applications for Boards	Number of Boards established	Number of strikes not averted or ended
<b>I. Disputes affecting mines, transportation and communication and other public utilities—</b>			
(1) Mines—			
Coal.....	4	1	0
(2) Transportation and communication—			
Steam railways...	5	2	0
Street and electric railways.....	3	3	0
Shipping.....	2	0	0

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of nine cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, July, 1932, page 762, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement, made between the railways and the employees concerned for the establishment of the Board, was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established

for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one

case has it been found necessary to appoint an arbitrator.

#### **Case No. 91—Traffic Department (Central Region)**

In February 1932, the positions of three information clerks in the Transportation Department at Ottawa were abolished and the work was transferred to the depôt ticket office, which is in the Traffic Department. The company explained that where ticket clerks can properly take care of all inquiries from the public, it is not necessary to maintain a separate information bureau. One of the clerks applied to be transferred to the ticket office, claiming that he had seniority from his standing in the Transportation Department. The company refused this claim, stating that the applicant's seniority was with the clerical forces of the latter Department, and did not apply to positions in the Traffic Department. The employees contended that a transfer of duties from one department to another did not abrogate the provisions of the schedule under which the information clerks held their seniority, unless a mutual agreement should be made to the contrary.

The Board found that an application from the clerk in question, made in 1929, to be transferred from the Information Bureau to the Ticket office had not been taken into consideration when a vacancy occurred in the latter office, as was required by Article 3 (g) of the schedule, and they therefore decided that this clerk should be transferred to the Ticket office, displacing the junior employee there.

#### **Case No. 93—Accounting Department**

This case concerned the seniority rights of an employee in the Freight Claims office at Moncton, in connection with an application for the position of stenographer in the same office. The applicant had been employed in the office for about fourteen years, and on receipt of notice that he was to be laid off he sought the new position, claiming the right to exercise seniority in accordance with Article 3, Rule (k) of the schedule. The company contended that although the stenographer actually appointed had a shorter period of service, yet she was senior in position to the applicant, who had latterly occupied the position of office boy, having stepped down from a higher position following a reduction in staff.

The Board decided that the applicant had the right, under Article 3, Rule (k) of the schedule, to exercise seniority to any position held by a junior employee, as set out in

Article 3, Rule (b), regardless of rate of pay, provided he had sufficient ability to perform the work.

#### **Case No. 94—Accounting Department**

A female employee who had served as junior clerk in a Freight Claims Office for about 16 years, received notice that her position was to be abolished, and she then applied for the position of Suspense and Draft Clerk, claiming seniority in accordance with Article 3, Rule (k) of the schedule. The Company refused her application and appointed to the vacancy a man who was junior to her in service but who, they claimed, had all along held a position senior to the female applicant, and supported their action by citing the seniority rule which recognized the claims of merit and ability as well as of length of service. A question as to the applicant's health and capacity was also raised by the Company.

The Board decided that, subject to Article 3, Rule (h), the applicant had the right, under Article 3, Rule (k) of the schedule, to exercise her seniority in regard to any position held by a junior employee, as set out in Article 3, Rule (b), regardless of rate of pay, provided she had sufficient ability to perform the work.

#### **Case No. 95—Sleeping, Dining and Parlour Car Department (Central Region)**

In connection with a reduction of staff, a dining car steward was refused by the Company permission to exercise his seniority in regard to a position of dining car steward in the Province of Quebec. The employees contended that the applicant had seniority under Article 2, Rule (j) of the schedule, in regard to a run that was held by a junior employee. They claimed further that this employee had operated runs in the province for a number of years. The Company on the other hand, stated that the applicant was not able to speak or write in the French language, and that, in view of numerous complaints that sleeping and dining car employees were unable to speak or write in French, they had decided to regard ability to do so as a necessary qualification for such positions.

The Board sustained the claim of the employees.

#### **Case No. 96—Accounting Department (Headquarters)**

This case concerned a female comptometer operator who was dismissed from the service as the result of continued absence from her duties on account of sickness. The em-

ployees contended that there had been no offence that would warrant dismissal, and that the employee had not been paid for the time she was absent. They pointed out also that she had not been allowed an investigation prior to dismissal, as required by Article 3, Rule (a) of the Headquarters Staff's Schedule. The company stated that such an investigation if granted, would have been only a matter of form as the employee was absent from duty.

The Board decided that the operator in question should be re-instated, with seniority rights unimpaired, and paid regular salary as from the date she reported for duty to the proper authority, being ready to submit, if required, a certificate from a qualified physician that she was fit for duty; also that in the event that she had not yet reported for duty no compensation need be allowed for time lost.

#### Case No. 97—Accounting Department (Headquarters)

Seniority questions were involved in this case, which concerned the claim of a clerk in the office of the Auditor of Freight Accounts to exercise his seniority to the position of divisions checker, held by an employee who was his junior as regards length of service. The applicant's former position had been

abolished, and the employees claimed that Article 2, Rule (1) of the Headquarters Staff's Schedule gave him the right to apply for the new position. The company contended that the man who had actually been appointed was senior to the applicant as regards rate of pay and character of work, Rule (1), in the company's view, recognizing seniority only in regard to employees with similar rank and pay, and not sanctioning any practice by which employees whose positions are abolished might be allowed to "bump" employees on senior work.

The Board decided that the applicant in this case had the right, under Article 2, Rule (1), to exercise his seniority to any position held by a junior employee, as set out in Article 2, Rule (b), regardless of rate of pay, provided he had sufficient ability to perform the work.

#### Cases No. 98, 99, 100—Accounting Department (Headquarters)

The question at issue in these cases was similar to that in Case No. 97. Positions of inter-line rate checkers having been abolished, the displaced employee in each case applied for a position at a higher salary, to which position the Company had appointed another employee who had a shorter period of service. The decision of the Board in each case was identical with that in Case No. 97.

### STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1932

THE following table shows the number of disputes, workers involved and time loss for September, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept., 1932..	16	4,251	10,995
*Aug., 1932..	16	4,972	62,492
Sept., 1931..	12	3,498	22,907

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a sepa-

rate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported, are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Although no change is shown in the number of disputes in existence in September, there was a slight decrease in the number of workers involved; the time loss incurred, however, shows a very substantial decline from that in August. In the latter month the time loss was great as a result of disputes involving large numbers of coal miners at Blairmore and Bellevue, Alta., fur workers at Toronto, Ont., and men's clothing factory workers in Montreal. The last of these terminated in August and the others early in September. As compared with September, 1931, while the number of strikes recorded for September this year is considerably larger,

with more workers involved, the time loss incurred is much less, a strike of coal miners in Estevan, Sask., having caused a time loss of 12,000 working days during that month.

Eight disputes, involving approximately 1,479 workers, were carried over from August, including one lockout of motion picture projectionists at Toronto, Ont., information as to which reached the Department too late for inclusion in the detailed list in the September issue of the LABOUR GAZETTE. Eight disputes commenced during September. Of the sixteen disputes in progress during the month eight were recorded as terminated, four resulting in favour of the workers involved, one in favour of the employer concerned, two resulting in compromises, and the result of one being recorded as indefinite. At the end of September, therefore, there were eight disputes recorded as strikes or lockouts in progress, namely: women's clothing factory

workers (cutters), Montreal, P.Q., lithographers, Toronto, Ont., carpenters, Niagara Falls, Ont., motion picture projectionists, Toronto, Ont., motion picture projectionists, Saskatoon, Sask., coal miners, Sydney Mines, N.S., sawmill workers, South Westminister, B.C., and sewer construction labourers, Verdun, P.Q. (See footnote to table, page 1054.)

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Ottawa, Ont., February, 29, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto, London, Ont., Montreal, Quebec, P.Q., and Winnipeg, Man.,

#### STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1932

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to September, 1932</b>			
<b>MINING, NON-FERROUS SMELTING, AND QUARRYING—</b>			
Coal miners, Blairmore, Alta....	300	900	Commenced Feb. 23, 1932; against dismissal of worker and for equal division of work; terminated September 6, 1932; compromise.
Coal miners, Bellevue, Alta.....	330	990	Commenced Feb. 24, 1932; in sympathy with miners on strike at Blairmore, Feb. 23; terminated Sept. 6, 1932; compromise.
<b>MANUFACTURING—</b>			
<i>Fur, Leather, etc.—</i>			
Fur factory workers, Toronto, Ont.....	800	1,500	Commenced July 29, 1932; against reduction in wages; terminated Sept. 2, 1932; in favour of workers.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cutters), Montreal, P.Q.....	10	250	Commenced July 15, 1932; for recognition of union untermiated.
<i>Printing and Publishing—</i>			
Lithographers, Toronto, Ont..	7	175	Commenced April 15, 1932; against reduction in wages; untermiated.
<b>CONSTRUCTION—</b>			
<i>Building and Structures—</i>			
Carpenters, Niagara Falls, Ont	14	350	Commenced July 19, 1932; alleged violation of agreement <i>re</i> wage rates; untermiated.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Motion picture projectionists, Toronto, Ont.....	4	100	Alleged lockout; commenced July 11, 1932; reduction in wages and changes in working conditions; untermiated.
Motion picture projectionists, Saskatoon, Sask.....	14	350	Alleged lockout; commenced Aug. 29, 1932; reduction in wages and changes in working conditions; untermiated.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1932—*Continued*

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during September, 1932</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Nacmive, Alta. . . .	120	1,320	Commenced Sept. 6, 1932; alleged violation of agreement <i>re</i> size of screens in use; terminated Sept. 18, 1932; in favour of workers.
Coal miners, Sydney Mines, N.S.	875	875	Commenced Sept. 20, 1932; against change in work-conditions for longwall miners; terminated Sept. 21, 1932; indefinite.
Coal miners, Sydney Mines, N.S.	875	1,750	Commenced Sept. 29, 1932; against change in working conditions for longwall miners; un-terminated.
<b>MANUFACTURING—</b>			
<i>Textile, Clothing, etc.—</i>			
Men's clothing factory workers Montreal, P.Q. . . . .	45	135	Commenced Sept. 28, 1932; alleged violation of agreement; terminated Sept. 30, 1932; in favour of workers.
<i>Other Wood Products—</i>			
Shingle mill workers, Eburne, B.C. . . . .	37	90	Commenced Sept. 7, 1932; for dismissal of foreman and against new rules; terminated Sept. 12, 1932; in favour of employer.
Sawmill workers, South Westminster, B.C. . . . .	100	1,500	Commenced Sept. 13, 1932; for increase in wages un-terminated.*
<i>Non-Metallic Minerals—</i>			
Granite cutters, Toronto, Ont.	20	360	Commenced Sept. 10, 1932; against reduction in wages; terminated Sept. 30, 1932; in favour of workers.
<b>CONSTRUCTION—</b>			
<i>Other—</i>			
Civic labourers, Verdun, P.Q.	700	700	Commenced Sept. 30, 1932; for increase in wage rates; un-terminated.

\*Later information indicates strikers resumed work at end of month.

May 4, 1931, one employer; composers, Regina, Sask., Nov. 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., Feb. 27, 1932, one employer; and women's clothing factory workers, Montreal, P.Q., Aug. 1, 1932, one employer.

A strike of ten pressers and cutters in one dress manufacturing establishment in Montreal, P.Q., from August 19, 1932, to August 25, 1932, has been recently reported to the Department. The strikers demanded changes in the piece rate system. Approximately one hundred and fifty other workers were indirectly affected by the dispute. The employer states that work was resumed under the conditions prior to the dispute. The union, the Industrial Union of Needle Trades Workers of Canada, however, claims that changes in the piece rate system were made.

A strike of pressers and cutters in one dressmaking establishment in Montreal from July 15, 1932, to August 29, 1932, has been recently reported to the Department. It appears that staff had been reduced but the

Industrial Union of Needle Trades Workers claimed that there was discrimination against workers owing to union activity. The employer states that all workers were reinstated on conditions as before the dispute when work was resumed, as orders were more plentiful, but the union claims that changes in the piece rate system were made.

A cessation of work in a gold mine near Amos, P.Q., has been reported in the press as occurring about the middle of September. It appears that the mine was closed down and that the employees, approximately thirty, had not been paid wages due. Particulars have not been received and it is uncertain whether there was any dispute between the employer and the workmen.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, BLAIRMORE AND BELLEVUE, ALTA.**—On September 6, 1932, the six hundred miners involved in these disputes since February, 1932, resumed work under the terms

of an agreement renewing that which expired March 31, 1932, until March 31, 1934. The new agreement provided for the same wages and working conditions as in force prior to the cessation of work, with the exception of the clause providing for the check-off of union dues, this being eliminated. It was also provided that miners might join any local organization for which they were eligible, and that the company would re-employ the miners as rapidly as possible, giving a preference to those on the pay-roll prior to the strike. The notice given on June 20, that some fifty miners would be laid off indefinitely as a result of propaganda leading up to the strike, was cancelled. The settlement was the result of the mediation of the Premier of Alberta who had also undertaken that miners not employed would be given relief. In the mine at Blairmore the workers had originally walked out to enforce their demand for reinstatement of one of their number, discharged for disobeying orders and refusing to apologize for insulting language to the mine officials, and also to have the available work distributed equally among the employees. The following day miners in the other colliery ceased work in sympathy. Attempts to reach a settlement of the dispute had been made in May, when a strike over distribution of work in Coleman was terminated, and again in June. Following this a number of miners seceded from the Mine Workers' Union of Canada and formed an independent union. The agreement was signed by miners representing members of both organizations. In connection with picketing a number of strikers had been charged with unlawful assembly and assault and the trial of those not yet dealt with has been set for a date early in October.

**FUR FACTORY WORKERS, TORONTO, ONT.**—This dispute commenced on July 29, 1932, in some seventy establishments in Toronto, eight hundred workers being involved in a demand for a renewal of the agreement between the International Fur Workers' Union and the Independent Furriers' Association which expired June 1, 1932. The employers had proposed decreases in piece rates of from five to fifteen per cent. From time to time the employees of individual firms returned to work, having reached a satisfactory understanding with the management of such firms. On September 2, however, a new agreement between the union and the fur manufacturers' association was signed providing for the same wages and working conditions as prior to the dispute, and by September 19 work was resumed in all establishments affected.

**MOTION PICTURE PROJECTIONISTS, SASKATOON, SASK.**—This dispute, an alleged lockout com-

mencing August 29, 1932, was reported in the September issue of the LABOUR GAZETTE as involving one theatre. It has since been reported that it affected two theatres under the same management and fourteen workers. Prior to the expiration of the agreement with the International Alliance of Theatrical Stage Employees (Motion Picture Machine Operators) on August 31, the employer had proposed reductions in wages which the union was prepared to consider and also changes in working conditions which were refused. The employer had then paid off the employees and engaged members of the National Union of Theatrical Employees. At the end of September the dispute was unterminated.

**MOTION PICTURE PROJECTIONISTS, TORONTO, ONT.**—Reference was made in the September issue of the LABOUR GAZETTE to a dispute, involving employees in two theatres, as to which particulars had not been received. This dispute commenced on July 11, 1932, motion picture projectionists employed in one theatre demanding that the management adhere to the terms of the agreement with the International Alliance of Theatrical Stage Employees (Motion Picture Machine Operators) to be in effect until September 1, 1933. The employers had proposed a reduction in wages from \$35 per week of twenty-seven hours to \$25, one projectionist only to be employed instead of two as provided in the agreement. On September 5 a second theatre became involved, bringing the number on strike up to four. At the end of September the dispute was reported to be still unterminated.

**COAL MINERS, NACMINE, ALTA.**—Miners in one colliery ceased work on September 6, 1932, claiming that the failure of the management to have one and one-quarter inch screens installed in the mine by that date, to replace the three-inch screens previously in use, constituted a violation of the agreement signed by the mine operators in that district during August, 1932, as the result of the findings of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act (LABOUR GAZETTE, July, 1932, page 753, and September, 1932, page 958). It was claimed that the larger screen caused a substantial loss in wages to piece workers and accordingly the smaller screen had been stipulated in the agreement. The management pointed out that temporary alterations had been made pending the arrival of the new screens, and also that the agreement with the union provided for the settlement of such grievances without a cessation of work and refused to install the new screens until the men returned to work, stating they would pay off the miners and close the mine in-

definitely. The officials of the union, the United Mine Workers of America, requested the intervention of the western representative of the Department of Labour who proceeded to the mine on September 15. Negotiations between the parties concerned being renewed, an agreement was reached providing that the new screens were to be immediately installed and that, after inspection and approval by the Department of Labour representative and an officer of the union, the miners would return to work. The employer stipulated, however, that no further strikes should occur and that disputes would be dealt with as provided under the agreement. Work was resumed on September 18.

**COAL MINERS, SYDNEY MINES, N.S.**—A dispute is reported to have occurred on September 20, 1932, coal miners employed in one colliery ceasing work when the employer ruled that ten pairs of miners, instead of eleven, should work a certain section of the mine. As the agreement between the employer and the union, the United Mine Workers of America, provides for negotiations regarding disputes before a cessation of work, and that grievances shall not be dealt with during a suspension of work in violation of regarding disputes before a cessation of work, the following day, pending negotiations for a settlement. On September 29, however, the negotiations not having resulted in a settlement, the men again ceased work, picketing the mine; and at the end of the month the dispute was reported to be still unterminated. The Deputy Minister of Mines for Nova Scotia had proposed that the work be divided among the unemployed miners, giving each four days per week. This was refused by the miners. A large number of the miners in the colliery had joined another organization, the Amalgamated Mine Workers of Nova Scotia, and these picketed the mine, only maintenance men working.

**CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—This dispute commenced on September 28, 1932, when employees in one men's clothing manufacturing establishment ceased work claiming that the employer was not operating under the terms of an agreement recently arrived at with the United Clothing Workers of Canada. Following negotiations between the parties an arrangement was reached as to a general wage levelling and a better distribution of hours under the agreement, and the strikers returned to work at the beginning of October.

**SHINGLE MILL WORKERS, EBURNE, B.C.**—Thirty-seven shingle sawyers and packers employed on the night shift in one establishment ceased work on September 7, 1932, following

a dispute with the night foreman over new grading rules. It is reported that the workers demanded that the foreman be dismissed. On September 12, 1932, however, they returned to work with the understanding that the grading rules as explained by the foreman prior to the walkout would be in force.

**SAWMILL WORKERS, SOUTH WESTMINSTER, B.C.**—This dispute, involving one hundred workers employed by one firm, commenced on September 13, 1932, when the management refused to consider the workers' demand for an increase of ten per cent above the rates of 24 cents and 31 cents per hour, with higher rates for skilled classes, then in force. The employer stated that he was paying higher wages than any sawmill in British Columbia and operating at a loss. It is stated that only about thirty-five employees were in favour of the strike, the others being deterred from working. Later in the month a substantial number of employees asked the management to re-open the mill, which was done on September 27, operating one shift only. The employer stated that all former employees applying within forty-eight hours would be reinstated. The plant had been picketed during the dispute, mainly by sympathizers from the cities nearby, and, on the re-opening of the mill, an attempt was made by the picketers to keep the workers from entering. Police protection, however, had been secured, and the pickets were dispersed, one arrest being made. At the end of the month, however, the dispute had not been reported terminated by either party. (See footnote to table, page 1054.)

**GRANITE CUTTERS, TORONTO, ONT.**—Employees of one firm ceased work on September 10, 1932, owing to a decrease in wages from 90 cents per hour to 75 cents. In August the employer had reached a verbal agreement with the union providing for a rate of 90 cents per hour until May 1, 1933. At the request of the union the Department of Labour representative in Toronto took the matter up with the employer and with a contractor with which the firm had a sub-contract and the resulting negotiations resulted in a resumption of work at 90 cents per hour.

**SEWER CONSTRUCTION LABOURERS, VERDUN, P.Q.**—Workmen engaged on the construction of a sewer as relief work by the city of Verdun ceased work on the afternoon of September 30, 1932, demanding an increase in wages from 30 cents per hour to 40 cents, the civic rate, and certain changes in methods of payment and apportionment of work. Early in October the City Council authorized payment on the basis of 40 cents per hour and work was resumed on October 6.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as long as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in August was 37, and 15 were still in progress from the previous month, making a total of 52 disputes in progress during the month, involving 154,900 workers with a time loss of 1,281,000 working days for the month. Of the 37 disputes beginning in the month, 20 were over proposed reductions in wages and other wage questions, 10 on questions respecting the employment of particular classes or persons, and 7 on other questions as to working arrangements. Settlements were reached in 24 disputes, of which 7 were in favour of workers, 13 in favour of employers and 4 ended in compromises.

*Dispute in Lancashire Cotton Industry.*—This dispute which began August 27 was reported in the last issue of the *LABOUR GAZETTE*. A

joint conference of both parties in the cotton cloth manufacturing part of the industry was convened by the Ministry of Labour on September 13, the head of the conciliation department of the Ministry presiding. A settlement was reached and a new agreement signed on September 28, providing for a reduction in wages of approximately  $8\frac{1}{2}$  per cent, which is a compromise between the rates proposed by each side. The agreement also provides for the reinstatement of strikers. In the spinning part of the industry, in which no stoppage of work occurred, employers proposed a similar reduction in wages, but no report of any agreement has been received.

### Sweden

The strike in the paper-pulp industry which began February 23 and by April involved about 14,000 workers, was reported in the *LABOUR GAZETTE*, May, 1932. A settlement was reached on July 5, which provided for a wage reduction of 7 per cent and for the abolition (unless provided by local agreements) of rent allowances, free housing and wood.

### United States

In July, the number of disputes reported was 46 and 49 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 28,784 and the time loss was 630,083 working days for the month.

## MINING IN THE PROVINCE OF QUEBEC IN 1931

THE annual report of the Quebec Bureau of Mines for the calendar year 1931, shows that the total value of production of the mines and quarries of the province for that period amounted to \$35,778,364—a decrease of 13.1 per cent as compared with the previous year. Quebec, however, maintained the position it reached in 1930 as second only to Ontario among the provinces in the value of its mineral production. The highest value yet recorded for the annual mineral production of the province occurred in 1929, when it totalled \$46,454,820.

An analysis of the statistics indicates that the building materials group totalled \$18,166,535 or 51 per cent of the total production of the mines; metallics, \$12,094,930, or 34 per cent; non-metallics, \$5,516,899, or 15 per cent.

In the metallics group, gold led with a production value of \$6,203,101 for a total of 300,-

075 ounces; this production value represented a large increase over the total of \$2,930,480 in the previous year, raising Quebec to a record place among the gold producing provinces. Second in the group was copper with a production value of \$5,723,154 for 68,376,985 pounds. This represented a considerable decrease in value from the total of \$10,425,891 for 1930. The report states that owing to lack of demand, due to industrial depression, the market price of copper was the lowest in the history of the metal, while "the economic situation has had the reverse effect on gold with its fixed price (actually an enhanced price, owing to the international exchange situation) and with the added advantage of lower mining costs."

In the non-metallic sub-division, asbestos had a production value much greater than all other components of this group combined, with a

total of \$4,812,886 for 164,296 tons. At that the production value of asbestos was nearly \$3,600,000 less than in the previous year, the decrease being attributed to "the effects of the economic depression and the increasing competition of Russian and Rhodesian fibres on both European and American markets."

*Employment and Wages.*—The statistics indicate that a total of 13,185 men were employed in the mining industry of the Province during the year 1931. This figure is based on returns from 417 operators, representing 68 mines and 349 quarries, and on reports of assessment work. On account of climatic conditions and the nature of the industry, a large number of producers operate between six and eight months only during the year. It is pointed out that this seasonal character of the occupation makes it necessary, for statistical purposes, to set up a "standard" year of a selected fixed number of working days, and the standard used by the Quebec Bureau is a year of 300 working days. On this 300-day basis, the number of men employed in the industry last year was 9,116, as compared with 10,549 in 1930. On the basis of the total number employed (13,185) there was a reduction of 569 on the payrolls from the total of 1930.

The report states that "the difficulties of the past years have had the effect of reducing employment in almost all classes of mining and quarrying operations in the Province. As compared with 1930, there was a very large decrease in the number of men employed in the asbestos mines, due to the diminished scale of operations. Workmen were also laid off as a result of curtailment of copper production, but the copper-gold and straight gold mines in western Quebec helped very materially to counterbalance this situation by their increased activities. Among mines proper, gold was the only exception to the general falling off in employment.

"In the quarry group, also, the decrease was general, with the exception of sand and gravel operations, which benefited from the relief measures of road maintenance and construction carried out by the Provincial government and various municipalities to alleviate unemployment. The changing of the cement plants from the dry to the wet process of making cement, and the installation of additional machinery, have resulted in greater efficiency and economy, but unfortunately they have had the effect of rendering fewer employees necessary. In the crushed-stone industry, also, the substitution of machines for human labour has had a like effect. The unemployment situation in the quarries was much less serious than it would have been without the relief works already referred to, and it was also mitigated to some

extent by the action of operators in reducing, as far as possible, their mechanical operations so that more men could be employed."

The total wages paid to workmen in mines and quarries during 1931 amounted to \$9,987,702, while in 1930 this total was \$11,994,271—a decrease of 17 per cent. The workmen in mines received \$4,935,923 and those in quarries, \$5,051,779 as against \$6,525,092 and \$5,469,179 respectively. The average wage earned by a 300-day workman during 1931 was \$1,096 as compared with \$1,137 in 1930.

*Accidents and Safety Measures.*—During 1931, there was a total of 590 accidents, of which 11 were fatal, as compared with a total of 640 accidents, with 24 fatalities, in 1930. As regards fatal accidents, the death rate for the year was 1.21 per thousand full year workers—the lowest recorded in fifteen years. In mines proper, the proportion was 0.97 and in quarries 1.40 against 3.8 and 0.91 in 1930. The total number of non-fatal accidents (579) was also lower than in 1930, although on the basis of a thousand full year workers, the rate was somewhat higher, being 64.7 as compared with 60.7 in 1930.

In mines, the highest percentage of fatalities was due to slide of rock, explosives and haulage being responsible for the balance. In quarries, slide of ground was the major cause of fatalities, others being due to electricity and handling stones.

Attention is called to the large number of fatalities due to fall and slide of ground in sand gravel pits, which accounted for 80 per cent of all the fatal accidents in quarries. Commenting on such accidents the report states: "A large proportion of these accidents are due to negligence and ignorance, and hence are preventable. Usually, such accidents do not occur in the operations of the large producers of these materials, with up-to-date plant and adequate supervision, but they are all too frequent in the smaller, temporary pits, which are so numerous and widespread that it is impossible for the inspectors of the Bureau to make a complete survey of them. Engineers and inspectors of the Highways Department have been instructed to see that incorrect methods of mining sand, and any lack of regard for danger, be discontinued in their several districts. It is for them, and also for the secretaries of municipalities, to conduct a campaign of education concerning the new regulations for sand and gravel pits, and to see to it that excavations are kept sloped at all times and that overhangs at the top of the bank are barred down as fast as developed. The system of excavating by undercutting, when used without mechanical appliances, is not only dangerous, but is also forbidden. A very bad practice

is to allow a man to load his waggon or truck while standing between it and the bank parallel to it. This is a form of carelessness that has been responsible for many deaths in past years."

An analysis of the non-fatal accidents, shows that the chief sources of danger in mining proper are: loading cars and boxes, responsible for 65 accidents or 17.4 per cent of the total; and haulage, with a total of 44 or 11.8 per cent. Next, in order of importance, are falls, fall of rocks, handling rocks or objects, lifting heavy objects, and handling machinery and tools. In quarrying, the most frequent causes of accidents were handling stones or objects, loading boxes, and slide of rocks and ground. In the annexed plants, accidents happening with the machinery and tools, and those through falls and the handling of objects and stones, were the most frequent.

Referring to safety measures, the report points out that regulations to improve conditions in "Open Pits" were drawn up in 1930. During the past year, the "Underground Regulations" were revised and completed, and, before their adoption, they received the approval of every important operator. A Sili-cosis Act (LABOUR GAZETTE, May 1931, page 528) has also been enacted by Order of the Legislature, its object being to prevent the employment in mines of men afflicted with lung trouble.

The report emphasizes the necessity for more adequate safety measures to prevent eye injuries and infection. Dealing generally with accident prevention work, the report summarizes this phase of the Bureau's work as follows:

"An important part of the duties of our inspectors of mines is to devise and suggest measures for safeguarding the lives and health of those employed in our mineral industry, in addition to seeing that the various safety regulations in force are strictly observed. In order to help them in maintaining the efficiency of their inspection, the Bureau of Mines maintains a register showing the accident record, with cause of each accident, of every operator in the province. This has been found of great value, as, by comparing the accident record from year to year, much can be done to prevent the recurrence of the causes of these accidents, and also to ensure the observance of the mine and quarry regulations.

"The Quebec Workmen's Compensation Act, 1931, (LABOUR GAZETTE, May, 1931, page 525) has a regulation concerning Preventive Association and Merit Rating, in articles 90 and 106. According to these articles, it is the purpose of the Board to give merit refunds annually, based on the accident experience of employers in the same lines of industry. The basis of comparison for this system of merit rating will be made after a three-year period. Where the accident costs falls short of the amount of assessment by a stated percentage, a merit rating refund within specified limits will be made.

"We believe that further efforts by companies or operators in the way of devising practical safety methods should be encouraged. It would be unfair to those who maintain a safety organization, and are constantly working to keep down accidents, to be compelled to pay for others who do nothing to prevent accidents."

## CENSUS OF MERCHANDISING AND RETAIL ESTABLISHMENTS IN CANADA, 1931

THE Dominion Bureau of Statistics recently published an additional series of preliminary reports on the census of merchandising and service establishments taken by the Bureau in 1931. Greater Montreal, Brantford, Samia, Niagara Falls, Kingston, East Windsor, Walkerville, Sandwich, Cornwall, Owen Sound, Woodstock, St. Boniface, Saint John, Sydney, Vancouver, Victoria and Halifax are the cities dealt with in the most recent bulletins. Reference was made to similar reports for Winnipeg and Ottawa in the July issue of the LABOUR GAZETTE, page 788. Hamilton and Regina were dealt with in the August issue, page 870; while Toronto, Calgary, Edmonton, Saskatoon, Port Arthur, Fort William, Quebec, Hull and Sherbrooke were summarized in the September issue, page 982.

*Montreal.*—According to a preliminary tabulation for Greater Montreal, the statistics indicated a retail business during 1930 of more than \$450,000,000. There were 13,038 retail stores with sales of \$410,594,200 and 4,167 service establishments with receipts of \$44,233,000. The 13,038 retail merchandizing establishments employed 52,601 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$54,409,900 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$60,582,900.

*Brantford, Ont.*—The city of Brantford showed a retail trade during 1930 exceeding \$14,000,000. There were 425 retail stores with

sales of \$13,479,600 and 158 service establishments with receipts of \$1,018,400. The 425 retail merchandising establishments employed 1,479 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$1,525,600 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,925,400.

*Sarnia, Ont.*—During 1930, Sarnia showed a retail trade of over \$7,000,000. There were 226 retail stores with sales of \$6,776,300 and 105 service establishments with gross receipts of \$592,800. The 226 retail merchandising establishments employed 646 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$666,300 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,041,000.

*Niagara Falls, Ont.*—The retail trade in Niagara Falls during 1930 was in excess of \$9,000,000. There were 305 retail stores with sales of \$9,229,100 and 93 service establishments with gross receipts of \$549,700. The 305 retail merchandising establishments employed 999 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$951,500 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,219,800.

*Kingston, Ont.*—The merchandising census indicated that the retail trade in Kingston approximated \$11,000,000 in 1930. There were 332 retail stores with sales of \$10,949,800 and 130 service establishments with gross receipts of \$811,300. The 332 retail merchandising establishments employed 1,295 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$1,308,100 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,877,600.

*East Windsor, Ont.*—The preliminary tabulation showed a retail trade for East Windsor in 1930 of nearly \$3,000,000. There were 130 retail stores with sales of \$2,527,300 and 57 service establishments with gross receipts of \$232,400. The 130 retail merchandising establishments employed 206 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$238,800 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$333,200.

*Walkerville, Ont.*—The retail trade of Walkerville also amounted to almost \$3,000,000 in 1930. There were 102 retail stores with sales of \$2,416,600 and 31 service establishments with gross receipts of \$327,600. The 102 retail merchandising establishments employed 248 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$259,600 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$349,800.

*Sandwich, Ont.*—During 1930, the retail trade in Sandwich was more than \$1,500,000. There were 79 retail stores with sales of \$1,430,300 and 27 service establishments with gross receipts of \$106,400. The 79 retail merchandising establishments employed 124 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$113,100 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$159,700.

*Cornwall, Ont.*—The preliminary tabulation for Cornwall indicated a retail business during 1930 of nearly \$5,000,000. There were 201 retail stores with sales of \$4,324,400 and 60 service establishments with receipts of \$409,600. The 201 retail merchandising establishments employed 500 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$445,200 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$854,800.

*Owen Sound, Ont.*—Similar statistics for Owen Sound showed a retail business during 1930 of more than \$5,000,000. There were 216 retail stores with sales of \$5,132,500 and 69 service establishments with gross receipts of \$326,700. The retail merchandising establishments employed 663 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$583,100 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,060,700.

*Woodstock, Ont.*—Retail trade in Woodstock, Ontario, during 1930, amounted to over \$5,000,000. There were 183 retail stores with sales of \$5,132,200 and 62 service establishments with gross receipts of \$358,300. The 183 retail merchandising establishments employed 638 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$582,900 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$915,100.

*St. Boniface, Man.*—According to preliminary statistics, the retail trade of St. Boniface in 1930 was more than \$2,000,000. There were 105 retail stores with sales of \$1,826,300 and 37 service establishments with gross receipts of \$174,100. The 105 retail merchandising establishments employed 196 persons (including full-time and part-time employees and proprietors and firm members receiving a fixed salary) who received \$181,400 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$174,800.

*Saint John, N.B.*—The preliminary report for Saint John indicates a retail business during 1930 of more than \$24,000,000. There were 803 retail stores with sales of \$21,364,600 and 324 service establishments with receipts of \$2,796,700. The 803 retail merchandising establishments employed 2,683 persons (including full-time and part-time employees and firm members drawing a fixed salary) who received \$2,547,900 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$3,200,300.

*Sydney, N.S.*—During 1930, the retail business of Sydney exceeded \$7,000,000. There were 303 retail stores with sales of \$7,008,700 and 100 service establishments with receipts of \$448,500. The 303 retail merchandising establishments employed 698 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$649,500 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$1,304,500.

*Vancouver.*—Preliminary statistics for Vancouver revealed a retail trade during 1930 of more than \$132,000,000. There were 3,602 retail stores with sales of \$119,406,600 and 1,506 service establishments with receipts of \$13,358,500. The 3,602 retail merchandising establishments employed 14,890 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary), who received \$15,836,200 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$17,155,200.

*Victoria.*—The city of Victoria did a retail business in 1930 of approximately \$30,000,000. There were 733 retail stores with sales of \$26,624,900 and 318 service establishments with \$3,025,300 receipts. The 733 retail merchandising establishments employed 3,258 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary) who received \$3,606,600 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$4,921,300.

*Halifax.*—Similar statistics for Halifax showed a retail business for 1930 of more than \$33,000,000. There were 865 retail stores with sales of \$30,825,000, and 247 service establishments with receipts of \$3,144,800. The 865 retail merchandising establishments employed 3,259 persons (including full-time and part-time employees and proprietors and firm members drawing a fixed salary), who received \$3,346,100 as salaries and wages. The merchandise carried in stock by these stores at the end of 1930 was valued at \$4,264,700.

### Weekly Rest Day in Hotels in Quebec

The *Quebec Official Gazette*, in its issue of August 13, 1932, published the following Order in Council, approved in 1920, which is now in effect in hotels in the Province.

*Copy of a Report of a Committee of the Honourable The Executive Council dated February 6, 1920, approved by the Lieutenant-Governor on the 9th of February, 1920.*

209—Concerning the protection of employees in certain industries (8 George V, Ch. 53).

The Honourable Minister of Public Works and Labour in a report dated January 27th (1920), sets forth: That an Act 8 G. V, chap. 53, relating to the protection of employees in certain industries was sanctioned February 9, 1918;

That the 11th May following, in virtue of article 2 of that Act, a regulation has been adopted providing a day of rest each week for employees of hotels, restaurants, and clubs with the exception however of waiters, bell boys and porters;

That the Honourable Minister received, on January 15, 1920, a request from hotel and restaurant employees, asking him to extend the above regulations to all employees of hotels and restaurants, males and females, working in any capacity whatsoever, by granting them the benefit of a day of rest each week.

The Honourable Minister believing that it is just and reasonable to grant the request, recommends, in virtue of article 2 of the above mentioned Act, that a day of rest each week, be granted to all male and female waiters, bell boys, porters, etc. from the adoption of the present order-in-council.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Safety Contest Award in British Columbia

The British Columbia Pulp and Paper Company, of Vancouver, with mills at Port Alice and Woodfiber, won the Workmen's Compensation Board safety contest for the year June 1, 1931, to May 31, 1932. The standing was:

(1) B.C. Pulp and Paper Co., Limited, Port Alice, one day lost in every 2,077 hours worked;

(2) B.C. Pulp and Paper Co., Limited, Woodfiber, one day lost in every 670 hours worked;

(3) Powell River Co., Limited, Powell River, one day lost in every 409 hours worked;

(4) Pacific Mills Limited, Ocean Falls, one day lost in every 161 hours worked.

### McIntyre Mines Win Safety Trophy

The McCrea Trophy, donated by the Hon. Charles McCrea, Minister of Mines of Ontario, for competition in accident prevention in Ontario mines, was awarded this year to the first-aid team of the McIntyre-Porcupine mine. The Hon. Mr. McCrea in presenting the trophy, said that,—

“Due to the first aid work of this splendid team, the McIntyre mine has not had a fatal accident in fifteen months and not an accident resulting in permanent disability in eight and one-half months.”

The presentation was made at the head office of the McIntyre mine at Schumacher. Prior to the presentation, Mr. R. J. Ennis, general manager of the company, reviewed the progress of safety training at the mine. The members of the winning team—Capt. E. H. Howard, A. R. Bateman, H. N. Glanville and S. Miles—were introduced to the minister by Mr. A. H. Straford, the safety engineer of the mine. The presentation was made in the presence of Hon. G. S. Henry, premier of Ontario; Hon. G. Howard Ferguson, Canadian High Commissioner to Great Britain; and members of the Ontario Cabinet and Legislature, as well as representatives of local municipal councils and boards of trade.

### Accident Records of Firms in Ontario

Reference was made in the last issue (page 947) to the investigations that are being made by the Industrial Accident Prevention Associations of Ontario into the accident records of certain firms in the province, the intention being to ascertain the ratio of the cost of workmen's compensation that is incurred by these firms. In a recent statement issued by the Association, it is pointed out that many firms have been responsible for taking out

much more in the way of compensation and medical aid awards than was paid in assessments. These special “cost ratio surveys” bring out the fact that there are many findings common to various types of industry, and some of these are listed below:—

1. Too often there is no record kept of all injuries, including minor, and in many cases where such records are kept, no subsequent use is being made by the employer of this information.

2. Too often the First Aid kit, or First Aid room, is not up to the standard of requirements set by Regulation 88 of the Workmen's Compensation Board.

3. Frequently it has been found that employees are being allowed to select the doctor and that there is no follow-up work by the employer. It is recommended that employers generally have some knowledge of the medical men in their vicinity and select one preferably with surgical experience to handle accident cases. In every case where an employee is sent to a doctor it is desirable to use Form 94 of the Workmen's Compensation Board, which can be secured on application to the Board.

4. In a number of cases the literature supplied by the Industrial Accident Prevention Associations and paid for by the industry is not being properly used, and it is recommended that the monthly literature distributed be posted on proper bulletin boards for the general information of employees.

### The Ottawa-St. Lawrence Accident Prevention Association

Reference was made in the last issue to the recent organization of an Eastern Ontario division of the Industrial Accident Prevention Associations of Ontario, under the title of the Ottawa-St. Lawrence Division. In a recent address the President, Mr. P. J. Wood, of the Canadian Bank Note Company, Ottawa, directed attention to the actual possibility of eliminating accidents by means of safety measures. Last year, he said, five large manufacturers in Ontario, all engaged in industries involving serious risks, operated without a single lost-time accident. The Canadian National Carbon Company, of Toronto, operated for over three years, or 2,160,000 man hours, without an accident. This result was not obtained, he stated, because of luck or happy coincidence. In all these plants they have set up a Safety Committee or Safety Organization which functions on the same basis and has responsibility to the chief executive com-

parable to that of the sales or production managers.

"The direct cost of accidents in industry in Ontario," Mr. Wood continued, "since the Workmen's Compensation Act came into force in 1915, is approximately \$100,000,000, and those employers who have had serious accidents in their plants know that the direct cost is not the whole story. A study of 10,000 accident cases by a large insurance company shows that for one dollar spent direct in compensation and medical aid there is a loss to industry of four additional dollars, and surely

this staggering amount, considering the monetary loss alone, should cause employers to give more consideration to this important subject. But of more importance is the terrific loss of life and limb resulting in impaired earnings to the injured employee and the consequent suffering due to privation by his dependents. Too many accidents are now solely the result of forgetfulness or carelessness, and it is only by constantly reminding employees by written bulletins, illustrated posters and other educational features that they can be warned of the necessity of exercising care while on the job."

## TWELVE YEARS' EXPERIENCE IN CO-OPERATIVE MANAGEMENT

### The National Council on Industrial Relations for the Electrical Construction Industry (U.S.A.)

IN 1920, after two years of preparation, an agreement to establish permanent joint machinery to regulate the electrical industry was concluded between the International Brotherhood of Electrical Workers and the National Association of Electrical Contractors and Dealers. The title of the new organization was the National Council on Industrial Relations for the Electrical Construction Industry. (A note on the work of this body appeared in the LABOUR GAZETTE, September, 1931, page 962). The origin, history and present standing of the National Council are described in a pamphlet by Mr. H. Hedges, Director of Research of the Union recently published in the "John Day" series of pamphlets (New York) under the title: "A Strikeless Industry; a Co-operative Plan for Adjusting Industrial Relations." This is stated to be one of the earliest and most successful examples of the "union co-operative management" plan of industrial organization. The immediate object before its originators was the lessening of strikes, which had been paralyzing building activities. "Two principals in the founding of the National Council," Mr. Hedges states, "were alike in their aversion to the strike, and to all the messy, hit-and-miss methods which the strike implied." These two men were L. K. Comstock, the head of a large construction business in New York and director of many corporations, and Charles P. Ford, then secretary of the union. Certain large employers had organized themselves into a group with conscious objectives as early as 1916, taking the name of Conference Club, and Mr. Comstock was president of the Club. The draft of a "National agreement" was adopted at a meeting of

this Society in 1918, and a "Declaration of Purpose" was issued later, the principles of which were accepted by the National Association of Electrical Contractors and the International Brotherhood of Electrical Workers. These principles were that (1) labour should sit on the Board, (2) labour should have equal representation with contractors; (3) The so-called disinterested party (who can never really be disinterested) should be excluded; (4) that all decisions should be unanimous.

The National Council for Industrial Relations was established in 1920, its policies being declared as follows:

(1) The Council views with disfavour sudden changes in wages, as unfair to employers on account of contract commitments. The Council likewise, and for the same reason, discourages retroactive wage advances, unless requested by both disputants. The Council reserves the right, however, to render decisions making sudden changes, or retroactive changes, or both, if in special cases the facts appear to warrant such action.

(2) Industrial enterprise, as a source of livelihood for both employer and employee, should be so conducted that due consideration is given to the situation of all persons dependent upon it.

(3) The public interest, the welfare and prosperity of the employer and employee, require adjustment of industrial relations by peaceful methods.

(4) Regularity and continuity of employment should be sought to the fullest extent possible, and should constitute a responsibility resting alike upon employers, wage earners, and the public.

(5) The right of workers to organize is as clearly recognized as that of any other element or part of the community.

(6) Industrial harmony and prosperity will be most effectually promoted by adequate representation of the parties in interest. Existing forms of representation should be carefully studied and availed of in so far as they may

be found to have merit and are adaptable to the peculiar conditions of the electrical industry.

(7) Whenever agreements are made with respect to industrial relations they should be faithfully observed.

(8) Such agreements should contain provisions for prompt and final interpretation in the event of controversy regarding meaning or application.

(9) Wages should be adjusted with due regard to purchasing power of the wage and to the right of every man to an opportunity to earn a living, and accumulate a competence; to reasonable hours of work and working conditions; to a decent home, and to the enjoyment of proper social conditions, in order to improve the general standard of citizenship.

(10) Efficient production in conjunction with adequate wages is essential to successful industry. Arbitrary restriction of output below reasonable standards is harmful to the public and should not be permitted. Industry, efficiency and initiative whenever found, should be encouraged and adequately rewarded, while indolence and indifference should be condemned.

(11) Continuing agreements are recommended, providing they contain provision for settling disputes, and for composing difference arising from controversial subjects, by reference to disinterested and competent judges.

The first decision rendered by the Board dealt with a dispute at Detroit in 1929 when the employers demanded a wage cut of 25 cents an hour. In refusing the request the Board defined a "fair wage" as follows: "A fair wage, in the opinion of the Council, is one which upon assumption based on statistics as to the duration of employment will satisfy as nearly as possible all the workers' needs. The adequacy of the wage to satisfy all of the workers' needs is regulated by the cost of living and will vary with the fluctuating purchasing power of the dollar. Embodied in that statement is the principle upon which the Council has reached its decision on the Detroit dispute."

Only 33 major decisions have been rendered by the Council during the 10 years of its existence. These decisions cover only 20 cities; but, as Mr. Hedges points out, there is little doubt that the influence of these decisions is out of proportion to the number. The establishment of a standard agreement; the rigid impartiality; the broad policies of equity displayed; the knowledge of labour's as well as management's peculiar problems; the loyalty to the industry as a whole—these principles soon percolated through the industry and established confidence. The very fact that there was a higher tribunal lessened tension. The knowledge that at the top officers of the union and representatives of employers were jointly considering common problems with equal authority and equal responsibility created good will."

In one of its decisions the Board summarized the major causes of industrial dis-

putes as being (a) intermittent and shifting employment, which breeds discontent on the part of the wage earner; (b) the system of price competition which drives both employers and employees to exploit the job to their mutual detriment; and (c) the lack of any general and moving understanding of the indissoluble partnership which exists in industry between management and labour. The decisions have been rendered as far as possible, in accordance with the principles enumerated above. They have been, in general, in the direction of "rational compromise," the interest of each party being considered as subordinate to that of the industry. The results brought about by these methods are stated by Mr. Hedges to be that "no major strike movement has occurred in the electrical construction industry since the establishment of the Council. There are virtually no local strikes. Strike psychology is passing. The immediate goal has been achieved."

### Electrical Guild of North America

A further development of co-operative methods in the same industry is the Electrical Guild of North America, which was founded by a group of contractors in May, 1930. "The Guild's avowed intention," Mr. Hedges states, "is to take a more positive attitude towards the industry, based upon a decade's experience in industrial relations. The Guild proposed to show the public that electrical construction men, unhampered by strikes and violent disputes, can pass on savings to the house owner."... "Within a year the Guild has set up offices in Washington, D.C., founded twelve section or local branches in principal cities, and has been instrumental in bringing about a trade practice which has worked out a new code of business conduct."

The methods of spreading work that are followed by employers of labour in the United States, are described by the President's Organization on Unemployment Relief in an article appearing in the *Monthly Labor Review* (Washington), for September. The writer reviews the work of 6,551 companies, employing 3,475,870 persons. The most usual method of arranging work so as to retain the largest possible number of workers was found to be by reducing the days worked per week, 58.8 per cent of the companies having adopted this practice. Other methods in use included the reduction of working hours per day; shorter shifts in continuous operations; alternating shifts or individuals; and rotation of days off.

## TRADES AND LABOUR CONGRESS OF CANADA

### Summary of the Proceedings of the 48th Annual Convention

THE 48th annual convention of the Trades and Labour Congress of Canada opened in the city of Hamilton, Ont., on September 12, and continued in morning and afternoon sessions until September 17, the meetings being held in the ball room of the Royal Connaught Hotel. Preceding the address of welcome to the delegates on behalf of organized labour by Mr. J. W. Burr, president of the Hamilton District Trades and Labour Council, the delegates stood during the playing by an orchestra of the National Anthem and "O Canada." The welcome of the city was extended by Mayor John Peebles, who stated that Hamilton being an industrial city, its citizens were greatly interested in the matters likely to come before the convention. He paid tribute to labour leaders for maintaining a certain equilibrium during the period of depression. The mayor opined that if the present system is to the advantage of only a few, there is something wrong with it, and the time had arrived when the economic system should be reconstructed if such was the case. As to leaders for reconstruction, the mayor stated that while governments hold an important place, leadership should come from the people. None were better able to assume the rôle than organized labour.

The Hon. W. A. Gordon, Federal Minister of Labour, stated that it was a pleasure to meet with the delegates to the convention, and pointed out that he had for a long time been associated with the workers. He paid tribute to his immediate predecessor in office, the Hon. Senator G. D. Robertson, who had been compelled to retire owing to ill-health. The minister commended the Congress and the labour movement generally upon the fact that it was founded on sane lines and had accomplished much in the interest of the workers during the past half century. He warned the delegates, however, not to be led away by hysteria, but to remain true to the principles of organized labour, and so be true to the nation, with the result that the efforts of the organized workers would continue to succeed. The minister believed that the great bulk of the unemployed were eager to secure employment, but he had been informed that there were some malingerers who he believed constituted a burden on organized labour. The present government, the minister declared, was ready at all times to receive the representations of the Congress, and although he could not of course promise com-

plete approval, he offered the assurance that any proposals advanced would receive careful consideration. Referring to conditions of the past three years, Mr. Gordon said that directly following the government's coming into office steps had been promptly taken to curtail the influx of immigrants to Canada under what was known as the railways agreement which permitted agricultural workers to enter the country. A great many of these had entered industrial occupations to the detriment of city workers. This agreement had been abrogated with the result that immigration had decreased. The minister favoured the shorter working day, but pointed out that it was difficult for one country to adopt appropriate legislation owing to the competition of other countries where the longer working day prevailed. In closing, the Hon. Mr. Gordon again declared that the Department of Labour was open at all times to hear representations from labour, and would be pleased to be helpful if at all possible.

The Hon. Dr. J. D. Monteith, Minister of Labour for Ontario, speaking for the province, referred to the sane and intelligent manner in which the provincial executive of the Congress laid their requests before the government. If it continued along the same course he was satisfied that the achievements of organized labour would be many, and of inestimable benefit. After enumerating the many attractive features of the province, including its natural resources, Dr. Monteith outlined the social legislation which had been enacted by the province. Right thinking people, the minister declared, recognized the sincerity, zeal and determination with which organized labour was imbued.

Mr. Drummond Wren, secretary of the Workers' Educational Association, spoke of the work of the organization and the efforts made towards workers' education in the province of Ontario, and made a plea for the formation of associations in other provinces with a view to forming a national association.

Mr. Tom Moore, the president, replying to the addresses of welcome, outlined the composition of the Congress, stating that there were delegates present from eight of the provinces, and declared the Congress to be the most representative body of Canadian organized labour. Mr. Moore stated that the Congress was proud of what had been accomplished, and declared the labour movement was inspired to improve and perfect

conditions to a greater degree, following which he reviewed the activities of organized labour through approaches to the several governments.

The convention being declared open, the first business was the report of the Credential Committee, which reported certificates received for 338 delegates, the representation being as follows: 46 delegates representing 45 international organizations which had affiliated the whole of their Canadian membership; 1 delegate from a provincial federation of labour; 35 delegates from 16 trades and labour councils; 254 delegates representing 152 local branch unions, and two fraternal delegates, representing respectively the British Trades Union Congress and the American Federation of Labour. The president commenting on the report, which was adopted, stated that the representation was the most numerous since 1920 and was the third largest convention in the history of the congress.

Convention officers were named as follows: Associate secretary, Ald. Rod Plant, Ottawa; sergeant-at-arms, Henry Trennum, Hamilton; messenger, Ernest Kell, Hamilton. Following the appointment of committees the reports of the executive council, provincial executives, federations of labour and fraternal delegates to the British Trades Union Congress and the American Federation of Labour were distributed.

### Report of Executive Council

The report of the executive council of the Congress opened with a reference to the marked advance made during the past year in improving standards of safety and health and social conditions by legislative enactment, following which reference was made to the legislative program which had been submitted to the Dominion Cabinet on January 26, 1932, including such subjects as (a) Unemployment and unemployment insurance; (b) British North America Act amendments; (c) Technical education; (d) Tariff; (e) Colonization, land settlement and migration; (f) Marine and shipping matters; (g) Criminal Code amendments; (h) Public ownership of public utilities; (i) Banking and credit systems; (j) Motor vehicle competition; (k) Magazine tax; (l) Letter carriers' conditions; (m) Old age pensions; (n) Fair wages; (o) Hours of labour; (p) Health insurance; (q) International Labour Organization; (r) Disarmament; (s) Taxation; (t) Cadet training; (u) Legislation to encourage co-operative training; (v) national banking system; (w) County health units; (x) Pensions for the blind; (y) Amendments to Bankruptcy, Election and Marking Acts.

The next section gave a review of the 1932 session of Parliament, reference being made to certain matters dealt with under the following headings: (1) Unemployment relief; (2) Hours of labour; (3) Civil Service Act amendments; (4) Taxation; (5) Banking and currency; (6) Economic council; (7) Criminal Code amendments; (8) Railways and harbours; (9) Canada Shipping Act; (10) Admiralty Act amendments; (11) International peace; (12) International connections; (13) Labour conditions in bridge contracts; (14) Frontier College; (15) Radio broadcasting; (16) Nationalization of radium supply; (17) Pensions for the blind; (18) National health; (19) Cadet training; (20) Dominion Election Act; (21) National coal policy; and (22) Beauharnois power project.

The Executive gave a review of provincial activities, which summarized the reports of the provincial executive committees and federations of labour (which were printed in full in another portion of the report) and outlined the legislative enactments of the various provincial legislatures of interest to labour.

Report was made on the relations of the congress with national and international bodies. Fraternal delegates were exchanged with the British Trades Union Congress and the American Federation of Labour. The Congress also has direct affiliation with the International Federation of Trade Unions, the American Association for Labour Legislation, the Canadian Council on Child and Family Welfare, the Canadian Radio League, the League of Nations Society in Canada, and the National Women's Trade Union League of America; while representation is accorded the Congress on the Employment Service Council of Canada, the Canadian Engineering Standards Association, the Dominion Fire Prevention Association, Frontier College, the Canadian Social Hygiene Council, the National Research Council, the National and Provincial Safety Leagues, and at the annual conferences of the International Labour Organization, Geneva. Synopsis of the year's activities of some of the bodies were given in the report.

Reference was made to the *Congress Journal*, official monthly publication, which it was stated has been self-supporting, but each affiliated unit was urged to accord assistance with a view to increasing its circulation.

Under the heading of "Disarmament" it was stated that this question still remains one of the greatest international problems, and the executive urged that the declarations and policies of the Congress on disarmament be again reaffirmed, the fullest support to be given to measures which aim toward the attainment of this object.

Referring to "Union Labels," the executive called attention to the Unfair Competition Act, under which the union labels already registered in accordance with the 1927 legislation pertaining to union labels will continue to be valid, but new registration is required under the provisions of the new law, which defines "Union label" to mean a registered trade mark adopted for the purpose of indicating that the wares bearing it have been produced under defined working conditions or by a defined class of persons.

The executive under the caption of "Nationalization of Radio Broadcasting" reported that membership in the Canadian Radio League had been continued, that legislation had been adopted providing for the public ownership of radio broadcasting, and that provision was made for a commission with powers to carry on the business of broadcasting in Canada and of regulating and controlling broadcasting by other agencies. It was recommended that membership be continued in the Canadian Radio League.

The executive reiterated the policy of the congress on public ownership, and pointed to the handicap placed on the Canadian National Railways and steamship lines by being compelled to assume burdens of capitalization out of all proportion to the value of the assets transferred. Referring to the Royal Commission on Transportation, it was urged, when the report was available, that it should be carefully examined by the labour movement to the end that the principles upon which labour's advocacy of public ownership is based may be fully protected. Reference was also made to the report on Canadian harbours in which it was recommended the merging of all existing harbour boards into one central authority.

The next section contained correspondence between President Moore and Prime Minister R. B. Bennett on the question of labour advisers to the Canadian delegation participating in the recent Imperial Economic Conference.

The report of the executive council closed with a recommendation to establish a committee on legislative activities, and again directed attention to a number of matters upon which the Congress had previously made pronouncements, and though not dealt with in the present report, are still considered a part of the program of the Congress.

The remainder of the report contained the reports of the provincial executive committees and federations of labour together with the reports of the fraternal delegates.

The various sections of the report were referred to the appropriate committee for consideration. The Committee on Officers'

Reports recommended approval of the sections of the report which had been referred to them, calling special attention to outstanding features and commending the executive for the work of the past year.

### Unemployment and Underemployment

The Committee on Officers' Reports also reported on the section of the executive council's report under the above heading, in which reference was made to the reduced working time, unemployment and salary reductions. In seeking remedial measures, the executive stated that they had at all times been governed by the policies of the Congress which had been found adequate to cover all phases of the situation. The executive also reported that in accordance with the instructions of last year's convention the report on "Employment, Unemployment and Underemployment" was published in pamphlet form and widely distributed. The executive council submitted the following recommendation with a view to securing legislation establishing contributory unemployment insurance:—

"It is our studied opinion that the best results will be achieved by this convention authorizing the executive council to seek the co-operation of other national organizations and public bodies—except those which are dual or hostile to the Congress—that have expressed themselves as in harmony with the unemployment insurance policies of the Congress. It is proposed that each organization or public body should be invited to send a limited number of representatives to a conference at Ottawa for the purpose of preparing a resolution urging the enactment of legislation providing for a national scheme of contributory unemployment insurance and that this resolution be presented, jointly with the executive of the Congress, to the Dominion Cabinet in time for action to be taken on the same during the next session of Parliament. Following this, Trades and Labour Councils should undertake to convene similar gatherings in their respective territories in order that public interest might be aroused in the resolution as presented to the Federal Government and the support of their local members of Parliament thereby obtained for the same.

"It is the unanimous opinion of your Executive council that the circulation of a petition for signatures would not bring results commensurate with the cost involved but that the plan for action herein outlined would be more effective, and we accordingly recommend its adoption."

The Committee on Officers' Reports commended the executive for its activities in the matter of unemployment insurance and concurred in the above recommendation for conferences on the subject. Many resolutions on unemployment and unemployment insurance were also introduced and it was decided they be discussed in connection with the above report. The recommendation of the executive

was adopted, as were also five resolutions requesting contributory unemployment insurance. The convention also approved of a resolution asking for immediate action on unemployment insurance and adequate payments to maintain a satisfactory standard of living.

Dealing with the resolutions in regard to the present system of relief the convention went on record as in favour of adequate maintenance in all localities, and urged trades and labour councils to support their respective municipal councils in securing increased assistance from the Federal and Provincial governments as may be necessary for this purpose. Approval was given to a request that the responsible authorities provide adequate relief for all unemployed women on at least the same basis as for men, and also that the federal authorities immediately release the various building projects in order to give employment. Opposition was expressed in a resolution to the holding of dual positions on government and civic work. Approval was given to a resolution asking that federal, provincial and municipal governments now levying a tax on incomes be requested to increase such levies as a means of securing adoption of unemployment insurance. It was decided by resolution that the executive of the Congress circularize all affiliated bodies immediately following the presentation of the legislative program to the government urging them to solicit the support of their respective federal members with a view to securing their co-operation.

Two resolutions asking for the establishment of a national system of non-contributory unemployment insurance were not concurred in. Another resolution asking for the imposition of an equivalent tax on the use of labour-saving machinery to the extent of the displacement of labour met the same fate.

The report of the Committee on Legislative Activities also commended the action of the executive on unemployment and unemployment insurance, and suggested that this work should be continued in the same energetic manner. This committee also reported on the review of the 1932 session of Parliament by the executive and the activities of the various provincial executive committees and federations of labour, the work of all of which was commended.

#### Report of Secretary-Treasurer

Mr. P. M. Draper, secretary-treasurer of the congress, presented the financial statement for the fiscal year ended August 31, 1932, which showed total receipts from all sources of \$39,260.64; the total expenditure,

including the cost of maintaining the Congress headquarters at 172 McLaren St., Ottawa, was \$23,128.86, leaving a balance of \$16,131.78. The paid-up membership of the congress is 122,129, as compared with 141,137, a loss for the year of 19,008. The secretary stated that six years ago the membership was 103,037, which shows that at the present time there is still an increase of 19,092 over the reported membership in 1926. There are 62 international organizations which have affiliated the whole of their Canadian membership numbering 115,300 with the Congress. During the year four charters were issued to federal unions. In the report of the trustees of congress headquarters, also presented by the secretary-treasurer, it was stated that plans for remodelling the building, as decided in 1931, have been prepared, and as soon as further details are completed the work will be proceeded with. On recommendation of the Audit Committee, the report was adopted.

Subsequently the Committee on Ways and Means recommended (1) that the fraternal delegate to the American Federation of Labour be granted \$300; (2) that the fraternal delegate to the British Trades Union Congress be allowed \$800; and (3) that the executive council be empowered to defray the incidental convention expenses. This report was also adopted.

#### A New Committee

In accordance with the recommendation of the executive council, the Committee on Constitution and Law approved of another convention committee to be known as Committee on Legislative Activities whose duties will be to deal with the legislative program, and the executive council's review of the sessions of Parliament and of provincial legislative matters, together with the reports of provincial executive committees and federations of labour, and to report to the convention.

Reporting on a resolution the committee concurred in the following being included in the constitution: "That in the absence of the president of the congress from the chair the convention shall be presided over by one of the vice-presidents." The convention adopted the report.

#### Union Labels

The Committee on Union Labels approved of the efforts of the executive council of the Congress to popularize the union label. The committee expressed the opinion that officers of local unions who are directly or indirectly affected by the use of the union label should make it their business to take advantage of the columns of the *Congress Journal* to

create an even greater interest in the use of all union labels, and to take heed of the legal changes that have been made to protect them from abuses of the said label by means of registration under the "Unfair Competition Act." The committee recommended that the Congress again request the Union Label Trades Department of the American Federation of Labour to have their union label literature for use in Canada printed in the Dominion.

The committee also recommended the publication of a union label guide in each city for the information and guidance of trade unionists and the general public, the expense to be borne by the international officers of the union label trades.

The committee called attention to the absence of the shop number on work where the Allied Printing Trades label is used, and urged that this omission be corrected.

Recommendation was made that union label leagues be formed in industrial centres where practical and expressed the opinion that where a labour representative on any public commission fails to urge the use of the union label on purchases made for such body it should be sufficient reason for his withdrawal as a representative of union labour.

The committee approved of a resolution seeking support for union-made cigars with a view to benefiting the organized cigar makers.

Regret was expressed that the photographs in the local souvenir booklet did not bear the label of the International Photo-Engravers' Union, but the committee was gratified to know that, through the affiliation of the United Brotherhood of Carpenters and Joiners with the International Federation of Woodworkers, the first named body now enjoys the co-operation of the Amalgamated Woodworkers of Great Britain, which organization now demands that all doors installed and trim erected by them must bear the union label of the Brotherhood of Carpenters. The committee suggested that the members of the Congress should ask for the carpenters' union label on houses, repairs and any other work of this character. The report was adopted.

### **Bonding of Notaries**

A resolution the preamble of which declared that "there are many opportunities for sharp practices by lawyers during these depressed times," and asking for legislation by the various provincial legislatures imposing a blanket bond on all notaries handling trust funds, was adopted.

### **Sale of Beer**

On the Resolution Committee recommending concurrence in a resolution asking the convention to reaffirm demand for the sale of beer in licensed places for beverages purposes, a motion was made that the resolution be tabled. This motion was defeated and the report of the committee adopted.

The convention also approved of a resolution asking for the appointment of a representative of labour on the Ontario Liquor Control Board.

### **Trade with Russia**

A resolution was submitted asking that the executive of the Congress use its influence with the federal government with a view to opening trade relations with Russia in such commodities as would work to the mutual benefit of both countries.

The Resolution Committee reported that the present policy of the Congress is not opposition to trading with Russia in commodities of mutual benefit to the workers of both countries, and recommended reaffirming this policy as outlined by the president of the Congress in 1931 when he opposed the entry into Canada of Russian commodities which would be to the detriment of Canadian workers. The convention adopted the recommendation of the committee.

### **Political Action**

A resolution was introduced, the preamble of which set forth that "Parliament as presently constituted is displaying ineffectiveness in handling the unemployment problem," and stated that "there is no likelihood of either Liberal or Conservative parties enacting the necessary measures to adequately take care of the primary producers and bring about that distribution of commodities which is so essential to the maintenance of a proper standard of living." The resolution asked that the executive be instructed to consider and formulate the best method to pursue for the creation of a Dominion-wide workers' parliamentary unit and report to the 1933 convention; and also that the Congress give assurance of its desire to co-operate with other political units which have for their purpose the socialization of the means of production and distribution. The Resolution committee recommended re-affirmation of the former stand of the Congress on political action, and non-concurrence in the resolution. (The policy of the Congress is to allow political autonomy to remain in the hands of the established labour political party.) After a lengthy debate the recommendation of the committee was adopted.

### Old Age Pensions

Under the above heading resolutions were submitted asking (1) that the Dominion Government legislate to make old age pensions a Federal measure covering all the provinces; (2) that efforts be continued to secure enactment of old age pensions legislation in the provinces where it is not in operation; (3) that the age limit be reduced to 65 years and the residence qualification be fifteen years, irrespective of length of residence in any particular province; and (4) that 55 years be the age of qualification, and fifteen years residence in the Dominion, the amount of pension to be \$50 per month, payable by the Federal Government.

The Resolutions Committee submitted a substitute for the above resolution calling on the Dominion Government to enact legislation making old age pensions a Federal measure covering all provinces and reaffirmed the decisions of last year as follows:—

(a) That the qualifying age be reduced from seventy to sixty-five years; (b) that the aggregate amount of private and pension income allowable under the Act, before deductions are made from pension payment, be materially raised from the present sum of \$360 per year; (c) repeal of the section of the Act demanding five years' provincial residence qualification and thus make all citizens of twenty years residence within Canada eligible for pension irrespective of the province in which they have lived.

The recommendations of the committee were adopted.

### Mothers' Allowances

Three resolutions on this subject were submitted and all were adopted, as follows: (1) that efforts be continued to secure mothers' allowance legislation in the provinces where such is not now provided for; (2) that the Quebec Government be asked to enact legislation providing for mothers' allowances in accordance with the recommendation of the commission which has been studying the question of social insurance; (3) that the Ontario Mothers' Allowance Act be amended in regard to the residential clause of two years' residence in the province immediately prior to application for allowance. These resolutions were adopted.

### Minimum Wage Laws

A resolution was introduced asking that the minimum wage laws of Quebec be amended to give the necessary power to the Minimum Wage Commission to recover difference in

wages between that paid and the scale set by the commission. This resolution was adopted, as was also another requesting that Minimum Wage Boards be empowered to regulate the hours of workers coming under the minimum wage acts in conformity with the wishes of organized labour.

### Workmen's Compensation Act Amendments

Eight resolutions were introduced under this heading, and all were concurred in by the Resolutions Committee and adopted by the convention, only slight amendments being made in two of them. The first asked that all First Aid work in injuries to workmen be placed under the jurisdiction of workmen's compensation boards in the various provinces. The second complained that the form of the Quebec Workmen's Compensation Act, owing to arbitrary interpretation of certain clauses, was not in harmony with the spirit of the Act, and asked that the Government be requested to take action in regard thereto. The other resolution asked (1) that a labour man chosen from the membership of the Trades and Labour Congress be appointed to the Quebec Workmen's Compensation Board; (2) that the list of industrial diseases under the Quebec Workmen's Compensation Act be enlarged; (3) that restaurant, culinary and club employees be covered by the provisions of the Quebec Workmen's Compensation Act; (4) enactment of amendments to Ontario Workmen's Compensation Act in accordance with the representations made by the Trades and Labour Congress and the railroad brotherhoods; (5) that all corporations, industries and institutions be brought under the jurisdiction of Schedule 1 of the Ontario Workmen's Compensation Act, and (6) enactment of amendments to the regulations of the Ontario Workmen's Compensation Act so as to cover silicosis and similar lung affections.

### Labour Publications

A resolution introduced declared that there were so-called labour papers, having no visible circulation in the international trade union movement, which receive advertising from manufacturers and government departments on the assumption that they are endorsed and accredited by organized labour, and requested that all publications in Canada that solicit subscriptions from advertisers as representing the international trade union movement be requested to place a copy of each issue or special issue with the Trades and Labour Congress, and that the Congress be authorized to state, if requested by advertisers, what labour

newspapers or periodicals have its endorsement or the endorsement of reputable bodies affiliated with the Congress. The convention reaffirmed its policy of support for all *bona fide* labour papers, but in the discussion it was pointed out that the *Congress Journal*, the official paper of the organization, was the only publication for which the Congress was responsible and which declared its policies on all matters affecting the organized workers.

### Shorter Work Day and Week

Resolutions were presented seeking the six-hour day and five-day week. One of these, which declared that the multiplication and use of machinery is constantly throwing large numbers of workers out of employment, was adopted as expressing the sentiments of the convention. Another resolution which was approved asked for a similar shortening of the working period combined with a proportionate increase in the scale of wages. Other resolutions under this heading which were approved were (1) that pending the adoption of the five-day week, action be taken to prevent workers being forced to labour seven days a week; (2) that the Ontario Factory Act be amended as regards the provision for a maximum 60-hour week, so as to bring the hours in line with present day custom; and (3) that hotels be brought under the provisions of the Ontario Factory Act.

### Foreclosures

The convention approved of a resolution asking for a year's extension of all moratory acts and urging the provincial legislatures which have not done so to adopt such legislation. A second resolution on the same subject asked for legislation restricting mortgage holders from taking unfair advantage of present conditions in foreclosing mortgages, both in the matter of principal and interest.

### National Control of Banks

A resolution which produced considerable discussion was one the preamble of which among other statements declared: "experience has shown that the banking system is one of the most potent factors in our present life, and that it can and does wield enormous power in the industrial and commercial world, thus holding in its hands the economic destiny of practically the entire community," and therefore is actually a public utility. The sponsors for the resolution asked the Congress to support the principle of national control of the banking system, a request that was unanimously adopted.

### Economic Policies

Under this caption were four resolutions, the preamble to the first stating that "the general policy of the Trades and Labour Congress of Canada is frequently misunderstood, particularly in connection with the present depression, and that the situation is aggravated by the wilful misconstruction of same by those opposed to the Congress," and asking the Congress to adopt a policy in connection with the present world-wide depression. Each resolution made recommendations as to what should be sought to improve conditions, and among these was the ten-point program of the United Farmers of Alberta, with which body the Congress was urged to co-operate.

The Resolutions Committee recommended that the resolutions be referred to the executive council with instructions to prepare and publish a pamphlet outlining the economic policies of the Congress as declared in decisions of previous conventions. This suggestion, after a brief debate, was adopted.

### Labour Representation on Reconstructed C.N.R. Board

The following resolution was unanimously approved:—

"Whereas, it is reported that the Royal Commission appointed to report upon the railway and transportation problem of the Dominion has recommended that the Board of Directors of the Canadian National Railways be drastically reduced in number; and whereas, it is reported that this recommendation has for its purpose the elimination of political influence as a directing force on railway matters, a principle in which we are in thorough accord; and whereas, curtailments and economies in railway operations are effected to the extent of at least 80 per cent by way of reduced earnings of employees and elimination of terminal facilities hit directly at the small properties of wage earners; and whereas, it has been the policy of past Governments to include a representative of wage workers on the Board of Directors of the Canadian National Railways.

"Therefore, be it resolved, that this convention of the Trades and Labour Congress of Canada hereby instruct its incoming executive to press for adequate wage workers' representation of a non-political character on the proposed reconstructed board of directors."

### Dual Duty on Street Cars

The convention unanimously voted in favour of legislation making it unlawful for any street railway company or municipality engaged in railway transportation to allow its operators to perform the duties of both conductor and motorman on any car in passenger service, or to start or operate such car, or permit such car to be in motion while he is collecting fares or performing any other duty not necessary in the actual movement of such car.

### Reduction of Bond Interest

Favourable consideration was given to a resolution which in the preamble declared that "a great many workers have been compelled to accept reduced wages owing to the scarcity of employment, and as holders of municipal, provincial and Dominion bonds are reaping an increased income at prevailing prices of debentures and bonds, and in addition are claiming favourable exchange rates," called on the Dominion Government to undertake by legislation a conversion issue of all outstanding public bonds and debentures at an interest rate not in excess of  $3\frac{1}{2}$  per cent to the end that equality of sacrifice shall prevail.

Another resolution which was adopted protested against the provisions of the Dominion Salary Deduction Act being applied to casual workers in the employ of the Government, and asked that the matter be taken up with the proper authorities in Ottawa.

### Fair Wages

Several resolutions in connection with fair wages and fair wages regulations were introduced and all adopted. The first requested that contractors who have violated the fair wage clauses on relief undertakings, in connection with work done for governments or municipalities, by not paying the regular scale of wages, be debarred from tendering on any government work until the said contractors have come to an understanding or entered into a contract with the labour unions concerned.

Another resolution expressed the opinion that the 10 per cent deduction in civil servants' salaries was never intended to apply to craftsmen on Government contracts and asked the executive council of the Congress to investigate. It was also decided to protest against minimum rates of pay being made the maximum on Government work or work aided by grant or subvention.

The other resolutions were (1) asking for the enactment of fair wage laws in each province; (2) that the Quebec Government be requested to enact fair wage legislation similar to that in force in Dominion Government contracts, and pending such action that the Government be asked to amend the Order in Council of April 17, 1929 (LABOUR GAZETTE, June, 1929, page 682), so as to include all departments of the Provincial Government as well as all other public bodies.

### Industrial Disputes Act and Hydro-Electric

A resolution adopted asked that the Ontario Government be requested to have the enabling legislation in connection with the Industrial

Disputes Investigation Act extended to cover the provincially-owned hydro-electric system. Another resolution on the same lines was also adopted.

### Type Setting to be Done in Canada

After setting forth that the tax on printing as proclaimed by the Dominion Government in August, 1931, has not provided for printers the employment expected, a resolution asked for the amendment of the Canadian Copyright Act so as to provide that any printed article requiring Canadian copyright must be printed from type, set in the Dominion or from plates made from type so composed. This was adopted, as was also a resolution pointing out that in many instances foreign manufacturers shipped into Canada, under a low tariff, fully assembled units minus one small part, and asked that this situation be closely watched.

### Freedom of Speech

Without any discussion the convention adopted a resolution requesting the Federal Government to eliminate section 98 of the Criminal Code forbidding free speech in Canada; but the resolution following, which asked that section 98 of the Criminal Code and sections 41 and 42 of the Immigration Act be immediately repealed and that all political prisoners be released, was not approved.

### Railways, Shipping and Motor Transport

Under this heading fifteen resolutions were introduced, one of these opposing the spending of any money on the proposed St. Lawrence waterways "until such time as the country's commerce requires same," was not concurred in. Favourably considered was a resolution in opposition to any part of the Canadian National Railways being sold or leased to any private interests. Other resolutions approved were: (1) in favour of the method of appointing directors for the C.N.R. as recommended by the Association of General Chairmen of Railway Employees to the Royal Commission on Transportation; (2) that the executive council of the Congress combat anything in the report of the above-mentioned commission which it is considered would be detrimental to the railway employees; (3) reiterating the stand of Congress in favour of public ownership; (4) that the Minister of Immigration be requested to take up with the United States Immigration Department the plight of the Michigan Central employees who were deprived of their jobs at Montrose, Canada, by the transfer of the work to Niagara Falls, N.Y.; (5) that the

Federal Government inaugurate a system of tolls on a tonnage basis on vessels operating through Canadian canals; (6) protesting against Parliament discarding the principle of Government ownership and operation of ships, and stating that if the present ships are uneconomic and cannot be satisfactorily operated that they be replaced by a modern fleet of merchant type vessels; (7) that the Dominion Government be urged to reintroduce Bill 74 designed to correct certain abuses in the coastal trade on the Great Lakes, and that the vessel owners be given ample opportunity to readjust their capital structure before the opening of navigation in 1933.

### **Control of Motor Transport**

The following five resolutions seeking to control motor transport were referred to the executive council and the provincial executive committees for action: (1) that motor vehicles carrying passengers or freight be placed under the control of the Board of Railway Commissioners, or some new authority set up for this purpose, so as to have all transportation rates standardized on a fair and equitable basis; (2) asking the Federal and Provincial Governments to create a board to deal with the problem of motor transport with a view to regulating freight rates, etc.; (3) that legislation be sought to prevent any one driver from operating a bus or truck more than 250 miles in any 24 hours, and that all drivers be given a medical eyesight and efficiency test periodically, the same as for locomotive engineers; (4) that the maximum period of duty for truck, bus and taxi drivers be six hours, that a severe penalty be provided for violations of the Highway Act, and that the law be strictly enforced in regard to length of trailers, and that when more than one trailer is used a man be placed at the rear; (5) that all truck owners be compelled to place two drivers on all commercial trucks on transport work in Ontario.

### **Health Insurance and Safety**

Approval was given to two resolutions asking that legislation be sought providing for health insurance so as to provide medical, surgical and hospital services for all needy persons. The convention also approved of the act entitled "Safety of Life at Sea and Load Line Conventions Act, 1931," being proclaimed by the Dominion Government, reiterated opposition to the unrestricted use of poisonous materials in paint-spraying machines, and asked for legislation to protect the workers exposed to the fumes of the

materials used in such machines. Other resolutions under the above heading which were adopted asked for legislation (1) to provide for regulations and sanitary conditions in barber shops; (2) to govern the erection, operation and supervision of hoisting appliances mechanically operated and used for the purpose of conveying material; (3) to provide that in each projection room of moving picture houses two licenced projectionists be employed during the whole performance and that the examination of applicant projectionists be made more exacting; (4) for the examination and licensing of all electricians in Ontario and the appointment of a competent board or boards of examiners to enforce such law under the direction of the Minister of Labour; (5) forbidding the establishment of printing offices in private houses on the ground of menace to the health of the owners and the public; (6) to prohibit the employment of females and inexperienced males as operators on power paper-cutting machines, owing to the risk of personal injury. Approval was given to a request that piping from hot water and steam boilers in the Province of Quebec be inspected by competent inspectors. On a resolution urging legislation to provide regulations for kitchens and food-preparing rooms the Resolutions Committee agreed as to the necessity of sanitary and properly ventilated rooms for food preparation.

### **Coal Price Investigation**

It was declared in a resolution that household commodities in general have fallen in price, wages have been considerably reduced, but fuel coal and coke prices remain unchanged, all standard brands being at the prices prevailing in the high wage period, and it was requested that the Federal Government be petitioned to initiate an enquiry into the coal business, retail prices, etc. This was approved.

### **Social Services in British Columbia**

A resolution was introduced, the preamble to which asserted that in the province of British Columbia a self-appointed committee of wealthy business men, known as the Kidd Committee, had investigated provincial government affairs; that in the published findings of this committee, staff and wage reductions are strongly advocated and other like recommendations made that can only increase unemployment and decrease the purchasing ability of many citizens; that recommendations are made in the report for the repeal of the Minimum Wage Act, curtailment of old age pensions, mothers' allowances and other social

services of benefit to many needy people; and that limitations in free school education are suggested that would throw many young people between the ages of 14 and 18 years on the labour market every year. The convention strongly condemned the findings of the Kidd committee and objected to the adoption of any of its recommendations.

### Other Resolutions Adopted

Other resolutions which received the approval of the convention were:—

In favour of sweepstakes being legalized.

In favour of all public utility commissions being elected by the people;

In favour of superannuation being provided by the Dominion Government for "prevailing rates employees";

Urging local labour bodies to support demand for the abolition of mechanical music in theatres;

Asking for legislation to prevent dividends being paid on other than the actual capital employed in industrial and other establishments with the ultimate prohibition of the practice of watering of stock;

In favour of amendment to the Ontario Mechanics' Lien Act being amended to give workmen added protection and facilitating collection of wages due as a first charge against property;

In favour of amendments to the Bankruptcy and Banking Acts so as to make claims for wages a first charge;

In favour of removing from the competitive field all musicians, now and in future, who are or may be serving in bands of the permanent forces of Canada;

Requesting strict enforcement of the immigration law which debars persons entering Canada under contract;

A resolution asking that the Congress take action to assure the trade union movement of the Dominion that a certain oil company is carrying out its expressed friendliness towards organized labour was referred to the trades directly affected, the executive of the Congress to co-operate.

### Question of Privilege

At the Tuesday afternoon session of the convention Mr. Humphry Mitchell, M.P. for East Hamilton, rose as a question of privilege to deny the statements contained in a circular which was distributed by alleged communists at the door of the convention hotel. The circular accused Mr. Mitchell of having called the police to disperse a Labour Day Parade sponsored by the Workers' Protective Association. The statements were branded by Mr.

Mitchell as a pure fabrication. Neither he nor the Hamilton Trades and Labour Council had anything to do with calling the police to disperse what he termed a branch of the Communist Party.

### Fraternal Greetings

The delivery of fraternal messages to the Congress took place at the morning session of Wednesday, September 14, the convention being presided over by Mr. P. M. Draper, the secretary-treasurer, who introduced the speakers.

Greetings from the American Federation of Labor were extended by Mr. Frank B. Powers, president of the Commercial Telegraphers' Union of America, who pointed out that there was a close bond of friendship between the American Federation of Labor and the Trades and Labour Congress of Canada. Each organization had to give much attention to the matter of reducing unemployment. All knew of the effect of unemployment on the purchasing power of the United States and Canada. He referred to the effect of labour saving machinery and said it had been impossible to keep anything like an equal balance. It was the work of the A.F. of L. to seek to restore to employment the 11,000,000 out of work in the United States. It had been estimated that an additional 10,000,000 workers were on short time. It was obvious from these figures how the purchasing power had been reduced. Mr. Powers outlined the efforts of the federation to have the hours of labour reduced on the North American continent. In 50 years the working day had been decreased from twelve to eight, and he stated that the federation was pledged to the five-day week, which he declared was necessary to help the unemployment situation. He urged organized labour to be on the alert to prevent any increase in the working hours and felt it was more necessary now than ever before for the workers to maintain their organizations to prevent any further lowering of living standards.

Mr. Stanley Hirst, vice-president of the Transport and General Workers' Union, the fraternal delegate from the British Trades Union Congress, in his message from that body and the British Labour Party, stated that while there were political differences existing between Great Britain and the Irish Free State there was no disagreement between the organized labour forces of these countries. After referring to the defeat of the Labour Government, Mr. Hirst mentioned the reduction in unemployment insurance benefits and the opposition to the "means test" which had

been adopted in connection with the insurance plan, and which he believed would be successful in securing amendments. The number of unemployed, the speaker stated, had not decreased, there being on July 25, as many as 2,811,782 registered unemployed, an increase of 98,432 over the previous year. The British Congress was in favour of the 40-hour week or less, and declared that the general council of the Congress intends, when the Labour Government again attains power, to introduce legislation for the 40-hour week. This, Mr. Hirst stated, was necessary if there was not to be a permanent army of unemployed men and women. Referring to disarmament, he stated that the British Congress had organized a petition campaign in favour of disarmament; thousands of meetings had been held, and the Congress would continue to press for disarmament until a treaty was put into effect, and which he declared would be the first step towards total disarmament. The present membership of the British Congress was 4,000,000. A special department for organizing purposes had been established, the functions of which is to render assistance to unions in increasing their membership. Amalgamation of unions is still being carried on with a view to effecting a system of larger groups. Mr. Hirst outlined the work of the several branches of the British Congress, which include an international committee dealing with all classes of international work and the gathering of data on wage standards.

On invitation of the executive council, and previous to the delivery of the fraternal messages, the Hon. C. J. Arcand, Minister of Labour for Quebec, addressed the convention, his opening remarks having reference to the proposals which had been submitted last year to the government by the provincial executive of the Congress, and pointed out that for the purpose of studying social legislation the government had appointed a commission to investigate and report on the question of old age pensions and other problems. Mr. Arcand referred to the action of the government in regard to fair wages and hours of labour; it had abolished fee-charging employment agencies; and had adopted the Industrial Disputes Investigation Act. Referring to unemployment he stated that it was apparent that something was wrong. Whether a change of the system or a change of the human mind with respect to selfishness was needed to bring about improved social conditions he hesitated to say. He paid tribute to the manner in which the organized workers had conducted themselves through the period of depression, and declared the working people are sound in

mentality and deserved the sympathy and support of all classes. Mr. Arcand referred to the great privileges which the younger workers are enjoying as a result of the pioneer work of their seniors. He cautioned the delegates not to work too much for state control, but to retain some liberty for themselves in carrying on their work in their own way, and urged organization of all workers.

Mr. Ed. J. Flore, of Buffalo, N.Y., president of the Hotel and Restaurant Employees and Beverage Dispensers' International Alliance, at the Tuesday afternoon session of the Congress conveyed the greetings of his organization, and thanked the delegates for the support given to the members of his organization and mentioned the close bond of fellowship existing between the organized workers in Canada and the United States.

At the Thursday afternoon session Mr. J. B. Carswell, chairman of the Ontario Apprenticeship Board, spoke to the delegates on the work of the board and declared the Apprenticeship Act to be one of the outstanding pieces of legislation in the province, under the provisions of which much was being done to develop competent workmen in the building industry.

Fraternal greetings were received from the International Association of Firefighters and from the Camp and Mill Workers' Union in Vancouver.

At one of the sessions the fraternal delegates were each presented with a gold watch, the wife of the delegate from the British Congress receiving a string of pearls. The convenor of the ladies entertainment committee was presented with a silver rose bowl, and the chairman and secretary of the local arrangements committee were made the recipients of gold vest pocket knives with chains, and cuff links.

### Officers Elected

The election of officers and fraternal delegates took place at the Friday afternoon session, the whole executive being re-elected without opposition, as follows:—

President, Tom Moore, Ottawa, Ont. (re-elected for the fourteenth consecutive term).

Vice-presidents, P. R. Bengough, Vancouver, B.C.; James Simpson, Toronto, Ont.; and R. J. Tallon, Montreal, Que.

Secretary-treasurer, P. M. Draper, Ottawa, Ont. (re-elected for the 33rd consecutive term).

Provincial Executive Committees: Quebec: Geo. R. Brunet (chairman), P. H. Corriveau and L. A. Beaudry, Montreal, and Omer Fleury, Quebec City. Ontario: Joseph Tom-

kins (chairman) and T. Jackson, Toronto; Rod Plant, Ottawa, and E. W. A. O'Dell, Hamilton. Manitoba: H. Kempster (chairman), Winnipeg, the remaining members to be named by the executive. Saskatchewan: W. E. Stephenson (chairman), Moose Jaw; H. Perry, Regina; Alex. M. Eddy, Saskatoon, and H. D. Davis, Prince Albert. British Columbia: Colin McDonald (chairman) and W. Watt, Vancouver; S. MacDonald, Prince Rupert, and James Wilson, Victoria. The naming of the Nova Scotia committee was

referred to the executive. The provinces of New Brunswick and Alberta having federations of labour, no committees are named.

Fraternal delegate to the British Trades Union Congress, Humphrey Mitchell, M.P., Hamilton, Ont.

Fraternal delegate to the American Federation of Labour, W. V. Turnbull, Montreal, Que.

Next year the convention will meet in Windsor, Ont.

## RECENT LABOUR UNION CONVENTIONS

### International Photo-Engravers' Union

THE thirty-third annual convention of the International Photo-Engravers' Union, which was held at Toronto, Ont., August 15-21, 1932, was attended by thirty-three delegates representing twenty local unions and about eighty per cent of the total membership. In the absence of Mayor Stewart, Controller James Simpson, vice-president of the Trades and Labour Congress of Canada, welcomed the delegates to the city. A number of other speakers also welcomed the delegates and extended greetings on behalf of the organizations they represented. President Volz, who thanked the various speakers for their kind expressions of welcome, asserted that the most serious loss the union had sustained was the closing down of certain concerns, which lessened considerably employment opportunities, with the result that about eighty per cent of the membership were either working part time or unemployed, and this continued unemployment was forcing some of the members to migrate into other fields of activity. Referring to the Canadian situation, President Volz informed the delegates that owing to a change in ownership of several firms, the membership was adversely affected, but this was off-set to some extent by the opening of new offices in Quebec City, Montreal, and London, in which members of the union were interested. Figures were quoted by the president to show that notwithstanding adverse conditions and heavy expenditures, the finances of local

unions during the year had increased by \$2,771.19, while, during the same period benefits paid out for various purposes by the international and local unions amounted to \$2,085,408.30. The reasonable attitude of employers in curtailing registration of apprentices until those identified with the industry were re-employed, was commended by President Volz.

According to the report of the secretary-treasurer, total receipts for the year ending May 31, 1932, amounted to \$472,888.68, while expenditures totalled \$523,303.54, of which amount \$389,863.65 or about seventy-four per cent was paid out for direct benefits and insurance premiums.

Resolutions were adopted advocating a shorter work day and week; and recommending moral support and where possible practical help to the campaign of the Employers' Association for the maintenance of a standard and reasonable price for their product.

Officers elected were: President, Ed. J. Volz, 292 Madison Ave., New York, N.Y.; first vice-president, Matthew Woll, 105 A.F. of L. Bldg., Washington, D.C.; second vice-president, F. H. Glenn, 6241 N. 21st St., Philadelphia, Pa.; third vice-president, Wm. C. Golby, 67 Day Ave., Toronto, 10, Ont.; secretary-treasurer, Henry F. Schmal, Tower Grove Bank Bldg., S. Grand Blvd., St. Louis, Mo.

Baltimore, Md., was selected as the convention city for 1933.

### Mine Workers' Union of Canada

The seventh annual convention of the Mine Workers' Union of Canada was held at Calgary, Alberta, September 12-16, 1932, with twenty-four delegates present, President James Sloan in the chair. Greetings were received from *The Worker*, the Canadian Labour Defense League, the Workers' Unity League of Canada, and the National Youth Department of the

W.U.L. President Sloan drew attention to the lack of organization work in Saskatchewan and Nova Scotia, and the executive board was asked to devise ways and means of uniting the Amalgamated Mine Workers of Nova Scotia with the Mine Workers' Union of Canada. The president called upon the workers throughout the country to unite and "force the boss-

class to give non-contributory unemployment insurance, and immediate relief against starvation, and for freedom of speech, press and assemblage to the workers". The delegates were advised that the only way to build up a real militant union was by educating the membership, and the president urged the central office to see that educational material was sent out regularly to the unions, and that classes, lectures, etc., be arranged to improve the inner life of the union.

According to the report of Secretary-treasurer Stokaluk, the total revenue for the period, January 1 to August 31, 1932, including the balance brought forward, was \$14,128.86, expenditures amounted to \$14,066.41, leaving a balance on hand of \$62.45.

The convention adopted the report of the committee on organization, which recommended that each sub-district should have a permanent full time agent paid by the locals in that sub-district, the wages of such agent being based upon the earnings of the miners. The committee on ways and means recommended that the official organ of the union, the *Canadian Miner*, be continued, and that every member should become a subscriber to the paper, the editorial policy of which to be under the direct control of the executive board. Other recommendations of this committee were: (1) The establishing of a national strike fund, the national office to set aside two per cent of all income for this purpose; (2) The creating of a strike relief fund, and (3) The calling of a special convention for the purpose of selecting the location of the national headquarters, the election of officers, and a discussion of the situation in the Drumheller Valley, where existing agreements soon expire. The recommendations of the committee were adopted.

Among the resolutions adopted were the following: (1) urging the local unions to send delegates to the united front conference to be held in Edmonton, October 28-29, 1932; (2) recommending the sending of a delegate to the Donbas coal region of Russia to in-

vestigate conditions prevailing in the mines and trade unions; (3) endorsing the Workers' International Relief; (4) seeking non-contributory unemployment insurance legislation, and pending such legislation immediate unemployment relief to be paid to all unemployed in cash at the rate of \$10 per week for all single persons, \$15 per week to all married men and to widows, with an additional \$2 per week for each dependant; (5) protesting against any further prosecution of charges against workers arising out of the strike in the Crow's Nest Pass; (6) urging co-operation with the Canadian Labour Defense League in organizing demonstrations all over Canada on September 29, demanding the dropping of all charges against those facing jail terms in connection with the Estevan strike; (7) demanding immediate release and the granting of a new trial for Sam Scarlett, one of the leaders in the Estevan strike; (8) protesting against the deportation policy of the government; (9) demanding the immediate repeal of Section 98 of the Criminal Code; (10) recommending the creating of youth sections in all local unions; (11) seeking amendments to the Mines Act, the Minimum Wages Act, and a revision of Mothers' Allowance Act; (12) favouring the payment of old age pensions to all persons over 55 years of age, and that the Federal Government assume the whole responsibility; (13) advocating that foreign born be naturalized after five years' residence in the country, and without recourse to the courts; (14) demanding the release of all class-war prisoners; (15) favouring the 5-day week and 6-hour day; (16) recommending that locals be empowered to call in any of the district officers to examine the mines at any time; (17) demanding free hospital and dental treatment to all miners and their dependants injured or sick in the mining camps; (18) recommending that a financial statement be sent to all local unions every six months.

The selection of the place for the holding of the next special convention was left to the executive board.

### Amalgamated Mine Workers of Nova Scotia

The first annual convention of the Amalgamated Mine Workers of Nova Scotia, which was formed in June, 1932, in opposition to the United Mine Workers of America, was held in Glace Bay, September 19-24, with 59 delegates registered representing 16 local unions. Among the fraternal delegates were Wm. Matheson, representing the Workers' Unity League, Jas. B. McLaughlin, editor of the *Nova Scotia Miner*, and Daniel McKay, of the United Steel Workers of Sydney and

sixteen members of three women's auxiliaries of the union. Greetings were received from the Workers' Unity League, the Industrial Workers of the World and the town council of Glace Bay.

President John A. McDonald, who presided, presented the report of the executive board in which he outlined events in Nova Scotia leading up to the formation of the new union. The report of Mr. Robert R. Stewart, secretary-treasurer, detailed the work under-

taken by the executive board and the active membership since the birth of the organization, in which information was given in regard to the various meetings held and the votes taken by a number of U.M.W. local unions on joining the Amalgamated Mine Workers.

A constitution, which had been prepared by a committee appointed previous to the opening of the convention, was presented and finally adopted by the delegates.

The report of the Policy Committee, to which were referred several resolutions having to do with working conditions, etc., all of which were finally adopted, reiterated the declaration of the executive officers in which the attitude of the U.M.W. in regard to the wage cut was strongly condemned, and the policy of continuing to fight for the improvement of living standards was affirmed. The Policy Committee made the following recommendations, based on the resolutions submitted, all of which were approved:

(1) That in the event of the company (Dominion Steel and Coal Corporation, Limited) proposing a wage cut or any other adverse changes in the present contract that we immediately start an organizational and educational campaign in preparation for a strike.

(2) That in the event of further recognition by the operators of the discredited officials of the U.M.W. as representing the miners we will make all necessary preparation for a strike.

(3) That our executive officers immediately on the adjournment of this convention notify the company that they are ready to enter negotiations with them for the restoration of the wage scale prevailing previous to the adoption of the wage cut.

(4) That we will oppose with all force at our disposal any effort that may be made to put into effect the so called "re-allocation" sections of the "Duncan award."

(5) That we propose the elimination from the contract of boys' rates and that regardless of the age of the miner the minimum datal scale will apply to all miners.

(6) That in any future agreement entered into with the operators no one sided "non stoppage of work" shall be included. Any such clause can only be on the basis of parity.

(7) That the A.M.W. of Nova Scotia go on record as being prepared to take "joint action" with other workers throughout Canada for the purpose of bringing pressure for the enactment of the non-contributory unemployment insurance bill to the extent of joining in "general strike" throughout Canada for this purpose.

(8) That we enter into negotiations with the Steel Workers' Union looking toward joint action on wage rates. In this the A.M.W. is ready to proceed as far as the Steel Workers and their union are ready to work with us. Also we should make every effort to make contact with the ore miners of Newfoundland.

(9) That it be the policy of the A.M.W. of N.S. to admit to membership all those who have been previously blacklisted for their previous labour activities.

(10) Acting on instructions from Resolution No. 8 re coal mined on idle days. In view of the fact that conditions are different in the different sub-districts, and our organization in the process of organization, we recommend this matter be referred to the local unions to make recommendations to district executive to be acted on.

Resolutions were adopted: (1) asking that the Coal Mines Regulation Act be amended to provide that any coal mine lease shall automatically become null and void when the lessee ceases operating any mine; (2) asking that the Dominion Coal and Steel Company and all others be informed that any contracts entered into with any other bodies will not be recognized by the Amalgamated Mine Workers; (3) expressing opposition to persons buying company-owned houses; (4) asking for repeal of Section 98 of the Criminal Code and the immediate release of all prisoners convicted under the said section; (5) asking that relief stations be opened in mining localities where they previously existed; (6) forbidding any member to draw up any contract with the coal company; (7) demanding that contracts entered into with the coal company shall in future expire during the period March 15 to May 31; (8) asking that the next agreement with the company shall contain a clause providing for connecting all dwellings with sewers and the installation of toilets in the houses; (9) that no lawyer shall be consulted or engaged in connection with any agreement, settlement of grievance or any internal work of the union; (10) that moral and financial support be given to the *Nova Scotia Miner*; (11) that a system of membership buttons be established; (12) that May Day and Davis Day (June 11), be recognized as holidays by the union; (13) that salaries of officers be based on \$5 per day rate, in no case to exceed \$125 per month; (14) asking for the enactment of non-contributory unemployment insurance, the employers and the Government providing \$10 per week for every unemployed single man and woman over 16 years of age and \$10 per week for every job-

less man and \$2 per week for each dependant, the wages of part time workers to be based on similar figures.

The question of having the check-off deleted from the Coal Mines Regulation Act was referred to the local unions for a referendum vote, as was also a resolution declaring for the banishing of the United Mine Workers from Nova Scotia.

The executive officers of the United Mine Workers having applied for an injunction to prevent seceding local unions from taking the funds into the new organization, the question was discussed and those who had been served

with writs met with the executive to determine a line of action.

It was decided to place on salary the secretary-treasurer and stenographer.

A committee of five was appointed to examine the Workmen's Compensation Act with the executive board, all of whom continue in office until the next convention, which will be held in Glace Bay on the second Monday in May, 1933. The officers are: President John Alex. McDonald; vice-president, Claire Gillis; secretary-treasurer, Robert R. Stewart, Glace Bay.

### **Hotel and Restaurant Employees' and Beverage Dispensers' International Alliance**

Over one hundred delegates, representing fifty-six local unions, attended the twenty-sixth general convention of the Hotel and Restaurant Employees' and Beverage Dispensers' International Alliance, which was held at Boston on August 8-12. This convention was originally set for August 10, 1931, but was postponed by referendum vote of the membership. Council Member Hon. J. H. Brennan, in the absence of Governor J. B. Ely, welcomed the delegates to the State of Massachusetts, while Mayor James M. Curley extended a civic welcome. Mr. J. T. Moriarty, president of the Massachusetts State Federation of Labour extended greetings from the organized workers of the State.

President Flore informed the convention that, in order to reduce the operating cost of the International Union, it had been decided that all the officials would take a temporary ten per cent wage reduction, and that a further saving had been made by reducing the cost of publishing the official journal by approximately \$200 a month. In reporting on conditions and trade union membership in Canada, figures, as appearing in the Twenty-first Annual Report on Labour Organization in Canada, were quoted by the president.

According to the report of the secretary-treasurer, receipts for the three year period ended April 30, 1932, amounted to \$469,077.59, while expenditures for the same period totalled \$536,972.22, leaving a deficit of \$67,894.63.

Mr. William Green, president of the American Federation of Labour, addressing the convention, informed the delegates that the preliminary estimate of unemployed, based on government figures, was over 11,000,000, and that if unemployment continued to increase at the same rate as from January to June, 1932, there would be over 13,000,000 out of work by January, 1933. President Green was opposed to dismantling industry by doing

away with labour-saving machinery, which, in his opinion, would be a retrograde step, but he would parallel the introduction of such machines by reducing the work day and work week. He further advised the delegates to concentrate their energies on a modification of the Volstead Act rather than the repeal of the 18th amendment.

Resolutions were adopted: (1) endorsing social insurance, and instructing the delegates to the convention of the American Federation of Labour to favour same; (2) providing for an audit of the books of the alliance on April 30, 1933, and yearly thereafter; (3) endorsing the five-day week and six-hour day; (4) asking for the repeal of private employment agency laws; (5) favouring the modification of the Volstead Act and the repeal of the 18th Amendment; (6) giving endorsement to the labour press; (7) approving of a program to care for unemployment; (8) favouring the creating of a food department within the American Federation of Labour, and calling upon the Federation to initiate same; (9) compelling affiliation of local unions with State Federations and local central bodies; (10) reducing the number of delegates to the convention of the American Federation of Labour to three.

Chief officers elected were: President, Edward Flore, 426 Woodbridge Ave., Buffalo, N.Y.; Secretary-treasurer, Robert B. Hesketh, 528 Walnut St., Cincinnati, Ohio.

Minneapolis, Minn., was declared the city in which the 1934 convention would be held.

The Ontario Municipal Association, at their annual meeting held at Toronto early in September, unanimously adopted a resolution in favour of the establishment of a national system of unemployment insurance, based on contributions from the state, the employers and the workers.

## Relief Activities of Trade Unions in the United States

The department of social economy and social research of Bryn Mawr College, in co-operation with the Central Labour Union of Philadelphia, last winter made a study of the extent of unemployment among the members of thirty trade unions, and the measures undertaken by these unions to make provision for their own membership. The results of this survey have been summarized in a recent issue of the *American Federationist*, the official publication of the American Federation of Labour. The report refers to the efforts made by union labour in various cities to cope with the problem of relief, first for its own membership and then by the raising of relief funds for the unorganized unemployed. In looking after its own members, the trade unions, it is pointed out, had no adequate relief funds upon which they could draw. In some cases a start on the relief financing was made from the union treasury, but "beyond this every cent had to be raised by contributions or assessments from the membership." As regards the relief measures adopted by the thirty unions included in the survey at Philadelphia, the report states that such provisions are typical of union relief throughout the country.

An analysis of the Philadelphia survey indicates that twelve Philadelphia unions have paid weekly unemployment benefits. Some of these union benefit plans had been in operation since December, 1930, while others started in January, February, and June of 1931. These twelve unions have expended a total of \$215,000 in unemployment relief since December, 1930, and this amount was raised entirely by collecting assessments from the employed membership, many of whom had lost heavily and were living on reduced incomes. In these twelve unions, every fully employed member has been assessed, and in some cases those working only part time as well. Members of several unions pay 50 cents for every 8-hour day they work; others pay

2 per cent or even as high as 10 per cent of their total weekly pay. In one union the members pay 5 cents an hour while in another union, \$10.50 is collected from each member for a full week's work of 44 hours. The unions, it is stated, have been able to give their unemployed members substantially more help than that given by the unemployed funds of the city. In Philadelphia the usual contribution from the unemployment funds has been between \$4 and \$4.50 a week for a family of five. The unions in general have given \$5 for single persons and \$8 to \$10 for families, sometimes as much as \$20 a week.

In addition to direct relief, several unions have assisted their unemployed members in other ways. Insurance has been carried for members out of work, coal and gas bills paid, union dues kept up, doctors' bills paid and prescriptions filled, relief given in the form of groceries and provisions, rent and clothing. In some cases where members were paying for homes, loans have been furnished to carry on the payments and prevent foreclosure. Hundreds of unemployed families received baskets of provisions at Christmas, and in cases where unions were too heavily burdened by unemployment to give regular relief payments, members contributed for the Christmas fund. Other unions divide work time or give up one day's work a week so that all may be steadily employed. In several cases the entire membership is kept at work by plans of this kind, although work available is often only 2½ to 3 days a week. Some organizations have been able to care for those in need by voluntary contributions.

The article concludes by stating that while this record is an outstanding achievement, yet with increasing unemployment, funds are being exhausted; and "the fact cannot be ignored that even with the greatest loyalty and co-operation on the part of the membership, the burden will soon be too heavy to carry."

The Quebec Social Insurance Commission announced during September that a further report would be laid before the provincial legislature at its next session, dealing with the subjects of Old Age Pensions and Unemployment Insurance. Earlier reports of the Commission were reviewed in the *LABOUR GAZETTE*, August, 1932, page 861, and November, 1930, page 1236.

An employer at Montreal was fined \$100 and costs on a charge brought by the Quebec Women's Minimum Wage Board, of having paid certain of their employees at rates below the minimum wages fixed by the Board. The Court commented severely on the practice, as a form of competition unfair to the employers who observe the law.

## THE TRADES UNION CONGRESS OF GREAT BRITAIN

THE sixty-fourth annual Trades Union Congress\* was held at Newcastle-upon-Tyne on September 5, and the four following days. The President was Mr. John Bromley, the Chairman of the General Council.

The figure of total trade union membership represented at the Congress was 3,613,273, a decline of 106,000 (3 per cent) on those of the previous Congress. All but three groups of unions showed a decrease, the largest decreases being in the metals, machines, conveyances, etc., group and in the textile group, where the decline in each case was nearly 7 per cent.

The president, in his opening address, defended the trade union policy of striving to maintain wages and conditions of employment during a period of falling prices and contraction of trade. We were living, he said, in an age of plenty, and the right policy was to increase consumption. He condemned a policy of "economy," as lessening the purchasing power of the consumers; and claimed that, in the conditions resulting from the immense expansion and finer technique of modern industry, the only sound and effective policy was that of raising wages and of shortening working hours with a view to the redistribution of employment between the workless and the over-worked.

### The Cotton Workers' Strike

After the president's address, the Congress was addressed by Mr. Naesmith, general secretary of the Weavers' Amalgamation, on the subject of the dispute in the manufacturing department of the cotton industry. An emergency resolution, submitted by the General Council, was passed unanimously, condemning the policy of the Lancashire cotton trade employers in seeking to depress still further the standard of living of their employees; expressing the view that such a policy was futile as a means of rehabilitating the industry, and could only postpone its long overdue reorganization and must further limit the market for industrial products; pledging the Congress to support by all means in its power the fight of the cotton trade unions for trade union standards of life, for the reinstatement of workers who have lost employment owing to their defence of trade union principles, and for the sanctity of trade union agreements; and instructing the General Council to organize all possible moral and financial assistance to help the cotton workers. The president announced that the General Council had set up a committee to carry out the terms of the resolution, and had voted

£1,000 as a contribution to the fund. He appealed for a wide response to the appeal.

### Shop Assistants

The Congress passed a series of resolutions dealing with shop assistants, including (i) a demand for legislative action to give effect to the recommendations of the Select Committee on Shop Assistants, (ii) a demand that employers should be required to give written references to employees leaving their service, (iii) a demand for legislative restrictions on Sunday trading. They also asked the General Council to take action to secure the regulation of the hours and conditions of office workers by legislation.

On the second day of the Congress, a resolution was passed protesting against the holding up of building programs, and instructing the General Council to call upon the Government to encourage local authorities to advance the progress of housing schemes and to introduce legislation for the stricter control of rents.

### Unemployment

The rest of the session was devoted largely to the subject of unemployment. The principal resolution expressed grave concern at the increase in the number of unemployed, which it attributed in part to the policy of the Government, and called for (i) the abolition of war debts and reparations, the international examination of other international debts, and the lowering of barriers to trade; and for (ii) the planning of housing and slum clearance schemes and other public works, the public control of banking and monopolistic industries, and the taxation of land values. Other resolutions called for a reduction in the waiting period under the unemployment insurance scheme, the abolition of the means test, the amendment of the "anomalies" regulations, and other changes in the unemployment insurance scheme and in its administration.

### National Health Insurance

Two resolutions dealt with the National Health Insurance scheme. One of these called for a centralization of finance under the scheme, the abolition of the panel system and the establishment of a State medical service, and the extension of medical services to the dependants of insured workers; the other condemned the reduction of women's benefit, and the other alterations in the scheme introduced by the National Health Insurance Act of 1932.

\* This report is based upon an account of the convention appearing in the *Ministry of Labour Gazette*, September, 1932.

A resolution was also carried calling upon the Government to amend the Workmen's Compensation Acts on the lines of the Trades Union Congress and Labour Party's draft bill. Special attention was called in the discussion to the need for employers to be compulsorily insured against workmen's compensation risks.

### Fraternal Greetings

On the following day, Mr. H. B. Butler, the recently appointed director of the International Labour Office, gave an account of the work of that Office, and dealt with the action which is being taken in various countries in connection with proposals for a shorter working week. The Congress was also addressed by the Right Hon. G. Lansbury, M.P., as fraternal delegate from the Labour Party; and by fraternal delegates from the American Federation of Labour, the Canadian Trades and Labour Congress, the International Federation of Trade Unions, and the Co-operative Union.

### Disarmament

The proceedings on the fourth day of the Congress began with an address from the Right Hon. A. Henderson, the chairman of the Disarmament Conference. Following this, a resolution calling for a large reduction of armaments was passed unanimously. Two of the delegates pointed out the necessity for making provision for workers at arsenals, shipyards, etc., who might be displaced by disarmament measures; but it was stated that this question, arising from the application of a general principle, had been considered, and was also under discussion internationally.

A resolution was then moved and seconded calling attention to the hostilities now in progress or threatened, and urging the General Council "to make representations to the International Federation of Trade Unions for the immediate prevention of the manufacture or transport of all war materials to Japan or China." It was stated that the International Federation of Trade Unions already had the matter under consideration, and had called together representatives of the unions concerned. The resolution was not put to the vote, the previous question being moved and carried by a large majority.

### Fiscal Policy

The remainder of the session was occupied by a discussion (which was continued on the following day) of a report on fiscal policy, which had been prepared by the Economic Committee in accordance with a resolution passed at last year's Congress, adopted by the General Council in May, and subsequently

published as a pamphlet. The report recommended "a comprehensive planning of our economic life, in the socialist direction," and expressed no final opinion on the tariff policy of the present Government. The report was criticized by several delegates as being inconclusive, and failing to condemn a tariff policy unequivocally; but it was defended, on behalf of the General Council, as an objective examination of the question, which did not advocate a tariff system. The report was ultimately passed by a large majority. A resolution was subsequently passed instructing the General Council to investigate the industrial effects of tariffs in the several trades directly and indirectly affected by them, and to report to a future Congress.

### Proposed National Industrial Council

On the fifth and last day of the Congress, a discussion took place on a report, prepared by the Economic Committee and adopted by the General Council, dealing with the public control and regulation of industry and trade. The report recommended, *inter alia*, the setting up of a National Industrial Council "for the discussion of the general problems of industry," and of boards of management in each of the industries or services which were judged suitable for "socialization," i.e., for being brought under public ownership or control. Socialization, it was stated, can generally be effected more conveniently and effectively by the public corporation method than by direct operation by a Government department. The boards of management of the socialized industries or services "should consist of persons appointed by the Government solely on the ground of their fitness for the positions, not excluding persons from any class, but not selected as representing particular interests. Advisory committees should be constituted to represent particular interests, including trade unionism." This report also was criticized by several delegates, and its reference back was moved and seconded. The motion to refer back was, however, withdrawn, on the understanding that the report should be regarded as merely a statement, not committing the Congress to any policy outlined therein, until the trade unions had had time to consider it more fully.

### Shorter Hours of Labour

A resolution was moved and seconded instructing the General Council to formulate a policy for the reduction of hours of labour. The resolution declared the opposition of the Congress to a movement which would lower the standard of living of the wage-earners, but stated that Congress would support any approach towards the establishment of a 40-hour week, in which provision is made to com-

pensate the workmen for loss of earnings consequent upon the reduction of hours; it also instructed the General Council to press forward internationally to secure a legal 40-hour week in all countries, as the most effective and practicable method of mitigating the results of industrial rationalization, and as a means of absorbing the unemployed. The resolution was carried, after one delegate had called attention to many cases in which even a 48-

hour week was not observed, and overtime was worked with the consent of the trade unions; the General Council, he said, would have to overcome the resistance, not only of the employers, but of many trade union workers.

A resolution was also adopted instructing the General Council to prepare a report on the best means of securing the transformation of the present system to one founded on a co-operative or socialist basis.

## UNEMPLOYMENT AND ADULT EDUCATION

### Symposium conducted by the American Association for Adult Education

**T**HE problems that have been raised by "technological unemployment," and the need for training displaced workers for new occupations, are discussed in a recent publication of the American Association for Adult Education under the following title: "Unemployment and Adult Education: A symposium on certain problems of re-education arising from permanent lay-off—the displacement of men and women in industry through the introduction of machinery and other labour-saving devices, sometimes known as technological unemployment." The contributors to the symposium are prominent educationists, industrialists, and publicists.

Mr. Morse A. Cartwright, the director of the Association, in a "foreword," points out that the "permanent lay-off" has shown a marked increase in recent years, being accentuated by the industrial crisis, and that this type of displacement seems destined to grow.

*Use of Existing Educational Facilities.*—In the first chapter, Mr. C. A. Beard refers to the lack of definite information as to the extent of the unemployment that can be attributed to improved methods of production, but notes the large numbers of displaced adult workers who are constantly searching for new places in industry for which they require training. Some attempts have been made by industry in the direction of retraining their displaced employees, but, in Mr. Beard's view, the agency that is best fitted to cope with the problem of fitting these workers to new employment is the Federal Board for Vocational Education, which now controls the expenditure of about \$27,000,000 a year, this amount being contributed by the Federal, State, and local governments. The experience of the Vocational Rehabilitation Division in the Federal Government might also serve as a guide. "Therefore," he concludes: "it seems safe to assume that, when the problem of adult education raised by technological unemployment is defined and given concrete forms, existing machinery and experience can be turned to good effect in its solution."

*Examples of Displacement.*—Mr. Stuart Chase, President of the Labour Bureau, Incorporated, gives some outstanding examples of the "displacement" of labour by improved machines:—

A machine at Milwaukee turns steel sheets into finished automobile frames, the process taking one hour, and the machine having a capacity of 10,000 frames a day, and keeping about 200 men engaged. Formerly 2,000 men would have been required to produce the same number of frames. One man can now do what ten men did before. Similar elimination of manpower is seen in the manufacture of steel sheets; in the conveyer systems introduced into open-pit mines for iron ore; in the manufacture of glass and tires. "Two men out of every three that were required to fabricate a complete car in 1914 are now laid off."

In a concrete sewer project at St. Louis, 33 machine operators, aided by 37 labourers, have been doing the work of 7,000 pick and shovel men. "The United States Department of Commerce estimates that mechanical combines in one wheat area have cut the force of farm labourers from 50,000 to 20,000. Here are automatic cigar makers, dial telephones, the 'iron chink' which has revolutionized the canning of fish, automatic stokers—where a white-garbed dial watcher displaces scores of coal-heavers,—mechanical glassblowers, automatic power stations, knitting machines, selling machines, book-keeping machines, paint-sprayers, teletype setters, mechanical cotton pickers, milkers, automatic check writers, and vast automatic railroad switch yards—all controlled by a man or two in a conning tower. The 'talkies' have cost 25,000 Hollywood employees their jobs, and all but wiped out the theatre musician the country over. The machine invades every field; no worker is beyond the reach of its steel tentacles—farm labourer, clerk, factory, salesman, railroad worker, stenographer, miner, printer, building tradesman, even musician."

Mr. Chase questions whether the economic structure is at present capable of effecting the

re-adjustments that were possible in the earlier stages of the mechanization of industry. "As machines, time study, and mergers, like three great engines, pump men from their jobs, we shall have to improve greatly our methods of re-allocating jobs if the sheer bulk of human misery during the transition period is not to increase... The total 'firing' rate is exceeding, or will soon exceed, the total 'hiring' rate."

*Alternative Training.*—Professor Paul H. Douglas (University of Chicago) makes suggestions as to the types of training that might be given displaced workers: (1) giving concrete information about the possibilities of industries and trades; (2) discovering and acquainting the workers with other lines of work for which their previous training has fitted them; (3) giving training, in the many cases where this will be necessary, for new occupations for which the workers' past training has afforded little preparation.

Mr. I. Lubin, of the Institute of Economics (Washington) gave the results of an inquiry he had made in 1928 of a group of displaced workers. Of those who succeeded in finding new jobs more than half had to take work which bore no relation to their former occupations. For example, trained cutters with years of experience in clothing factories were found to have accepted jobs as gas station assistants, watchmen, and grocery clerks. Trained machinists had become canvassers for a mail order hosiery firm; a skilled cabinet-maker was mixing drugs for a patent medicine firm, and a rotary press operator was being employed in a tailor shop. Such changes of occupation were typical of about one-half of the 410 persons who had found new employment.

Similar results were obtained from studies of workers discharged by a clothing firm at Chicago and by a rubber plant in Connecticut. "Our entire vocational educational system," Mr. Lubin concludes, "should be revamped to fit in with the constant flux which characterizes modern industry. We might well question the social wisdom of training useful workers for crafts already over-supplied with labour and the continuation of courses for trades in which the future demand for labour bids fair to be further restricted... "Without close contact with technical changes, vocational re-education for those already dispossessed may eventually result in merely making more acute an already grave situation."

Professor Elizabeth Baker, of Columbia University, makes a plea for the co-ordination of programs of vocational education, based on fuller knowledge than exists at present as to the rate of displacement, and the power of industry to absorb new labour.

*Proposed Permanent Central Board.*—Professor Slichter, of Harvard University, dis-

cusses the causes of the recent violent occupational shifts, and suggests a program for dealing with technological unemployment:—"A joint and permanent standing committee or board on technological unemployment, might", he suggests, "be created by the National Association of Manufacturers, the United States Chamber of Commerce, the American Federation of Labour, the Association of Railway Labour Executives, the Association of Railway Executives, the American Bankers Association, and possibly one or two farmers' organizations. The members of the Board should serve without pay, but the Board would need a full time executive secretary and it would need a competent and well-paid technical staff. The expenses should be borne equally by the co-operating organizations. Another alternative would be a Federal Labour Board, created by the United States Government and composed of six or seven industrialists and labour leaders, with the Secretaries of Commerce and Labour as *ex officio* members. It also would need a technical staff, and it would need to be connected with industry by advisory committees. Professor Slichter considers that, of these two proposals a private, co-operative board would be preferable, provided the organizations creating it were willing to give it proper moral and financial support.

Mr. Newton T. Baker, president of the American Association for Adult Education, expressed the view that the problem of technological re-education was primarily one for industry rather than the state. This was also the opinion of Mr. R. I. Rees, of the American Telephone and Telegraph Company.

*Attitude of Organized Labour.*—Mr. Spencer Miller, Junior, of the Workers' Education Bureau of America, mentioned industries in which labour had accepted the situation resulting from the displacement of men by machines, and had retrained the members for new forms of work. The chief example of this attitude was the printing industry, when the Mergenthaler linotype displaced the hand typesetters. The union foresaw that the new process would ultimately increase employment by creating more work, and to-day the machine is considered to be an indispensable part of the industry. In the bottle industry, following the introduction of machine glass blowers, the union accepted a drastic wage cut, which made it possible for many of the employees to be retained. The metal trades met a similar crisis when machines were introduced in the manufacture of stoves, and the union took measures to re-educate numbers of its members in the new methods. The Teamsters' Union of New York also took defensive measures when motor trucks were first introduced, training its members to serve as chauffeurs;

and the Printing Pressmen's Union instituted a trade school for training workers according to the most modern methods.

*The Function of Vocational Schools.*—Mr. J. C. Wright, director of the Federal Board for Vocational Education, suggested the possibility of developing public "opportunity schools," such as already exist at Denver and elsewhere, where unemployed persons can apply for instruction by well qualified teachers. "In the last fourteen years," he said, "there have grown up in this country something like 25,000 trained teachers, supervisors, and administrators who are administering the programs of vocational education in the public school. Many of these people in handling the ordinary vocational work of the community have been forced to analyse occupations in order to know the kind of program

which should be set up in the case of any individual. They are experienced in that work, and it seems to me that greater attention should be directed toward the opportunity of service to the unemployed. A greater degree of consciousness of responsibility on their part would tend toward a partial solution, at least, of this problem.

Mr. W. A. O'Leary, Assistant Commissioner of Education for New Jersey, also advocated the development of vocational schools for the purpose of retraining workers who are thrown out of their occupations, and suggested that these schools should develop closer relations with labour and with industry.

Other suggestions by various contributors included the development of university extension facilities and, in general, of provision for adult education.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Preparatory Technical Conference on Shorter Working Hours

The Governing Body of the International Labour Office held a special meeting in Geneva on September 21 to consider a request received from the Italian Government proposing that a special session should be convened of the International Labour Conference to draw up proposals for the reduction of hours of work in industry, for consideration by the different member states, with a view to relieving the widespread unemployment now prevailing throughout the world. Reference to this meeting was made in the September issue of the *LABOUR GAZETTE* (page 990). The decision reached by the Governing Body after two days' deliberation was that a preparatory conference should be held in Geneva in January for the study of the technical problems connected with the reduction of hours of work.

This preparatory conference will be composed of representatives of governments, employers and workers. Its conclusions will be submitted, in the course of the same month, to the Governing Body, which will examine the desirability of communicating them to the World Economic Conference which is to be held early in the new year, and possibly to governments, for consideration as bases for the conclusion of bilateral or multilateral agreements, in the event of the subject being taken up by the 1933 session of the International Labour Conference. The Governing Body will consider at its regular session whether the question of the reduction of working hours should be placed on the agenda of the regular session of the International Labour Conference which is to be held in the spring of 1933.

### The Revised Dockers' Convention

On the invitation of the British Government a preliminary meeting was held in London in July, attended by representatives from Belgium, Denmark, France, Germany, Great Britain, the Netherlands, Norway and Sweden, for the purpose of an exchange of views on the possibilities of reciprocal arrangements in the application of the revised Convention concerning the protection against accidents of workers employed in loading or unloading ships, which was adopted at the Sixteenth Session of the International Labour Conference last spring. The meeting convened by the British Government on this subject was in the nature of a first step in pursuance of a Recommendation which was adopted at the same time as the Convention, advising the desirability of reciprocal arrangements between countries, designed to secure a general standard of safety for dockers equally effective as the standards required under their own laws and regulations.

### Visit of the Egyptian Prime Minister

Sidky Pasha, Prime Minister of Egypt, visited the International Labour Office in September and was received by the Director, Mr. H. B. Butler. Their conversation turned chiefly on the Egyptian Government's plans for social legislation. Mr. Butler visited Egypt last February at the request of the Government and later submitted a report on present conditions in industry in that country and the best methods of organizing a Department of Labour. The visit of the Prime Minister of Egypt to Geneva afforded an opportunity of a discussion of the practical steps to be taken for applying the suggestions contained in Mr. Butler's report.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN AUGUST, 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on September 1, was 8,007, the employees on their payrolls numbering 792,149 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for August was 1,762, having an aggregate mem-

bership of 163,530 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of September, 1932, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics, there was very little general change in employment at the beginning of September; the working forces of the 8,007 co-operative employers aggregated 789,321 persons, compared with 792,149 in the preceding month. The index number (based upon the average for the calendar year 1926 as 100) declined slightly from 86.3 on August 1, 1932, to 86.0 on September 1, as compared with 107.1 on the same date in 1931. On September 1 of the ten preceding years, the index was as follows:—1930, 116.6; 1929, 126.8; 1928, 119.1; 1927, 111.0; 1926, 106.2; 1925, 97.8; 1924, 94.2; 1923, 101.2; 1922, 94.8 and 1921, 89.8. The record for these years shows that there is often a slackening in industrial activity on September 1; the percentage falling-off on the date under review was fractionally less than the average loss reported in the last decade, but the index continued at a low level.

Manufacturing, coal-mining, transportation, railway construction, services and wholesale trade reported heightened activity as compared with the preceding month, the general increases in these industries exceeding those recorded on the same date of last year. On the other hand, activity was curtailed in logging, building and highway construction and retail trade. It is noteworthy that the decline in highway construction alone, (where the activity is now largely in the nature of local relief work), exceeded the total decline reported by all the co-operating employers.

#### Employment by Economic Areas

Firms in Quebec, the Prairie Provinces and British Columbia showed gains, but contractions occurred in the Maritime Provinces and Ontario; the improvement in the Western areas, largely resulting from harvest activities, appears likely to be reflected before long in an improved situation in Eastern Canada as well.

*Maritime Provinces.*—In the Maritime Provinces there was a decline in employment, which, however, involved a smaller number of workers than that registered on September 1 of last year. Most of the loss this year took place in construction, mainly of highways and roads, but transportation and coal-mining also released employees. On the other hand, manufacturing, (chiefly of textile and iron and steel products), logging and railway construction showed improvement. Statistics were received from 583 firms, whose staffs aggregated 60,558 workers, compared with 62,199 in the preceding month. The index was much lower than on the same date in 1931.

*Quebec.*—Increased employment was noted in Quebec, mainly in manufacturing, but also in shipping and highway construction; within the first-named, textile, pulp and paper, lumber, leather and musical instrument factories showed most improvement. Reductions were reported, however, in logging camps. The working force of the 1918 employers co-operating in Quebec stood at 230,007 persons, as against 227,371 on August 1. A very large

increase had been registered at the beginning of September, 1931, (chiefly as a result of unemployment relief works), and the index then was considerably higher.

*Ontario.*—In this province, 3,556 firms reported further reductions in employment; manufacturing, especially of metal products, showed curtailment, and mining, transportation, trade and construction were also slacker. Within the manufacturing group, however, improvement was reported in canning (seasonal), pulp and paper and some other factories, and services were also more active. The reported payrolls aggregated 318,632 per-

ployment; manufacturing was rather slacker, notably in the iron and steel, building material and lumber divisions, and construction work was also curtailed. Harvest activities, proceeding on a large scale, are, of course, not reflected in these statistics.

*British Columbia.*—Employment as indicated by employers in British Columbia showed a gain; this took place chiefly in manufacturing (notably of non-ferrous metal, food and lumber products), in mining and building and railway construction, while logging, shipping and highway construction showed contractions. The working force of

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

sons, or 6,845 fewer than in the preceding month. Employment was quieter than in the early autumn of 1931; the employers furnishing data for September 1 of last year had recorded no general change.

*Prairie Provinces.*—There was an increase of approximately 2,000 in employment in the Prairie Provinces; the index was lower than on September 1, 1931, when an advance had also been indicated by the firms making returns. Data were tabulated from 1,152 employers of 112,500 workers, as compared with 110,593 at the beginning of August. Mining and transportation afforded heightened em-

ployment; manufacturing was rather slacker, notably in the iron and steel, building material and lumber divisions, and construction work was also curtailed. Harvest activities, proceeding on a large scale, are, of course, not reflected in these statistics.

Table I gives index numbers by economic areas.

#### Employment by Cities

Employment advanced in Quebec City, Montreal, Ottawa and Vancouver, while curtailment was noted in Toronto, Hamilton, Windsor and the adjacent Border Cities and Winnipeg.

*Montreal.*—Employment in Montreal showed an increase on September 1, 1,263 workers having been added to the pay-lists of the 1,086 co-operating firms, who employed 127,042. Manufacturing (especially of textile products) reported general improvement, and transportation was also rather brisker, but construction and trade showed a falling-off. The index was lower than on the same date in 1931, when a slight contraction had been recorded.

*Quebec.*—A considerable advance was indicated in Quebec, according to 147 employers

of 12,897 persons, as compared with 12,322 in the preceding month. Gains took place in manufacturing (chiefly in leather and iron and steel plants), and in services and construction. Employment as reported by employers was not so active as at the beginning of September a year ago, although only a small advance had then been noted.

*Toronto.*—Manufacturing showed a contraction, chiefly in iron and steel, while textiles afforded more employment. Construction and trading establishments also released employees.

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,  
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Sept. 1, 1921.....	89.8	104.9	83.3	89.1	97.8	84.8

Sept. 1.....	86.0	87.8	85.3	85.1	91.6	82.8
Relative Weight of Employment by Districts as at Sept. 1, 1932.....	100.0	7.7	29.1	40.4	14.2	8.6

Statements were received from 1,197 firms with 108,725 workers, or 860 fewer than on August 1. An increase had been indicated on the same date a year ago, when employment was above its present level.

*Ottawa.*—There was a slight increase in Ottawa, chiefly in manufacturing, while construction works released some help. The 156 firms furnishing returns reported 12,481 employees, compared with 12,404 in the preceding month. On September 1, 1931, a general reduction had been noted, but the index then was higher.

*Hamilton.*—Manufacturing (particularly of iron and steel and textile products), and construction recorded contractions in Hamilton, while other industries on the whole showed little change; 236 employers reported 24,182 persons on their pay-rolls, as against 25,283 on August 1. Employment was in less volume than at the beginning of September a year ago, when a smaller falling-off had been indicated.

*Windsor and the Adjacent Border Cities.*—A further decline was registered in the Border Cities, where the 135 co-operating firms re-

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

ported 9,172 workers, as against 10,226 in the preceding month. Automobile plants showed reduced activity, while other industries reported only slight general changes. A gain had been noted on the same date last year, when the index was higher.

*Winnipeg.*—Employment in Winnipeg showed a reduction; manufacturing as a group was rather less active, and work in transportation, construction and trade was also curtailed. An aggregate working force of 35,094

persons was reported by the 383 employers who made returns for September 1, and who had employed 35,458 workers in the preceding month. Little change, on the whole, had been recorded on the same date in 1931, when the index was higher.

*Vancouver.*—There was an increase in activity in Vancouver, according to statements received from 342 firms employing 27,479 workers, as against 27,189 on August 1. Manufacturing establishments reported larger

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

leather footwear, musical instrument, non-ferrous metal, beverage, pulp and paper, vegetable food, textile and garment factories recorded improvement, in some cases of a seasonal nature. Statements were received from 4,935 manufacturers employing 412,663 operatives, as compared with 410,212 at the beginning of August. Although this increase is not particularly large, it is especially interesting because in the experience of the last eleven years employment in the manufacturing has usually been slightly lower on September 1 than at the beginning of August. Employment on September 1, 1931, had remained at the level of the preceding month, but the index then was many points higher than on the date under review.

*Animal Products, Edible.*—Declines were shown in dairies and fish-preserving establishments, while meat-packing plants were more active. The payrolls of the 247 co-operating factories aggregated 20,468 employees, as compared with 20,561 in the preceding month. Employment on September 1, 1931, had decreased more extensively, and the index number then was over three points lower than on the date under review.

*Leather and Products.*—A gain was shown in leather factories, chiefly in footwear plants; this was larger than that noted at the beginning of September of last year, when the employment reported by the firms making returns was at the same level. Statements were received from 246 manufacturers having 18,575 persons in their employ, as against 18,068 on August 1. Quebec firms reported most of the increase, but the movement was also favourable in Ontario.

*Lumber and Products.*—Further seasonal reductions were made in sawmills, but furniture and wood turning and carving factories were busier; the result was a decrease of 82 persons in the staffs of the 70 lumber-using plants furnishing data, whose payrolls aggregated 30,970. This loss was much smaller than that noted on September 1, 1931, but the index then was decidedly higher.

*Musical Instruments.*—Additions to personnel were recorded in musical instrument works, 37 of which increased their labour forces by 399 persons to 1,466 on September 1. The increase was largely confined to Quebec. A gain had also been indicated at the beginning of September, 1931, when employment was at a higher level.

*Plant Products, Edible.*—Confectionery, chocolate, cocoa, starch, flour and cereal and fruit and vegetable preserving factories reported heightened activity, the additions to staffs in canneries being most pronounced. The

general improvement was on a smaller scale than on the same date last year, when the index was higher. Data were compiled from 391 firms in the vegetable food group, whose payrolls rose from 29,391 on August 1, to 31,112 at the beginning of September. Ontario and British Columbia reported the largest advances, but the trend was also upward in the Maritime and Prairie Provinces.

*Pulp and Paper Products.*—Employment in this group showed a considerable improvement, mainly in pulp and paper mills, while printing shops were rather slacker; large losses had been noted on September 1 last year, but activity then was greater than on the date under review. The forces of the 562 co-operating establishments included 53,239 persons, as compared with 52,218 in the preceding month. Quebec and Ontario reported most of the advance.

*Rubber Products.*—Practically no change was indicated in rubber factories, 44 of which employed 10,263 workers. The situation on September 1, 1931, had also remained much the same as in the preceding month, but employment was then at a higher level than on the date under review.

*Textile Products.*—Seasonal increases occurred in textile factories, 849 of which had 79,411 employees, as against 77,611 on August 1. Most of the advance took place in Quebec. Garment and personal furnishing factories registered the bulk of the gain, but improvement was also noted in headwear, knitting, silk and woollen mills, while carpet and cordage plants were slacker. The index of employment on the same date last year was fractionally lower; the increase then reported had involved a much smaller number of workers.

*Tobacco, Distilled and Malt Liquors.*—Moderate improvement was noted in this industry on September 1, as compared with the preceding month, since when 203 persons were added to the payrolls of the 154 co-operating factories, which employed 14,513 operatives. The advance took place in distilled and malt liquor factories. The level of employment was lower than at the beginning of September, 1931, when a larger increase had been indicated in the group as a whole.

*Chemical Products.*—Employment in this division showed a slight gain, according to statistics from 144 employers of 7,887 persons, compared with 7,811 on August 1. The situation was not so favourable as on the same date a year ago.

*Clay, Glass and Stone Products.*—Stone and clay product works released employees, while

the glass division showed some improvement. Statements were received from 187 plants, having 7,654 workers, as against 7,839 in the preceding month. A rather larger reduction had been noted at the beginning of September last year, but the index then was considerably higher.

*Electric Current.*—Greater activity was shown in electric current plants, 92 of which employed 14,487 persons, compared with 14,386 in their last report. The improvement took place chiefly in Ontario. Employment was slacker than on September 1, 1931.

*Electrical Apparatus.*—Employment in this group decreased at the beginning of September, when 456 workers were released from the forces of the 87 co-operating establishments, which had 11,225 employees. This loss occurred mainly in Ontario. Improvement had been noted on the corresponding date in 1931, when the index was above its level at the time of writing.

*Iron and Steel Products.*—The vehicle, iron and steel fabrication, foundry and machine shop, tool and other divisions of the iron and steel group recorded contractions in employment, while rolling mills, heating appliance and some other factories were busier. On the whole, there was a reduction of 2,871 in the forces of the 757 co-operating iron and steel manufacturers, who employed 81,059 persons at the beginning of September. Activity was curtailed in all except the Maritime Provinces, but chiefly in Ontario. The trend on September 1, 1931, had also been unfavourable, but the index number then was much higher than on the date under review.

*Non-Ferrous Metal Products.*—The precious metal and the smelting and refining divisions reported heightened employment, while base metal working plants showed curtailment; 132 manufacturers in the group as a whole employed 12,449 operatives, as against 12,128 on August 1. Although reductions had been indicated on the same date last year, activity then was greater.

*Mineral Products.*—Employment in this group showed a slight increase, according to statements from 99 establishments with 11,917 persons on their payrolls, as against 11,879 at the beginning of August. The index was lower than on September 1, 1931, when more marked improvement had been noted.

### Logging

Employment in logging camps showed a further falling-off at the beginning of September, according to the 215 co-operating firms, whose payrolls aggregated 7,105 workers, compared with 7,955 in the preceding month. The

number employed in the bush was smaller than in any other year on record.

### Mining

*Coal.*—Data were received from 88 operators having 23,504 men on their payrolls, as compared with 22,400 at the beginning of August. The Western coal-fields reported the expansion, which involved a much greater number of workers than that registered on the same date a year ago; the index number then, however, was higher than on the date under review.

*Metallic Ores.*—Employment in metallic ore mines showed a falling-off, according to returns from 63 firms whose forces declined from 15,603 persons on August 1, to 15,391 at the beginning of September. A contraction had also been shown on September 1, 1931, when employment was in greater volume.

*Non-Metallic Minerals (other than coal).*—Further slight declines were reported in this group, in which 77 firms reduced their staffs by 69 workers to 4,789 on September 1. An increase had been noted on the corresponding date of last year, and the level of employment was then higher.

### Communications

A falling-off was indicated in the communications division, in which the companies reporting employed 24,281 workers, as compared with 24,451 in the preceding month. Activity was less than in the early autumn of 1931.

### Transportation

*Street and Electric Railways and Cartage.*—Improvement was shown in local transportation on the date under review, when the 171 employers furnishing data reported 24,364 workers, or 867 more than in the preceding month. There were advances in Quebec and the Western Provinces, the largest occurring in the Prairie areas. Although practically no change had been recorded at the beginning of September, 1931, the index then was some three points higher.

*Steam Railways.*—There was an increase in the number employed in steam railway operation on September 1, according to the 98 companies and branches from which returns were received, and which had 61,076 employees, compared with 60,669 on August 1. Employment was at a lower level than on the same date last year, although a decline had then been noted. The improvement reported at the beginning of September, 1932, took place mainly in the Prairie Provinces.

*Shipping and Stevedoring.*—There was a very slight increase in employment in water

transportation, in which activity was less than on the same date in 1931. Statements were received from 87 employers of 15,671 workers, as against 15,647 in the preceding month.

### Construction and Maintenance

*Building.*—A further falling-off was noted in building construction, in which employment was slacker than in the late summer of 1931. Data were received from 665 contractors, whose payrolls declined from 23,200 on August 1, 1932, to 21,180 persons on the date under review. The trend was unfavourable in all provinces except British Columbia.

*Highway.*—There was a pronounced decrease in this group, 4,738 men being released from the forces of the 358 co-operating employers, who had 46,666 workers; there were losses in all provinces except Quebec. Activity was not so great as on September 1, 1931, when important unemployment relief works were being carried on.

*Railway.*—An increase in employment was indicated by the 37 firms furnishing data in this division, who employed 29,257 persons, as against 28,843 in the preceding month. Improvement was reported in the Maritime Provinces and British Columbia. Lessened activity had been noted on the corresponding date of 1931, but the index number then was many points higher.

### Services

There was a moderate advance in the service group, in which business this year has not been so brisk as in 1931. The 289 establishments furnishing returns for September 1, 1932, reported 22,335 assistants, as against 21,933 on August 1.

### Trade

There was a decrease in the staffs of retail establishments, while a gain occurred in whole-sale trade; employment in this group continued at a lower level than in the late summer of last year, when similar trends had been indicated in the two divisions. Returns were received from 847 trading establishments employing 81,039 persons, compared with 81,477 at the beginning of August, 1932.

### Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions in Canada at the Close of August, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in work other than their own trades or who are idle owing to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The trend of activity among local trade unions, which has been very slightly though steadily upward since the close of April, continued in the favourable movement throughout August, as manifest by the returns tabulated from a total of 1,762 labour organizations including a membership of 163,530 persons. Of these, 34,949 were without employment on the last day of the month, a percentage of 21.4, in contrast with 21.8 per cent of idleness in July. Unemployment was, however, in greater prevalence than in August, 1931, when the percentage of inactivity stood

at 15.8. In Nova Scotia and New Brunswick fractional recessions in employment from July, were recorded, while the situation in the remaining provinces was generally improved, though the gains were quite slight ranging only from 1.5 per cent in both Manitoba and Alberta to 0.5 per cent in Ontario. Pronounced curtailment of operations from August a year ago was noted in Ontario and Quebec, and in New Brunswick also the employment volume afforded was substantially reduced. Declines of much lesser magnitude, however, were reflected by British Columbia, Manitoba and Saskatchewan unions. In Nova Scotia and Alberta, the tendency was toward greater activity.

Each month the returns on unemployment in the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Toronto unions reported the greatest percentage of idleness during August of the cities compared, which was but fractionally smaller than that shown in July. Vancouver and Halifax were next in line, the percentage recorded in the former city representing a nominal decline in activity and in the latter very slight improvement in

conditions. An employment advance from July of nearly 4 per cent was reported in Montreal and in Winnipeg the situation was somewhat better. Regina unions showed a drop of over 4 per cent in the volume of work available, while the Edmonton recessions were less than 2 per cent. In St. John the situation remained unchanged from July. An adverse employment movement was reflected in all cities with the exception of Regina, from August a year ago, Toronto, and St. John unions showing particularly heavy curtailment of activity, although notable recessions also occurred among Montreal, Halifax and Vancouver unions. In Regina the improvement recorded was but nominal.

with 24.1 per cent in July. A large factor in this favourable trend noted from July was the improvement reported by garment workers, although among leather, fur, brewery and wood workers, and metal polishers more active conditions prevailed. On the contrary employment was somewhat retarded for iron and steel workers, paper makers, printing tradesmen, textile and glass workers, general labourers and cigar makers. Greater depression was indicated in the manufacturing industries as a whole than in August last year when 14.0 per cent of the members reported were idle. In this comparison paper makers were afforded a much better volume of activity during the month reviewed and noteworthy employment

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Accompanying this article is a chart which illustrates the trend of unemployment from January, 1926, to date. The course followed by the curve, which has been consistently downward since the close of April, continued in the favourable movement during August, indicative of a slightly better employment tendency. The level reached at the close of the month was, however, above that of August last year, showing more depressed conditions during the month reviewed.

Some lessening of the unemployment volume from the previous month was shown in the manufacturing industries during August, the 455 labour organizations from which reports were tabulated with 43,486 members indicating 22.5 per cent of their members idle, compared

advances were also reported by woodworkers. Among cigar makers fractional gains only occurred. The situation for garment workers, however, remained substantially the same as in August a year ago. In the remaining trades a slowing up of industrial activity was noted, the iron and steel trades particularly showing heavy losses.

Coal miners during August reported improvement of minor importance when compared with July conditions, the level of activity, however, being much better than in August last year. This was shown by the reports tabulated from a total of 45 unions covering 14,711 members, 1,735 or 11.8 per cent of whom were without work in August, contrasted with percentages of 12.6 in July

and 17.5 in August, 1931. Unemployment in the Alberta mines was in considerably lesser volume than in July. In Nova Scotia declines of less than 1 per cent occurred, while in British Columbia the same percentage of idleness was noted in both months under comparison. Nova Scotia, Alberta and British Columbia miners all participated in the favourable employment movement shown from August last year, the gains in Alberta affecting the greatest number of workers. In addition to the miners reported entirely out of work

at the close of the month reviewed much short time was in evidence.

The building and construction trades, with 236 unions reporting in August a membership of 21,160 persons showed that 12,940 were without work on the last day of the month, a percentage of 61.2, contrasted with 58.6 per cent of inactivity in July. Unemployment for painters, decorators, and paperhangers increased substantially from July and among tile layers, lathers and roofers also, conditions were considerably slacker. Curtailment of activity, though on a much smaller scale, was noted among bricklayers, masons and plasterers, electrical workers, plumbers and steamfitters, steam shovelmen and hod carriers and building labourers. On the other hand, granite and stone cutters, and carpenters and joiners were afforded somewhat heightened employment. Operations for building and construction tradesmen were largely restricted from August last year, when 41.5 per cent of the membership involved was idle, granite and stone cutters, plumbers and steamfitters, carpenters and joiners, bricklayers, masons and plasterers, and painters, decorators and paperhangers all suffering severe employment losses during the month reviewed. Among electrical workers, tile layers, lathers and roofers, and hod carriers and building labourers also, the level of activity was somewhat reduced. Bridge and structural iron workers alone reported a more favourable situation, though the change was slight.

Little variation from the previous month in the volume of activity afforded workers in the transportation industries was reported during August, the employment tendency, however, being favourable. This was manifest by the returns tabulated for August from an aggregate of 783 unions with 61,418 members, 7,584 or 12.3 per cent of whom were idle on the last day of the month, in contrast with a percentage of 13.0 in July. Responsibility for this slightly better trend from July rested largely with steam railway employees, whose returns included over 79 per cent of the entire group membership reported, teamsters and chauffeurs showing but nominal improvement. Employment for navigation workers, however, was considerably reduced from July and among street and electric railway employees fractional recessions only were noted. In making a comparison with the returns for August, 1931, when 9.5 per cent of inactivity was recorded in the transportation industries, navigation workers and steam railway employees reported a noteworthy drop in employment during the month reviewed, with declines of much lesser degree among teamsters

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

and chauffeurs. The situation for street and electric railway employees, however, remained much the same as in August last year.

Retail clerks were quite busily engaged during August, as in the previous month, the 4 unions from which returns were received, with a membership total of 1,162 persons, showing 0.7 per cent of their members idle on the last day of the month, contrasted with 0.9 per cent in July. Better conditions prevailed than in August last year, when 2.5 per cent of idleness was recorded.

Reports for August were tabulated from 68 associations of civic employees, with a combined membership of 7,300 persons, 386 or 5.3 per cent of whom were idle on the last day of the month, in contrast with 4.7 per cent in July. In August last year a high level of activity was maintained, only 0.1 per cent of the members being reported idle.

A slightly better employment tendency was shown in the miscellaneous group of trades during August from the previous month, the 124 unions furnishing returns with 4,530 members, indicating 23.1 per cent of their members idle, compared with 24.5 per cent in July. The most noteworthy improvement was recorded by stationary engineers and firemen, gains of much smaller proportions being shown by hotel and restaurant employees, and unclassified workers. Activity for theatre and stage employees was somewhat curtailed from July and among barbers employment eased off very slightly. Stationary engineers and firemen, theatre and stage, and hotel and

restaurant employees, and barbers all shared in the adverse employment movement shown from August last year in the miscellaneous group of trades when 18.9 per cent of inactivity was registered, stationary engineers and firemen showing the greatest increase in slackness. On the other hand, unclassified workers registered considerable improvement in the situation from August a year ago.

Fishermen were afforded a greater volume of work during August then in either the previous month or August last year, the 2 unions from which returns were tabulated with 705 members showing an unemployment percentage of 5.7, contrasted with percentages of 10.6 in July and 7.7 in August, 1931.

From unions of lumber workers and loggers 4 reports were received in August involving a membership of 1,304 persons, 592 or 45.4 per cent of whom were reported without work on the last day of the month, compared with 42.0 per cent of unemployment in July. Slacker conditions also prevailed than in August last year when 37.8 per cent of members recorded were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931, inclusive, and also the percentage of unemployment by provinces for August of each year from 1919 to 1929, inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for August, 1932

During August, 1932, the reports from the offices of the Employment Service of Canada showed an increase of nearly 1 per cent in the average daily placements over those of the preceding period, and a gain of 3 per cent when a comparison was made with the average daily placements effected during the corresponding month a year ago. In comparison with work transacted during July, farming, services and manufacturing showed gains, the largest increase being in the first named section, due to harvest operations in the Prairie Provinces. Other groups recorded declines, the largest of these, which was in construction and maintenance, was of sufficient amount to largely offset the marked increase recorded in agriculture. Although there was a net gain over the corresponding month a year ago, all industrial divisions, except farming and construction and maintenance, showed decreased placements from those of August, 1931, the

heaviest decline occurring in services and the highest gain once more in farming.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted from the graph that the curve, both of vacancies and placements in relation to applications, was slightly downward during the first half of the month, but followed a marked upward trend during the latter half of the period under review, and at the close of August was, respectively, 23 points and 22 points above the levels attained at the end of August a year ago. The ratio of vacancies to each 100 applications was 56.0 during the first half and 60.2 during the second half of August, 1932, in contrast with the ratios of 38.0 and 37.2 during the corresponding periods

of 1931. The ratios of placements to each 100 applications during the periods under review were 54.2 and 57.7 as compared with 36.2 and 35.8 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1932, was 1,052 as compared with 1,037 during the preceding month and with 1,032 in August a year ago.

The average number of applications for employment received daily by the offices dur-

lar employment were 15,319, of which 11,581 were of men and 3,738 were of women, while placements in casual work totalled 12,036. The number of vacancies reported by employers was 21,114 for men and 7,283 for women a total of 28,397, while applications for work numbered 48,815, of which 36,950 were from men and 11,865 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1922, to date:—

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

ing the month under review was 1,808 in comparison with 1,868 in July, 1932, and with 2,746 during August last year.

The average number of placements made daily by the offices of the Service during August, 1932, was 1,014, of which 568 were in regular employment and 446 in work of one week's duration or less, as compared with a total daily average of 1,008 during the preceding month. Placements in August a year ago averaged 987 daily, consisting of 478 placements in regular and 509 in casual employment.

During the month of August, 1932, the offices of the Service referred 28,870 persons to vacancies and effected a total of 27,355 placements. Of these, the placements in regu-

Year	Placements		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522

1932 (8 months).....	96,796	146,694	243,490

NOVA SCOTIA

During the month of August, 1932, positions offered through employment offices in Nova Scotia were over 8 per cent less than in the

preceding month and over 23 per cent below the corresponding month of last year. There were similar declines in placements under both comparisons. The largest reduction in placements from August, 1931, was in the highway division of construction and maintenance, and accounted for most of the loss under this comparison, the only groups to show any gains being services and finance, and these were small. There were 110 placements in the construction and maintenance group, and 326 in services. Of the latter, 230 were household workers. Regular employment was found for 71 men and 73 women.

#### NEW BRUNSWICK

There was a decline of nearly 7 per cent in the number of positions offered through employment offices in New Brunswick during August, when compared with the preceding month, but a gain of over 20 per cent in comparison with the corresponding month of last year. Placements were over 7 per cent less than in July, but 21 per cent above August, 1931. The gain in placements over August of last year was due to work provided on highway, road and sewer construction, although small increases were also shown in transportation and manufacturing. These gains were partly offset by a large reduction in the services group, and small losses in logging, farming and trade. Industrial divisions in which most of the placements were effected were: manufacturing, 29; transportation, 41; construction and maintenance, 495; and services, 380, of which 290 were of household workers. During the month 116 men and 39 women were placed in regular employment.

#### QUEBEC

The demand for workers, as indicated by orders received at employment offices in the Province of Quebec, was nearly 4 per cent higher than in the preceding month, but over 12 per cent less than during the corresponding month of last year. Placements were nearly 8 per cent below July and nearly 22 per cent fewer than in August, 1931. The decline from August of last year was due to losses in construction and maintenance and logging. These decreases were partly offset by gains in other groups, all of which, however, were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 79; logging, 55; farming, 45; construction and maintenance, 150; trade, 72; and services, 908, of which 702 were of household workers. Placements in regular employment numbered 417 of men and 693 of women.

#### ONTARIO

Orders received at employment offices in Ontario during August called for nearly 10 per cent less workers than in the preceding month and showed a nominal decline when compared with the corresponding month of last year. There was a loss also in placements of nearly 11 per cent when compared with July, but a gain of nearly 3 per cent when compared with August, 1931. This gain was accounted for by increased placements in the highway division of construction and maintenance, but was, however, offset in part by substantial losses in services, farming and manufacturing, with somewhat smaller declines in logging and transportation. The changes in other groups were unimportant. Placements by industrial divisions included: manufacturing, 392; logging, 95; farming, 1,104; construction and maintenance, 4,956; trade, 292; and services, 2,985, of which 1,644 were of household workers. There were 2,264 men and 1,182 women placed in regular employment during the month.

#### MANITOBA

During August, 1932, orders listed at employment offices in Manitoba called for over 29 per cent more workers than in the preceding month and over 15 per cent in excess of the corresponding month of last year. There was a gain also in placements of nearly 30 per cent when compared with July and of nearly 17 per cent in comparison with August, 1931. Farm placements were considerably higher than during August of last year, while smaller gains were shown in construction and maintenance and manufacturing. Declines were reported in all other groups, of which that in services was the largest. These losses, however, were not sufficient to offset the gains indicated above. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 76; farming, 2,266; construction and maintenance, 1,480; and services, 1,045, of which 918 were of household workers. Placements in regular employment numbered 2,673 of men and 519 of women.

#### SASKATCHEWAN

Opportunities for employment, as indicated by orders received at employment offices in Saskatchewan during August, were 99 per cent higher than in the preceding month and 75 per cent above the corresponding month of last year. Placements showed a gain of 102 per cent when compared with July and of 74 per cent in comparison with August, 1931. The substantial gain in placements over August of last year was due to a large increase under

\*95 Placements effected by offices since closed.

farming, although minor gains were also shown in services and manufacturing. The only decline of importance was in construction and maintenance. Placements by industrial divisions included: manufacturing, 51; farming, 2,954; construction and maintenance, 309; and services, 856, of which 665 were of household workers. During the month, 2,983 men and 568 women were placed in regular employment.

#### ALBERTA

There was an increase of nearly 34 per cent in the number of positions offered and placements effected through employment offices in Alberta during August, when compared with the preceding month. Vacancies, however, were nearly 11 per cent less than in August, 1931, and placements nearly 12 per cent lower than during that month. A large reduction in the number of persons placed on highway construction was responsible for the decline from August of last year, as all other groups showed improvement or a nominal decline only. The largest increase was in farming. Placements by industrial divisions included: manufacturing, 48; farming, 1,641; construction and maintenance, 441; and services, 653, of which 501 were of household workers. Regular employment was found for 1,859 men and 442 women.

#### BRITISH COLUMBIA

Employment opportunities as indicated by orders received at employment offices in British Columbia during August, were nearly 13 per cent less than in the preceding month and 11 per cent fewer than in the corresponding month of last year. There was a decline of nearly 14 per cent in placements when compared with July and of 11 per cent in comparison with August, 1931. Decreased placements in the services group contributed largely to the adverse change in comparison with August of last year, although losses were also reported in manufacturing and construction and maintenance. Placements in logging and mining were somewhat higher, while the changes in other groups were nominal only. Industrial divisions in which most of the placements were made during the month were: manufacturing, 30; logging, 63; farming, 119; construction and maintenance, 1,798; and services, 586, of which 394 were of household workers. During the month, 1,198 men and 222 women were placed in regular employment.

#### Movement of Labour

During the month of August, 1932, offices of the Employment Service of Canada made 15,319 placements in regular employment,

9,686 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter 512 were granted the Employment Service reduced transportation rate, 444 going to centres within the same province as the despatching office and 68 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The Ontario labour movement during August comprised the transfer of 4 persons to centres within the province, 2 bushmen and 1 cook travelling from Sudbury and one miner from Timmins to employment within their respective zones. Manitoba offices issued 348 certificates at the reduced rate in August, 294 of which were provincial and 54 interprovincial. Of the former, 287 were granted by the Winnipeg office to 6 farm domestics, one hotel general, one hospital cook, and one town domestic bound for Brandon and to 277 farm hands and one farm domestic going to rural points within the Winnipeg zone. In addition, from St. Boniface 7 farm hands went to employment within the same zone. The movement outside the province was mainly of farm help, 47 farm hands and 3 farm domestics travelling to situations in the agricultural districts of Saskatchewan and one farm hand and one farm domestic to the Port Arthur zone. Of these, 4 secured their certificates for transportation at St. Boniface and the balance at Winnipeg. From Winnipeg also one hotel employee went to Regina and one cafe cook to Port Arthur. In Saskatchewan 34 workers secured certificates for reduced transportation during August all of whom journeyed to positions within the province. With the exception of 6 teachers travelling from Regina and one carpenter from Moose Jaw to employment within their respective zones, all transfers effected were to the rural localities of the province and included 22 farm hands and 5 farm household workers, 11 of whom received their certificates for transportation at Regina, 8 at Saskatoon, 7 at Moose Jaw and one at Prince Albert. Workers who availed themselves of the reduced transportation rate in Alberta during August were 116 in number, 102 of whom went to employment within the province and 14 to points outside. Provincially, from Edmonton one cafe waitress proceeded to Drumheller and 9 mine workers, 4 railway construction labourers, 2 highway construction labourers

and one hotel cook within the Edmonton zone, which zone also was the destination of one hotel chambermaid despatched from Calgary. The balance of this provincial movement was of agricultural labour, 61 farm hands and 9 farm household workers travelling from Edmonton and 13 farm hands and one farm housekeeper from Calgary to various sections of the province. The 14 persons transferred outside the province were farm hands shipped from Edmonton to Saskatchewan rural districts. The movement of labour in British Columbia during August originated entirely at Vancouver and comprised the transfer of

10 persons, all of whom went to employment within the province. Included among these were 4 cannery workers and one hotel employee going to Kamloops, one farm hand and 2 restaurant workers to Revelstoke and one mine flunkie and one hotel cook to centres within the Vancouver zone.

Of the 512 persons who took advantage of the Employment Service reduced transportation rate during August, 203 travelled by the Canadian National Railways, 301 by the Canadian Pacific Railway, 6 by the Northern Alberta Railway, one by the Timiskaming and Northern Ontario Railway and one by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada during August, 1932

There was a seasonal decline in the value of the building permits issued during August, 1932, as compared with July, while in comparison with August of last year, there was also a considerable reduction; during the month under review, the 61 co-operating centres authorized building estimated to cost \$3,331,278, as compared with \$4,227,173 in July, 1932, and \$8,201,879 in August, 1931. There was, therefore, a decrease of 21.2 per cent in the first comparison, and of 59.4 per cent in the second. The aggregate value of the building authorized in the first eight months of this year, viz., \$30,137,519, was lower than in 1931 and other years of the record; in considering these data, however, it should be noted that there has also been a very significant decline in wholesale costs of building materials, the Bureau's index, based on the 1926 average as 100, having fallen from 156.3 in the first eight months of 1920, to 78.0 in the period, January-August, 1932, or by slightly over 50 per cent.

Some 50 cities furnished detailed statistics showing that they had issued about 300 permits for dwellings estimated to cost over \$900,000, and more than 2,000 permits for other buildings valued at approximately \$2,200,000. During July, authority was granted for the erection of some 450 dwellings and 1,800 other buildings, estimated at about \$1,000,000 and \$3,200,000, respectively.

British Columbia reported a gain of \$420,090, or 138.0 per cent, as compared with July, 1932. Of the reductions elsewhere indicated, that of \$975,131, or 46.0 per cent, in Quebec was greatest.

British Columbia also reported a slightly higher aggregate of building permits issued than in August of last year, there being an increase of \$13,762, or 1.9 per cent. Declines in this comparison were recorded in the remaining provinces, that of \$2,504,798, or 71.9 per cent in Ontario being most pronounced.

Of the larger cities, Vancouver showed improvement as compared with both July, 1932, and August, 1931, while Montreal, Toronto and Winnipeg reported decreases in both comparisons. Of the other centres, Kingston, Peterborough, Walkerville, Woodstock, Lethbridge, Nanaimo and North Vancouver recorded gains in both comparisons.

*Cumulative Record for First Eight Months, 1920-32.*—The following table gives the value of the building authorized by 61 cities during August and in the first eight months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first eight months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued in first eight months (1926=100)	Average indexes of wholesale prices of building materials in first eight months (1926 average=100)
1932.....	\$ 3,331,278	\$ 30,137,519	27.6	78.0
1931.....	8,201,879	78,194,996	71.6	83.4

1928.....	17,448,542	145,247,485	133.0	97.5
1927.....	29,478,378	126,690,292	116.0	96.8
1926.....	11,672,599	109,211,942	100.0	101.7
1925.....	9,511,008	88,223,328	80.8	104.3
1924.....	9,406,733	81,762,083	74.9	109.1
1923.....	11,425,031	97,551,074	89.3	111.7
1922.....	18,158,932	105,181,416	96.3	108.4
1921.....	10,928,039	77,665,614	71.1	128.6
1920.....	10,805,846	86,303,601	79.0	156.3

The aggregate for the first eight months of this year was less than in earlier years of the record, but as already stated, the average index number of wholesale prices of building

materials was also much lower than in any other year of this record.

Table I gives the value of building permits issued by 61 cities during July and August,

1932, and August, 1931. The 35 cities for which records are available since 1920 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

The British *Ministry of Labour Gazette*, September, 1932, summarized the employment situation as follows:—

Employment showed a slight decline at August 22 as compared with July 25. The principal industries affected by the decline were the cotton, silk and carpet industries, textile printing, bleaching, dyeing, etc., the clothing trades except boot and shoe manufacture, pig iron and iron and steel manufacture, coal mining, dock and harbour service, and the distributive trades. On the other hand, there was some improvement in linen and jute, hemp, rope, etc., electrical and wireless apparatus, pottery and earthenware, and leather and leather goods manufacture.

There was an increase in the numbers of insured persons recorded as unemployed in the Northern Counties and in Wales, but in Scotland and Northern Ireland the numbers showed a reduction. There was very little change in other parts of the country. Employment was moderate in the south of England and bad in all other areas.

Among the workpeople, numbering approximately 12,770,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at August 22, 1932 (including those temporarily stopped as well as those wholly unemployed), was 23.1, as compared with 22.9 at July 25, 1932, and with 22.0 at August 24, 1931. The

percentage wholly unemployed at August 22, 1932, was 17.4 as compared with 17.1 at July 25, 1932, while the percentage temporarily stopped was 5.7, as compared with 5.8. For males alone, the percentage at August 22, 1932, was 26.5, and for females, 14.2; at July 25, 1932, the corresponding percentages were 26.3 and 14.1.

At August 22, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,040,078 wholly unemployed, 719,295 temporarily stopped, and 100,455 normally in casual employment, making a total of 2,859,828. This was 48,046 more than a month before, and 126,046 more than a year before. The total included 2,289,045 men, 83,737 boys, 430,271 women and 56,775 girls. Comparison of the numbers on the registers and of the percentages unemployed with the figures for a year before is affected by the results of legislative and administrative changes.

The 2,040,078 wholly unemployed included 698,045 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,005,051 insured persons with applications for transitional payments; 200,764 insured persons not in receipt of insurance benefit or transitional payments, and 136,218 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at August 22, 1932, was 2,935,873.

### United States

The Bureau of Labour Statistics of the United States Department of Labour, reports the changes in employment and earnings in August, 1932, as compared with July, 1932, based on returns made by 64,762 establishments in 16 major industrial groups, having in August, 4,167,215 employees, whose combined earnings in one week were \$79,002,459. The combined totals of these 16 groups show an increase of 0.5 per cent in employment and a decrease of 1.0 per cent in earnings.

Of the sixteen industrial groups, canning and preserving registered an increase of 35.6 per cent in employment and 38 per cent in earnings; anthracite mining increased by 10.5

per cent in employment and 19.8 per cent in earnings; the crude petroleum producing group increased 3.6 in employment though earnings reflected a decrease of 3.7; quarrying and non-metallic mining showed increased employment of 3.4 per cent and increased earnings of 2.3 per cent; manufacturing showed an employment and earning increase of 1.4 per cent and 0.3 per cent, respectively; while bituminous mining gained 1.3 per cent in employment and 8 per cent in earnings. The remaining ten industrial groups all showed decreases both in employment and payrolls, ranging in the former from 3.5 to .2 per cent and in the latter from 6 to .7 per cent.

The Bureau of Labour Statistics also published reports of building permits from 352 cities of the United States having a population of more than 25,000 for the months of July and August. The estimated cost of all building operations for which permits were issued in these cities during August was \$37,137,073. The number of all building operations increased 18.7 per cent, comparing the two periods. Comparing August with July, 1932, there was an increase of 22.5 per cent in the number and an increase of 20.6 per cent in the estimated cost of new residential buildings. New non-residential buildings increased 23.6 per cent in number but decreased 3.7 per cent in estimated cost. Additions, alterations and repairs increased 16.8 per cent in number and 10.1 per cent in estimated cost. During August, 1932, family dwelling units were provided for 2,290 families. This is an increase of 18.0 per cent as compared with July.

According to statistics published in the September issue of the *American Federationist*, the official publication of the American Federation of Labour, the estimated number of unemployed in the United States, based on government figures, is placed at 11,400,000.

Mr. Edouard Montpetit, chairman of the Quebec Social Insurance Commission, announced last month that recommendations concerning old age pensions would be submitted by the Commission to the provincial legislature at its next session. The subjects of health insurance and unemployment insurance also will be dealt with in the forthcoming report. The last reports of the commission, dealing respectively with family allowances and industrial hygiene, were outlined in the *LABOUR GAZETTE*, August, 1932, page 861.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the cur-

rent wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his

satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the work-

men, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

## DEPARTMENT OF PUBLIC WORKS

**Contracts in Group "A" (Construction, etc.)**

Construction of repairs to wharf at Manicougan, Saguenay County, P.Q. Name of contractor, Mr. Louis Zuanette, Pointe au Pic, P.Q. Date of contract, September 28, 1932. Amount of contract, approximately \$5,797. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Timbermen.....	0 42	8
Drill runners.....	0 40	8
Blacksmith.....	0 50	8
Quarrymen.....	0 40	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Labourers.....	0 35	8
Divers.....	1 25	8
Firemen.....	0 40	8
Hoist operators (Gasolene).....	0 50	8
Powdermen.....	0 45	8
Compressor operator.....	0 40	8
Teamsters.....	0 35	8

Construction of repairs and improvements to wharf, Port Renfrew, Nanaimo District, B.C. Name of contractor, Victoria Pile Driving Co., Ltd., Victoria, B.C. Date of contract, September 27, 1932. Amount of contract, approximately \$7,818.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Pile driver boomman.....	0 90	8
Bridgeman.....	0 90	8
Timberman.....	0 90	8
Fireman.....	0 62½	8
Labourers.....	0 40	8

Construction of repairs to wharf, Paspebiac, P.Q. Name of contractor, Mr. Japhet T. Langlois, Port Daniel Centre, P.Q. Date of contract, September 14, 1932. Amount of contract, approximately \$5,251.03. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Master carpenter.....	\$0 65	8
Carpenter.....	0 55	8
Blacksmith helper.....	0 40	8
Engineer—hoist.....	0 50	8
Teamster and team.....	0 65	8
Labourers.....	0 35	8
Blacksmith.....	0 50	8

Construction of repairs and renewal of roof of the public building, Vancouver, B.C. Name of contractors, George Snider Construction Co., Ltd., Vancouver, B.C. Date of contract, September 6, 1932. Amount of contract, \$5,994. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$1 22½	8
Carpenters and joiners.....	0 87½	8
Cement finishers.....	0 75	8

Concrete workers.....	0 45	8
Hollow tile layers.....	1 22½	8
Labourers.....	0 45	8
Motor truck drivers.....	0 50	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 75	8
Roofers (felt and gravel).....	0 60	8
Sheet metal workers.....	1 00	8
Sheet metal workers' helpers.....	0 50	8
Teamsters with team and wagon.....	1 00	8
Teamsters.....	0 50	8

Construction of a quarantine station at Partridge Island, Saint John, N.B. Name of contractor, James E. Kane, Saint John, N.B. Date of contract, September 14, 1932. Amount of contract, \$2,541. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 50	8
Cement finishers.....	0 70	8
Carpenters and joiners.....	0 60	8
Sheet metal workers.....	0 65	8
Roofers, felt and gravel.....	0 65	8
Lathers, metal.....	0 60	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 40	8
Painters and glaziers.....	0 60	8
Plumbers and steamfitters.....	0 65	8
Electricians.....	0 65	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 60	8
Driver, team and wagon.....	0 85	8
Teamster.....	0 35	8
Motor truck driver.....	0 40	8

Construction of an extension to the wharf at St. Jacques des Piles, Champlain County, P.Q. Name of contractors, Ludger Lemieux Limitée, Quebec, P.Q. Date of contract, September 8, 1932. Amount of contract, approximately \$8,950. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Blacksmiths.....	0 50	8
Teamsters.....	0 40	8
Labourers.....	0 35	8
Timbermen.....	0 42	8

Construction of wharf repairs, Ste. Angele de Laval (Doucet's Landing), Nicolet County, P.Q. Name of contractor, Mr. J. Ernest Fleury, Three Rivers, P.Q. Date of contract, September 10, 1932. Amount of contract, approximately \$10,752.75. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Mixer runner.....	\$0 45	8
Carpenters.....	0 55	8
Timbermen.....	0 42	8
Labourers.....	0 35	8
Teamsters.....	0 35	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8

Construction of repairs to the assembly wharf, Port Alberni, B.C. Name of contractors, Victoria Pile Driving Co., Ltd., Victoria, B.C. Date of contract, September 12, 1932. Amount of contract, approximately \$5,670.09. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Boorman.....	0 90	8
Bridgemen.....	0 90	8
Timbermen.....	0 90	8
Fireman.....	0 65	8
Labourers.....	0 40	8

Construction of repairs to the north jetty at Steveston, New Westminster District, B.C. Name of contractors, The Coast Quarries Limited, Vancouver, B.C. Date of contract, September 13, 1932. Amount of contract, approximately \$23,327. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Boorman.....	0 90	8
Bridgemen.....	0 90	8
Derrick scow engineer.....	1 00	8
Derrickman.....	0 90	8
Fireman.....	0 65	8
Labourers.....	0 45	8

Docking, cleaning, painting and repairing Dredge P.W.D. No. 305 ("King Edward"), at North Vancouver, B.C. Name of contractors, Burrard Dry Dock Co., Ltd., North Vancouver, B.C. Date of contract, August 12, 1932. Amount of contract, \$5,500 and unit prices. The General Fair Wages Clause was inserted in this contract.

Contract in Group "B" (Interior Fittings, etc.)

Installation of interior fittings in the public building, Parry Sound, Ontario. Name of contractors, The Office Specialty Manufacturing Co., Ltd., Newmarket, Ont. Date of contract, September 19, 1932. Amount of contract, \$2,143. The "B" Labour Conditions were inserted in this contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in September, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. ....	\$ 597 25
<i>Making and repairing rubber stamps, dater, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. ....	144 69
<i>Making and supplying letter carriers' uniforms.</i>	
Samuel Dorfman, Quebec, P.Q..	625 51
J. A. Humphrey & Son, Ltd., Moncton, N.B. ....	2,658 15
<i>Mail bag fittings.</i>

Bell Thread Co., Hamilton, Ont.	531 88
<i>Scales.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. ....	39 45
<i>Letter boxes, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. ....	115 48
<i>Stamping ink.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd. ....	136 50

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Iron, Steel and Products

VICTORIA, B.C.—TWO EMPLOYERS AND THE BOILERMAKERS AND IRON SHIP-BUILDERS' UNION OF CANADA, LOCAL No. 2.

The verbal agreement which came into effect May 15, 1929, has been renewed to May 15, 1933.

Hours: 44 per week.

Overtime: time and one-half; Sundays and holidays, double time.

Wage rates per day: acetylene welders and burners, boilermakers, chippers and caulkers, riveters and ship fitters and anglesmiths, \$6.72; drillers, holder on and tappers, punch and shearmen, \$5.76; reamers and countersinkers, \$5.28; rivet heaters, \$5.12; ironworkers' helpers, \$5.04; passer boys, \$2.72.

### Manufacturing: Non-metallic Mineral Products

GUENETTE, QUEBEC.—QUARRY OWNERS AND THE PAVING CUTTERS INTERNATIONAL UNION, BRANCH No. 142.

Agreement to be in effect from January 1, 1930, to December 31, 1932, and year to year until notice.

Only union members to be employed.

Hours: 8 per day, 4 on Saturday, a 44-hour week.

Wages: all day work to be paid at \$1 per hour; for piece work, rates per thousand blocks of specified sizes are given in the agreement.

### Manufacturing: Pulp, Paper and Paper Products

FORT WILLIAM, ONTARIO.—GREAT LAKES PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, AND VARIOUS OTHER UNIONS.

Agreement to be in effect from June 1, 1932, to May 1, 1933, and thereafter from year to year subject to notice.

Preference of employment to be given union members. Any others employed must join the union.

Hours: 8 per day, a 48-hour week.

Overtime and all work between 8 a.m. Sunday and 8 a.m. Monday and on four holidays, time and one-half.

Provision is made for settlement of any disputes by arbitration if necessary and no strikes or lockouts to occur during the life of the agreement.

Wages per hour in paper mill: machine tenders \$1.45 and \$1.56; back tenders \$1.29 and \$1.40; third hands 96 cents and \$1.03; fourth hands 59 cents; fifth hands 48 cents; sixth hands 38 cents; beater engineer 75 cents; boss machine tender \$1.66 (\$1.76 when two machines operate); clothing man 96 cents; re-winder man 57 cents; rewinder helper 38 cents; boss oiler, 66 cents; oilers 48 cents.

Wages per hour: Wood yard: sawyers 43 cents; labourers 38 cents. Ground Wood Mill: sharpeners 53 cents; grindersmen and screenmen 41 cents; wet machine and pressmen 39 cents; wood stackers, wood sorters and cleaners 38 cents. Sulphite Mill: cooks 77 cents; lead burner 66 cents; acid makers 64 cents; cooks' helpers 50 cents; deckermen 45 cents, blowpit men 40 cents; sulphur and stonemen 39 cents. Chipper: saw sharpener 66 cents; labourers 38 cents. Beater Room: broke beatermen 39 cents. Paper Mill: cleaners 38 cents. Finishing Room: truckers 46 cents; weighmen 44 cents; boss coreman 41 cents; checker, finishers, headermen, carman and loader 40 cents; cleaners and coreman 38 cents. Labourers, cleaners and watchmen 38 cents. Electrical Department: switch board operators and maintenance men 66 cents. Boiler House: turbine operators 68 cents; firemen 55 cents; meterman 46 cents; coal and ash handlers 39 cents; filter pump house operators 38 cents. Mechanical Department: crane engineer 67 cents; millwrights, roll grinderman, machinists, blacksmith, tinsmith, and pipefitters 66 cents; concrete man and painter 56 cents; machinists' helpers 55 cents; blacksmiths' helpers, pipefitters' helpers and millwrights' helpers 50 cents; pipe machine man and crane fireman 45 cents; wood room oilers 41 and 46 cents; ground wood oiler 41 cents; riggers 40 cents.

### Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—CERTAIN NEWSPAPER AND COMMERCIAL PRINTING FIRMS AND THE INTERNATIONAL PHOTO ENGRAVERS UNION, LOCAL No. 35.

Agreement to be in effect from May 1, 1932, to April 30, 1935, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1931, page 1036, with the following exception:

Wages per week for photo engravers \$50 (a reduction of \$5 per week).

The wage rates for apprentices are unchanged, but after the completion of the five years' apprenticeship, employers may advance apprentices to the minimum journeymen's wage

by increasing the maximum apprentices' rate of \$35 per week by \$5 per week each six months for eighteen months, when the journeyman's rate of \$50 per week will be reached. No additional apprentices are to be indentured during the lifetime of the agreement.

**HAMILTON, ONTARIO.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 176.**

In the agreement which is in effect from January 1, 1930, to December 31, 1932, and which was summarized in the *LABOUR GAZETTE*, August, 1930, page 969 and December, 1928, page 1376, it was provided that for the year 1932, the wages would be increased from \$42.50 to \$42.75 per week. It was verbally agreed between the parties, however, to continue the wage rate of \$42.50 for the year 1932.

**HAMILTON, ONTARIO.—NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 129.**

In the agreement which is in effect from January 1, 1930, to December 31, 1932, and which was summarized in the *LABOUR GAZETTE*, March, 1930, page 325, it was provided that for the year 1932, the wages would be increased from \$43.50 to \$43.75 per week. It was verbally agreed between the parties to continue the wage rate of \$43.50 per week for the year 1932.\*

**SASKATOON, SASK.—CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 85.**

Agreement to be in effect from November 2, 1931, to November 1, 1932.

Only union members to be employed.

Hours: 44 per week.

Overtime: time and one-half for first three hours; thereafter and all work on Sundays and holidays, double time.

Wages for journeymen bookbinders: 86½ cents per hour or \$38.06 per week for day work. Night work \$3 per week extra.

One apprentice allowed to every three journeymen or major fraction thereof.

Wages for apprentices: 35 per cent of journeymen's wages in first six months, with increases each six months to 90 per cent of journeymen's wage in eighth six months.

Wages for journeywomen: \$17 per week.

Wages for women apprentices: from \$10 per week during first six months to \$14.50 per week for fourth six months.

Provision is made for settlement of disputes by arbitration.

**VANCOUVER, B.C.—CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 105.**

Supplementary agreement to be in effect from March 1, 1932, to March 1, 1933.

This agreement amends the one previously in effect which was summarized in the *LABOUR GAZETTE*, July, 1929, page 805, by providing for a wage reduction of 10 per cent. This makes the wage scale for journeymen bookbinders \$40.50 per week and for journeywomen \$20.70.

Hours are unchanged at 44 per week.

**VICTORIA, B.C.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 79.**

Temporary agreement to be in effect from March 14, 1932, to March 14, 1933.

The original agreement came into effect January 1, 1928, and runs from year to year until notice.

Hours: 48 per week for day work and 45 per week for night work.

Overtime and work on five holidays, time and one-half. Work on Sundays and three other holidays, double time.

One apprentice and one packer boy allowed to each press.

Wages per week for apprentices: first year \$12, second year \$14, third year \$18, fourth year \$24, fifth year \$30.

Wages provided in the original agreement for journeymen pressmen for both day and night work was \$48. The temporary agreement which is in effect from March 14, 1932, to March 14, 1933, provides for a 10 per cent reduction in wages from this rate for all union members, making the rate \$43.20 for journeymen pressmen.

The temporary agreement also provides for a joint standing committee which shall meet regularly.

### Manufacturing: Textiles and Clothing

**VANCOUVER, B.C.—CERTAIN EMPLOYERS AND JOURNEYMEN TAILORS' UNION OF AMERICA, LOCAL No. 178.**

Agreement to be in effect from April 1, 1932, to March 31, 1933, and thereafter from year to year until notice.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, May, 1931, page 598, with the following exceptions:

Wages per hour: tailors (including operators, pressers and tailors), 82 cents, finishers 57 cents, helpers 50 cents (reductions of about 10 per cent from the former rates).

### Construction: Buildings and Structures

**MONTREAL, QUEBEC.—MASTER ROOFERS' ASSOCIATION OF THE BUILDERS' EXCHANGE INCORPORATED AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 116.**

Agreement to be in effect from July 1, 1932, to April 30, 1933. Ninety days' notice to be given of any change.

This agreement is similar to the one between this local union and certain contractors, which was summarized in the *LABOUR GAZETTE*, May, 1931, page 599, with the following exceptions:

Wages per hour for journeymen sheet metal workers: 65 cents (a reduction of 15 cents per hour from the previous rate).

The hours are unchanged at 44 per week.

**HAMILTON, ONTARIO.—HAMILTON AND DISTRICT UNION ELECTRICAL CONTRACTORS AND THE INTERNATIONAL ELECTRICAL WORKERS' UNION, LOCAL No. 105.**

Agreement to be in effect from September 1, 1932, to April 30, 1933. If no change required at that date, the agreement to continue from year to year thereafter, subject to notice.

This agreement is similar to the one summarized in the LABOUR GAZETTE, April, 1931, page 477, with the following exceptions:

Apprentices are to serve five years instead of four years as formerly and will be employed as provided by the Province of Ontario Apprenticeship Act. Wages of apprentices from 20 per cent of journeyman's rate for first year to 75 per cent for fifth year.

Wages for journeymen electrical workers are unchanged at 95 cents per hour with a 44-hour week.

**HAMILTON, ONTARIO.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 205.**

Agreement to be in effect from May 1, 1932, to April 30, 1933.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: overtime and work on Saturday afternoons, time and one-half; double time for work on Sundays and holidays.

Wages: 70 cents per hour (a reduction of 5 cents per hour). For night work, nine hours' pay for eight hours' work.

**EDMONTON, ALBERTA.—EDMONTON BUILDERS' EXCHANGE AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION, LOCAL No. 1.**

This agreement covers bricklayers and masons only.

Agreement to be in effect from May 1, 1932, to April 30, 1933. Both parties are to meet in February, 1933, to negotiate a new agreement.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, November, 1931, page 1254, with the following exceptions:

Overtime: time and one-half for all overtime; double time for work on Sundays and holidays.

Wages per hour for journeymen bricklayers and masons: \$1.20 (a reduction of 20 cents per hour). On jobs employing five or more

journeymen, unless the contractor is a competent tradesman, a foreman to be employed and to be paid 10 cents per hour extra; if ten or more journeymen employed, 15 cents extra.

One apprentice allowed for every five journeymen.

Wages for apprentices from 25 per cent of journeymen's wage for first year to 70 per cent for fourth year.

**EDMONTON, ALBERTA.—MASTER SHEET METAL ASSOCIATION AND THE INTERNATIONAL SHEET METAL WORKERS' ASSOCIATION, LOCAL No. 371.**

Agreement to be in effect from May 1, 1932, to April 30, 1933. If notice of change not given three months before April 30, 1933, the agreement to remain in effect to April 30, 1934.

Union members are not to work in any but a legitimate shop, except in case of work for the government.

Hours: 8 per day, 5 days per week, a 40-hour week. If necessary to work on Saturday mornings, men to be laid off half a day the following week.

Overtime: time and one-half till midnight; thereafter and all work on Saturdays after 5 p.m., Sundays and holidays, double time.

Wages for journeymen sheet metal workers: \$1 per hour (a reduction of 15 cents per hour).

One apprentice allowed each shop and one to each additional four men employed. Apprentices to serve five years. During fifth year, apprentice to receive 75 per cent of journeymen's rate. (For the five advanced apprentices agreed on the rate to be 86½ cents per hour for one year, when they will become journeymen.)

For work out of the city, fare and board to be paid. Men may work either 8 or 10 hours per day on such work, and overtime only to be considered after 10 hours.

Shop stewards to be appointed in each shop. If they and the management cannot settle any dispute, it will be referred to the joint executive committee of the two associations without prejudice.

### National Agreement for the Italian Cotton Industry

A national collective agreement, stated to cover some 250,000 workers, was concluded in Italy on August 31, between the National Confederations of Employers and Workers in Industry, to regulate the conditions of employment in all undertakings in the cotton industry. The agreement became operative in the first fortnightly pay period after September 1, and remains in force for one year. The provisions governing working hours and wages are summarized below.

The normal working day is 8 hours of effective work, except in the case of occupations requiring only intermittent work or mere attendance or caretaking. Provision is made, however, for the daily hours to be extended, subject to a weekly maximum of 48 hours, to permit the introduction of a half-holiday on Saturday. Hours may also be extended, but by not more than one day, in order to make up for lost time, provided

that the extensions take place during the two fortnights immediately following the stoppage. Overtime work is defined as that performed outside the normal hours, and night work as that performed between 10 p.m. and 5 a.m. The wage rates are increased by (a) 30 per cent, for overtime worked on week days; (b) 50 per cent for overtime work at night, on Sundays, and on public holidays; and (c) 25 per cent for ordinary night work, except in the case of shift-working, when the increase is only 20 per cent.

Wages are payable at the rates specified. When the work is arranged in two shifts, the hours of work per shift are 7½, and the rates are increased by 5 per cent. Where the rates paid in any establishment are higher than these agreed rates, they may be reduced by not more than 10 per cent, but not below the agreed rates.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat lower while the Dominion Bureau of Statistics index number of wholesale prices was again slightly higher.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was little changed at \$6.98 for September as compared with \$7.01 for August. Comparative figures for previous dates are: \$8.03 for September, 1931; \$10.38 for September, 1930; \$11.64 for September, 1929; \$10.28 for September, 1922; \$16.92 for June, 1920 (the peak); and \$7.83 for September, 1914. The most important decline was a seasonal fall in the price of potatoes, while the prices of beef, mutton, milk and bread were slightly lower. A seasonal advance occurred in the prices of butter and eggs, while less important advances occurred in the prices of bacon, lard and sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$16.34 at the beginning of September as compared with \$16.42 for August; \$18.06 for September, 1931; \$20.75 for September, 1930; \$21.90 for September, 1929; \$20.90 for September, 1922; \$26.92 for July, 1920 (the peak); and \$14.33 for September, 1914. Fuel was slightly lower because of a decline in the price of wood in some localities, which more than offset a seasonal advance in the price of anthracite coal. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly higher at 66.9 for September as compared with 66.8 for August. Comparative figures for earlier dates are 70.0 for September, 1931; 82.1 for September, 1930; 97.8 for September, 1929; 94.4 for September, 1922; 164.3 for May, 1920 (the peak); and 67.2 for September, 1914. One hundred and eleven prices quotations advanced, ninety declined and three hundred and one were unchanged.

In the classification according to chief component materials five of the eight main groups were higher and three were lower. The groups which advanced were: the Animals and their Products group, because of higher prices for cured meats, calves, hogs, hides, butter, cheese, lard and eggs, which more than offset lower prices for canned salmon, steers, lambs and shoes; the Fibres, Textiles and Textile Prod-

ucts group, due mainly to higher quotations for raw cotton, raw silk, raw wool and cotton fabrics; the Wood, Wood Products and Paper group, due to advances in the prices of lumber and cedar shingles which more than offset declines in the prices of sulphite and ground wood pulp; the Non-Ferrous Metals and their Products group, due to advances in the prices of antimony, copper, lead, tin and zinc which more than offset reductions in the prices of aluminium and silver; and the Non-Metallic Minerals and their Products group, due to higher prices for coal. The Vegetables and Vegetable Products group was considerably lower, decreases in the prices of barley, corn, oats, wheat, flour, bran and shorts exerting a greater influence than higher prices for flax, gluten meal and coffee. The Iron and Its Products group and the Chemicals and Allied Products group were also slightly lower, the former due mainly to lower quotations for steel sheets, steel tanks plates and scrap iron, and the latter due to lower prices for carbon black.

In the grouping according to purpose consumers' goods advanced, higher prices for coffee, cured meats, butter, cheese, eggs, cotton fabrics and coal being more than sufficient to offset lower prices for flour, bran, shorts, potatoes, fresh meats, boots and shoes. Lower prices for wheat, oats, rye, steers, lambs, spruce lumber and silver caused a decline in producers' goods. In this group prices for flax, calves, hogs, hides, furs, pine lumber, copper, lead and tin advanced.

In the grouping according to origin raw and partly manufactured goods were lower, decreases in the prices of wheat, oats, rye, steers, lambs, scrap iron and silver more than offsetting higher prices for flax, calves, hogs, hides, eggs, copper, tin and zinc. Fully and chiefly manufactured goods were slightly higher, because of increased quotations for canned vegetables, cotton fabrics, cured meats, leather, butter, cheese, copper sheets and copper bars which more than offset reductions in the prices of flour, bran, shorts, boots and shoes and window glass. Domestic farm products and articles of marine origin were lower, articles of forest origin advanced, while articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed

houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities

are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

(Continued from page 1122)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

## Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.04; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6, Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

Beef prices were somewhat lower in most localities, sirloin steak being down in the average from 25.4 cents per pound in August to 24.8 cents in September, round steak from 20.6 cents per pound to 20 cents and shoulder roast from 13.2 cents per pound to 12.7 cents. Mutton was down in the average from 21.4 cents per pound to 20.2 cents. Fresh pork advanced from 15.6 cents per pound in August to 15.9 cents in September. Prices were higher in most localities in Ontario and the western provinces but were somewhat lower in Quebec and the maritime provinces. Breakfast bacon was up from 20.6 cents per pound in August to an average of 21.7 cents in September, increases being noted from most localities. Lard was also up in the average at 12.1 cents per pound as compared with 11.4 cents in August.

Eggs showed a seasonal advance, fresh being up from 24.1 cents per dozen in August to 25.6 cents in September and cooking from 19.6 cents per dozen to 20.5 cents. These prices compare with the low of 19.2 cents per dozen in June for fresh and 15.1 cents for cooking. Butter prices were also seasonally higher in most localities, dairy averaging 20.8 cents per pound in September as compared with 18.8 cents in August and creamery 25 cents per pound as compared with 22.1 cents.

Bread was little changed at an average price of 5.8 cents per pound. Canned vegetables were again slightly higher, tomatoes averaging 11.4 cents per tin as compared with 11.2 cents in August, peas 11.3 cents per tin as compared with 11.1 cents and corn 11.5 cents per tin as compared with 11.3 cents. Onions were substantially lower in practically all localities, the price averaging 4.5 cents per pound in September as compared with 6.4 cents in August and 8.1 cents in July. Potatoes also showed a substantial seasonal fall the price averaging 90 cents per ninety pounds in September as compared with \$1.21 in August. Prunes were slightly higher in the average at 11.2 cents per pound as compared with 11 cents in August. Coal prices were little changed, anthracite averaging \$15.34 per ton and bituminous \$9.65. Hardwood, stove lengths, was down from an average price of \$13.30 per cord in August to \$12.89 in September. A decrease in rent was reported from Brandon.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from an average price of 56.3 cents per bushel in August to 51.9 cents in September. The high price for the month was 55.9 cents reached near the beginning and the low 49.3 cents reached at the end of the month. The downward movement was said to be influenced by the large supply of Canadian wheat being marketed and to the prospects of plentiful harvests also in France and Italy. Most other grain prices were lower, western barley being down from an average of 34.4 cents per bushel in August to 28.9 cents in September, oats from 29.9 cents per bushel to 26.1 cents and rye from 33.3 cents per bushel to 31.9 cents. Flax advanced from 71.6 cents per bushel to 78.5 cents. Flour at Toronto declined from \$4.90 per barrel to \$4.60. Bran and shorts at Montreal were 58 cents per ton lower, the former at \$18.45 and the latter at \$20.45. Raw sugar at New York declined from \$1.32 per hundred pounds to \$1.20 (Canadian funds), while granulated sugar at Montreal was unchanged at \$4.37 per hundred pounds. Ceylon rubber at New York advanced from 4.2 cents per pound to 4.3 cents. In livestock prices steers at Toronto declined from \$6.05 per hundred pounds to \$5.36 and at Winnipeg from \$4.70 per hundred pounds to \$4.17. Bacon hogs at Toronto declined from \$5.21 per hundred pounds to \$5.11 but advanced at Winnipeg from \$4.69 per hundred pounds to \$4.87 and at Montreal from \$5.33 per hundred

pounds to \$5.64. Lambs at Toronto were down from \$5.97 per hundred pounds to \$5.46 and at Winnipeg from \$5.03 per hundred pounds to \$4.53. The price of calves at Toronto rose from \$6.06 per hundred pounds to \$6.90 and at Winnipeg from \$4.46 per hundred pounds to \$4.71. The price of creamery butter at Montreal advanced from 21.2 cents per pound to 24.5 cents and at Toronto from 21.4 cents per pound to 24.4 cents. Fresh eggs at Montreal were considerably higher at 33 cents per dozen as compared with 28.1 cents and at Toronto at 28.9 cents per dozen as compared with 23.5 cents. At Vancouver the price was 31.2 cents per dozen as compared with 21.8 cents in August. Raw cotton at New York was unchanged at an average price of 8.5 cents per pound (Canadian funds). Raw silk at New York was slightly higher at \$2.11 per pound as compared with \$2.06 in August. In lumber Canadian white pine advanced from \$70 per thousand board feet to \$80. Cedar shingles were 25 cents per thousand higher at \$2.25. Electrolytic copper at Montreal advanced from \$7.03 per hundred pounds to \$7.62 and tin at Toronto from 30 cents per pound to 31.8 cents. United States anthracite coal advanced from \$12.76 per ton to \$12.98 and western domestic coal at Lethbridge from \$4.50 per ton to \$4.75 and at Edmonton from \$2.75 per ton to \$3. White lead in oil rose from \$8.05 per hundred pounds to \$8.32.

### The Sugar Refining Industry in Canada, 1931

Statistics of the sugar refining industry in Canada for the year 1931 are presented in a report published by the Dominion Bureau of Statistics, in its Census of Industry series. The refineries operating during the year were located as follows:—Ontario, 2 (Chatham and Wallaceburg), Quebec, 2 (both at Montreal), New Brunswick, 1 (Saint John), Nova Scotia, 1 (Dartmouth), Alberta, 1 (Raymond), and British Columbia, 1 (Vancouver). These eight sugar refineries in 1931 reported a capital investment of \$37,691,433 and a value of production of \$43,962,061. They also employed 2,265 persons who received \$3,307,730 in salaries and wages and paid out \$29,196,494 for raw materials, while the value added by manufacture

amounted to \$14,765,567. The sugar refining industry is therefore of considerable importance in the industrial life of Canada. The demand created by the war gave it a great impetus. All things considered, 1919 was a record year. The number of persons employed (3,491), the value added by manufacture (\$16,321,882) and the exports (\$22,953,135) were the highest recorded, while the volume of sugar manufactured was only 10 per cent lower than that of the peak year 1925 when 11,714,967 cwt. were produced. Since 1925, however, exports of sugar have declined with the result that production and employment slackened considerably. Exports of sugar in 1931 amounted to 149,384 cwt. valued at \$728,825.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 59.9 for August, an advance of 1.8 per cent for the month, bringing the index number up to the level of August of last year. Comparing August, 1932, with July, food was slightly lower, while industrial materials advanced 3.3 per cent.

The *Statist* index number, on the base 1867-1877=100, was 80.7 at the end of August, an advance of 2.3 per cent for the month. The feature of the month was an advance of 17.4 per cent in textiles. There were also advances in minerals and sundries and in sugar, coffee and tea, but both vegetable and animal foods were considerably lower for the month.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 141 at September 1, which is the same figure as for August 1. Fuel and light were slightly higher, while sundries were lower, but the other groups, including food, rent and clothing were unchanged for the month.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 80 for August, a decline of 2.4 per cent for the month. Vegetable foods and animal foods were both lower for the month, but all other groups were higher.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 95.4 for August, a decline of 0.5 per cent for the month. Agricultural products were 1.6 per cent lower, colonial products 0.7 per cent lower, industrial raw materials and semi-manufactured goods advanced 1.2 per cent and manufactured goods were 0.9 per cent lower for the month.

**COST OF LIVING.**—The official index number of the cost of living on the base 1913-1914=100, was 120.3 for August, a decline of 1.0 per cent for the month. There was no change in rent; heat and light were slightly higher, but all other groups declined from the July level.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 1913=100 (pre-war currency), was 79.6 for August, an advance of 0.1 per cent for the month. The small advance in industrial materials was partly offset by a decline in foods.

**COST OF LIVING.**—The index number of the cost of living, Milan, on the base 1927=100, was 79.15 for July, a decline of 1.4 per cent for the month. Food, clothing and heat and light were lower, while rent and sundries were higher for the month.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 65.2 for August, an advance of 1.1 per cent for the month, but this index number is still 9.6 per cent lower than for August, 1931. Comparing August, 1932, with the previous month, there were slight declines in fuel and lighting materials, housefurnishing goods and building materials, but the other seven groups were all higher.

*Bradstreet's* index number, which is the sum total of the prices per pound of 96 commodities of common consumption was \$7.2753 at October 1, an increase of 1.4 per cent for the month. This is the fourth consecutive monthly advance. Of the 13 groups, seven were higher, five lower and one was unchanged for the month.

**COST OF LIVING.**—The National Industrial Conference Board index number, on the base 1923=100, was 76.8 for August, a decline of 0.2 per cent for the month, due to decreases in food, housing and clothing, partly offset by a slight rise in fuel and light; sundries were unchanged.

The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 128.5 for August, showing no change from the July level. Increases in food prices were offset by declines in clothing.

## INDEX NUMBERS OF RETAIL PRICES OF FOODS AND COST OF LIVING IN CANADA AND CERTAIN OTHER COUNTRIES—Continued

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Fair Wages Regulation under Dominion Water Power Act declared intra vires

The following case relates to the validity and to the application of Regulation 83A under the Dominion Water Power Act (Revised Statutes of Canada, 1927, chapter 210). The regulation was first issued in 1928, but was revised in 1929, so as to protect more fully the rights of the workmen engaged in connection with water power development, with regard to the payment of current or "fair and reasonable" rates of wages (LABOUR GAZETTE, February, 1929, page 117). The circumstances of the case are set forth in the following judgment by Mr. Justice Dysart, in the Court of King's Bench, Manitoba, July 21, 1932.

#### Text of Judgment

DYSART, J.—Action to recover \$1,482.20, being the amount by which the plaintiff claims to have been underpaid in respect of wages earned by him while in the employ of the defendants Stewart and Grant on the construction by them of a power plant at Slave Falls, Manitoba, for the other defendant, the city of Winnipeg.

The defendant city, having procured on June 8, 1929, an interim licence to develop hydro-electric power at the said Slave Falls, soon thereafter awarded the contract for the construction of the necessary works to two firms, who later assigned their rights to the defendants Stewart and Grant (hereinafter referred to as the contractors). Under this contract and assignment the defendant city is to be indemnified by the contractors against all such claims as that which the plaintiff now puts forth, and for that reason took no active part in the trial.

The plaintiff was hired in Winnipeg in the late summer of 1929, to do any work that might from time to time be available for him on the said construction, at a rate of wages "to be fixed on the job." Under this arrangement he went to work. For a few weeks he

was engaged as a common labourer; then he was put in partial charge of a small pumping station; and in the months of October, November and December, 1929, and January, February and March, 1930, he worked in this station for a total of 2,062 hours, for which he was classified as a pumpman, and was paid wages at the rate of 55 cents an hour, and during the corresponding months of 1930-1931, he performed similar services in the same capacity for a total of 1,128 hours, for which he was classified as a fireman, and was paid wages at the rate of 65 cents an hour. Throughout the whole of these two periods (he makes no complaint as to any other times) his classification and rates of wages were fixed in advance by mutual arrangement, and his wages were paid regularly every pay day, and were accepted by him without murmur or complaint as to their adequacy. So far therefore as the express terms of his hiring are involved, he has no ground for complaint, and indeed makes none.

Notwithstanding the facts just mentioned, he claims that he should have been classified as a third-class engineer, and should have been paid as such at the rate of \$1.05 an hour.

Although the contract between the defendants covering the construction of the works contained a provision (par. 28) obligating the contractors to pay wages as fixed by the Fair Wage Schedule from time to time in force during the life of the contract (which schedule, it is clear by reference to the instructions upon which the contract was drawn up, meant the provincial schedule) the plaintiff does not base his claim upon the effect of that contract; indeed, he frankly and quite properly acknowledges that, being a stranger to that contract, he has no right to sue under it; and that neither the provincial wage schedule nor any other schedule was embodied by reference in his own hiring contract. He bases his claim strictly on what he contends is a statutory right.

The particular material upon which he relies includes the *Dominion Water Power Act*, R.S.C., 1927, ch. 210, together with the Water Power Regulations formulated thereunder, and

the interim licence issued to the city under those regulations.

It is assumed by all parties—at least it is not questioned by any—that the regulations are authorized by sec. 12 of the said Act, and that they have the force of statutory law. The Act itself does not directly confer any right on the plaintiff. The licence refers to rates of wages only by referring to the regulations.

Of the regulations, only one calls for consideration, that is No. 83A, which was passed on October 31, 1928, and was in force when the interim licence was issued in June, 1929, and continued in force until December 3, 1929, when it was repealed and replaced by a new regulation bearing the same number, and dealing in a more amplified way with the same subject-matter. In its old form this regulation read:—

Every licence shall be deemed to be executed on the express condition that the licensee shall pay or require to be paid to those employed in the construction \* \* \* of the works authorized in such licence, wages not less than those generally accepted as current for similar services in similar undertakings in the locality \* \* \*

In its new form, the regulation reads in part:

Every licence shall be deemed to be executed on the express condition that all mechanics, labourers and other persons who perform labour in the construction \* \* \* of the works authorized by such licence, shall be paid not less than such rate of wages as are generally accepted as current from time to time during the continuance of the licence for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates \* \* \*

The interim licence declares that it is "issued \* \* \* subject to the provisions of any regulations now or hereafter in force," and "upon the express condition that it shall be deemed to incorporate and shall be subject to the provisions" of the regulations then in force, including said No. 83A. This licence, with the terms and conditions set forth, both in the licence and in the regulations, was expressly accepted by the city.

For the defence it is contended by Mr. McAulay that this licence, while admittedly subject to old regulation No. 83A, is not subject to the new regulation, because the latter was not promulgated until long after the licence was issued and is not retroactive in its operation. The licence was issued subject to regulations then or *thereafter* in force. The new regulation is evidently intended to be generally retroactive, as shown in the provision that the Minister of Labour may determine from time to time what are current or fair and reasonable rates of wages, but that such determination "shall not be operative prior to the period of three months immediately preceding the date" of the regulation, December 3, 1929. This provision places a limitation upon the generally retroactive scope of the whole regulation, and to a degree reads the regulation into all licences then outstanding. Moreover, the regulation declares that "every licence shall be deemed to be executed on the express condition" that the rates of wages therein referred

to shall be observed. Reading the licence and the regulation together, I am satisfied that the combined effect of the two is that the licence was governed by the old regulation until December 3, 1929, and thereafter by the new one; in other words, that the city was required to see to it that the plaintiff was paid "current rates" of wages until December 3, 1929, and thereafter "current rates, or if there be no current rates, then fair and reasonable rates."

It can scarcely be denied that Regulation 83A, in both the old and new form, imposes an obligation on the city in favour of the plaintiff. That the defendants themselves acknowledge this obligation, is evidenced by the fact that in their contract governing the work they made provision for payment of wages in, as they thought, conformity with that requirement. The questions for determination here are (1) whether that obligation is absolute or only conditional; and (2) whether the plaintiff can sue for its enforcement.

The obligation is either absolute or it is not. If it is absolute, then it is general legislation governing rates of wages and conditions of employment, and as such is an invasion of the field of "property and civil rights" which is exclusively within the province's legislative powers: B.N.A. Act, sec. 92, clause 13; *Citizens Insur. Co. v. Parsons* (1881) 7 App. Cas. 96, 51 L.J.P.C. 11; *In re Legislative Jurisdiction over Hours of Labour* (1925) S.C.R. 50. If however the obligation is not absolute, but only conditional, then it is constitutionally unobjectionable, because there is nothing to prevent any proprietor from imposing what lawful conditions he chooses on the transfer of right in his property. And as a matter of fact the legislation itself and the interim licence both set forth in the clearest terms that the due observance by the licensee of the wage rate stipulations is one of the conditions upon which the licence is issued; in other words, that the obligation is conditional. Framed in this way, the regulation attains the end desired, without exceeding Dominion legislative powers. If I am correct in this, the plaintiff's case is at an end.

However, if we assume that the regulation does create an absolute obligation, what follows? It is a cardinal principle of interpretation of statutes that where a statute which creates a new duty or obligation provides a remedy for breach of the statute, that remedy is the only one that can be pursued; and that it is only when no such remedy is provided, that a remedy at law, apart from the statute, may be invoked: *Atkinson v. Newcastle, etc. Waterworks Co.* (1877) 2 Ex. D. 441, at 447, 46 L.J. Ex. 775; *Saunders v. Holborn District Board of Works* [1895] 1 Q.B. 64, at 68, 64 L.J.Q.B. 101; *Dawson v. Bingley Urban Council* [1911] 2 K.B. 149, at 159, 80 L.J.K.B. 842; *Phillips v. Britannia Hygienic Laundry Co.* [1923] 2 K.B. 832, 93 L.J.K.B. 5; *Coldstream Mun. Dist. v. Bellevue* [1929] 2 W.W.R. 597 (B.C.); *Fort Frances Pulp Co. v. Spanish River Pulp Co.* (1927) 61 O.L.R. 512.

These cases, in addition to illustrating the principle just mentioned, establish that each such statute must be given its own proper construction. They indicate also the reluctance of the Courts, even where the breach of such duty

is a wrong at law, to permit persons for whose benefit such statutes are enacted to seek any remedy other than that prescribed in the statute itself. Where such suit has been allowed, it is because the breach complained of constituted a tort or wrong at common law; but where the breach is no wrong to the benefited persons, except in so far as the statute itself makes it a wrong, then the remedy must be sought under the Act.

The regulation in question contains in the new form a provision by which the plaintiff might have obtained relief. After providing for current or fair and reasonable rates, as before mentioned, this regulation goes on to provide that:

The Minister of Labour may at any time and from time to time determine for the purposes of the licence, what are the current or fair and reasonable rates of wages, and . . . the licensee shall adjust the wages and hours and classification of work so as to give effect to such decision.

This provision implies necessarily that some notice of breach of the wage conditions shall be given to the Minister of Labour, and that naturally the workmen affected are the persons to lay the complaint.

Power in the government to enforce such decisions is involved in the conditions upon which the licence is issued. One of these conditions (par. 10) is that, unless the licensee observes and fulfils all the terms and conditions required by the interim licence and regulations, the government might refuse to issue the final licence. Such condition is a powerful weapon of enforcement in the hands of a government, and was available at the instigation of the plaintiff or any other complaining workman. Inasmuch, therefore, as the plaintiff had (and if the final licence is not yet issued, still has) an efficient remedy under the regulations, he is not entitled on the principle of the cases above cited to maintain this action at law.

It may be conceded, however, that if the plaintiff ever had a right to bring this action, he did not waive it by accepting classification and rates on a scale lower than those to which, under the regulation, he was entitled: *Baddeley v. Granville (Earl)* (1887) 19 Q.B.D. 423, 56 L.J.Q.B. 501; *Dunn v. Malone* (1903) 6 O.L.R. 484. The first of these cases shows that a person otherwise entitled to sue for the performance of a statutory duty cannot waive his right by acquiescence or conduct, and the second shows that he cannot waive it even by express contract or covenant.

If however the conclusion I have thus far drawn should be shown to be unsound, there are other obstacles to the plaintiff's success. Assuming for the purpose of this branch of the case that the regulation is mandatory, and that the plaintiff has a right to enforce it in this action, the plaintiff has still the onus of showing that the rates of wages paid him prior to December 3, 1929, were not "current" rates, and that those paid him after that date were not "current" or "fair and reasonable." The evidence to which we must look includes the fact that Slave Falls is in a wild and unsettled part of Manitoba, remote from labour centres, and that neither the provincial wage schedule nor the city wage schedule was by itself applicable to the construction in question. If however the schedules can be treated as evidence of what were current or fair and reasonable rates in a general way, we are met by the fact that

neither of the schedules contains a classification precisely such as that for which the plaintiff contends. Neither schedule contains the classification of "pumpman," each contains a classification of "firemen," and fixes the rate of wages therefor at 65 cents an hour, the rate which the plaintiff was paid during the second period; each contains a classification entitled "Engineers in charge of single drum machines" (being the classification to which the plaintiff claims he was entitled) and provides a rate of wages therefore—the city schedule \$1.05 an hour, and the provincial only 95 cents an hour. In my opinion the plaintiff was not and is not entitled to this classification. Single drum machines are hoisting engines, the operators of which are required to have skill in machinery which is not required of a person in charge of a steam boiler, even though that boiler be a high pressure one. To have charge of such a steam boiler, or of such a single drum machine, the operator is required to hold a third-class engineer's certificate (*The Steam Boiler Act, C.A., 1924, ch. 185, secs. 2 [1], 3 and 31*) but that requirement is the only link between the two, and in fact the only ground upon which plaintiff's claim rests.

To show the fallacy of plaintiff's claim on this point, it is only necessary to point out that the pumping station, of which the plaintiff had partial charge, contained a steam boiler suitable for furnishing steam for such a single drum machine; but the only bit of machinery attached to or connected in any way with the said boiler was a steam pump. As already stated, pumping was the main business of this station, and the pumping was done chiefly, if not almost solely, by an electric pump. The steam pump in question was there merely as a stand-by, to be called into service only in case of breakdown of the electric pump. Apart from being held in reserve for the steam pump, throughout the year, the boiler in question was used only in the season of low temperatures, that is, from the beginning of October until the end of March, for furnishing steam to heat water mains. The plaintiff's duties in connection with the boiler were mainly, if not solely, those of a fireman. The requirement of a third-class engineer's certificate is one which applies to such a boiler even when used exclusively for steam heating, even those in apartment blocks and boarding houses: *The Steam Boiler Act, secs. 2 (1) and 3, supra*.

Again, the agreement between the plaintiff and his employers as to his classification and rate of wages is evidence of what were current or fair and reasonable rates. In all probability the plaintiff was treated no better or no worse than the many other men doing similar work on the job.

Then there is the fact that the plaintiff's classification and rates for the second period of his employment were fixed by the Fair Wage officer (Mr. Jackson) who had been sent out to the work by the city for the express purpose of supervising and adjusting the working conditions and rates of wages of all workmen. The decision of Mr. Jackson, a disinterested expert, is strong evidence that the plaintiff's classification and rates were those current in the locality, and at any rate fair and reasonable.

Plaintiff was not the only man engaged in work in pumping stations, and we have no evidence that any of the persons in charge of such stations made or pressed any complaints against classification and rates. It is true that

some witnesses have now come forward in support of the plaintiff with the contention that their silence was enforced by fear that complaints would involve dismissal. The fear which they now express seems to have had little or no foundation.

Apart from the two wage schedules, Mr. Locke, for the plaintiff, after he had closed his case and had proceeded some time with his argument, tendered a wage agreement (Ex. 26) which I received at the time conditionally. It is an agreement between the "General Contractors' Section of the Winnipeg Builders' Exchange of the first part, and the Hoisting and Portable Engineers, Local 869 of the International Union of Operating Engineers of the second part." This small document with a formidable title was in force throughout the period under review, and fixes \$1.05 an hour for "Engineers operating all machines used in building and construction work such as \* \* \* pumps \* \* \* and all stationary engines and boilers \* \* \*." This document is not to be regarded as in the slightest degree binding upon the parties to this action but, if it is applicable to the Slave Falls district, it is evidence of current or fair and reasonable rates of wages for one who operates a pump. The plaintiff operated a pump—an electric pump—

and does not make any claim in respect thereof. The "pumps" referred to are probably steam pumps. The plaintiff makes no claim in respect of his services on either pump, but solely on the steam boiler. This wage agreement is therefore not relevant. And I so hold.

I therefore find and hold that the plaintiff was in fact paid current or fair and reasonable wages during the second period of his employment.

During the first period it would seem that he was entitled to 10 cents an hour more than he was actually paid, but, as against that possibility, we have to consider that the increase in his rate of wages was effected by way of compromise, and was not accompanied or followed by any claim for underpayments on the first period. The conclusion therefore is that any under-payment during the first period was abandoned as part of the arrangement for the higher rates in the second period.

It would seem that if the plaintiff has any just cause of complaint, the Minister of Labour is the tribunal to which, if he is not too late, he ought to apply for relief.

The plaintiff's action is therefore dismissed with costs.

*Outen versus Stewart and Grant and City of Winnipeg (Manitoba), 1932, Western Weekly Reports, vol. 3, page 193.*

### Salary Must Continue until Definite Termination of Employment

The board of directors of a security company engaged the services of a secretary-treasurer, to be continued during the pleasure of the board, and to be paid for at the rate of \$70 a week. The stipulated salary was paid for about six months, after which period it was discontinued, the company stating that the employee's services had been "effectively dispensed with" some time previously. The employee claimed that he had not been formally dismissed, and that he had rendered services after the payment of salary had ceased. In an action for unpaid wages judgment was given for the employee (the plaintiff), Mr. Justice Garrow stating that, although the services rendered by the plaintiff after his wages ceased were of a trifling nature, yet the plaintiff was entitled to judgment because of the failure of the defendant company to properly terminate the employment. The judgment pointed out that although one individual director of the defendant company told the plaintiff that his services would be no longer required, there was not at any time any recorded expression of the intention of the board of directors to dispense with the plaintiff's services.

Since the plaintiff was to be employed during the pleasure of the board of directors, the only method by which the plaintiff's contract of employment could be terminated was by resolution of the board of directors; and since there was no such resolution the plaintiff's contract of employment had never been properly terminated. Therefore there should

be judgment for the plaintiff for \$70 per week from October 31, 1930, to the date of the hearing with interest.

*Fancy versus Dealers Securities Limited (Ontario), 1932, Ontario Weekly Notes, vol. 41, page 318.*

### Winnipeg Bylaw regulating Hours of Labour found *intra vires*

The Winnipeg traffic bylaw, which among other requirements provides that no cab owner shall allow a driver to work more than sixty hours a week, having been declared by Mr. Justice Galt to be invalid, the Manitoba Court of Appeal allowed an appeal by the city and affirmed the validity of the bylaw. Mr. Justice Trueman pointed out that the reason given by Mr. Justice Galt for objecting to the provision was that the bylaw, as framed, did not cope with the evil against which it was directed, namely, the continuance on duty of a driver for an undue number of consecutive hours. "The validity of the bylaw," he said, "cannot depend upon whether it will accomplish its object or not".

On the general question of the powers that belong to local authorities for the regulation of their affairs, His Lordship cited the opinion of Lord Sumner, in *Roberts versus Hopwood*, (1925), where he said: "Where a discretion is given to the local authority, it is for that authority to exercise it, provided that its action is not *ultra vires*, nor its powers exercised corruptly or *mala fide* . . . . The authority may appear to be right or may appear to be wrong in the course they have adopted, according as that course may be subjected to

criticism from one point of view or another. Upon such discussion and criticism it is not for the courts to pronounce. So long as the discretion has been exercised and the limits of discretion are not passed, the decision rests with the local authority."

Mr. Justice Prendergast and Mr. Justice Dennistown concurred in the opinion of Mr. Justice Trueman.

On the other hand, Mr. Justice Robson considered the provisions in question to be *ultra vires*, stating that if the Winnipeg Charter, as passed by the Legislature, had contemplated conferring on the local authority this power of regulating the period of time in the week "in which an employee is to be at liberty to make a wage-earning use of his time and working capacity", such a power "should stand out clearly" in the statute. "A regulation interfering with the contract of employment between the owner and driver is not germane to the purpose of the statute". The phrase "for regulating and licensing" appeared also in connection with food and milk dealers, restaurants, theatres, tobacco shops, laundries, dealers in stone, lime, sand, cordwood, hay or straw, business colleges, bakeries and other businesses. "It does not seem to me to be possible," His Lordship concluded, "to impute a legislative intent that the city council should have power as a matter of regulation to fix periods of time during which owners engaged in these activities must see that their employees do not work therein".

*Re Winnipeg Bylaw No. 14272 (Manitoba)*  
1932, *Dominion Law Reports*, vol. 3, page 625.

#### Application for Woodmen's Liens must be filed with Registrar

In the case of *Dinning versus the Workmen's Compensation Board (B.C.)*, which was reported in the *LABOUR GAZETTE*, February, 1932, page 248, the British Columbia Court of Appeal (reversing the judgment of the lower Court) found that the Board had no priority in its claims against a bankrupt estate for payment of assessment dues, and allowed priority to the claim of Dinning, the holder of a blanket mortgage on the property of the bankrupt. The claim of certain wage-earners for priority was also rejected. After their decision, an order was made that Nichols, Cullum and Anderson be appointed to represent themselves and certain wage-earners of the insolvent company (other than those already dealt with). This group was allowed to make a separate appeal from the original findings in the Dinning case in which the claim of the Board had been upheld.

A majority of the Court of Appeal rejected the claim of these workmen for priority, find-

ing that they were "unsecured creditors," having failed to obtain liens under the Woodmen's Lien for Wages Act, and that therefore they could not compete with Dinning, who was a secured creditor under a mortgage on all the debtor's property.

Mr. Justice J. A. McPhillips, in a dissenting opinion, held that the wage-earners were entitled to priority in the bankruptcy proceedings. The appellants, he noted, were entitled to liens under the Woodmen's Lien for Wages Act, and they made their claim accordingly upon the trustee in bankruptcy, but failed to file their statements with the Registrar of the County Court, as required by that Act. Commenting on the resulting situation on the appellants, Judge McPhillips said:—

"When the provisions of Acts of both the Dominion and Provincial Parliaments are considered, each being entitled to be considered—and no question of *ultra vires* arising—then it would seem to me that the policy of the statute law is to be carefully considered and matters should be so ordered as to work out what was the intention of both legislative authorities. The staying of proceedings (section 24, Bankruptcy Act) must be held to mean that, as to the priority of a statutory lien, the persons entitled shall have that statutory lien as of the date of the bankruptcy; here that right existed and the liens could have been gone on with and perfected under the provincial law, but were prevented by the Dominion law. The combined legislation must be given a liberal construction and the policy of the law carried out by the Courts if possible. Now, I think that is possible, and I trust that my sympathy for the wage-earners in this present matter does not carry me too far when I arrive as I do—not without some hesitancy—at the view that the wage-earners should succeed in this appeal.

"It is really contrary to natural justice that the debenture-holders enforcing the trust deed should thereby exploit the wage-earners out of the moneys they should receive for the cutting down of and the fashioning of the trees of the forest into a commercial product, and that the commercial value thereof should go to the debenture-holders, to the denial of payment of justly earned wages of those who produced that commercial product. Particularly is this so when the policy of the statute law is to protect the wage-earners. If in the end the result is that the wage-earners fail, clearly it will be a matter for legislation to effectively carry out the undoubted intention of both Parliaments."

*Workmen's Compensation Board et al versus Nichols, et al.* (British Columbia) 1932, *Dominion Law Reports*, vol. 3, page 385.

[NUMBER 11

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THERE was an improvement in industrial activity in Canada on October 1, according to statements received by the Dominion Bureau of Statistics from 8,020 employers, each with a minimum of fifteen employees, whose staffs aggregated 796,165 persons, as compared with 790,967 in the preceding month. Employment has often shown a falling-off at the beginning of October in the eleven years of the record, so that the increase this year is especially interesting. Activity, however, continued at a low level as compared with previous years for which statistics are available. The index (based upon the average for the calendar year 1926 as 100) stood at 86.7 on October 1, 1932, compared with 86.0 on September 1, 1932, and 103.9 on October 1, 1931. On the same date in the ten preceding years, the index was as follows: 1930, 116.2; 1929, 125.6; 1928, 118.8; 1927, 110.3; 1926, 106.5; 1925, 99.5; 1924, 95.0; 1923, 100.7; 1922, 95.8, and 1921, 91.3. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of October, 1932, the percentage of idleness reported to the Department of Labour by local trade unions stood at 20.4, in contrast with percentages of 21.4 at the beginning of September and 18.1 at the beginning of October, 1931. The percentage for October was based on the reports received by the Department of Labour from a total of 1,732 labour organizations with a combined membership of 162,186 persons.

Reports for September, 1932, received by the Department of Labour from the offices of the Employment Service of Canada showed an increase over August in the average daily placements effected, but a decline from September a year ago under a like comparison. Farming was largely responsible for the gain over the previous month, and construction and maintenance for the loss from the corresponding month in 1931. For the period under review, September, 1932, total opportunities for work numbered 32,111, applications made

53,437, and placements in regular and casual employment 29,944.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was slightly higher at \$7.07 at the beginning of October as compared with \$6.98 for September. Comparative figures for earlier dates are: \$7.84 for October, 1931; \$10.32 for October, 1930; \$11.68 for October, 1929; \$10.23 for October, 1922; \$16.92 for June, 1920 (the peak); and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was 65.0 for October as compared with 66.9 for September; 70.4 for October, 1931; 81.0 for October, 1930; 96.8 for October, 1929; 94.8 for October, 1922; 164.3 for May, 1920 (the peak); and 66.8 for October, 1914.

### Industrial Disputes Investigation Act.

During the past month the Department received reports from the two Boards of Investigation and Conciliation appointed in connection with disputes between the Niagara, St. Catharines and Toronto Railway and its employees. Three new applications for Boards were received from one district and a Board was appointed to deal with these three disputes. Another application, reported in the October issue, was found to relate to an industry in connection with which, under the provisions of the Act, a Board could be appointed only with the consent of both parties; and as the employer declined to join in the application no action was taken. Full details of the recent proceedings under the Act, with the text of the reports referred to, will be found on page 1153.

### Census figures of employment and unemployment in Canada.

On another page of this issue will be found the substance of the preliminary report published by the Dominion Bureau of Statistics, giving the number of wage earners of Canada at work and not at work on June 1, 1931, together with causes as stated by wage earners re-

porting as not at work, presenting the information as to the extent of unemployment in Canada as ascertained through the special questionnaire that was inserted in the population schedule used in the Seventh Census of Canada, 1931 (LABOUR GAZETTE, May, 1931, page 545).

### **Relief of unemployed in Canada during winter**

The Hon. W. A. Gordon, Minister of Labour, made the following statement in the House of Commons on October 25:—"The Government, in conjunction with the provinces and the municipalities, has been proceeding since the beginning of the summer with the consideration of measures for unemployment relief. We are continuing the consideration of this matter and I believe that adequate provision will be made during the coming winter for the relief of those unable to take care of themselves. I am confident that no one in this country need worry about being adequately supplied with food, fuel, clothing and shelter."

Replying to a question in reference to unemployment conditions at Winnipeg, the Minister stated on October 26: "So far as the needy in the city of Winnipeg are concerned, as in all other cities, if the responsible officials of the city of Winnipeg and the responsible governmental officers of the province of Manitoba find they are unable to carry the burden of taking care of those who are unable to take care of themselves in regard to food, fuel, clothing and shelter, and make representations to this government, then this government is prepared to take appropriate action to see that no one suffers."

By an Order in Council, approved October 8, 1932, on the recommendation of the Minister of Labour, \$300,000 was appropriated under the Relief Act, 1932, for work in connection with the construction and development of a portion of the Trans-Canada Airway, and repairs, renovations and renewals of portions of the walls of the City of Quebec and the Citadel of Halifax. These works are designed to provide employment for homeless men without means of support who will require relief during the coming winter. The order points out that homeless men are not included in the direct relief afforded by many municipalities in connection with the relief work that is being carried on with the aid of Dominion contributions under the Act. The new order is to provide accommodation, subsistence, and a cash allowance to such homeless men to a number not exceeding 2,000.

Dr. W. J. Black, representing the Dominion government, recently conferred with the governments of the western provinces on plans

for the care of single men, these plans including the undertaking of public works of various kinds.

The Hon. T. G. Murphy, Minister of the Interior, announced in October that employment would be given immediately in the western national parks to 1,500 unemployed single men without permanent residence, this number to be increased gradually. These men will be employed in Riding Mountain Park in Manitoba, Prince Albert Park in Saskatchewan, and Elk Island Park and Waterton Park in Alberta. Twelve camps are being established in these parks, and others will be provided as required. The men will be engaged in clearing and other improvement work. The Minister further stated that the arrangement embraced other national parks where it might be considered advantageous to place men in employment. Construction of the Valley River Road, which will serve as the connecting link between the Waterton Park and the Glacier Park in the United States, is being started at once, affording a means of work for unemployed single homeless men. At the present time, the minister said, there were men at work engaged on the road connecting Banff and Jasper Parks under the relief plan.

### **Death of Mr. F. J. Plant, of the Department of Labour**

The Department of Labour sustained a serious loss in the sudden death, on October 24, of Mr. F. J. Plant, chief of the Labour Intelligence Branch. Mr. Plant had been connected with the Department since its formation in 1900, when his special qualifications were recognized by Sir William Mulock, the Minister then in charge, and by Mr. W. L. Mackenzie King, the first Deputy Minister of Labour. He had been for many years a printing foreman at London, Ontario, and was president of the local International Typographical Union, with which organization he continued in membership to the end of his life. While in London he was active also in public life, having served several terms as alderman of the city. As the result of this experience and of his researches in connection with his official work, Mr. Plant acquired a thorough acquaintance with every phase of the labour movement. His authority on the subject was widely recognized, and the benefit of his knowledge was sought by many students and inquirers throughout Canada. Some of the results of his researches appear in the annual report on Labour Organization in Canada, which is generally regarded as an indispensable handbook on the subject. Mr. Plant was also responsible for the production

of the year-books dealing respectively with Organization in Industry, Commerce and the Professions, and with Co-operative Organizations in Canada.

In connection with Mr. Plant's death the Department received many messages from public bodies and from labour organizations, expressing their sense of appreciation of his life work and of regret at his loss. In the words of the Hon. G. D. Robertson, former Minister of Labour, "he was a faithful servant and a friend to man."

# Department's Report on Co-operative Associations in Canada

The Department of Labour has just issued the Fifth Annual Report on Co-operative Associations in Canada, the contents of this directory indicating the development and present strength of the co-operative movement.

The associations are grouped in two main divisions—marketing and purchasing. Marketing associations are subdivided according to commodities handled; and purchasing associations are shown according to provinces. The remaining two definite groups are under the headings of "Credit and Savings" and "Community Hall Societies." The list of associations closes with a miscellaneous section which includes the names of organizations which are formed for bargaining, educational or social purposes. The report opens with a reference to the Co-operative Union of Canada, a Dominion-wide organization established with a view to federating co-operative bodies and to propagate co-operative principles.

The marketing group consists of 803 societies provincially arranged with a combined membership of 374,516, divided by commodity sections as follows: Live Stock, 362 associations, which includes 324 local shipping clubs of the Canadian Live Stock Co-operative, Limited, with 4,106 members; Sheep and Wool, 18 associations, all affiliated with the Canadian Co-operative Wool Growers, Limited, their combined membership being 10,000; Dairy Products, 113 associations, 68,111 members; Poultry Products, 27 associations, 35,126 members; Fruit and Vegetables, 152 associations, with 12,662 members; Seed and Grain, 31 associations with 192,809 members (which include the three provincial wheat pools); Miscellaneous commodities, 99 associations, with 51,702 members.

The societies which are engaged in purchasing supplies for sale, including general merchandise (groceries, etc.), oil, building material, implements, gasoline, fertilizers, etc., number 467, with a combined membership of 49,361.

The credit and savings group, which consists of 13 associations, includes the regional federations operating the people's co-operative banks in the province of Quebec, which have 46,000 members; the remaining eight societies are divided between Ontario and Alberta, the first named having three with 2,113 members, and Alberta five with 141 members. There are 92 community hall associations which are formed for the purpose of providing a meeting place for the residents of the districts in which they are located on a non-profit basis, 86 of which are in Saskatchewan, with 5,438 members, the remaining six are divided equally between Manitoba and British Columbia, those in the first named province having 258 and the three in British Columbia 53 members.

The report also contains a miscellaneous list of associations, some of which are bargaining societies and others combine educational and social features with their co-operative trading activities; the number in this section is 77, with a combined membership of 47,336.

The total number of co-operatives of all classes as recorded in the report is 1,452 with a combined membership of 525,216.

This report may be obtained from the Department of Labour, Ottawa, the price being 25 cents.

# 8-hour day and fair wages to be applied in all public works in Quebec

The Hon. C. J. Arcand, Minister of Labour of the Province of Quebec, announced last month that the observance of the eight-hour day and Fair Wages

conditions would be required henceforth in connection with all public works in the Province.

The scope of the Fair Wages order in Council of 1929 (LABOUR GAZETTE, June, 1929, page 683), which applied only to building contracts, has been extended by a new order so as to include all classes of government contracts. The new order provides as follows: "The following conditions shall apply to the Department of Public Works and all other Departments of the Government administration, and to the commissions or corporations placed directly and exclusively under the administration of any of these departments, in all contracts concluded in the name of the Government of the Province of Quebec for the construction or repair of public buildings of all sorts, and all other work and buildings constructed or repaired on behalf of the Government of the Province of Quebec."

Under these Orders in Council the Minister of Labour of the Province has power to define not only Fair Wages, but also to determine the hours of labour that are to be observed. Last April the Hon. Mr. Arcand in announcing

the Fair Wages Schedules in Montreal and Quebec City, intimated that the 8-hour day would be enforced in connection therewith (LABOUR GAZETTE, May, 1932, page 526).

**Shorter hours  
required by  
building  
contract**

A contract given out recently by the Trades and Labour Congress of Canada for extensions and alterations at the headquarters of the Congress at Ottawa,

contained a clause which stipulated that not more than six hours a day and not more than five days a week shall be worked by any artisan or labourer on the job. No less than 50 cents an hour is to be paid to labourers. Prevailing trade union rates have to be paid to mechanics, but under the conditions of employment stipulated as to hours. The purpose of these stipulations as to hours is to spread the work over as many employees as possible. The work is being undertaken as a contribution towards the relief of unemployment.

**Reciprocal  
agreement on  
compensation in  
Alberta and  
Saskatchewan**

An agreement was concluded recently between the Provinces of Alberta and Saskatchewan making reciprocal arrangements in regard to the payment of workmen's compensation at

points along the boundary where industrial operations in the two provinces overlap. In such undertakings workmen are required to work partly in each province, and this practice had led to a confusion of jurisdiction between the Boards.

Under the new arrangement employers are to be assessed by the Board of the Province in which their workmen are actually employed; for example, an employer in Saskatchewan who conducts operations in both provinces is to be assessed by the Saskatchewan Board in respect to work carried on in that province, and by the Alberta Board in respect to work in Alberta, provided, however, that the industry concerned is one coming within the scope of both boards. Where the industry concerned is covered by the Act of one province but not by that in force in the other, then the Board whose schedule embraces the industry is entitled to levy assessment in respect to workmen in that industry whether they are employed in one province or the other. In the event of an accident occurring in one province, the injured workman is to apply for compensation or medical aid to the Board of that province, although his employer may reside in the other province. The two provinces agree to render

mutual assistance in ascertaining the true payroll which each Board is entitled to assess.

A similar agreement between the Provinces of Saskatchewan and Manitoba took effect on December 31, 1930.

**Co-operation  
between Quebec  
and Ontario**

A conference in regard to provincial insurance legislation was held at Montreal last month between representatives of the Provinces of Quebec and Ontario. Quebec was represented by the Hon. Premier L. A. Taschereau, Mr. Charles Lanctot, K.C., assistant attorney-general, Mr. Arthur Dugal, Superintendent of Insurance, and Mr. Aimé Geoffrion, K.C.; the Ontario representatives being the Hon. W. H. Price, attorney-general, Mr. W. E. Bailey, assistant attorney-general, and Mr. R. Leighton Foster, superintendent of insurance for Ontario. Besides the question of securing uniformity of insurance legislation in the two provinces the conference considered the question of the legal status of workmen's compensation legislation in the two provinces in view of the recent judgment by Mr. Justice de Lorimier, in the Superior Court, Montreal, declaring certain parts of the Quebec Act, including the establishment of the Workmen's Compensation Commission, to be *ultra vires* of the provincial legislature (LABOUR GAZETTE, June, 1932, page 733).

**Compensation  
payments to  
persons residing  
abroad**

The Quebec Workmen's Compensation Board recently denied the right of persons in receipt of monthly payments for compensation to commute future payments for a lump sum for the purpose of living outside Canada, or to live abroad on their pension. In support of this decision the commissioner pointed out that the amounts paid for compensation are based upon the standards and cost of living in the province, and that if persons in receipt of compensation could move at will to other countries where living is cheaper they would benefit from their allowances to a greater extent than those remaining in the province. Reference was made to the provision contained in the Workmen's Compensation Acts of Ontario and some of the other Canadian provinces, by which compensation is paid only to workmen or their dependants residing in those countries which grant similar privileges to residents in Canada. Section 7 (1) of the Ontario Act reads as follows:—

7. (1) Where a dependant is not a resident of Canada he shall not be entitled to compensation unless by the law of the place or country in which he resides the dependants of a work-

man to whom an accident happens in such place or country, if resident in Canada, would be entitled to compensation and where such dependants would be entitled to compensation under such law the compensation to which the non-resident dependant shall be entitled under this Part shall not be greater than the compensation payable in the like case under that law.

### Annual Convention of American Federation of Labour

The 52nd annual convention of the American Federation of Labour will be held at Cincinnati, Ohio, on November 21 and following days. The "convention call" refers as follows to the special problems to be considered: "The hopes and aspirations of millions of workers will be centred upon the convention and wide-spread interest will be manifested in its actions and in its deliberations. The economic emergency which existed one year ago has become more intensified and acute. The problem of unemployment overshadows every social, economic and political problem which the American people are called upon to consider. . . . We must speak for Labour and act for Labour in a way which will inspire them to renewed efforts and to strengthen them in their determination to resist all attempts to lower the wage standard and to impose unbearable conditions of employment. For these special reasons the officers of the American Federation of Labour appeal to all National and International Unions, State Federations of Labour, City Central Bodies and Local Unions to send delegates to this important convention."

### Australian Old Age Pensions to be made contributory

The Hon. Joseph A. Lyons, Prime Minister of the Commonwealth of Australia, announced in September that his government intended, during the lifetime of the present parliament, to place the existing old age pensions system on a contributory basis. Some account of this system was given in the LABOUR GAZETTE, September, 1929, page 967. The Commonwealth Act providing pensions in respect of old age and invalidity was passed in 1908 and took effect in the following year, superseding the acts previously in force in the several states of the Commonwealth. As a preliminary measure the Prime Minister, on September 15, gave notice of legislation providing for (1) a compulsory contribution by the relatives of pensioners of an amount based on a graduated scale under which those on low salaries will pay a portion and those on high salaries the full amount of the pension paid to a mem-

ber of their family; (2) that property owned by a pensioner will at death have the amount of the pension charged against it as a first payment.

The Melbourne *Argus*, explaining the effects of this measure, states that it will require near relatives of pensioners (sons, daughters, sisters and brothers) to pay into the Commonwealth treasury a sum based on their personal incomes, which will be applied by the treasury towards writing off the cost of the pensions. Persons who have no other source of income will continue to receive 17 shillings and sixpence per week (old age pensions being payable to persons aged 65 years and over), while for those with active sources of income the limit will be 15 shillings.

On August 26 of this year, 184,542 old age pensions and 72,864 invalidity pensions were being paid in the Commonwealth.

### Cost of coal production in Great Britain

The Mines Department of Great Britain recently published a statistical summary of the output and of the costs of production, of the coal mining industry for the quarter ended June 30, 1932. The report shows that the net costs of the production of saleable coal, after the proceeds of "miners' coal" has been deducted, were equivalent to 13 shillings and 9.99 pence per ton, of which 9 shillings and 1.55 pence represented wages costs. The proceeds of commercial disposals were equivalent to 13 shillings and 8.08 pence per ton. The quarter's production of the collieries covered by the report, which was 97 per cent of that of all collieries, was 50,090,452 tons of saleable coal, of which 46,147,998 were disposable commercially. The number of workpeople employed was 781,704, and the number of man-shifts worked was 45,993,696. The average output per man-shift worked was 21.78 cwt. and the average earnings per man-shift worked were 9s. 1.92d.

Information as to the value of allowances in kind is also given in the summary. The value of these allowances ranged from 0.43d. to 4.20d. per shift, except in Northumberland and Durham, in which it was 1s. 0.41d. and 1s. 1.73d. respectively. For Great Britain as a whole the average value of such allowances was 4.65d. per shift.

### Decline of juvenile employment in United States

"A steady long-time trend away from the employment of young children" is shown in the recent census of working children, according to the *American Child*, published by the National Child Labour Com-

mittee (United States). The number of child workers aged 10 to 15 years, inclusive, was 667,118 in 1930, as compared with 1,060,858 in 1920, a decrease of 37.1 per cent. Since the decrease among the young persons 16 and 17 years of age was only 13.6 per cent, it is considered reasonable to conclude that at least half, and perhaps more, of the reduction among the younger children was due, not to the depression, but to a definite tendency against the use of child labour. Credit for this progress is given to existing legislative enactments, to the growth of public opinion, and to technological changes in industry.

"With very few exceptions," it is stated, "the kinds of work where child labour increased, either absolutely, or relatively to the total number of child workers, are those where the pay is low, regulation ineffective, and hours long. Perhaps the most encouraging figure in the Census tables is the 83.5 per cent decrease in the number of children under 16 engaged in mining and quarrying. As the combined result of legislation and operative policies, the day, or rather the night, of the child in these extra-hazardous occupations is coming to an end."

#### **Report of Commission on Unemployment Insurance in Great Britain.**

The report of the Royal Commission on unemployment insurance appointed by the British Government about two years ago (LABOUR GAZETTE, January, 1931, page 4), was presented to Parliament in London on

November 8. (Interim majority and minority reports of the Commission were outlined in the LABOUR GAZETTE, July, 1931, page 781). The Chairman of the Commission was Judge Holman Gregory, the other members being Mr. W. Asbury, chairman of the Public Assistance Committee; Professor Henry Clay, of Manchester University; Dr. H. J. W. Hetherington, chancellor of Liverpool University; Mr. E. C. P. Lascelles, deputy umpire under the Unemployment Insurance Acts; Mrs. C. D. Rackham, temporary inspector of factories; and Mr. H. M. Trouncer, president of the Institute of Actuaries.

According to a telegraphic summary of the report now published, the commissioners uphold the British system of unemployment insurance as constituting "the first line of defense over a large part of the field of employment for a great majority of the unemployed." Moreover they recommend certain extensions in the system to include domestic servants and (under a separate system of benefits) unemployed agricultural workers. The majority and minority reports agree that the state should be responsible for training and

educating unemployed persons, especially young men and women, during the period of their unemployment.

The commissioners recommend the establishment of a permanent statutory commission to guide the government on the flexible administration of insurance in accordance with conditions prevailing at any given period. Such a commission, by contact with industrial organizations, would keep the whole matter of unemployment in constant review and suggest to the government each year what changes if any, should be made in the rates of insurance benefits payable and what premiums should be contributed by employers and insured persons. The majority report points out that the standards of relief must depend on the general level of national prosperity and the amount of public funds available. The amounts paid for relief must always be less than the prevailing wage rate. Instead of a fixed period of twenty-six weeks, to which the insured jobless man is now entitled to benefit in any one year, the commission recommend minimum and maximum periods ranging from thirteen to thirty-nine weeks, for which insured persons would be entitled to benefits according to the number of contributory payments previously made to the fund.

By the adoption of the changes they suggest, the commissioners estimate that for the coming year, on a basis of 3,000,000 persons unemployed, the cost to the government would be £81,670,000, but that total contains an annual provision for amortization. The commissioners do not recommend any alteration in the amount contributed to the insurance fund now made by the exchequer, employers and workers. Except for very minor modifications, they recommend the continuance of the existing rate of benefits; also that young persons should begin paying insurance premiums as soon as they enter employment, provided they are not below 14 years old, the legal age for leaving school.

A fuller account of the report of the Commission will be given in the next issue.

#### **Apprenticeship law in Wisconsin**

The Industrial Commission of Wisconsin recently issued a pamphlet containing a full account of the apprenticeship law of the State.

Under the provisions of this law a boy between the ages of 16 and 21 may be put under a written contract of apprenticeship. There are three parties to such an agreement, namely: the employer, the apprentice and the state. The employer must be equipped to teach the trade in all its branches; he must enter into a *bona fide* contract with the apprentice, in which he agrees to furnish em-

ployment to the apprentice during the term of training at an agreed wage, and to give the apprentice opportunity to work on all machines or all branches of the trade. The apprentice must sign the contract, in which he agrees to work for apprentice wages, to remain with his employer during the period of apprenticeship, and to attend a part-time school for four hours each week for a total of four hundred hours. The State, represented by the Industrial Commission, supervises the training, arbitrates differences arising between the apprentice and the employer, passes upon schedules of training, assures proper instruction in the part-time school, determines what is good cause of annulment of contracts and enforces all indentures.

The present law was enacted in 1915, and a large number of apprentices have completed their training, but the Commission comments specially on the benefits that have resulted from the co-operation between organized labour and the employers in regard to apprenticeship. About twenty-five local joint apprenticeship committees are functioning in various cities in addition to the State-wide committees of the principal trades; and additional local committees are being formed as the different crafts become interested. Twelve of the larger shops employ experts to act as apprentice supervisors within the plants. Also, in these and a number of other shops apprentice instructors are employed to work directly with apprentices on the job. Some employers are spending more money in the promotion of apprenticeship within the plant than is the State itself. It is stated that "practically all employers who have fostered

apprenticeship for several years have lists of applicants waiting to become apprenticed. In most Wisconsin cities no difficulty whatsoever is being experienced in securing applicants for apprenticeships due to the fact that genuine apprentice training rapidly is becoming better known to the public. Fifteen full time itinerant instructors, all practical craftsmen, are now employed jointly by the cities, state, and federal government to provide apprentices and adult workmen in the trades with part-time related instruction. In addition, there are, of course, the many trade teachers on the faculties of the vocational schools, which schools number about thirty."

An advisory body to be known as the Occupational Health Council was recently established in the Massachusetts Department of Labour and Industries. An occupational hygienist has also been appointed. The members of the Council include prominent representatives of public health and industrial medical services, trade unions, employers' organizations, social welfare organizations and insurance companies.

The Quebec Provincial Government through the Department of Colonization, Game and Fisheries, has been successful in establishing on the Gaspé coast two quick-freezing fish plants on the brine system. The plants are at Little East River and Belle Anse Malbaie. Each plant is equipped with two separate systems, one for fillet freezing and one for whole fish freezing. They will produce a total of over two tons of frozen fish daily for the two plants.

### Vocational Training and Labour Adjustment

Dr. J. C. Wright, Director of the United States Federal Board for Vocational Education, stated in a recent address that vocational education has the responsibility of retraining workers out of employment because of technological changes in industry. "One-half of the workers unemployed to-day," he said, "are, according to United States Census figures, under 35 years of age, 35 per cent are between the ages of 35 and 54, and only 15 per cent fall in the group over 55 years old. Interpreted in another way this means that the age grouping of the unemployed is particularly favourable for realizing some of our educational ideals. We know that many of those unemployed to-day have cherished ambitions to continue their education at some favourable opportunity. While unemployment is unquestionably an appalling evil, it will not be an unmixed one if our schools

provide opportunities for ambitious workers to fulfil their ambitions. Except for a small percentage the unemployed are not too old to learn. Many of them are still of the generally accepted school ages, and these younger unemployed workers have a relatively long life expectancy. If the schools function as they should, in providing a youth of say 20 years of age with needed general or vocational education, society will continue year after year to reap the benefits of his improved citizenship and economic activity over a period of 30 or 40, or even 50 years. Our job as educators is to find out what these workers need, and give it to them. In this way the evil of unemployment may for hundreds of thousands of workers be converted into a paid-up policy insuring good citizenship and economic welfare for years to come."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of October was reported by the Superintendents of the Employment Service to be as follows:—

Farming in the province of Nova Scotia was quiet, as fall ploughing was nearing completion. Fair catches of fish were reported. Small concerns were beginning logging operations for the winter, but otherwise activity in this line was nil. The steel industry showed slightly better conditions, as the blooming and nail mills at Sydney were to resume work in a few days. Other manufacturers reported business as fair. Mines in the New Glasgow area worked from two to six days a week and one shaft, which had been closed down entirely, had reopened with 200 of its former employees on the roll and additional help hired each day as need arose. The majority of mines in Cape Breton and vicinity operated only two days per week, while two were open one day only, and another worked five days. There was little to report in the building line, except at Halifax, where 75 men had been taken on at the shipyards for a minor repair job and the Citadel Hill relief project, which was expected to provide employment for about 300 men. Considerable highway construction throughout the province was also being done. Transportation and trade were somewhat slow. A number of requests were received in the Women's Division for charworkers and domestics, and placements made accordingly.

Farmers in New Brunswick were busy clearing land or getting in the remainder of their root crops before cold weather arrived. Oyster fishing was handicapped by high gales but the market was plentifully supplied with cod, haddock and halibut. As the Provincial Government has reduced the stumpage rate \$1 per thousand, it was announced that there would be a substantial increase in the amount to be cut of hardwood, pulpwood and long lumber, these cuts greatly benefiting the northern section of the province. Manufacturing showed some improvement, especially in the pulp and paper industry, one plant having started with a crew of 140 men, which would be increased to 200 when in full operation. Factories in Moncton were also busy, one operating a night and day shift. Building construction was slack, as many of the larger contracts were nearing completion. Civic road work continued as a relief measure. Freight transportation by water was heavy, due to shipments of winter supplies to various points.

Trade was fair. There was a moderate call for women domestics which was easily supplied.

The demand for farm workers in the province of Quebec had decreased, the only offices to report placements being Montreal and Sherbrooke. Very few transactions were reported in logging. A few men were sent out to cut cordwood, but no orders were received from logging companies for heavy timber. Quietness prevailed in mining. Manufacturing concerns still continued very slack, especially in Montreal. A number of women workers found employment in Hull, but factories there were not running, as yet, at full strength, while in Quebec city, except in the fur industry, they were operating on half-time. Paper mills at Three Rivers were slightly improved. Building construction showed little activity in any of the larger centres, the majority of work being repairs to private dwellings. The municipality of Montreal, however, continued to employ a large number of workers on unemployment relief projects, comprising sewers, sidewalks and street paving. Transportation was quiet and trade was only moderately active. Orders for women domestic workers were numerous in Quebec city and Sherbrooke, while at Montreal, although a number of orders had been received, the supply continued far greater than the demand.

Orders for farm help in Ontario had diminished as the season drew to a close. For the first time in two years orders were received at the Sault Ste. Marie office for bushmen. Camps were opened at Timmins and North Bay and contracts had been signed at Fort Frances for the employment of 300 men cutting pulp, while Port Arthur reported a good demand for workers in this industry. Other centres in the north, however, reported no activity. Metal mines in some localities were reported as running at only 20 per cent capacity, but smelters at Falconbridge had resumed operations. Activity previously reported in industrial lines was being maintained according to the Toronto office and a number of firms in Hamilton and Brantford were showing improvement. Textiles particularly were busy in all centres, but the automobile industry in Windsor was not very promising, nor were conditions in Kitchener any better, where several lines still were very slack. In the pulp and paper industry, Sault Ste. Marie reported the mills operating steadily, although the steel works had not yet resumed operations. A limited amount of work was in progress in the building group, with no

(8) MacLean's Building Review.

immediate prospects of a resumption of activity in this industry. Work on the trans-Canada highway also continued and additional camps were expected to open within a short time. Large numbers of applicants were registering in Hamilton in the women's department, with an improvement in calls for both industrial and domestic workers. Toronto also reported an increase in orders from factories with, however, a corresponding decrease in orders for office help.

A further decrease was shown in requests for farm help in the province of Manitoba, a fair number of men willing to take this kind of work being registered at the offices, but in some cases without money for railroad fare, while farmers were awaiting the decision regarding the farm development plan now under consideration. It was expected this would cause a much heavier demand as soon as it became effective. Logging was quiet, but manufacturing continued fairly steady. Unseasonable weather slowed up work on city construction, and permits for new buildings, alterations, repairs and additions to present structures became fewer in number as this condition hindered progress on outside work. A number of men, however, found employment on relief work in Riding Mountain National Park, also on civic work in shifts of three days' duration. Many women and girls applied in the domestic service division, where a slight improvement was noted in the number of domestics ordered and placed.

There was little call for farm help in the Province of Saskatchewan, although there were many inquiries regarding the relief scheme from farmers, who wished to hire men for the winter, but were unable to pay wages. A few cordwood cutters were sent out from Prince Albert, but elsewhere there was no activity in logging and likewise little in the mining districts. Building construction was also exceptionally quiet, with only casual help required, which was easily supplied. Several country orders for women domestics were received, but there was slight demand for help of this kind in the city.

Snow in Alberta put an abrupt end to threshing for the time being and reduced the call for farm help to the usual winter requirements. Beet topping was also nearing completion, resulting in an average yield in the vicinity of Lethbridge of approximately twelve tons per acre. Logging was quiet, with prospects again indefinite. As a fair number of orders were coming in, mines were gradually taking on men, most of whom were former employees. Manufacturing industries were inactive and there was little sign of improvement. Building construction also showed no activity,

although street and highway work afforded employment for a certain number of men. Railway operation was fair, but there was no call for extra help. A decrease in orders and placements was noted in the women's domestic section, with applicants in general increasing, some of whom were already on direct city relief.

Apple harvesting in British Columbia was almost completed and very little more fruit remained to be picked, resulting in a decline in orders in the farm division. On the completion of picking, a number of local packing house employees were to be laid off and only the regular crew retained. Logging was quiet, although saw mills at New Westminster were fairly busy. Some development work in mining was being carried on in the vicinity of Prince Rupert, but elsewhere there was no activity. Manufacturing was slack. There was nothing new to report in building construction, however, a small railway gang had been sent out from Vancouver, also a number of men to rotation relief work on provincial government roads. A few small overhaul jobs were provided at the drydock at Prince Rupert, but no extra men employed. Shipping and longshore activity was somewhat less on nearly all waterfronts. Wholesale and retail trade showed little change, although in districts where deferred wages had been recently paid, trade was more active. Business was slightly better in the women's domestic section in Victoria, but not so good at Vancouver, with a surplus of applicants at hand in both cities.

#### EMPLOYERS' REPORTS.

An increase in employment was shown in Canada on October 1, according to statements tabulated by the Dominion Bureau of Statistics from 8,020 employers, whose staffs aggregated 796,165 persons, as compared with 790,967 in the preceding month. As employment has frequently shown a falling-off on October 1 in the eleven years of the record, the increase this year is unusually interesting. Activity, however, continued at a low level as compared with previous years for which statistics are available. The index (based upon the average for the calendar year 1926 as 100) stood at 86.7 on October 1, 1932, compared with 86.0 on September 1, 1932, and 103.9 on October 1, 1931. On the same date in the ten preceding years, the index was as follows:—1930, 116.2; 1929, 125.6; 1928, 118.8; 1927, 110.3; 1926, 106.5; 1925, 99.5; 1924, 95.0; 1923, 100.7; 1922, 95.8 and 1921, 91.3.

Firms in the Maritime Provinces and British Columbia reported contractions, but in Quebec, Ontario and the Prairie Provinces the

trend was upward, the largest advances taking place in the Prairie area. In the Maritime Provinces, a decline was indicated, involving more workers than that registered on the same date last year, when the index was higher. Mining, manufacturing, transportation and services reported the bulk of the decrease, while there were gains in building and highway construction. In Quebec, manufacturing, logging, shipping and highway construction registered most of the advance, but building construction showed decided curtailment, and services were also slacker. In Ontario, improvement was indicated, mainly in manufacturing, mining and retail trade, while employment decreased in construction, logging and services. In the Prairie Provinces, there was a further increase in employment. This took place chiefly in coal mining, construction and transportation, but manufacturing and trade also showed improvement. Services, on the other hand, were seasonally slacker, and communications also released employees. In British Columbia, moderate curtailment was noted, mainly in manufacturing, transportation and services, while logging, building and trade reported heightened activity.

The trend of employment was downward in Quebec City, Ottawa, Windsor and the adjacent Border Cities and Vancouver, but upward in Montreal, Toronto and Hamilton, while in Winnipeg, practically no general change took place. In Montreal, manufacturing showed the greatest gain, but there was also improvement in transportation and construction. In Quebec, there were seasonal losses in services and construction, and manufacturing was also slacker. In Toronto, manufacturing was much busier, and trade also absorbed more workers. In Ottawa, construction was not so active, while other groups showed comparatively little change. In Hamilton, improvement was registered in manufacturing, largely in textile factories. The non-manufacturing industries, however, showed little general change. In Windsor and the adjacent Border Cities, there was a decrease in the number employed, mainly occurring in the automobile trades. In Winnipeg, there were gains in manufacturing and trade, while transportation released some employees. In Vancouver, manufactures recorded a slight decline, and there was also a falling-off in transportation; construction, however, showed improvement and trade was rather brisker.

An analysis of the returns by industries shows that there was a further increase in manufactures, chiefly in the textile and vegetable food groups. Logging, highway construction, mining, transportation and trade

also registered gains, but in building construction, services and communications there were contractions.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

#### TRADE UNION REPORTS.

Slight improvement in the labour volume available to local trade union members was indicated at the close of September from the previous month, as shown by the returns tabulated from 1,732 labour organizations with an aggregate membership of 162,186 persons. Of these 33,146 or 20.4 per cent were without work on the last day of the month, contrasted with 21.4 per cent of idleness in August. The September percentage exceeded that shown in the corresponding month a year ago when 18.1 per cent of the membership involved was idle. Nova Scotia and Manitoba unions alone reported a less favourable employment tendency than in August, the decline in the former province being slightly under 3 per cent and confined chiefly to the coal mines of the province, while in the latter the change was but fractional. Of the increases in employment shown in the remaining provinces the most substantial was reflected by Alberta unions where, contrary to Nova Scotia, the coal mines afforded a greater volume of work and accounted largely for the expansion of about 5 per cent noted in that province. In Quebec and Saskatchewan the gains were of much lesser magnitude than in Alberta, while in New Brunswick, Ontario and British Columbia the improvement recorded was less than 1 per cent. Compared with the returns in September of last year, Ontario unions showed a drop in activity of over 4 per cent during the month reviewed, the building trades recording the greatest employment losses, though in transportation, particularly steam railway operation, the situation also declined. In addition, less favourable conditions prevailed for Nova Scotia, Alberta, New Brunswick, British Columbia and Quebec unions. On the other hand, Manitoba and Saskatchewan unions were afforded a slightly better employment volume than in September a year ago.

Elsewhere in this issue appears an article in greater detail with tabular statements on unemployment among local trade unions at the close of September, 1932.

#### EMPLOYMENT OFFICE REPORTS.

Reports of the Employment Service of Canada for the month of September, 1932, showed 31,722 references of persons to positions and a total of 29,944 placements, of which 18,573 were in regular employment and 11,371 in casual work.

Regular placements totalled 14,645 of men and 3,928 of women. Vacancies reported to the Service numbered 32,111, of which 24,314 were for men and 7,797 for women. Applications for work were received at the offices from 39,345 men and 14,092 women, a total of 53,437. When compared with last month's figures, there was a noteworthy gain shown in all divisions, but when comparison was made with the work effected during September a year ago, a large decline was recorded in each group, the reports for August, 1932, showing 28,397 vacancies offered, 48,815 applications made, and 27,355 placements effected, while in September, 1931, there were listed 41,723 vacancies, 81,453 applications for work, and 40,077 placements in regular and casual employment. In another section of this issue may be found a detailed report of the work of the offices for September, 1932, and for the quarterly period, July to September, of the current year.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during September, 1932, was \$2,203,230, as compared with \$3,331,278 in the preceding month and with \$10,407,999 in September, 1931.

The *MacLean Building Review* states that the October total for construction contracts in Canada was \$8,875,600. Thirty per cent of this total was for residential work, the value of contracts in this group being \$2,663,400. Forty-five per cent, or \$3,990,900, was the share for engineering work. Business buildings accounted for 23.1 per cent or \$2,045,700, and Industrial buildings for 1.9 per cent, valued at \$175,600.

Quebec province, during October, accounted for 54.8 per cent of the awards, the total being \$4,859,300. Ontario had \$2,722,100 worth, which was 30.7 per cent. The Prairie Provinces took care of 7.1 per cent, valued at \$627,900, while the Maritime Provinces showed \$507,500 worth, or 5.7 per cent, and British Columbia, 1.7 per cent, the value being \$158,800.

#### Production and Trade

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 1147.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations were nearly maintained in September at the level of the preceding month, according to comprehensive

production indexes maintained by the Bureau. The relative stability of the last four months forms a sharp contrast to the steady decline of the preceding three years, marked betterment being shown in the financial background during the third quarter. A factor of great significance is the marked advance in government bond prices between June and September.

Despite the tangible improvement in financial factors, the physical volume of business was not greatly altered in September. The mining industry, according to preliminary information, was more active than in August, while manufacturing production showed moderate decline, the latter index being 74.3 compared with 75.5 in the preceding month. The group engaged in the manufacture of food-stuffs showed a gain in September and newsprint was produced in greater volume. The automobile and iron and steel industries operated at a lower percentage of capacity. The new business obtained by the construction industry emphasizes the inactivity of the present period. The gain in the output of electric power was less than normal for the season. Carloadings, affected by the extensive wheat movement, were greater in September than in the preceding month. Exports showed a moderate gain and imports recorded an increase after seasonal adjustment. Bank debits charged to individual accounts against notice and demand deposits showed, after the usual adjustment, a decline of about 5 per cent.

It is anticipated that the chief influences in the trend of Canadian business during the next twelve months will be the heavy wheat crop recently threshed, together with the tariff changes, effective from midnight October 12, as provided for in the treaties negotiated at the Imperial Economic Conference.

**Coal.**—Canadian mines produced 914,467 tons of coal in September, a 28.9 per cent decline from the five-year average for the month of 1,286,174 tons. Bituminous coal output in September totalled 600,737 tons, sub-bituminous coal, 42,664 tons and lignite coal, 271,066 tons. Alberta's production during the month amounted to 418,778 tons or 1.1 per cent below the September, 1931, total of 423,541 tons. Nova Scotia mines produced 304,536 tons, a decline of 23.2 per cent from the output in the corresponding month last year of 396,510 tons. British Columbia's coal production showed an 11.4 per cent falling-off to 128,590 tons from the output a year ago of 145,079 tons. Saskatchewan produced 45,494 tons and New Brunswick 17,069 tons as compared with the outputs in September, 1931, of 35,130 tons and 12,399 tons, respectively.

Imports of coal into Canada during September totalled 1,296,274 tons or 27.9 per cent

below the September, 1927-1931 average of 1,797,021 tons. Anthracite importations were recorded at 304,298 tons, made up of 171,444 tons from Great Britain, 126,697 tons from the United States, and 6,157 tons from Germany. During the past five months Canada's anthracite requirements have been drawn from the following sources: Great Britain, 58.6 per cent, the United States, 40.2 per cent, and Germany, 1.2 per cent. Bituminous coal imports in September included 966,643 tons from the United States and 25,290 tons from Great Britain. Forty-three tons of lignite coal were received from the United States in September.

Exports of Canadian coal amounted to 18,854 tons, a 71.9 per cent decrease from the 1927-1931 average for the month of 67,013 tons. Nova Scotia and New Brunswick ports cleared 11,199 tons of Canadian coal during the month and Manitoba, Saskatchewan, Alberta and British Columbia ports cleared 7,655 tons.

Canada's coal supply in September was computed at 2,191,887 tons or 27.3 per cent below the five-year average for the month. Coal made available for consumption included 304,298 tons of anthracite, 1,574,324 tons of bituminous, 42,664 tons of sub-bituminous and 270,601 tons of lignite.

#### EXTERNAL TRADE.

A summary of Canadian trade in September, 1932, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$34,504,129 as compared with \$36,527,262 in the preceding month and with \$45,379,099 in September, 1931. The chief imports in September, 1932, were: Non-metallic minerals and products, \$8,501,280; Fibres, textiles and textile products, \$4,935,313; Agricultural and vegetable products, mainly foods, \$4,247,238.

The merchandise exported from Canada during September, 1932, amounted to \$42,186,815 as compared with \$41,314,120 in the preceding month, and as compared with \$48,991,385 in September, 1931. The chief exports in September, 1932, were: Agricultural and vegetable products, mainly foods, \$19,263,215; Wood, wood products and paper, \$9,410,125; Animals and animal products, \$4,666,990.

#### Strikes and Lockouts

The time loss due to industrial disputes during October showed a slight increase over that recorded for the previous month, although fewer strikes were recorded with a decrease in the number of workers involved. In comparison with the figures for October, 1931, decreases appear in the number of disputes recorded and the number of workers

involved, the time loss incurred showing a marked decline from that recorded for the same month last year when strikes of saw-mill workers in British Columbia involved approximately one thousand workers and caused a time loss of 25,000 working days. There were in existence during the month fifteen disputes, involving 2,225 workers, and resulting in a time loss of 14,470 working days, as compared with sixteen disputes, involving 4,251 workers and resulting in a time loss of 10,995 working days in September, 1932. In October, 1931, the record included seventeen disputes, involving 3,044 workers and resulting in 35,450 working days time loss. At the end of the month there were on record three disputes involving approximately eighty workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the unions involved.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was slightly higher for October at \$7.07, as compared with \$6.98 for September. Comparative figures for earlier dates are \$7.84 for October, 1931; \$10.32 for October, 1930; \$11.68 for October, 1929; \$10.23 for October, 1922; \$16.92 for June, 1920 (the peak); and \$7.99 for October, 1914. The most important changes were seasonal advances in the prices of eggs, butter and cheese. The prices of potatoès, beef, mutton, fresh pork, evaporated apples, prunes, and granulated sugar were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.40 at the beginning of October, as compared with \$16.34 for September. These figures compare with \$17.86 for October, 1931; \$20.68 for October, 1930; \$21.96 for October, 1929; \$20.87 for October, 1922; \$26.92 for July, 1920 (the peak); and \$14.48 for October, 1914. Fuel was slightly lower, due to somewhat lower prices for anthracite coal and wood. Rent showed little change in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was lower at 65.0 for October, as compared with 66.9 for September. Comparative figures are 70.4 for October, 1931; 81.0 for October, 1930; 96.8 for October, 1929; 94.8 for October, 1922, 164.3 for May, 1920 (the peak); and 66.8 for October, 1914. In the classification according to chief component materials seven of the eight main groups were lower and one advanced. The groups which declined were: the Vegetable and Vegetable Products group,

due mainly to lower prices for grains, bran and shorts; the Animals and their Products group, because of decreases in the prices of steers, hogs, lambs and fresh meats which more than offset higher prices for calves, lard and eggs; the Fibres, Textiles and Textile Products group, mainly because of decreased quotations for raw cotton, certain cotton fabrics, raw jute, raw silk and worsted cloth yarns; the Wood, Wood Products and Paper group, due to lower prices for newsprint and wood pulp; the Iron and its Products group,

because of declines in the prices of steel tank plates, automobile body plates and galvanized steel sheets; the Non-Ferrous Metals and their Products group, due to lower quotations for copper, imported copper wire bars, lead, tin and zinc; and the Non-Metallic Minerals and their Products group, due to declines in the prices of sulphur, quicklime and crushed stone, which more than offset higher prices for coal. The Chemicals and Allied Products group was slightly higher due to increased prices for shellac, white lead and fertilizer.

### Statistics of Electric Railways of Canada in 1931

The Dominion Bureau of Statistics recently published a bulletin dealing with statistics of electric railway transportation in Canada during the year ended December 31, 1931. According to the report, passenger traffic of electric railway systems in Canada showed further decreases in 1931, the total number of passengers carried being 720,468,361 as against 792,701,493 in 1930. This was a decrease of 72,233,132 passengers, or 9.1 per cent, whereas the decrease in 1930 compared with 1929 was 40,795,373 passengers, or 4.9 per cent. None of the railways showed an increase, and decreases for the larger systems ranged from 4.2 per cent for the British Columbia Electric to 18.5 for the Calgary Municipal System. With two exceptions the western railways showed larger decreases than the eastern systems. The Montreal Tramways carried almost one-third of all the traffic and the Toronto system carried a little more than one-quarter of the total.

Three railways ceased operating during the year and of the remaining 52 systems, 20 failed to earn operating expenses, and after paying interest, taxes, etc., but before providing for reserves and dividends, 27 showed deficits. The incomes of the other 25 systems more than overcame these losses so that the net income of all systems amounted to \$7,585,297 as against \$10,111,782 in 1930. Seven railways declared dividends out of the 33 company systems, the total being \$2,979,670 as against \$3,402,261 in 1930. Gross revenues amounted to \$49,088,310 which was a decrease from 1930 revenues of \$5,630,949, or 10.3 per cent, whereas operating expenses of \$35,367,068 were reduced by \$3,758,447, or 9.6 per cent. Taxes amounting to \$2,392,428 were heavier than in 1930 by \$158,428 and also were heavier than for any year since 1921. Interest charges, however, were less, decreasing from \$8,716,858 in 1930 to \$8,641,360.

*Employees and Wages.*—The tabular summary of employees and wages indicates that in 1931 the number employed on all electric

railways totalled 17,158, while the payroll amounted to \$24,647,391, as compared with 18,340 employees who were paid \$26,954,994 in 1930. The largest reduction was in maintenance employees where the cut was 810 employees and \$1,442,684. There was a reduction of 299 conductors, motormen and operators of one-man cars and buses, or 3.2 per cent, and a cut in their payroll of \$836,973, or 6.0 per cent whereas the decrease in car and bus miles was 3.7 per cent.

*Accidents.*—During the year 65 persons were killed in accidents involving electric railway cars or buses and in car barns, etc. These included only 1 passenger, 33 pedestrians, 25 motorists, 1 person riding in other vehicle, no conductors or motormen, 3 other employees, and 2 other persons. Collisions accounted for 58 of these fatalities, one person was electrocuted and 6 were killed from other causes. The total number of persons injured amounted to 4,147, including 2,245 passengers, 523 pedestrians, 304 motorists, 27 persons riding in other vehicles, 193 conductors and motormen, 17 motor bus drivers and conductors, 548 other employees and 290 other persons. Nine railways had a clean record with no one killed or injured. Thirty-two railways reported no person killed, and two railways each reported one person killed and no persons injured.

A recent decision of the Workmen's Compensation Board of Quebec related to injuries sustained by a female employee in a laundry, where, by permission of her employer, she was making use of a pressing machine in the laundry for work of her own. The employer had allowed her the privilege of using the machine for private work during her spare time. The board members who heard the case recommended that compensation should be paid to the employee, the employer being held at fault for permitting an inexperienced worker to operate the machine.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of October four applications were received in the Department of Labour for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act. Reports were received early in November from two Boards which inquired into disputes affecting the Niagara, St. Catharines and Toronto Railway and employees being (1) passenger car operators and (2) barn and shop men.

### Applications Received

Three applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour on October 29 from employees of various shipping interests of the port of Saint John, N.B., as follows: (1) General longshore workers, nine hundred in number, being members of Local 273, International Longshoremen's Association; (2) coal handlers and trimmers, numbering two hundred and being members of Local 810, International Longshoremen's Association; (3) shipliners, numbering two hundred and seven and being members of Local 1039, International Longshoremen's Association. A Board of Conciliation and Investigation was established by the Minister of Labour on November 7 to deal with the differences as set forth in the three applications which grew out of wage reductions proposed by the employing companies. Mr. A. L. W. MacCallum, of Montreal, was appointed a member of the board on the companies' nomination, and Mr. John Nicholas Small, of Saint John, N.B., a member thereof on the recommendation of the em-

ployees concerned. Messrs. MacCallum and Small were requested to confer with a view to naming jointly a person for appointment as third member, who will be chairman of the board.

An application was also received during October from Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America, claiming that the Mohawk Bus Company, Limited, Brantford, Ontario, which operates motor coaches in the city of Brantford under agreement with the municipality and the Brantford Municipal Railway Commission, had reduced wages and made certain changes in working conditions in violation of an agreement in existence between the Brantford Municipal Railway Commission and its employees. The matter of the application had been taken up with the parties concerned at the close of the month.

### Other Proceedings under the Act

Reference was made in the October issue of the *LABOUR GAZETTE* (page 1048) to an application which had been received from brewery workers employed by the Brewing Corporation of Canada, Limited, at London, Hamilton, Toronto and St. Catharines, being members of Locals Nos. 318, 312 and 304 of the International Union of Brewery Workers. The industry concerned not being one to which the Industrial Disputes Investigation Act primarily applies, a board could be established only with the joint consent of the disputing parties. The matter of the application was taken up with the employing company, who refused concurrence in procedure under the statute, and no action was therefore taken looking to the establishment of a board.

## Report of Board in Dispute between Niagara, St. Catharines and Toronto Railway and its Passenger Car Operators

A Board of Conciliation and Investigation established during October to deal with a dispute between the Niagara, St. Catharines and Toronto Railway and its employees being passenger car operators, presented its report to the Minister of Labour on November 7. The personnel of the board was as follows: Mr. Lynn B. Spencer, K.C., of Welland, Ontario, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. A. B. Ingram, of Toronto, and Fred Bancroft, of

Oakville, nominees of the company and employees respectively. The dispute related to a ten per cent wage reduction proposed by the company, sixty-one employees being directly affected. The report of the board was unanimous and was accompanied by an agreement which the board had been successful in negotiating between the parties to the dispute.

The text of the report and agreement follows:—

### Report of Board

ST. CATHARINES, ONT., October 20, 1932.

The Hon. W. A. GORDON,  
Minister of Labour,  
Confederation Building,  
Ottawa, Canada.

SIR:

Subject—*Niagara, St. Catharines and Toronto Railway, and certain of its employees being passenger car operators.*

We have the honour to inform you that your Board of Conciliation held a preliminary meeting on Monday, October 17, 1932, at the request of the employer and employees, and duly convened on Tuesday, October 18, 1932, to take evidence, and held sessions on Tuesday, Wednesday, and Thursday, adjourning from time to time as progress was made in negotiations between the parties.

We hereby beg to report that a memorandum of agreement was arrived at between the parties to the dispute and after being submitted to the Board, was duly signed by the parties to the dispute and is forwarded herewith. This memorandum of agreement is to be read with an agreement dated April 30, 1926.

All of which is respectfully submitted.

(Sgd.) LYNN B. SPENCER,  
Chairman.

(Sgd.) A. B. INGRAM,  
Member of the Board.

(Sgd.) FRED BANCROFT,  
Member of the Board.

MEMORANDUM OF AGREEMENT covering *Wages and Working Conditions Between: The Niagara, St. Catharines and Toronto Railway, Hereinafter called the "Company," of the First Part and Its Employees, being the Passenger Trainmen represented by the Parties who sign this Agreement, being their duly Accredited Representatives, Hereinafter called the "Employees," of the Second Part.*

WITNESSETH that the parties hereto mutually agree to and with each other that the following terms and conditions be supplementary to Agreement dated April 30, 1926, as particularly referring to Passenger Trainmen.

(1) The Company agrees that during the term of this supplementary agreement basic rates of pay and working conditions as specified in agreement dated April 30, 1926, shall remain in effect.

(2) The Company agrees that the words "regular rate" in Clause 3 of Agreement dated April 30, 1926, shall mean regular rate for one-man Car Operator.

(3) The Company agrees to add to Clause 4 of Agreement dated April 30, 1926, the words "with a minimum of one hour."

(4) The Company acknowledges that Clause 12 of Agreement dated April 30, 1926, applies

to Trainmen reporting to and from Thorold for work on the Welland Division.

(5) The Company agrees that Clause 13 of Agreement dated April 30, 1926, be applied to extra runs as well as to regular runs on both cars and buses.

(6) The Company agrees to allow each passenger trainman one hour arbitrary time in each pay period for time required for making out reports after completing runs, going to Terminal Station for change and tickets and for signing Bulletins.

(7) The Company agrees that when passenger trainmen are sent out on chartered bus trips requiring them to be away from home more than fifteen hours in one day they will be allowed 50 cents for each meal required to be bought, with a maximum allowance of \$1.25 for meals taken at regular meal hours in each day after midnight.

(8) The Company agrees that wages and working conditions as specified in Agreement dated April 30, 1926, shall, during the period of this Agreement, apply to bus operators in the same manner as to passenger trainmen, and the employees agree that two Inspectors be allowed to occupy runs on the Geneva-York bus route.

(9) The employees agree that the Company may deduct ten per cent (10%) from each employee's pay cheque in each pay period.

(10) This supplementary agreement shall continue in force and be binding upon the respective parties from the 16th day of October, 1932, until the 15th day of October, 1933.

In witness whereof the parties hereto have executed this Agreement this twentieth day of October, 1932.

For the Employees:

(Sgd.) C. N. LANGESON,

(Sgd.) A. N. CAUGHILL,

(Sgd.) W. A. HOLT.

For the Company:

(Sgd.) E. B. WALKER.

Witness:

(Sgd.) J. R. EMPRINGHAM.

Dated at St. Catharines, Oct. 20th, 1932.

MEMORANDUM OF AGREEMENT Covering *Wages and Working Conditions between The Niagara, St. Catharines and Toronto Railway, hereinafter called the "Company," of the First Place; and Its Employees in the Various Departments represented by the Parties who sign this Agreement, being their duly accredited Representatives, hereinafter called the "Employees," of the Second Place.*

Witnesseth that the parties hereto mutually agree to and with each other as follows:

(1) The party of the first part agrees to meet and treat with the properly accredited committee of the party of the second part on all grievances and disputes respecting wages and conditions of employment that may arise between the Company and the Employees, and failing to reach an agreement, these shall be referred to a Board of Conciliation under the Disputes Act.

#### *Passenger Service, Wages and Hours*

(2) Regular runs shall be paid for in accordance with time allowed therefor on a basis of straight time up to (10) ten hours, and time and one-half thereafter. In the case of a trainman completing a regular run of a mini-

mum of (9) nine hours, who turns home and is called out again he shall receive time and one-half for the second run.

(3) All trainmen who are called for extra work and are not assigned shall not be held longer than (2) two hours and shall receive two hours pay at their regular rate.

(4) Extra men will be paid on the basis of straight time up to (10) hours and time and one-half thereafter.

(5) Sunday runs of less than ten hours shall be paid for as platform time. The conditions of clause (2) shall apply to Sunday runs.

(6) No regular motorman or conductor after finishing his run shall be required to do extra work if there are competent extra men available and the company shall at all times provide sufficient extra so that regular men will not be required to do extra work except when it shall be absolutely necessary.

(7) Trainmen shall act as either motormen or conductors in an emergency when ordered to do so by the proper authority of the company, if trainman is competent to take run required.

(8) The wage scale for passenger motormen and conductors shall be as follows:—

1st year. . . . .	40 cents per hour
2nd year. . . . .	43 cents per hour
3rd year. . . . .	45 cents per hour
4th year. . . . .	48 cents per hour

(9) Operators of one-man cars will receive a bonus of (4) four cents per hour over their regular rate.

(10) Trainmen shall receive fifty (50) cents per day for training a student, in addition to their regular pay.

(11) In order to recognize the spirit of Christmas season, the company will pay time and one-half for the period of one day of normal working hours, to all trainmen who work on Christmas day or New Year's day, and who are on duty during such days for a collective period of one day. To those who work less than one collective day, time and one-half will be paid pro-rata.

(12) Where trainmen are required to report for work away from their regular reporting place, they shall be paid for such time as it takes to go and come from their regular reporting place at their regular rate. Such allowances are arbitrary and are not to be included in computing overtime. This also applies to Trainmen who are required to report at their regular reporting place and are afterwards compelled to go to another to get their cars.

(13) Fifteen minutes at regular schedule rates, in addition to time of regular run will be allowed to crews who are required to go to barn to take car to initial terminal and fifteen minutes will be allowed to crews who are required to take cars back to barn.

(14) A Trainman becomes a Motorman or Conductor on the existing seniority list when he elects and signs for a regular run. But this does not limit the scope of Section 7.

(15) A Trainman's seniority starts from the hour on which he starts drawing pay.

(16) Trainmen shall have the privilege of choosing the line on which they wish to work every January, June and September, according to seniority of continuous service having regard to qualifications, with the Company. Passenger men to work week about as at present. No trainman on Wesley Park division selecting a

run on another Division is to leave Niagara Falls until another trainman is available to fill his place.

(17) Trainmen leaving St. Catharines to work at Niagara Falls, or vice versa must go to foot of working seniority list at barn from which he works.

(18) Lists of regular runs shall be posted every January, June and September, ten days prior to runs going into effect, and Trainmen must sign thereon according to seniority of continuous service, having regard to qualification with the company. Trainmen must sign with ink and no erasures will be permitted.

(19) Regular Trainmen shall not be required to report for duty before 7.30 o'clock a.m. for extra work, when they have worked until midnight on the day previous.

(20) When a regular Trainman elects to sign extra he shall retain his seniority only on the extra Board for that period.

(21) Extra work shall be performed by extra men if competent for service required. Where extra men fail to make (20) twenty days per month the extra list shall be reduced by dropping junior men.

(22) When a regular run becomes vacant through the temporary absence of a Trainman, said run shall be termed an extra run and shall be filled by men on extra Board.

(23) When a regular run becomes vacant through the permanent absence of a Trainman, said run shall be termed a regular run, and the next Trainman whose turn it is to sign shall be permitted to sign thereon.

(24) Motormen and Conductors who have elected to work as either Motormen or Conductors on the existing seniority list shall retain such classification unless otherwise approved by the Superintendent and the President of the Employees' Organization.

(25) Trainmen who sign for regular runs must retain such runs during period signed for unless otherwise approved by the Superintendent.

(26) When an outpost run becomes vacant, such run shall be posted for a period of (3) three days, and Trainmen shall have the privilege of signing for same according to seniority of continuous service.

(27) Trainmen on outpost duty at Port Colborne shall retain their runs until such time as they sign for another run irrespectively of seniority, having regard to qualifications with the Company.

(28) Trainmen on sick leave when ready to go to work shall be permitted to report for duty either in person or by telephone on or before two (2) o'clock p.m. of the day previous to their starting.

(29) All Conductors will upon application be furnished with sufficient change and tickets before starting on their runs.

(30) Notice of shortage in Conductors' reports shall be furnished to each Conductor who by such reports is found to be short in his returns to the Company and in each instance as soon as such daily report is checked and shortage noted.

(31) Every Passenger Trainman in the service of the Company shall wear a uniform suit of material and style to be selected by the Company after consultation with a committee of employees. Such uniforms not to cost over \$30.

(32) The Company agrees to pay one-half the cost of uniforms per year for each Passenger

Trainman who has been in the employ for a period of not less than one year. A standard uniform cap will be supplied when required by the Company at its expense. If a Trainman who has paid one-half the cost of a uniform leaves the employ of the Company,—

- (1) Within three months after he has received his uniform he shall retain the said uniform and pay to the Company an amount equal to one-half of the total cost of said uniform.
- (2) After the expiration of three months, he shall retain the uniform without payment of any additional cost.

(33) Deduction for payment of uniforms to be made from wages due employees on first payroll following receipt of such uniforms by employee, or at request of any employee, it may be extended over three equal instalments covering three semi-monthly pay periods. The Company is hereby authorized to make such deductions.

In case of an employee leaving the service, notwithstanding what the cause may be, the balance owing on any uniform shall become immediately due and be first charge on any wages due.

(34) The buttons on each uniform shall remain the property of the Company and shall be returned by employee concerned upon request.

(35) Trainmen shall be permitted to leave their coats and vests off during certain periods of the summer months, these periods to be fixed by the Superintendent. At such time or times, Trainmen must wear a uniform shirt, of style and material to be approved by the Company. When uniform shirts are worn, belts and invisible suspenders must also be worn. It is understood that the granting of this privilege is dependent upon retaining the neat and smart appearance of Trainmen while on duty and depends upon the co-operation of Trainmen to this end in order to maintain the practice.

(36) The vestibules of all cars operated by the Company shall be properly heated at all times.

(37) The accredited representatives of the employees wishing to be off duty on business shall make application to the proper officer for specified leave of absence which shall be granted as soon as relief can be provided.

(38) Any employee who may be suspended or dismissed from the services shall be entitled to a hearing within three (3) "Days" and, if upon investigation the charge is not sustained, shall be reinstated and paid all time lost through suspension or dismissal at his regular rate of pay. The said employee shall be notified 24 hours in advance of his hearing and also of the charge laid against him, and he shall have the right to produce witnesses, and to have assistance of any other employee he may desire.

(39) This agreement shall continue in force, and be binding upon the respective parties from the first day of December, 1925, until the first day of December, 1926, and from year to year thereafter, provided that after the first day of November, 1926, the agreement may be opened by either party giving the other thirty days' notice in writing, of their desire to open the agreement for revision.

So long as this agreement continues in force and, in consideration of the same, the employees agree that they will loyally and faithfully perform their work and will serve the interests of the Company in all proper ways, and that they will not in any manner interrupt or interfere with the operations of the Company, all to the end that the employees and the Company may jointly work in cordial co-operation for the better service to the public.

In witness whereof the parties hereto have executed this agreement this thirtieth day of April, 1926.

Approved:

VICE-PRESIDENT,  
For the Company.  
E. W. OLIVER,  
Manager,  
For the Employees.

## Report of Board in Dispute between Niagara, St. Catharines and Toronto Railway and its Shop Employees

A unanimous report was received on November 7 from the Board of Conciliation and Investigation which dealt with a dispute between the Niagara, St. Catharines and Toronto Railway and its shop employees. The Board was composed as follows: Mr. Lynn B. Spencer, K.C., of Welland, Ontario, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. A. B. Ingram and Joseph Gibbons, both of Toronto, nominated by the company and employees respectively. A ten per cent wage reduction proposed by the company was the cause of the dispute, twenty-nine employees being directly affected. The Board's report was accompanied by an agreement consummated between the parties to the dispute. The text of the report and of the agreement follows:

### Report of Board

ST. CATHARINES, ONT.,  
October 25, 1932.

The Hon. W. A. GORDON,  
Minister of Labour,  
Confederation Building,  
Ottawa, Canada.

SIR,

Subject—*Niagara, St. Catharines and Toronto Railway and certain of its employees being shop employees.*

We have the honour to inform you that your Board of Conciliation held a preliminary meeting on Monday, October 24, 1932, at the request of the employer and employees and duly convened on Tuesday, October 25, 1932, to take evidence.

We are pleased to report that a memorandum of agreement was arrived at between the

parties to the dispute, and after being submitted to the Board was duly signed by the parties to the dispute and is forwarded herewith. This memorandum of agreement is to be read with and supplementary to an agreement dated the thirtieth day of April, 1926.

All of which is respectfully submitted.

(Sgd.) LYNN B. SPENCER,  
Chairman.

(Sgd.) JOS. GIBBONS,  
Member of the Board.

(Sgd.) A. B. INGRAM,  
Member of the Board.

MEMORANDUM OF AGREEMENT covering wages and working conditions between the Niagara, St. Catharines and Toronto Railway, hereinafter called the "Company" of the First Part and its employees, being the Barn and Shopmen, represented by the parties who sign this agreement, being their duly accredited representatives, hereinafter called the "Employees" of the Second Part.

WITNESSETH that the parties hereto mutually agree to and with each other other that the following terms and conditions be supplementary to Agreement dated April 30, 1926, as particularly referring to Barn and Shopmen.

(1) The company agrees that during the term of this supplementary agreement basic rates of pay and working conditions as specified in agreement dated April 30, 1926, shall remain in effect.

(2) The company agrees that during such period as there is insufficient work to provide nine hours' employment per day for each employee, as set out in the agreement dated April 30, 1926, a minimum of 44 hours employment per week will be given to each regular employee.

(3) The company agrees that "regular schedule hours" as referred to in Clause 2 of said agreement dated April 30, 1926, shall be 8 hours per day.

(4) The employees agree that the company may deduct ten per cent (10%) from each employee's pay cheque in each pay period.

(5) This supplementary agreement shall continue in force and be binding upon the respective parties from the 1st day of November, 1932, until the 31st day of October, 1933.

In witness whereof the parties hereto have executed this agreement this twenty-fifth day of October, 1932.

For the Company:  
(Sgd.) E. B. WALKER.

For the Employees:  
(Sgd.) L. NEEDHAM,  
(Sgd.) P. V. O'CONNELL,  
(Sgd.) WM. D. ARMSTRONG.

Witness:  
(Sgd.) J. R. EMPRINGHAM.

Dated at St. Catharines, Ontario, October 25, 1932.

MEMORANDUM OF AGREEMENT covering wages and working conditions between the Niagara, St. Catharines and Toronto Railway, hereinafter called the "Company" of the First Part and its employees in the various departments represented by the parties who sign this agreement, being their duly accredited representatives, hereinafter called the "Employees" of the Second Part.

WITNESSETH that the parties hereto mutually agree to and with each other as follows:—

(1) The party of the first part agrees to meet and treat with the properly accredited committees of the party of the second part on all grievances and disputes respecting wages and conditions of employment that may arise between the company and the employees, and, failing to reach an agreement, these shall be referred to a Board of Conciliation under the Industrial Disputes Act.

#### Barn and Shopmen

(2) The hours of barn and shopmen will be nine hours per day.

(3) Time and one-half will be paid after regular schedule hours.

(4) The wage scale for barnmen and shopmen will be as follows:—

	Cents per Hour
Carpenters.. . . .	45 to 55
Carpenter helpers.. . . .	30 to 45
Blacksmiths.. . . .	45 to 55
Blacksmith helpers.. . . .	40 to 45
Painters.. . . .	45 to 55
Truck and Pitmen.. . . .	40 to 50
Controller & Wiring Men..	38 to 55
Controller & Wiring Helpers.	30 to 38
Armature & Field Dept. . .	38 to 50
Armature & Wiring Helpers.	30 to 38
Air Brake Department. . .	35 to 50
Car Cleaners.. . . .	30 to 40
Shop Cleaners.. . . .	30 to 35
Machinists Department.. .	40 to 55

NOTE.—Rates other than those specified may be established for classes not included in the above.

(5) All classes of barn and shopmen shall be allowed one hour for dinner, regardless of the time they commenced dinner, and shall be allowed five minutes each day for the purpose of washing up before noon hour and before time of closing day's work.

(6) In order to have competent men in the shops to operate cars on the road for emergency purposes, certain shopmen will be selected to train in road work and during the course of such training they will be paid straight time at their regular hourly rate.

(7) This agreement shall continue in force and be binding upon the respective parties from the first day of March, 1926, until the first day of March, 1927, and from year to year thereafter, provided that, after the first day of February, 1927, the agreement may be opened by either party giving to the other thirty days' notice in writing of their desire to open the agreement for revision.

So long as this agreement continues in force and, in consideration of the same the employees

agree that they will loyally and faithfully perform their work and will serve the interests of the company in all proper ways, and that they will not in any manner interrupt or interfere with the operations of the company. All to the end that the employees and the company may jointly work in cordial co-operation for the better service to the public.

In witness whereof the parties hereto have executed this agreement this thirtieth day of April, 1926.

Approved.

(Sgd.) E. BARTON.

(Sgd.) W. E. MASSIE.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING THE MONTHS OF JUNE TO OCTOBER, 1932, INCLUSIVE

THE June issue of the LABOUR GAZETTE (page 645) contained a report giving details of a number of the more important cases of conciliation work carried on by the Department of Labour during the months of April and May, 1932. The present article brings this information up to the end of October. Conciliation proceedings are carried on for the most part under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

*Three Rivers and Dolbeau, Que.*—The Department was advised under date of June 24, 1932, that a strike was to be called for June 27th in the plants of the St. Lawrence Paper Company at Three Rivers and Dolbeau, P.Q., against a 10 per cent wage reduction and to enforce union recognition, it being stated that the management had ignored the officials of the paper makers' organization. This information reached the Department through a representative of the International Brotherhood of Paper Makers, with the request that a conference be arranged between the president of the paper makers' organization and the president of the St. Lawrence Paper Company. The Quebec representative of the Department, with headquarters in Montreal, was assigned to this case and he immediately arranged for a conference between the interested parties, at which he was present. As a result of the friendly discussions that took place, during which the full facts as to the difficult situation confronting the paper industry became known, the president of the International Paper Makers stated that the employees would be advised to continue work pending further discussions with the St. Lawrence Paper Company, as well as with other paper companies at a later period. No further complaints have reached the Department in regard to this matter.

*Toronto, Ont.*—On June 1, 1932, approximately 300 employees in the shoe department of the Gutta Percha Rubber Company, Toronto, Ont., went on strike protesting against an efficiency system which had been put into operation some months previously, and demanding that the Company eliminate what is known as the "sliding scale" of base rates under the new system. Various conferences had taken place between the employees and employers without satisfactory results. On June 4th a committee representing the employees called upon the departmental representative at his Toronto office requesting that

he should interview the management of the Company and endeavour to bring about an adjustment of the dispute. The departmental officer on June 6th had a lengthy interview with the assistant manager and offered the services of the Department for the purpose of bringing about a settlement of the difficulty. The assistant manager, while quite willing to discuss any phase of the trouble, expressed the view that the time was not ripe for the intervention of a third party, nor was he agreeable that the matter in dispute be referred to a Board of Conciliation and Investigation for adjustment. He was agreeable, however, that the departmental representative should confer further with the employees. Following this interview another conference was held with a committee representing the strikers and the Company's position was made known to them. It was suggested that a committee be appointed to meet the Company with as little delay as possible. The committee agreed to place the suggestion before a general meeting of the strikers and expressed the opinion that it would be acted upon. About the middle of June the management announced that as no settlement had been reached the strikers would be replaced. Subsequently a settlement was reached between the parties providing that the strikers would be taken back and given full time work, the sliding scale of wages to be suspended for two weeks while the new system was rechecked and any unfair features corrected. Work was resumed on June 22nd.

*New Westminster, B.C.*—The plant of the United Mills, Limited, Vancouver, B.C., having been destroyed by fire, the Company decided to operate their mill at New Westminster. It is stated that about twelve shingle sawyers demanded that the Company sign an agreement, which the Company understood was to be with the Lumber and Agricultural Workers' Industrial Union, and further demanded the restoration of the wage scale which was in force on April 15, 1932, together with other concessions. The manager declined to meet these demands and the men refused to go to work when the plant opened on the morning of July 12. On July 14, on request, the western representative of the Department visited New Westminster and discussed this difficulty with His Worship the Mayor, and also with the president of the United Mills, Limited. On July 18, accompanied by the Deputy Minister of Labour for the Province of British Columbia, the Western Representative of the Department again visited New Westminster and held conferences with a small committee of the employees.

Later on in the same day a further conference was held with a larger committee of the employees at which the president of the company was also present. At this time the committee made known the wage scale that would be acceptable to the employees. At the conclusion of a lengthy discussion the president of the company stated that he would consider the matter and give his answer at a further conference to be held on July 22. At the following conference it developed that since the meeting on July 19 the Company had made a proposal to its employees that the mill should re-open on July 21 for a period of two weeks, during which time negotiations towards the settlement of wages rates would be continued. For the first week the existing rates would be paid and for the second week the higher rates demanded by the committee would be paid. This proposal had been submitted to a full meeting of the employees, but was not accepted. During the discussion the president of the company renewed the above offer which the departmental officer urged the committee to accept, stating that he would undertake to again visit New Westminster prior to the conclusion of the second week period and reconvene the conference with the view of settling terms for further operations. The committee agreed to submit this offer to the employees for decision, which was done but proved unacceptable. Subsequently, as a result of further negotiations, a compromise settlement was reached. This arrangement was temporarily upset due to a dispute as to the employment of a certain number of Chinese workers to replace strikers who had secured work elsewhere. This matter having been disposed of, the strike terminated on August 5. Certain concessions were made by the company in regard to wages rates, but the employees' demand for a signed agreement was not conceded.

*Toronto, Ont.*—Lithographers employed by the Miller Lithographic Company, Toronto, Ont., ceased work on April 15, 1932, protesting against a reduction in wages, transferers having been reduced from \$54 per week to \$45.50, and one artist from \$54 per week to \$50. The employers stated that similar reductions had been accepted by employees in other establishments. The lithographers' union reported that the employers afforded no opportunity for negotiations. Seven or eight employees were stated to be involved. Under date of September 24 the president of the Lithographers' Union, Toronto, intimated to the Department that it would be appreciated if this dispute could be satis-

factorily disposed of, and, on the strength of this intimation, the representative of the Department in Toronto was instructed to offer his services with the object of bringing about an amicable settlement. Interviews were held with union officials and also with the managing director of the company. The company's position, however, was that the workmen had voluntarily left the Company's service and had been replaced by others, that the Company was not agreeable to re-opening the matter, and that there was no strike or dispute at this time so far as the Company was concerned.

*Winnipeg, Man.*—Employees in the plant of the F. J. Wellwood Company, an establishment manufacturing boxes and excelsior, went on strike on June 2, 1932, in protest against a wage reduction of 10 per cent, no rate, however, to be reduced below 12½ cents per hour. Subsequently the employees demanded recognition of the workers' shop committee, recognition of the Manitoba Minimum Wage Act, and that no discrimination would be made against any of the strikers. As a result of the mediation of His Worship the Mayor of Winnipeg and the conciliation officer of the Department stationed in Winnipeg, a settlement was effected restoring wages to the former level and the management acceding to the demands of the employees. Work was resumed on June 16. On June 21, however, the employees ceased work again, alleging discrimination in regard to the re-engaging of the strikers. The departmental officer got into touch with both sides to the dispute immediately and a further joint conference was arranged for the morning of June 22. Negotiations were continued on the 23rd, but, due to interference by outside sympathizers, no headway could be made. On June 28, at the request of the strikers' committee, the departmental officer again interested himself in the dispute and a basis of settlement acceptable to the employees was reached, but the arrangements were again upset by outside sympathizers, alleged to be communists. The dispute was finally settled by local authorities on July 22. No details of the settlement were made public.

*Vancouver, B.C.*—On or about June 1 of this year the Associated Dairies Limited, Vancouver, B.C., gave notice to their employees, members of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local Union No. 464, of their desire for a revision, not cancellation, of the existing contract. Section 22 of the agreement provides that in case the two parties fail to agree

upon any amendment, they shall mutually agree that application be made under the Industrial Disputes Investigation Act for the establishment of a Board of Conciliation and Investigation, the majority decision of such board on the points in dispute to be accepted by both signatories as final and binding. Direct negotiations up to October having failed to settle the issue, the resident departmental officer interested himself in the matter and held separate and joint conferences with the interested parties, which resulted in a settlement being reached on October 31. A new agreement was signed.

*Calgary, Alta.*—In the spring of this year negotiations were under way for several weeks between the Calgary Builders' Exchange and the bricklayers' union. A wage scale of \$1.25 per hour was agreed upon; also a five-day week, except in cases of emergency. The bricklayers insisted upon time and one-half for any work done on Saturday mornings, and the contractors offered time and one-quarter. Early in June the western representative of the Department when in Calgary had several conferences with both parties to the dispute, but was unable to break the deadlock on this point.

*Westville, N.S.*—On July 29, 1932, the Department received an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act from miners in the employ of the Intercolonial Coal Company, Limited, Westville, N.S., being members of the Mine Workers' Union of Canada, Local No. 50. The application set forth that the agreement which had heretofore existed between the Company and the employees had expired in the previous April and that it had been impossible to bring about a new agreement. It was alleged that the former agreement had been violated in numerous instances and, further, that practically the whole of the former agreement was in dispute. Following the board application certain correspondence developed which led the Department to believe that the difficulty at Westville was largely due to misunderstandings and misinterpretations of certain clauses of the former wage agreement. The Chief Conciliation Officer of the Department was therefore instructed to proceed to Westville to deal with the matter, and, if possible, to work out a settlement of the dispute without the necessity of board procedure. On September 1, therefore, this officer held separate conferences with the officials of the company and with the officers of the union. These

meetings were followed by a joint conference on September 2, which lasted throughout the day. As a result of these, and subsequent conferences at which the departmental representative in the Maritime Provinces was also in attendance, certain understandings were reached and some small concessions made by the Company which appeared to form a basis for a new agreement. This basis was later on approved by Local No. 50, and there is reason to believe that, through negotiations which were under way at the end of October, a new agreement will be reached without the necessity of having the matter dealt with by a board.

*London, Ont.*—An application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department on July 16, 1932, from employees of the London Street Railway Company comprising motormen, conductors, one-man car operators, shopmen, shedmen, trackmen, linemen and other miscellaneous employees, and being members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America. One hundred and ninety-one employees were said to be directly involved. The application set forth that the employing company put into effect on July 1, 1932, as an emergency measure a decrease of 3 cents per hour in the existing wage rates, and at the same time gave sixty days' notice in writing of a further reduction of 2 cents per hour to become effective on September 1, 1932. The employees contended that the wage decrease effective July 1 was a violation of the existing agreement. At the time the application was received the enabling legislation passed by the Ontario Legislature making the Industrial Disputes Investigation Act effective in that province had not been proclaimed. This legislation later became effective on August 15 and a new application bearing date of August 19 was thereupon submitted by the employees in substitution for that made in July. On August 24 the Chief Conciliation Officer of the Department proceeded to London and discussed the question involved with the union officials, as well as with the management of the company. It developed, however, that due to its unfavourable financial situation the Company officials were not prepared to make any concessions other than to agree that should the earnings of the company improve they would be quite prepared to restore the former wages rate. This did not prove acceptable to the employees and the matter was dealt with through board procedure.

*Toronto, Ont.*—Employees of the Thompson Monumental Company, Limited, Toronto, Ont., members of the Canadian National Union of Granite Cutters, ceased work on September 9, 1932, owing to a decrease in wages from 90 cents per hour to 75 cents. In August the employer had reached a verbal agreement with the union providing for a rate of 90 cents per hour until May 1, 1933. The union requested the assistance of the Department of Labour in this matter and the departmental officer stationed at Toronto was instructed to deal with the case. Conferences were held with the union officers and with officials of the employing company and a contracting firm with whom they had a sub-contract. Resulting negotiations brought about a settlement of the dispute on September 30, the former rate of 90 cents being restored. Operations were resumed on October 3.

*Saint John, N.B.*—Local No. 1 of the Bricklayers', Masons' and Plasterers' International Union, Saint John, N.B., complained to the eastern representative of the Department when that officer was in Saint John the latter part of October that the contractor for the Canadian National Railways station at Saint John had refused to pay their trade penalty overtime for work done in excess of the regular hours. The departmental officer, in his capacity as mediator, held conferences with the union officials and the contractor, with the result that the contractor agreed to conform to the custom of the trade in that city.

*Drumheller, Alta.*—A Board of Conciliation and Investigation was established in April, 1932, to deal with a dispute existing between various coal mine operators in the Drumheller district and certain of their employees being members of the United Mine Workers of America, District No. 18. The majority report of the board was accepted by the miners, while the minority report was accepted by the operators. Subsequent conferences between these two groups resulted in a deadlock and at the joint request of the disputing parties under date of July 19, the western representative of the Department, resident in Vancouver, proceeded to Drumheller with the object of finding a basis of agreement. The departmental officer held separate and joint conferences over a period of days but, though numerous propositions were put forward, no settlement could be reached at that time. On August 17 a further conference was held which resulted in a settlement of the dispute and a new agreement was signed.

*Nacmine, Alta.*—Miners in the employ of the Thomas Coal Company, Limited, Nacmine, Alta., ceased work on September 6, 1932, claiming that the failure of the management to have one and one-quarter inch screens installed in the mine by that date, to replace the three-inch screens previously in use, constituted a violation of the agreement signed by the mine operators in that district during August, 1932. On September 15 the western representative of this Department had an interview with the managing director of the Thomas Coal Company, at Calgary, who agreed to the installation of new screens prior to the opening of the mine. On September 18 the departmental officer, accompanied by

the secretary of the United Mine Workers of America, visited Nacmine and met the pit committee of Local Union No. 3365, United Mine Workers of America, and also the company officials. Together they made an inspection of the alterations made in the screens, which alterations met with the approval of the pit committee. The question of the re-employment of the miners who had ceased work was discussed with the management and it was agreed that every man who was employed on the day of the strike would be given work, and that the plant would be ready for operation the following morning, Monday.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

SIX new decisions were given recently by the Canadian Railway Board of Adjustment No. 1, and an earlier case was closed, a satisfactory settlement having been reached by the parties concerned. Earlier decisions were outlined in the *LABOUR GAZETTE*, July, 1932, page 760, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 380—Canadian National Railways (Atlantic Region) and Order of Railway Telegraphers.

This case was presented to the Board in August, 1931, when decision was deferred so as to enable the parties to negotiate further. A satisfactory settlement was reached subsequently, and the case was therefore closed.

#### Case No. 397—Northern Alberta Railways and Order of Railroad Telegraphers.

The position of relieving despatcher for the usual summer work having been bulletined as vacant, the permanent agent at another station applied for and obtained it, the temporary vacancy at the latter station being filled by the senior spare man. On the conclusion of the summer season he returned to his position as permanent agent, and after his return he submitted a claim for expenses while on relief duty, this claim being based on Article 26, paragraph 2, of the Telegraphers' schedule, which reads:—

"Relief despatchers and relief agents will receive seventy-five cents (75c.) per day expenses while away from headquarters. The headquarters of relief despatchers and relief agents are the headquarters of the division, unless they hold established positions on the division, in which case the points where they are established will be considered their headquarters."

The company pointed out that expenses had never been paid in such cases, the precedent established on the Canadian Pacific Railway in this respect being followed, and they alleged that the article above quoted had been adopted by the parties concerned on the understanding that the established usage would be adhered to.

The Board sustained the contention of the employees.

**Case No. 400—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

A passenger train was delayed for one hour and fifty minutes owing to the derailment of one of the cars about four miles out from Saskatoon. The conductors and trainmen claimed that as the delay occurred within the switching area they should be allowed payment in addition to mileage or hours made on the trip, in accordance with Article 5, Rule 9 of the Conductors' Schedule, and Article 5, Rule 12 of the Trainmen's Schedule. The company, on the other hand, contended that while the delay occurred within the yard limits as recognized for freight train operation, the train in question was a passenger train, which had already proceeded about four miles after leaving the passenger terminal.

The Board denied the claim of the employees, finding that the train had left its terminal and was delayed by an accident incidental to the operation of that train and having no relation to the passenger terminal.

**Case No. 401—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

In this case (and also in the three following cases) the Board drew attention to the fact that the parties concerned had not submitted a joint statement of fact; such a statement is desired by the Board wherever possible, to serve as a basis for the discussion of the merits of any case. In this instance, however, no difference existed as to facts, and the failure to present a joint statement was the result of a misunderstanding as to procedure. It concerned the method of payment of certain train crews employed on the Alberta coal branch, the question at issue being whether or not an assignment involving more than one round trip in a period of duty could be made and paid as "continuous service." The contention of the railways was that the company had such a right, while the employees' representatives maintained that each round trip in service should stand by itself and be paid for on the basis of a "minimum day."

The Board decided that the right of the company to make assignments must be conceded; and that where an assignment includes two or more round trips (as in this case) within one period of duty, the basis of payment should be the actual miles run, or hours, on each trip, with a minimum of 100 road miles for the combined trips, *plus* time at

terminal and turn-around point before and after each trip.

**Case No. 402—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

Conductors and trainmen on a passenger train were occasionally required to set out and pick up cars at a station which lies within the limits of Rainy River yard. The employees contended that, in accordance with the decision of the Board in Case No. 33 (LABOUR GAZETTE, September, 1919, page 1044; November, 1920, page 1460), the crew should be paid under terminal time rules for all time consumed within the yard limits. The company, on the other hand, stated that the runs of this train extended for a distance of 208 miles, and maintained that the picking up or setting out of a car at the station referred to was incidental to the trip in the same sense as though it occurred at any other intermediate station.

The Board pointed out that in the decision in Case No. 33 they had ruled that delayed time at an intermediate terminal should only be paid for where switching is performed at such a terminal, and in Supplement No. 1 to that decision the same view was reiterated. In the present case the Board considered that the service rendered by the passenger train crew did not constitute switching, and they therefore denied the claim of the employees.

**Case No. 403—Canadian National Railways (Western Region) and Order of Railway Conductors and Brotherhood of Railroad Trainmen.**

A freight conductor and crew arriving at their "away from home terminal" became available for the handling of a passenger train outside their assigned territory, the conductors' schedule providing that "the first crew called out in unassigned service will take the engine first turned out in unassigned service." Instead, a passenger conductor and crew were used. The first crew claimed that they were entitled to be paid for 100 miles, according to Article 3, clause F of the same schedule, which states: "All such conductors and trainmen so run around will be paid 100 miles each run around, retaining their original standing on the train board." The company pointed out that the claimants being away from their home terminal were not equipped with suitable clothes for manning a main line passenger train, while the crew actually used was suitably equipped.

The Board noted that both the crews involved were run off their own assigned territory, and under the circumstances they sustained the claim of the employees.

**Case No. 404—Canadian National Railways (Western Region) and Brotherhood of Railroad Trainmen.**

This case concerned the question of the right of the company to require a head brakeman to report for duty in advance of the time at which the rest of the crew are required to report. The employees cited the following example as given in the Trainmen's Schedule:

"If a crew is ordered for 8.00 K., they will come on duty at 7.30 K. and be paid from 7.30 K., first preparing themselves for work within the preparatory time and afterwards performing such duties as may be required of them during the 30 minutes preparatory time."

The employees contended that under the schedule rules the company had not the right

to require the head brakeman to report before the rest of the crew. The railways claimed that where the location of roundhouse and yard tracks rendered it desirable, the practice was to order the head-end brakeman fifteen minutes prior to the time the balance of the crew is called for, this is to get the engine off the shop track and have it on the train at the desired time. The balance of the crew, it was pointed out, do not participate in this move, and they would simply put in an equivalent amount of idle time, if all members of the crew were called for this earlier time.

The Board found that the general practice on many railways requires the head brakeman to come on duty in advance of the crew for the purpose of bringing the engine out. The contention of the employees, therefore, was denied.

## STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1932

THE following table shows the number of disputes, workers involved and time loss for October, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct., 1932...	15	2,235	14,470
*Sept., 1932...	16	4,351	10,995
Oct., 1931....	17	3,044	35,450

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Although the number of strikes and lockouts recorded as in existence during October, shows a decrease in the number of workers involved,

the time loss incurred shows a substantial increase over that in September, during which month all strikes involving large numbers of workers terminated within a few days. As compared with October, 1931, the number of disputes recorded for October this year is somewhat lower, with fewer workers involved, the time loss incurred showing a marked decline from that recorded for the same month last year when strikes of sawmill workers in British Columbia involved approximately one thousand workers and caused a time loss of 25,000 working days.

Six disputes, involving approximately 1,439 workers, were carried over from September; information received during October indicating that the disputes involving womens' clothing factory workers (cutters) in Montreal, P.Q., and sawmill workers in South Westminster, B.C., reported as unterminated in the October issue of the LABOUR GAZETTE, had been settled prior to September 31, in favour of the employers concerned. Nine disputes commenced during October. Of the fifteen disputes in progress during the month twelve were recorded as terminated, seven resulting in favour of the employer concerned, one in favour of the workers involved, one resulting in a compromise, one being partially successful, and the result of two being recorded as indefinite. At the end of October, therefore, there were three disputes recorded as strikes or lockouts in progress, namely: lithographers, Toronto, Ont., coal miners, Three Hills, Alta., and womens' clothing factory workers, Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to eight such disputes, namely: motion picture projectionists, Ottawa, Ont., February 29, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto, London, Ont., Montreal, Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; women's clothing factory workers, Montreal, P.Q., August 1, 1932, one employer; motion picture

projectionists, Toronto, Ont., July 11, 1932, two employers; and motion picture projectionists, Saskatoon, Sask., August 27, 1932, one employer, the last two being added to this list this month

Information reached the Department recently as to a dispute involving some fifty workers employed in a lumber and shingle mill Vancouver, B.C., from August 15, 1932, to August 17, 1932. The causes of the dispute are reported to be the discharge of certain workers and a demand for a ten per cent increase in wages, the demands of the workers being granted. The mill, however, was closed down shortly afterward. A previous strike had occurred in this establishment from July 6, 1932, to July 11, 1932 (LABOUR GAZETTE, August, 1932, page 859).

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1932\*

Industry, Occupation and locality	Number of workers involved	Time lost in working days	Remarks
<b>(a) Strikes and Lockouts in Progress Prior to October, 1932</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b> Coal miners, Sydney Mines, N.S.	700	6,300	Commenced Sept. 29, 1932; against change in working conditions for longwall miners; terminated Oct. 12, 1932; indefinite.
<b>MANUFACTURING—</b> <i>Textiles, Clothing, etc.—</i> Women's clothing factory workers (dress cutters), Montreal, P.Q.			Commenced July 15, 1932; for recognition of union; and against dismissal of union members; terminated by Sept. 30, 1932; in favour of employer.
<i>Printing and Publishing—</i> Lithographers, Toronto, Ont.	7	182	Commenced April 15, 1932; against reduction in wages; untermintated.
<i>Other Wood Products—</i> Sawmill workers, South Westminster, B.C.			Commenced Sept. 13, 1932; for increase in wages; terminated Sept. 29, 1932; in favour of employer.
<b>CONSTRUCTION—</b> <i>Buildings and Structures—</i> Carpenters, Niagara Falls, Ont.	14	250	Commenced July 19, 1932; alleged violation of agreement re wage rates; lapsed by Oct. 31, 1932; in favour of employer.
<i>Other—</i> Sewer construction labourers, Verdun, P.Q.	700	2,800	Commenced Sept. 30, 1932; for increase in wage rates; terminated Oct. 6, 1932; in favour of workers.
<b>SERVICE—</b> <i>Recreational—</i> Motion picture projectionists, Toronto, Ont.	4	100	Alleged lockout; commenced July 11, 1932; reduction in wages and changes in working conditions; employment conditions no longer affected by October 31, 1932; in favour of employer.
Motion picture projectionists, Saskatoon, Sask.	14	300	Alleged lockout; commenced Aug. 27, 1932; reduction in wages and changes in working conditions; employment conditions no longer affected by October 31, 1932; in favour of employer.

\* In this table the date of commencement is that on which work first ceased and the date of termination is the last day on which working time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1932\*—*Continued*

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during October, 1932</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Wayne, Alta.....	133	673	Commenced Oct. 3, 1932; against agreement with another union; terminated Oct. 8, 1932; compromise.
Coal miners, Three Hills, Alta..	25	650	Commenced Oct. 1, 1932; against decrease in wages; un-terminated.
Coal miners, Carbon, Alta.....	100	1,000	Commenced Oct. 7, 1932; for increase in wages; terminated Oct. 20, 1932; partially successful.
Power plant employees of coal mine, New Waterford, N.S.	28	28	Commenced Oct. 15, 1932; against change in working conditions; terminated Oct. 16, 1932; in- definite.
<b>MANUFACTURING—</b>			
<i>Textiles, Clothing, etc.—</i>			
Shirt factory workers, Mont- real, P.Q.....	180	1,080	Alleged lockout; commenced Oct. 4, 1932; for restoration of wage reduction in force two months; terminated Oct. 11, 1932; in favour of employer.
Women's clothing factory workers (dressmakers), Montreal, P.Q.....	10	10	Commenced Oct. 14, 1932; against a decrease in piece rates; terminated Oct. 15, 1932; in favour of employer.
Women's clothing factory workers, Montreal, P.Q.....	50	700	Commenced Oct. 15, 1932; against dismissal of union workers and for recognition of union; un-terminated.
Textile factory workers, Woodstock, Ont.....	243	365	Commenced Oct. 17, 1932; against a change in working conditions and for an increase in wages; terminated Oct. 18, 1932; in favour of employer.
Men's clothing factory work- ers, Montreal, P.Q.....	15	30	Commenced Oct. 24, 1932; against employment of members of another union; terminated Oct. 26, 1932; in favour of employer.

\* See footnote on page 1165.

A minor strike has been reported as occurring on October 4, 1932, three truck drivers employed by a retail coal and wood dealer in Winnipeg ceasing work to enforce their demand for an eight-hour day. It is reported that certain sympathizers picketed the establishment, but at noon on October 5 the drivers involved applied for reinstatement, and returned to work with no change in hours or conditions.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, SYDNEY MINES, N.S.**—Early in October the miners involved in this dispute, which commenced on September 29, 1932, in protest against a change in working conditions

for longwall miners, requested the Provincial Government to assist in bringing about a settlement. The strikers having demanded that additional miners should be employed for a certain place, the employer proposed to put two men on at night, but this was not accepted. On October 8 the Deputy Minister of Mines for Nova Scotia arrived in the locality and as the result of conferences with the management and representatives of the miners on October 12 work was resumed pending further negotiations.

**WOMEN'S CLOTHING FACTORY WORKERS (CUTTERS), MONTREAL, P.Q.**—At the end of September this strike for recognition of the Montreal Dress Cutters' Union, a new and independent organization, and against the dismissal of two union members for alleged unsatisfactory work, was recorded as un-terminated, but during October union officials stated that most of the workers involved had returned to work at the end of August, the employer refusing to reinstate three. The legal proceedings regarding

picketing mentioned in the September issue of the LABOUR GAZETTE were dropped early in September, and by the end of the month the dispute was regarded as lapsed.

**LITHOGRAPHERS, TORONTO, ONT.**—In connection with this dispute, which commenced on April 15, 1932, arising out of a reduction in wages which the employer stated was accepted in other establishments, while the union stated that the employer refused to enter into negotiations, at the end of September the union requested the Department of Labour to assist in bringing about negotiations for a settlement. During October the resident representative of the Department took up the matter with both parties to the dispute, but a settlement was not reached.

**SAWMILL WORKERS, SOUTH WESTMINSTER, B.C.**—This dispute, which commenced on September 13, 1932, the workers asking for an increase in wages, was, as stated in a footnote to the table in the October issue of the LABOUR GAZETTE, terminated by the end of the month, the strikers returning to work on September 29 at the same rates of wages as prior to the dispute.

**CARPENTERS, NIAGARA FALLS, ONT.**—This dispute, commencing July 19, 1932, when employees of one contractor ceased work demanding the union rate of wages, is recorded as lapsed by the end of October, employment conditions being no longer affected, the strikers having been replaced some time ago.

**SEWER CONSTRUCTION LABOURERS, VERDUN, P.Q.**—As stated in the October issue of the LABOUR GAZETTE this dispute commenced on September 30, 1932, when workmen engaged on the construction of a sewer as relief work by the city of Verdun ceased work, demanding an increase from 30 cents per hour to 40 cents, the civic rate, and certain changes in methods and apportionment of work. Work was resumed on October 6 on a basis of 40 cents per hour.

**MOTION PICTURE PROJECTIONISTS, TORONTO, ONT.**—Employment conditions being no longer affected by the end of October, this dispute, an alleged lockout, which commenced on July 11, 1932, as a result of a reduction in wages and changes in working conditions, has been transferred to the list of such disputes carried elsewhere in this article, the union involved not having declared the dispute terminated.

**MOTION PICTURE PROJECTIONISTS, SASKATOON, SASK.**—This dispute, an alleged lockout commencing August 27, 1932, the workers having protested against a reduction in wages and changes in working conditions, is now recorded as terminated, employment conditions being no longer affected, and transferred to the list mentioned in the last preceding paragraph.

**COAL MINERS, WAYNE, ALTA.**—A number of the employees in one mine ceased work on October 3, 1932, in protest against an agreement signed by the management with the United Mine Workers of America providing for the check-off of union dues for that union. The management, it is reported, had been petitioned in writing by a majority of the miners to do so. An agreement between the management and the Mine Workers' Union of Canada had expired on March 31, 1932, but work had been carried on with conditions unchanged. For several days the mine was picketed, a police force being present, and one picket was arrested for assault. It is reported that finally there were practically no miners working, and it was arranged that the miners would vote as to which union they wished to negotiate the agreement. The vote resulted in favour of a local independent union, being reported to be eighty-two votes to fifty-five, and work was resumed on October 8, an agreement to be negotiated between the management and the new union.

**COAL MINERS, THREE HILLS, ALTA.**—Employees ceased work on October 1, 1932, in protest against a wage reduction in rates per ton from \$1.25 to 70 cents, apparently on the introduction of new mining machinery. The miners after five days at the lower rate offered to work for \$1 per ton, but this was refused. The management replaced about half of the strikers and during negotiations toward the end of the month refused to dismiss these and reinstate all the strikers. A settlement accordingly was not reached.

**COAL MINERS, CARBON, ALTA.**—Miners in various collieries ceased work on October 7 and October 14, 1932, demanding higher wages, but resumed work from time to time by October 20, having reached agreements with the employers on more favourable terms.

**POWER PLANT WORKERS, (COAL MINE), NEW WATERFORD, N.S.**—Twenty-eight workers employed in a power plant at Carney's Lake, New Waterford, ceased work on October 15, 1932, protesting against a reduction in staff owing to the closing down of some of the boilers. The strikers, however, returned to work at 11 p.m. October 16, 1932, pending negotiations as to a final settlement between the management and representatives of the union, the United Mine Workers of America.

**SHIRT FACTORY WORKERS (GIRLS), MONTREAL, P.Q.**—Employees in a shirt manufacturing establishment in Montreal demanded the restoration of a five per cent reduction in wages which had been put into effect two months earlier, and work ceased on October 4, 1932, the management refusing the demand.

On October 11, 1932, work was resumed on the employer's terms.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Ten operators and finishers employed by one women's dress manufacturing company in Montreal ceased work on October 14, 1932, protesting against a reduction of 2½ cents per garment. On the following day six of the strikers returned to work at the reduced rates, the employer refusing to reinstate the others, and replacing them.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees in one establishment in Montreal, manufacturing women's dresses, ceased work on October 15, 1932, in protest against the dismissal of union members and demanding recognition of the Industrial Union of Needle Trades Workers. The employer offered to reinstate some of the workers but not others, and at the end of the month no termination had been reported.

**TEXTILE FACTORY WORKERS, WOODSTOCK, ONT.**—Weavers in one establishment manufacturing plushes, etc., ceased work on October 17, 1932, protesting against a proposal that one weaver should operate two looms instead of one. The

management claimed that this was the general practice in the industry, and was necessary to reduce costs and continue in operation. The strikers were joined by the remainder of the employees, demanding an increase of ten per cent, wages having been reduced earlier in the year. On the following day at noon the employees resumed work on the employer's terms, after negotiations in which the situation was explained and it was agreed to give a fair trial to the system of two looms to one weaver.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—A number of the employees in one establishment ceased work and picketed the establishment on October 24, 1932, to prevent certain employees from working, the latter having left the Canadian Union of Clothing Workers and returned to the Amalgamated Clothing Workers of America. Six of the pickets were arrested and charged with conspiracy and wounding as a result of a clash between the two factions in which one worker was wounded. On October 26, 1932, a similar clash was averted by a policeman. The strikers failing to secure their demands, the dispute terminated.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in September was 24 and 29 were still in progress from the previous month, making a total of 53 disputes in progress during the month, involving 153,100 workpeople with a time loss of 3,325,000 working days for the month. Of the 24 disputes beginning in the month, 6 were over proposed reductions in wages, 8 on other wage questions, 7 on questions respecting the employment of particular classes or persons and 3 on other questions. During the

month, settlements were reached in 38 disputes, of which 6 were in favour of workpeople, 9 in favour of employers and 22 ended in compromises. In 4 other disputes, work was resumed pending negotiations.

*Dispute in the Lancashire Cotton Manufacturing Industry.*—As reported in the last issue of the LABOUR GAZETTE, the employers in the spinning section of the industry proposed to reduce wages approximately 8½ per cent, which is the same rate of reduction as agreed to in September in the weaving section of the industry following the dispute in that section (LABOUR GAZETTE, September and October). The workers in the spinning section offered to accept only a reduction of 4·1 per cent. A joint conference of the parties was called by the Ministry of Labour, and on October 23, reductions of from 5 to 8 per cent were agreed on. Dissatisfaction with this decision led to a strike of 150,000 out of the 200,000 workers in this section of the industry, which lasted from October 31 to November 6, when it was called off.

### France

Figures for the first quarter of 1932 show that there were 22 disputes involving 1,981 workers in January, 35 disputes involving

13,047 workers in February and 43 disputes involving 9,219 workers in March.

### Germany

A decree of the Government in September provided for a bonus to employers for every new employee added to staffs, and also authorized them to reduce wages as much as 12½ per cent as the number of employees was increased. Strikes occurred in a large number of factories in September and October against these wage reductions.

### Switzerland

For the year 1931, the number of disputes was 25, involving 4,746 workers, with a time loss of 73,975 working days for the year.

### Australia

The number of disputes reported for the year 1931 was 134 involving directly 33,674 workers with a time loss of 245,991 working days. The estimated loss in wages for the year was £227,731.

For the first quarter of 1932, 41 disputes were recorded, directly affecting 7,860 workers with a time loss of 41,248 working days and with an estimated loss in wages of £40,408.

### New Zealand

For the first half of the year 1932, the number of disputes was 10, involving 6,733 workers with a time loss of 57,950 working

days and with an approximate loss in wages of £57,684.

### United States

The number of disputes beginning in August was 52 and 37 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 27,639 and the time loss 704,944 working days for the month.

*Bituminous Coal Mining Disputes.*—These disputes which began April 1, were reported in the LABOUR GAZETTE, April, May, August and September. During July an agreement had been reached in Illinois between certain employers and the United Mine Workers' Union reducing the basic wage from \$6.10 to \$5 per day. A similar agreement was reported on October 7 to have been concluded with the Progressive Miners' Union, but the dispute continued in certain sections of this State and further disorders were reported during October.

On September 10, an agreement was reached between the United Mine Workers union and the employers' association of Indiana providing for a wage reduction of 25 per cent, although certain concessions were granted to the miners. Also during September an agreement was reached in certain coal fields of Ohio providing for a wage rate of \$3.28 per day. In Arkansas and Oklahoma a settlement was made between the union and about three-quarters of the operators in Arkansas and Oklahoma which provided for a base scale of \$3.75 per day.

## Labour Statistics of Principal Railways of United States

The Bureau of Railway Economics (Washington, D.C.) has recently issued its annual bulletin giving statistics of Class 1 Railways in the United States, based upon official summaries of the Interstate Commerce Commission for the calendar years ended December 31, 1920 to 1931. Railways designated as "Class 1" include carriers with annual operating revenues exceeding \$1,000,000. Switching and terminal company statistics are not included. Class 1 railways operate approximately 92 per cent of the total railway mileage of the United States and earn about 97 per cent of the total revenues.

According to the bulletin the number of employees on railway payrolls during the calendar year 1931 averaged 1,258,719 as compared with 1,487,839 in the year previous. The compensation paid to these employees in 1931 aggregated \$2,094,994,379 as compared with \$2,550,788,519 in 1930. The average compensation per employee per hour (on a basis of

eight hours per day) was \$0.689 while in 1930 it was \$0.678. On an annual basis, the average compensation per employee, per year, was \$1,664.39 as compared with \$1,714.42 in 1930. During 1931 the number of hours paid for (hourly and daily employees) totalled 3,039,110,118, while the average number of hours per employee throughout the year was 2,414.4. For 1930 the corresponding figures were 3,759,772,082 and 2,527.

The total property investment in Class 1 railroads at the end of 1931 amounted to \$26,242,856,220 while at the end of 1930 it stood at \$26,354,686,261. For 1931, the total operating revenue (freight, passenger, mail, express, etc.) amounted to \$4,188,343,244. In the previous year this total was \$5,281,196,870. During 1931, the total operating expenses (maintenance of way and structures, maintenance of equipment, traffic, transportation, general, etc.) were \$3,223,574,616 while in 1930 the total expenses were \$3,930,928,687.

## ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA FOR FISCAL YEAR ENDING MARCH 31, 1932

THE annual report of the Department of Labour, recently issued, describes the various activities of the Department during the fiscal period from April 1, 1931, to March 31, 1932. The following Acts and ordinances were administered under the authority of the Minister of Labour: (1) Labour Department Act; (2) Conciliation and Labour Act; (3) Industrial Disputes Investigation Act; (4) Government Annuities Act; (5) Employment Offices Co-ordination Act; (6) Technical Education Act; (7) Vocational Education Act, 1931; (8) Combines Investigation Act; (9) Old Age Pensions Act; (10) White Phosphorus Matches Act; (11) Fair Wages Policy of the Government of Canada, based on a Resolution of the House of Commons, 1900; (12) The Fair Wages and Eight-Hour Day Act, 1930; (13) Unemployment Relief Act, 1930; and (14) The Unemployment and Farm Relief Act, 1931.

### Industrial and Economic Conditions

The report of the Deputy Minister of Labour refers to the continued industrial depression, and to the legislation adopted by Parliament in 1930 and 1931 to cope with the situation: "The universal economic and financial depression which dominated the two preceding fiscal periods persisted throughout the fiscal year 1931-32, and unemployment continued to be a problem of major importance in the leading countries of the world. In Canada an element further affecting the general unfavourable situation was the acute stress obtaining in large sections of the Prairie Provinces where continuous drought caused the third consecutive crop failure. . . . The adoption of official relief measures, in mitigating the more severe aspects of prevailing unemployment and distress, exercised a strengthening influence on the national life, with the result that industrial activity, while generally more curtailed than in any year since 1926, was much less impaired than in practically any other country.

"A feature of the depression was the downward movement in prices, which became pronounced in the spring and summer of 1930 and continued throughout the fiscal year 1931-32, prices of foods and raw materials, however, falling more rapidly than those of manufactured articles, mainly because of an effort being made to maintain standards of living and standards of wages. In wholesale prices the decline was not so precipitous as during the preceding year, the index number calculated

by the Dominion Bureau of Statistics being 8 per cent lower in March, 1932, than in March, 1931, as compared with a decline of 18 per cent during the fiscal year 1930-31. At the close of the fiscal year 1931-32 the index was 58 per cent below the peak of May, 1920.

"Retail prices and cost of living also declined during the year, the index number as computed by the Department of Labour being in March, 1932, 10 per cent below the same month in the preceding year. Food prices receded 20 per cent during this period, clothing prices 13 per cent, while in fuel, rent and sundries the decline was slight.

"Wage rates generally had maintained their ground during the sharply receding price tendency of 1930. In 1931, however, a downward trend was recorded in the wage rates of the various classes of labour concerning which the department compiles index numbers, the only exceptions being in the wage rates of the printing trades, which showed a slight advance, and of coal mining, which remained stationary, although the latter industry suffered greatly from short time, i.e., collieries were to a large extent operated less than six days per week. The most severe reduction occurred in the rates of wages in the logging and sawmilling group, the index number dropping from 183.9 for 1930 to 163.0 for 1931, while small wage decreases took place in the building trades, metal trades, steam and electric railways, common factory labour, and miscellaneous factory trades."

The report contains a chapter giving an account of the operations during the fiscal year under the Unemployment Relief Act, 1930, and under the Unemployment and Farm Relief Act, 1931. (The report of the Dominion Director of Unemployment Relief on the proceedings under the latter Act was reproduced in the *LABOUR GAZETTE*, March, 1932, page 313; and reports on the administration of the 1930 Act appeared in the issue for October, 1931, page 1108, and in previous issues.)

### Industrial Disputes Investigation Act

Applications under the provisions of the Industrial Disputes Investigation Act received during the fiscal year numbered twenty. Boards of Conciliation and Investigation were established to deal with six cases, three of the disputes involved being in the electric railway industry, two in steam railway and one in coal mining. In addition a Royal Commission was appointed under the provisions of Part I of the Inquiries Act and in accordance

with section 65 of the Industrial Disputes Investigation Act, to investigate and report upon a coal mining dispute in the Estevan-Bienfait district in southeastern Saskatchewan. In each of these cases the inquiry was successful in averting the threatened cessation of work or ending the strike which had been already declared.

The proportion of boards to applications was unusually small, six of the disputes having proven adjustable with the aid of departmental officers, while with respect to four cases the applications were either withdrawn or allowed to remain in abeyance, or the dispute was such that the machinery of the statute could not be utilized. Three applications were under consideration at the close of the fiscal year.

With exception of Prince Edward Island, which is not to any extent concerned with industrial disturbances, its primary industry being agriculture, all of the provinces have now enacted statutes extending the scope of the Dominion Industrial Disputes Investigation Act to disputes therein defined which come exclusively within provincial jurisdiction. In the case of Quebec and Ontario the enabling legislation was passed during the closing months of the past fiscal year. The Ontario statute, however, will not come into force until proclaimed by the Lieutenant-Governor. Reports of proceedings under the Act, with the text of the reports of the Boards of Conciliation and Arbitration, appear regularly in the LABOUR GAZETTE.

### Conciliation Service

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The section of the present report devoted to the conciliation work of the department shows an extensive list of the more important industrial disputes in connection with which the mediative services of its conciliation officers were, on request of one or both of the parties concerned, extended to the disputants, usually with the utmost success. Several of these disputes were of a perplexing

and troublesome nature and the settlements effected entailed the most arduous efforts and perseverance on the part of the departmental officers. In addition the department was able by correspondence to exercise a conciliatory influence in the case of several difficulties coming to its knowledge. Particulars of the conciliation work of the Department during the period covered by the report appeared in the LABOUR GAZETTE, May, 1932, page 493.

### Fair Wages Policy

An Act entitled the Fair Wages and Eight-Hour Day Act, 1930, was adopted by the Federal Parliament during the session of 1930 (LABOUR GAZETTE, June, 1930, page 652; April, 1930, page 383) to give statutory effect to the Fair Wages Policy of the Government in so far as concerns the construction, remodelling, repair or demolition of any works for the Government of Canada, whether carried out under contract or by workmen employed by the Government who are exempt from the operation of the Civil Service Act. In providing for the observance of current rates of wages, which have been applicable since the Fair Wages Resolution was adopted by the House of Commons in March, 1900, the important proviso is added in the statute that in all cases the wages to be paid shall be such as are fair and reasonable, and, further, that the working hours shall not exceed eight hours per day except in special cases as the Governor in Council may otherwise provide, or in cases of emergency.

In accordance with the provisions of the Fair Wages and Eight Hour Day Act, and the Fair Wages Policy of the Government, fair wages conditions were prepared or sanctioned by the Department of Labour during the fiscal year 1931-32 in connection with 272 contracts for Dominion public works executed by various departments of the Government, and in the case of two contracts awarded by the Harbour Commissioners of Halifax and Saint John, respectively, for works aided by Dominion public funds. Wage rates and hours of labour for inclusion in contracts awarded by the Post Office Department for supplies totalling \$201,806.34 were also submitted to the Department of Labour for approval or otherwise. In addition the Labour Department was frequently consulted by other departments of the Government regarding wage rates to be observed in connection with work undertaken on the day labour plan.

Complaints reached the department during the year of alleged non-observance by contractors of the labour conditions for the protection of workmen in the case of thirty-seven

contracts and investigations were conducted in connection with these complaints by the staff of Fair Wage Officers. In twenty-two cases the complaint was found to have been justified and the contractors were required to make proper settlement with the workmen concerned. (Particulars of contracts to which the Fair Wages regulations apply, appear each month in the *LABOUR GAZETTE*).

### Employment Service

The fiscal year ended March 31, 1932, was the fourteenth in which the Employment Service Branch, set up under the Employment Offices Co-ordination Act, co-operated with the provincial Governments to maintain the Employment Service of Canada. The primary function of the Employment Service Branch is administrative—that of administering the Employment Offices Co-ordination Act (chapter 57, R.S.C. 1927). This Act empowers the Minister of Labour (a) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them; (b) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters; (c) to compile and distribute information received from employment offices, and from other sources, regarding prevailing conditions of employment. The Department of Labour does not itself operate any public employment offices, but, through the device of paying subventions to the provinces, as provided in the Act, encouragement is given to the governments of the several provinces to operate such offices on a uniform basis. In the view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are commonly considered as a single organization known as "The Employment Service of Canada."

Statistics covering the work of the 71 employment offices operated by the Employment Service of Canada during the fiscal year ending March 31, 1932, show 767,419 applications for employment, 433,334 vacancies and 419,407 placements recorded, as compared with 721,609 applications, 464,136 vacancies and 447,239 placements in 1930-31. Over 58 per cent of the placements were for periods not exceeding seven days, this high proportion being largely due to the brief terms of employment afforded persons on the various relief schemes undertaken by governmental authorities. The ratio of vacancies to applications was lower than in the preceding year, as was also the

ratio of placements to applications. For each 100 applicants registered during 1931-32 there were 56.5 vacancies and 54.7 placements, while in 1930-31 there were 64.3 vacancies and 62 placements for each 100 applicants.

The percentage of unemployment amongst organized workers during 1931-32 as reported by trade unions to the Employment Service was 18.1, while for 1930-31 the corresponding figure was 12.3 per cent.

Monthly, quarterly and annual reports of the work of the Employment Service appear regularly in the *LABOUR GAZETTE*.

### Old Age Pensions

The 6th annual report on the Administration of the Old Age Pensions Act, 1927 (amended 1931), is contained in the present report. (Quarterly reports appear in the *LABOUR GAZETTE* from time to time, the report for the 3rd quarter of 1932 being in the present issue.) The legislation of 1927 entrusted the administration and payment of pensions to the provinces, the Dominion Government to reimburse each province adopting the scheme 50 per cent of the provincial disbursements in pensions. An amendment to the Old Age Pensions Act was enacted during the 1931 session of Parliament increasing to 75 per cent the share of pension payments borne by the Dominion Government. The Bill was introduced in the House of Commons by the Prime Minister, who intimated that the measure was but temporary in character and that it was the ultimate intention of the Government to establish a federal old age pension system on a contributory basis. Pending the taking of the decennial census of 1931, however, and obtaining such information therefrom as would enable the necessary computations to be made, it was considered desirable and of advantage to the Dominion to augment the national contribution. The amending Act contains provision also for the examination and audit of expenditures for Old Age Pensions in the provinces and the accounts relating thereto.

The Old Age Pensions Regulations were revised (*LABOUR GAZETTE*, May, 1932, page 517) and new agreements negotiated between the Government of Canada and the Governments of the five provinces already participating in the Old Age Pensions system, namely British Columbia, Alberta, Saskatchewan, Manitoba and Ontario, for the purpose of giving effect to the provisions of the amending Act, the Dominion contribution on the basis of 75 per cent of the total disbursements for old age pensions becoming payable as from November 1, 1931.

The total sum paid out in pensions in the five provinces above named and the North-west Territories during the fiscal year 1931-32 amounted to \$14,526,908.36, the Dominion Government's share being \$8,639,387.29. The total number of pensioners on March 31, 1932, was 67,006.

### **Combines Investigation Act**

The report summarizes the proceedings under this Act during the fiscal year, this section constituting the ninth such report to be issued. The Combines Investigation Act was enacted in 1923. This legislation provides for the investigation of business and industrial combinations which have operated or are likely to operate to the detriment of the public. As recounted in the eighth annual report, the Supreme Court of Canada on April 30, 1929, pronounced the Act to be within the legislative powers and jurisdiction of the Dominion Parliament; on appeal this decision was supported by judgment of the Judicial Committee of the Privy Council delivered on January 29, 1931 (LABOUR GAZETTE, March, 1931, page 378). Details of the proceedings under the Act appear in the LABOUR GAZETTE from time to time. The present report contains full particulars of the cases concerning the Electrical Estimators' Association (LABOUR GAZETTE, February, 1932, page 156), the Motion Picture Industry (LABOUR GAZETTE, April, 1932, page 400), and the Amalgamated Builders' Council (LABOUR GAZETTE, February, 1932, page 158). No commissioners were appointed during the fiscal year 1930-31, the two principal investigations being made by the registrar, one into a combination of manufacturers of fruit and vegetable baskets, the other into an alleged combine of manufacturers of radio vacuum tubes. Reports in these two cases were referred to the Attorney-General of Ontario shortly after the close of the fiscal year.

### **White Phosphorus Matches Act**

The White Phosphorus Matches Act, which prohibits the manufacture, sale and importation of matches made of white phosphorus, is also administered under the authority of the Minister of Labour. No report is made on this subject, there having been no claims of violation of this statute during the past fiscal year.

### **Canadian Government Annuities**

The report notes that, despite the business depression, the sale of Government annuities showed no decline, 1,726 contracts, the second highest number recorded since the enactment of the Government Annuities Act in 1908, having been issued during the fiscal year 1931-

32, while the aggregate amount of annuities provided under these contracts, \$885,876.26, was unequalled in the past. Purchase money received during the fiscal year totalled \$4,194,383.81, a sum surpassed in but one previous year.

An amendment to the Government Annuities Act (LABOUR GAZETTE, July, 1931, page 764) reducing the maximum amount payable as an annuity from \$5,000 to \$1,200 a year, was enacted during the 1931 parliamentary session and received Royal Assent on August 3. The plan of Government annuities as conceived by the founder, Sir Richard Cartwright, was to provide security for persons of moderate means for their old age and was not intended to offer opportunity for investment to those in well-to-do circumstances, which was the result when later the amount was raised from \$1,000 to \$5,000, and this amendment was the purpose of restoring the Act to the basis originally intended. The maximum annuity which one person may purchase was placed at \$1,200 a year, or \$100 a month, as being in keeping with present living conditions.

### **Vocational Education**

An Act, cited as the Vocational Education Act, 1931 (LABOUR GAZETTE, June, 1931, page 642), authorizing an annual appropriation of \$750,000 over a period of fifteen years from which payments may be made to the Governments of the various provinces for the purpose of promoting and assisting vocational education, was adopted by the Dominion Parliament in August, 1931. Administration of the Act was vested in the Minister of Labour, under whose authority the Technical Education Act of 1919 also is administered. Payments under the Vocational Education Act are conditional upon agreements being entered into between the Minister of Labour and the respective provincial Governments as to the terms, conditions and purposes on and for which payments are to be made and applied, the total payments to any provincial Government not to exceed a proportion of the yearly appropriation corresponding to the proportion which the population of the province bears to the population of Canada, as determined by the latest federal decennial census.

In connection with its administration the Act empowers the Governor in Council to make regulations with respect to various matters including the definition which is to be applied to the expression "vocational education," the particular types and grades of vocational education to which assistance may be granted, and the extent to which assistance may be made available towards the continuance of existing vocational education work, or

for lands, buildings, equipment and furnishings. These regulations had not yet been promulgated or agreements completed with the various provinces when the fiscal year terminated. The annual grants in aid of technical education work in the various provinces provided by the Technical Education Act of 1919 over a period of ten years aggregated ten million dollars. The report contains full particulars of the administration of the Act during the fiscal year.

### Statistics

Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (Labour Department Act, chapter 111, Revised Statutes, 1927, section 4). In accordance with the Statistics Act (1918) chapter 190, Revised Statutes, 1927, and under arrangements with the Dominion Statistician, statistics are collected and published in co-operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics. The statistics prepared by the Department include Strikes and Lockouts; Wages and Hours of Labour; Prices and Cost of Living; and Fatal Industrial Accidents. This information is published regularly in the LABOUR GAZETTE. Summaries for the period 1930-31 are given in the present report.

### The Labour Gazette

The LABOUR GAZETTE, the official monthly journal of the department, was issued regularly each month and completed its thirty-first year of publication at the end of 1931. The average monthly circulation was 10,413 copies of the English edition, and 1,711 of the French.

### Labour Intelligence Branch

The regular work of the Labour Intelligence Branch includes the preparation of reports on (1) Labour Organization, (2) Organization in Industry, Commerce and the Professions, and (3) Co-operative Associations. In addition the branch has been called upon to prepare numerous statements on labour matters, and to handle correspondence pertaining to trade unions and other related work.

### Other Publications

The Department also continued the publication of the series entitled "Labour Legislation in Canada," containing the text of the labour laws enacted by the Dominion Parliament and the several provincial legislatures.

A revised and enlarged edition of a former publication of the department entitled "Government Intervention in Labour Disputes in Canada" was issued during the year as No. 11 in the series of bulletins on Industrial Relations.

### International Labour Organization

The Department of Labour is entrusted with important duties arising out of the relations of Canada with the International Labour Organization. These entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies also were prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. A bulletin entitled "Canada and the International Labour Conference," has been issued by the Department of Labour for the purpose of furnishing information in reference to the International Labour Organization and the subjects which have received attention at the hands of this body.

In order to secure closer touch with the work of the League of Nations and of the International Labour Organization, the appointment was made by the Government of Canada in 1924 of an advisory officer resident in Geneva. It was felt that this appointment would ensure greater permanency and continuity of representation at the meetings of the Governing Body of the International Labour Office and that such an officer, acting as a substitute for and under the direction of the Minister of Labour, would improve the present plan of Canada's representation. Dr. W. A. Riddell, former Deputy Minister of Labour of Ontario, who had also held an important position on the staff of the International Labour Office, was entrusted with the duties of Dominion of Canada Advisory Officer to the League of Nations in Geneva.

Since the International Labour Organization forms part of the machinery of the League of Nations, its expenditures are met from the funds of the League. Canada's contribution to the League of Nations in 1931 amounted to \$205,083.94, of which amount \$59,325.88 was apportioned by the League to the work of the International Labour Conference and to its permanent bureau in Geneva, the International Labour Office.

An account of the fifteenth session of the International Labour Conference, which was held during the fiscal year, appeared in the LABOUR GAZETTE, July, 1931, page 793.

### Library of the Department

The Library of the Department was organized in 1900 when the department was created, and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other Governments carrying on work along similar lines the department is kept in touch with labour matters in almost all countries of the world. In addition to the official publications thus received, there is a valuable collection of publications of labour organizations and periodicals and newspapers published in

the interest of organized labour. A complete collection of volumes dealing with labour problems and legislation is supplemented by books for reference and volumes on general economic subjects, history and law. Subject to requirements of the departmental officers, the services of the library are at the disposal of the general public, and frequent use is made of its material by students from the Canadian universities and by others interested in labour problems. Books are sent by mail, wherever possible, to any persons wishing to borrow them, and special information and bibliographies are compiled when required.

## OLD AGE PENSIONS IN CANADA

### Financial Summary of Administration During Third Quarter of 1932 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156; as amended by statutes of 1931, chapter 42) and the various provincial concurrent Acts, during the third quarter of 1932, and since these Acts became severally effective. Similar information bringing the statistics down to June 30, 1932, was given in the LABOUR GAZETTE, August, 1932. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act made provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. The provinces now participating in Old Age Pensions are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The Northwest Territories are also within the scheme. The New Brunswick legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In

cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year; and in cases where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province where the Act is not in force, the pension payable is reduced by the same proportion as the duration of the pensioner's residence in these provinces bears to twenty years. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments.

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure. Accordingly new agreements between the Dominion and Provincial Governments under the provisions of the amending Act were completed recently, as stated in the LABOUR GAZETTE, May, 1932, page 517. That issue also contained the text of the Old Age Pensions regulations, as recently revised. Arrears resulting from the increase of the Dominion contribution were paid to the provinces back to November 1, 1931; and the payments by the Dominion for the current year are on the basis of 75 per cent of the total expenditure on old age pensions.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT SEPTEMBER 30, 1932

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan	Northwest Territories	Totals
—	Act effective Aug 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in C. effective Jan. 25, 1929	
Total number of pensioners as at September 30, 1932.....	4,880	6,714	7,776	41,513	7,869	6	68,758
Average monthly pension.....	\$18 90	\$19 08	\$19 63	\$18 37	\$18 63	\$20 00	.....
Total amount of pensions paid by Province during second quarter of fiscal year 1932-33, (Period July 1—September 30, 1932)	\$273,371 70	\$390,628 04	\$448,120 82	\$2,259,413 08	\$451,385 93	\$407 11	\$3,823,326 68
Dominion Government's share of expenditure.....	\$205,113 89	\$293,102 92	\$336,090 61	\$1,687,251 01	\$338,539 45	\$407 11	\$2,860,504 99
Total amount of pensions paid by Province during two quarters of fiscal year 1932-33, (Period April 1—September 30, 1932)	\$530,541 05	\$770,425 78	\$878,501 96	\$4,497,283 09	\$901,620 03	\$719 43	\$7,579,091 34

Total amount of pensions paid by Province since inception of Old Age Pensions Act to September 30, 1932.....	\$2,384,525 24	\$5,462,653 63	\$5,438,275 44	\$22,790,859 03	\$5,128,137 84	\$4,382 98	\$41,208,834 16
Dominion Government's share of expenditure.....	\$1,426,103 63	\$3,080,857 90	\$3,109,349 91	\$13,278,260 26	\$2,970,955 54	\$4,382 98	\$23,869,910 22

## COMBINES INVESTIGATION ACT

### Alleged Combines of Manufacturers of Fruit Baskets and of Radio Tubes to be Prosecuted

A DECISION by the Attorney General for Ontario to proceed with prosecutions of alleged combines of manufacturers of fruit and vegetable baskets and of manufacturers of radio vacuum tubes was announced on October 14. This announcement followed a review by the Ontario Attorney General's department of the reports of the Registrar of the Combines Investigation Act and accompanying evidence which were submitted to the Ontario department by the Minister of Labour in June, 1932. The investigations in the two cases were conducted by the Registrar. The evidence in both cases was obtained without public hearings, and neither report was made public.

#### Radio Tube Combine

Application for investigation of the alleged combine of Canadian radio vacuum tube manufacturers was received in the fiscal year 1930-31. The greater part of the investigation was carried on in 1931 with the assistance

of Professor K. W. Taylor of McMaster University. It was alleged that the Canadian General Electric Company, Limited, the Canadian Marconi Company, the Canadian Westinghouse Company, Limited, and the Radio Valve Company of Canada had combined to fix common selling prices and common resale prices for radio vacuum tubes at unreasonably high levels and had otherwise lessened competition in the sale of radio tubes in Canada to the detriment of the public.

Mr. Eric Armour, K.C., Crown Attorney of the County of York, was instructed in October by the Attorney General for Ontario to proceed with combine charges against the members of this alleged combine.

#### Fruit Basket Combine

An investigation into an alleged combine of manufacturers of baskets and other containers for fresh fruits and vegetables was commenced by the Registrar in November, 1931, following complaints which were sub-

mitted to the Dominion Government. It was charged that uniform and enhanced prices had been put into effect by the basket manufacturers in Ontario, comprising some twelve firms located in the Niagara peninsula and elsewhere throughout Western Ontario. The report of the Registrar, submitted in March, 1932, stated that in his opinion the Canadian Basket Pool and related organizations of the Ontario basket manufacturers constituted a combine within the meaning of the Combines Investigation Act.

After an examination of the case by the Department of the Attorney General for Ontario, Mr. G. W. Ballard, K.C., Crown Attorney of the County of Wentworth, was instructed to take steps for the prosecution of

members of the basket manufacturers' organizations.

### **Electrical Contractors Combine Appeals Dismissed**

Appeal by the members of the Electrical Estimators Association, a combine of Toronto electrical contractors, against their conviction by Mr. Justice Raney in January, 1932, following an investigation under the Combines Investigation Act, was dismissed by the Appellate Division of the Supreme Court of Ontario in October. The application for leave to appeal was filed in February. The convictions and sentences, now confirmed by the action of the Appellate Court, involved fifteen firms and fines totalling \$26,200.

### **Canned Fruit and Vegetable Industry in Canada in 1931**

A report on the fruit and vegetable preparations industry of Canada in 1931, published by the Dominion Bureau of Statistics in its Census of Industry series, notes that the development of this industry has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year, not always with all the flavour of the freshly gathered product, but with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market for their products and the consumer in both city and country with cheap and wholesome food in great variety. This industry has made rapid strides in the past few years. Since 1921, the number of plants in operation increased from 270 to 278, the capital invested from \$23,558,689 to \$48,152,325, the number of employees from 3,577 to 6,329, salaries and wages from \$3,150,564 to \$4,509,377, materials used from \$12,003,946 to \$18,668,100 and value of products from \$20,967,476 to \$32,572,580. During the period 1923-31, the volume of fruit and vegetable preparations increased 95 per cent. This growth is indeed remarkable as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1931 were valued at \$4,315,979 and exports at \$2,651,722. According to these figures, the industry supplied over 95 per cent of the domestic requirements.

The fruit and vegetable preparations industry is divided into two main sections (1) Fruits and Vegetables, Canned, Evaporated and Preserved, and (2) Vinegar, Cider, Pickles, Catsup, Sauces, etc. The most important

branch of this industry is the canning of fruits and vegetables, which is carried on most extensively in Ontario, British Columbia and Quebec, where climatic conditions for the growing of fruits and vegetables are favourable. The principal fruits canned in Ontario are apples, pears, plums, peaches, cherries, currants, gooseberries, blueberries, raspberries, and strawberries. In addition British Columbia has the apricot and loganberry. The vegetables canned include tomatoes, peas, corn, beans, beets, carrots, pumpkins, squash, spinach and asparagus. The canning season begins in June and continues throughout the summer and autumn until October, being at its height in July, August and September. In September of 1931 there were as many as 16,561 wage-earners employed in the canneries. This number declined sharply to 5,530 the following month.

The Minimum Wage Board of Saskatchewan gave notice during October that Order No. 6, which reduced the existing minimum wage rates for a period of five months commencing June 1, 1932, would remain effective until April 1, 1933. Order No. 6 (LABOUR GAZETTE, May, 1932, page 541) provided for a 10 per cent reduction in the rate for experienced female workers coming under the various orders of the Board, and for a 5 per cent reduction in the rates for adult learners. The reductions, however, do not apply to any employee, subject to a periodical or other layoff, whether by the hour, day, week or month, or who works less than the maximum number of hours per week permitted by the regulations of the Board.

## LABOUR LEGISLATION IN NEW BRUNSWICK AND PRINCE EDWARD ISLAND IN 1932

### New Brunswick

THE following is a brief summary of the legislation of labour interest enacted during the session which began on February 25, and ended on April 1, 1932.

#### Workmen's Compensation

The Workmen's Compensation Act was revised and consolidated with a number of changes, many of which embody recommendations of the Commission appointed in January, 1931, to inquire into the operation of the Act (LABOUR GAZETTE, March, 1931, page 267; April, 1932, page 378). "Average earnings" are to be computed on the weekly or monthly remuneration of the workman during the twelve months immediately preceding the accident, but when, in the opinion of the Board, this basis cannot conveniently be used, they are to be computed in such a manner as is best calculated to give the rate per week or month at which the workman was remunerated, but not exceeding \$1,500 per annum. The clause of the old Act was retained which authorizes the Board in dealing with average earnings of a workman under 21 years to take into consideration the fact that his wages would probably increase under normal conditions.

A new clause provides that, without restricting the generality of the term, permanent total disability shall include the loss of both eyes, both hands, both feet, or one hand and one foot. Persons engaged in office or other clerical work are omitted from the list of those excluded from the benefits of the Act. A subsection is added which provides that where the accident arose out of the employment, unless the contrary is shown, it shall be presumed that it occurred in the course of employment and vice versa.

Under the old Act when a workman was engaged on work which was performed partly within and partly without the province, the work was considered to be performed within the province and compensation was payable, provided the employer had included the workman on his payroll and notified the Board that he would be so engaged. This proviso is now deleted and the employer is charged with the duty of including such workman on his payroll and notifying the Board. Should he fail to do so he is individually liable for the payment of compensation unless the workman or his dependents can claim it under the law of the former's place of employment without the province.

Application for compensation must be made within six months from the happening of the accident, or, in case of death, within six months from the time of the death. Formerly application had to be made within one year after the occurrence of the injury.

Certain sections dealing with the powers of the Board have been redrawn. An appeal lies, as formerly, to the Supreme Court from a final decision of the Board on questions of law or jurisdiction, but except for this provision the Board is given exclusive jurisdiction in all matters and questions arising under Part I of the Act, its action or decision is not open to question or review in any court, and no proceedings by or before it may be restrained by injunction, prohibition or other process or proceeding in any court or be removable by *certiorari* or otherwise into any court. It is further provided that the decisions of the Board shall be upon the real merits and justice of the case and it shall not be bound to follow strict legal precedent.

Compensation is now payable for disability continuing for seven days, instead of for more than seven days as formerly. Where impairment of earning capacity does not exceed ten per cent the Board may commute the weekly payments for a lump sum unless, in the opinion of the Board, it would not be to the advantage of the workman to do so. Where deemed just, the impairment of earning capacity may be estimated from the nature of the injury, having always in view the workmen's fitness to continue in the employment in which he was injured or to adapt himself to some other suitable employment.

Compensation is payable to an invalid child without regard to the age of the child and for so long as, in the opinion of the Board, the workman, had he lived, would have continued to contribute to its support. In case of death compensation payable, exclusive of the expenses of burial, may not exceed, in the aggregate, 55 per cent of \$125 per month. Formerly such compensation was limited to 55 per cent of average earnings which might not exceed \$1,500 per annum.

If a workman deserts his wife and a child or children under 16 years of age, leaving them without adequate means of support, the Board may pay a portion of the compensation payable to the workman to his wife or the guardian of his children. Where the workman leaves no widow or the widow subsequently dies, a satisfactory foster mother maintaining the household and caring for the

children may receive the same compensation as the widow.

The term "medical aid" is extended to include artificial members and apparatus. A workman claiming compensation or to whom compensation is payable must, if required by his employer, submit to an examination by a qualified medical practitioner chosen and paid by the employer, and also, if required by the Board submit himself for examination by a medical referee chosen by the Board. If he fails to do so, or obstructs the examination, compensation is suspended until the examination has taken place. The Board may diminish or suspend compensation payments when a workman persists in dangerous or unsanitary practices imperilling or retarding his cure, or refuses to submit to necessary medical or surgical treatment.

The Board is authorized to take such measures as it may deem expedient to rehabilitate injured workmen in industry and for that purpose to make the necessary expenditures not exceeding in all the sum of \$15,000 per annum.

The workman, or someone on his behalf, must notify the employer as soon as practicable after the happening of an accident and must send a similar notice to the Board. Failure to give such notice does not bar the right to compensation if, in the opinion of the Board, the employer was not prejudiced thereby.

The Board is empowered to exclude industries from the operation of Part I of the Act.

Statements showing the amounts earned by all employees and the estimated amount of their wages during the current year are required from every employer on a date fixed by the Board. The employer must keep wage records in proper form within the province and produce them when required by the Board. If he under-estimates his payroll he is liable to pay the difference between his assessment and the amount which he would have paid on the basis of his payroll. A penalty not exceeding \$500 is provided for failure to furnish statements or for furnishing untrue statements. For default or delay the employer is also liable to pay interest on his assessment. A system of merit rating may be adopted by the Board. Where a deficiency in the amount realized by an assessment in any class is caused by the failure of some of the employers in that class to pay their share or by any disaster or other circumstance which, in the opinion of the Board, would unfairly burden the employers in that class, the deficiency may be made up by supplementary assessments upon employers in all the classes. The Board may also add to the assessment of

any or all classes a sum for the purpose of raising a disaster fund.

The section dealing with associations was amended and now provides that employers in any of the classes may form themselves into an association for accident prevention and may make rules for that purpose. The Board, if of the opinion that an association so formed sufficiently represents the employers in the industries included in that class, may approve such rules which when approved also by the Lieutenant-Governor in Council shall be binding upon all employers in the industries in the class. The Board may make a grant towards the expenses of any such association and may also pay all or part of the salary of an inspector or expert appointed by such an association for the purposes of accident prevention. The moneys thus expended are to be charged to the class represented by the association. "Class" is defined to include a group or such part or parts of a class as the Board may approve.

#### Factories Act

The Factories Act was amended to provide that the salaries of factory inspectors and the expenses of administering the Act shall be paid out of the accident fund of the Workmen's Compensation Board. Fines and penalties recovered under the Act are to be paid to the Board and form part of the accident fund. The administration of the Factories Act has been in the hands of the Board since 1920.

#### Compulsory School Attendance

An Act Respecting Compulsory Attendance at School was amended to make Part II of the Act operative in School District Number One, Parish of Madawaska, if a resolution to that effect is adopted by a majority of the qualified voters present at an annual meeting or a special meeting of the Board of School Trustees for the said District. Part II requires children between the ages of six and sixteen years to attend school for at least one hundred and twenty days in each school year, unless the physical or mental condition of the child renders such attendance impracticable. A child over 12 years of age who has passed Grade 7 or a child over 13 years of age who has attended school for sixty days during fourteen consecutive weeks in the preceding year may be exempted if necessity requires him to work. Part II further provides that no child under 16 years of age shall be employed by any person to labour in any business during school hours unless he has been properly instructed in certain school subjects for at least six months of the 12 months immediately preceding and has a satisfactory school certificate.

It is provided, however, that a child between 14 and 16 years of age may be excused from school attendance if he has a certificate of attendance for "a reasonable period" and is "reasonably proficient". No child under 13 years of age may be employed in any mechanical, manufacturing or mercantile establishment.

### Unemployment Relief

Three statutes deal with unemployment relief. An Act to Validate Assessments or Loans for Direct Unemployment Relief, validates assessments made by municipalities in order to take advantage of the Dominion Unemployment and Farm Relief Act, 1931. The other two laws authorize the raising of loans to finance public works and deal, respectively, with the City and County of Saint John, and the Province at large.

### Prince Edward Island

During the Session of the Legislature which opened on March 2 and closed on April 2, 1932, two statutes of labour interest were passed.

The Electrical Inspection Act provides for the inspection of electrical works and installations, which must conform to the requirements of the latest authorized edition of the Canadian Electrical Code. Inspectors appointed under the Act by the Lieutenant-Governor in Council must have full access to premises at

### Motor Vehicles

Sections dealing with the financial responsibility of owners and drivers were added to the Motor Vehicle Act. The driver's licence or owner's permit of any person convicted of certain offences, or who fails to satisfy a final judgment for damages for the death of any person or damage to property exceeding \$100, is to be suspended by the Minister in charge of the Act pending proof of financial responsibility given by such person to the Registrar of Motor Vehicles. If the Registrar finds that such driver was, at the time of the offence for which he was convicted, employed by the owner of the motor vehicle as a chauffeur, or operator, then, if the owner gives proof of financial responsibility, the chauffeur or operator shall be relieved of giving such proof in his own behalf.

all reasonable times, for the purpose of carrying out their duties. The Lieutenant-Governor in Council may make regulations concerning electrical installations with a view to the prevention of fire and injury to persons and property, and also respecting the qualifications and licensing of mechanics and contractors engaged in electrical work, and other matters.

An amendment to the Road Act enables the commutation of road and horse taxes by statute labour.

## WORKMEN'S COMPENSATION IN SASKATCHEWAN IN 1931

THE second annual report of the Workmen's Compensation Board of Saskatchewan reviews the administration of the Act during the calendar year 1931. The Workmen's Compensation Act of Saskatchewan became effective July 2, 1930, the provisions of the Act being outlined in the LABOUR GAZETTE, April, 1929, page 379. The province made an initial grant to the Board of \$25,000, which was credited proportionately to the general body of employers in 1930, as shown in the 1930 report. No further grant has been made by the province, and since 1930 the fund of The Workmen's Compensation (Accident Fund) Act has been entirely self-sustaining. "This fact is mentioned to correct an impression that exists in the minds of some of the employers and employees that the money paid out by the Board is furnished by the Government. The funds of the Board are wholly furnished by the employers of the province, as was intended when the Act was framed and adopted by the Legislature."

It is explained that the report for 1931 is a provisional summary, with adjustments to be made in practically all statistics. Accordingly what is presented for 1931 is subject to revision, while a final statement is given for the operations during 1930. The province of Saskatchewan, the Dominion of Canada, the Canadian National Railways and the Canadian Pacific Railway are treated as self-insurers, each carrying their own compensation costs and their own share of administration expenses apportioned according to the disbursements made on their behalf. These four employers are referred to in the report as "depositors," as they each keep on deposit with the Board sufficient funds to meet the obligations incurred on their behalf as they accrue.

On the 1931 account, total receipts were estimated at \$616,391.71, with total disbursements of \$513,246.63, leaving an estimated surplus for 1931 of \$103,145.08. The surplus for 1930 was \$176,818.97, leaving an estimated surplus for 1930 and 1931 of \$279,964.05.

The wage expenditure for six months' period from July 2, 1930 (when the Act came into effect), until December 31, 1930, was \$24,077,244. For the whole of 1931 the wage expenditure is estimated at \$40,487,546. These figures are exclusive of the payrolls of the Dominion and Provincial Governments, which, as previously explained, are treated as self-insurers.

**Accidents.**—The total number of accidents reported for 1930 was 3,335, including 17 fatalities, while in 1931 there were 4,722 accidents with 18 fatalities. At the end of 1931 a considerable number of accidents were not yet reported and were therefore not included in the total for the year. At the end of 1931, the number of widows' pensions being paid was 13, while the number of children's pensions was 17. Other pensions totalled 35. Final statistics for 1930 indicated that the total number of days lost in that half year through accidents numbered 44,852, while the average days lost for temporary total disability was 24.88. The average age of workmen injured in 1930 was 35.42 years, while the average weekly wage was \$24.08.

Of the 3,832 accidents paid for in 1931, there were 1,719 which entailed medical aid only; 2,018 were classed as temporary disability; 80 as permanent partial disability; 2 as permanent total disability, while 13 were fatal cases. The number of accidents involving benefit payment during the six months' operation of the Act in 1930 totalled 2,639, of which 1,102 involved medical aid; 1,468 were temporary disability cases; 52 permanent disability; and 17 fatalities.

An analysis of the statistics for 1930 showed that in 537 cases the disability terminated in one to two weeks after the accident. The causes of the 2,639 accidents in 1930 were given as follows: prime movers, 109; working machines, 146; hoisting apparatus, 13; dangerous substances, 114; stepping on or striking against objects, 432; falling objects, 211; handling objects, 624; tools, 96; runaways and animals, 62; moving trains, vehicles, etc., 127; falls of persons, 299; all other causes, 406.

During 1931, 4,967 employers made returns to the Board, as compared with 4,214 in 1930. On account of employers being in default in payment of assessments due in 1930, 287 executions were issued for collection by sheriffs' levy. Out of the twenty main classes into which employers are divided, two show a debit balance, indicating that these classes have paid less into the fund than they have cost the fund. Benefits paid out in 1931 amounted to \$409,410.45, while the cost of administration was \$50,928.39 or 12.4 per cent in proportion to benefits awarded.

**Accident Prevention.**—During 1931, accident prevention associations were formed at Saskatoon, Moose Jaw and Prince Albert. It is intended to complete the work of organizing local safety associations in 1932, and when the larger centres have been organized, to encourage the formation of a central Safety Association representative of the whole province, in charge of a permanent official of the association, and, it is pointed out, the Board is empowered to make a grant to such an association and anticipates that it will in due course do so.

In a further effort to prevent accidents, inspectors of the provincial Department of Labour, acting on behalf of the Board, investigated many cases where defect of system or carelessness on the part of employer or employee were indicated in reports to the Board. The Board also had an accident prevention exhibit at the Regina Exhibition. An employer and an employee were convicted and sentenced during the year for fraudulent practices against the Board.

**Payrolls.**—The following table gives an estimate of the wage expenditure for 1931 in Schedule 1, by classes:—

Class	Wage Expenditures
	\$
Canadian Pacific Railway.....	3,446,000
Canadian National Railway.....	3,800,000
Province of Saskatchewan.....	no wage estimate required
Dominion of Canada.....	2,508,500
Cities of Regina, Saskatoon, and Moose Jaw.....	2,304,760
Municipalities with the exception of Regina, Saskatoon, and Moose Jaw.....	410,380
Lumbering.....	1,705,244
Planing mills, etc.....	1,201,600
Mining.....	386,913
Gravel pits, brick and glass works.....	3,175,107
Garages, machine shops, etc.....	602,368
Gasoline, chemicals, etc.....	423,960
Breweries, bottling works, etc.....	5,955,190

An agreement was recently negotiated between the Transport and General Workers' Union of Great Britain and a large Wolverhampton firm manufacturing paint, varnish and ink. It provides for a 40-hour working week at the same wages the workers have been receiving for 47 hours. No employee is to be laid off for at least the next six months, and after that, if it is necessary to reduce forces, all displaced workers will be pensioned or otherwise compensated.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Question of Effect of Age on Accident Liability

The directors of the Quebec Association for the Prevention of Industrial Accidents (LABOUR GAZETTE, August, 1931, page 865; October, 1931, page 1102), recently called the attention of the provincial Workmen's Compensation Board to figures published at Paris by the "Association des Industriels de France," which show the frequency of industrial accidents on railways among employees in the various age groups. The figures show that, in the largest railway service in France, employees between the ages of 40 to 49 years have an accident frequency of 16 per cent only, while the greatest number of accidents are suffered by workmen in the class comprised between the ages of 20 years to 29 years, who have the high frequency of 25.9 per cent. It is also shown by the figures that the lowest rate on accidents is obtained by employees over 50 years of age, the percentage being 13.4. The highest rate is shown to be that of the apprentice class, which has a percentage of 40.

These figures were interesting to the directors as it had been reported that some firms claimed that men over forty years of age could not be employed because of technical and other reasons.

The directors advanced the following reasons for the employment or retention of older workers in preference to new men:—mental and physical abilities are more important than age; middle-aged and older workers are more efficient and experienced; middle-aged and older workers are steadier and reduce labour turnover; middle-aged and older workers are less liable to injure themselves; lack of speed of middle-aged and older workers is offset by other qualities; middle-aged and older workers are more faithful and reliable. The directors further called attention to the fact that middle-aged and older workers are more apt to take their work seriously, to think of the job in hand and to study and solve the various problems that may arise during the course of their work.

### Safety Rules for Mechanical Refrigeration in Manitoba

Regulations have been issued under the Steam Boiler Act of Manitoba for the construction, installation, inspection, operation and maintenance of mechanical refrigerating systems. The administration of this Act is in charge of the Provincial Bureau of Labour. The Regulations are divided into three parts according to the size of the refrigeration system in each

class. Those applying to the larger plants relate to the following subjects: Automatic bye-pass valves; safety valves on liquid receivers; discharge of refrigerants; ammonia discharged into water tank; liquid receivers—application of inter-provincial regulations; hydrostatic test pressures; stop valves on liquid receivers; pressure gauges required; level gauges; piping and fittings; liquid traps required on suction lines; charging connection; machinery room to be ventilated; machinery room to have direct exit; respirators or gas masks to be provided; storage of refrigerant; inspection and report; hydrostatic test; owners to notify Bureau of Labour; inspection certificates.

Part 2 (applying to systems of the second class) contains regulations on the subjects of industrial and commercial systems; apartment dwelling system; limitations of commercial systems; machinery room; commercial locations; air conditioning system; design and construction; safety devices; construction location, size and discharge; pressure relief valves; pressure relief; stop valve; gauges; discharge of refrigerant; relief valves; rupture members; fusible plugs; supports; refrigerant lines; water; stop valves; copper tubing; tests; refrigerants; notification of tests; posting of tests; part making; operating precautions—user's liability; withdrawal of refrigerants; tests; instructions; marking; refrigerant odorant; refrigerator fastening; 50-lb. systems; owner to notify Bureau of Labour; inspection certificates.

Part 3 applies to smaller systems, the regulations being under the following heads:—Unit systems; pressure relief device; design and construction; marking; materials, installation and testing; copper tubing; tests.

### Silicosis and Asbestosis

The British Home Office has issued a memorandum on the industrial diseases of silicosis and asbestosis. The object of the memorandum is to set out briefly what these diseases are, how and where they are produced, the means which can be taken to prevent them, the provision made for compensation for workers suffering therefrom, under the Workmen's Compensation Acts, and the arrangements for the medical examination and certification of workmen. The Home Office has issued four codes of regulations for the protection of those engaged in processes involving the inhalation of silica dust, and another code of regulations for the protection of those engaged in the asbestos industry. Under certain conditions, workmen

suffering from silicosis or asbestosis may claim compensation under the Workmen's Compensation Acts. Five schemes have been made

in accordance with which such compensation may be payable, and particulars of these are given in the memorandum.

### Hospital Treatment for Employees of Consolidated Mining and Smelting Company

References have been made in previous issues of the LABOUR GAZETTE to the policy of the Consolidated Mining and Smelting Company of Canada in promoting various plans for the benefit of its employees. A review of the existing program of industrial relations was given in the issue for February, 1930, page 154. The company recently adopted, after a favourable vote by its employees, an additional plan whereby hospitalization is to be extended to the families and dependants of those employed in its plants. The first vote on the hospitalization plan for dependants was taken in November, 1929, when the affirmative majority was 83 and considerably below the required two-thirds. A second vote was taken recently and the majority in favour of the proposal was 423, although it still lacked 135 votes of the two-thirds required to put the plan into effect. However, it was decided that the vote in favour of the plan was sufficiently indicative of the wish of the majority, and accordingly the Workmen's Compensation Board authorized the plan being put into effect.

The agreement giving effect to the plan provides hospitalization for all dependants of the company, the required funds to be obtained out of the individual employee contributions amounting to 35 cents for each half calendar month. The employees' contribution is not to be reduced unless the surplus equals the amount of hospitalization charges for services during the preceding three months, and then any such reduction must still leave the contributions sufficient to maintain the surplus. A medical committee of employees has the custody and control of the fund thus created in trust for the employees, and it is the duty of this committee to pay the hospitals out of the fund all accounts received for services to the employees.

Hospital treatment includes the usual public ward hospital service, provided, however, that if the attending physician considers a private ward necessary it will be supplied; otherwise a patient may pay directly to the hospital the difference between public and private ward accommodation if accommodated in a private ward. Hospital treatment will continue so

long as, in the opinion of the doctor in charge of the case, it is necessary, but will not exceed ninety days, unless approved by the medical committee on the recommendation of the doctor in charge.

Hospitalization is not provided in cases of venereal disease, or where the use of drugs or intoxicants has caused the sickness, or in cases of chronic ailment present at the time an employee first entered into employment with the company, or which is disclosed or discovered within thirty days of his entering into such employment (The latter clause to apply only to cases where the employee has entered into the employment of the company after the date when the agreement comes into operation).

It was announced that the first deduction of 35 cents would be made on the November 23 pay day, but dependants will be covered from November 1. The employees themselves already have an hospitalization agreement which came into effect in August, 1927. It is understood that with the inclusion of the 70 cents per month entailed by the new hospitalization agreement covering dependants, the gross deduction (for both the employees and the dependants' agreements) will amount to \$2.50 per month.

The Canadian Engineering Standards Association calls attention in its quarterly bulletin to the action of the Imperial Economic Conference, held at Ottawa last summer, in regard to industrial standardization among the members of the British Commonwealth. A special sub-committee on industrial standardization was appointed, the Canadian representatives being Dr. H. M. Tory, president of the National Research Council of Canada, and Mr. B. Stuart McKenzie, secretary of the Canadian Engineering Standards Association. The sub-committee, in their report to the conference, laid stress on the value of industrial standardization in the promotion of trade, pointing out that uniformity in standards throughout the Empire should be encouraged by all the governments concerned, and a number of definite recommendations were made with a view to the securing of this result.

## NOTES ON LABOUR UNION ACTIVITIES

### British Columbia Provincial Association of Fire Fighters

The ninth annual convention of the British Columbia Provincial Association of Fire Fighters was held recently at Vancouver, with eleven delegates present. President Macdonald, who presided, reviewed the work of the Association during the past year, and pointed out the difficulties which were confronting not only the members of affiliated locals but firemen in general throughout Canada and the United States.

The committee on officers' reports approved of the executive report and recommended that the incoming officers carry on the endeavours of the Association to secure the eight-hour day. An amendment to the constitution, providing for the auditing of the books of the secretary-treasurer before adjournment of the annual convention and the findings reported to that meeting, was adopted.

Resolutions were adopted: (1) recommending that aerial wires be kept seven feet clear of roof peaks; (2) instructing the executive to press for the establishment of an Industrial Disputes Act covering civic and municipal employees; (3) recommending to the International Association of Fire Fighters that a suitable button be issued by the International to be purchased by the locals for presentation to pensioned or retired members.

Chief officers elected were: President, N. Macdonald, 1136 McLean Drive, Vancouver; Secretary-treasurer, Charles A. Watson, 1624-8th Avenue East, Vancouver.

Vancouver was chosen as the convention city for 1933.

### Organization of Catering Industry at Halifax

Union organization of the employees in the catering industry of Halifax became effective recently when the cooks and waiters of that city held their inaugural meeting. The new union was established largely through the efforts of the Organizing Committee of the Halifax Trades and Labour Council. It was announced that this most recent addition to the ranks of organized labour will immediately become affiliated with the Trades and Labour Congress of Canada and also with the Halifax Trades and Labour Council. The temporary officers are: J. J. McLellan, President; W. Smith, vice-president; R. Crocker, Financial secretary; R. Darragh recording secretary; H. Stuts, master-at-arms.

### I.F.T.U. recommends 40-Hour Week

At a meeting of the Executive Committee of the International Federation of Trade Unions (with which body the Trades and Labour Congress of Canada is affiliated), held at Berlin during September, it was unanimously agreed that energetic measures should be taken by the International Labour Office to secure the introduction of a statutory forty-hour week. To achieve this object, it was thought that the convening of a special conference of the three groups (governments, employers and workers) would result in practical and immediate action.

With reference to the agenda of the 1934 session of the International Labour Conference, the Committee decided that a final choice should be made from the following four important questions: (1) holidays with pay; (2) limitation of maximum loads; (3) forced labour (penal sanctions); (4) enlargement of the schedule of industrial diseases.

## Regulation of Collective Agreements in Brazil

The Head of the Provisional Government of Brazil issued on August 23, a Decree relating to collective agreements. The Decree defines a collective labour agreement as an agreement relating to conditions of employment, concluded between one or more employers and their workers, or between unions or other associations of employers and unions or other associations of workers. In the statement of objects and reasons, the Minister of Labour observes that in spite of his personal preference for a system based on trade unionism, the Decree has followed the lines rendered necessary by the present position in Brazil and

in particular by the absence of adequate trade union organization. Agreements are voluntary; but when an agreement is concluded in one or more states or municipalities covering three-quarters of the employers and workers in any industry, the Minister of Labour, Industry and Commerce may, on application by either of the contracting parties and after consultation with the conciliation committee concerned, declare the provisions of the agreement binding on all other employers and workers in that industry, whose circumstances are approximately the same, in the states and municipalities concerned.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Reduction of Hours of Work

The Governing Body of the International Labour Office at a meeting held at Madrid during October decided to include the question of the reduction of hours of work on the agenda of the 1933 session of the International Labour Conference. This decision is a sequel to the discussions and decisions of the Governing Body at the special meeting held a few weeks ago (LABOUR GAZETTE, October, 1932, page 1085), when Mr. de Michelis (Italian Government representative) proposed that a special session of the Conference should be called with a view to the adoption of international measures for the immediate reduction of hours of work, as a means of alleviating unemployment. At that meeting the Governing Body adopted by a majority a modified proposal, to the effect that the technical problems which arise in connection with any reduction of hours of work should be considered by a Tripartite Preparatory Conference representing governments, employers and workers, to be held in Geneva in January next. The conclusions of that Conference were to be submitted to the Governing Body in the course of the same month, and the Governing Body was to consider the desirability of communicating them to the coming World Economic Conference and possibly to the governments, in order that they might perhaps provide guidance for the conclusion of bilateral or multilateral agreements, pending decisions which might be taken on the subject by the 1933 Session of the International Labour Conference.

The question whether that Session of the Conference should be called upon to consider the matter as a definite item of its formal agenda could not be settled until the Madrid meeting. As announced above, it has been decided affirmatively. The Governing Body also decided that the Preparatory Conference shall meet on January 10 and that, in addition to all the States Members of the Organization, those States which do not belong to the Organization shall be invited to take part, in view of the world-wide nature of the problems to be studied.

### International Conference of Migration Statisticians

An International Conference of Migration Statisticians met at the International Labour Office from October 3 to 7, 1932. Twenty-five countries were represented as follows: Albania, Austria, Brazil, Canada, China, Cuba, Denmark, Estonia, Finland, France, Ger-

many, Hungary, Italy, Japan, Mexico, the Netherlands, Nicaragua, Poland, Portugal, Spain, Sweden, Switzerland, the United States of America, Uruguay and Yugoslavia.

The Conference noted that none of the methods of compiling statistics of migration in different countries is entirely satisfactory or makes it possible to observe the phenomenon of migration completely in all its aspects, and gave its attention particularly to port statistics, statistics of declarations of residence, statistics of frontier control, and statistics of coupons detached from certain documents. Certain observations were made by the Conference regarding these particular classes of statistics with a view to arriving at more adequate information.

A number of resolutions were adopted unanimously by the Conference looking to the improvement of migration statistical services from an international point of view.

### Legislative Jurisdiction in Canada with regard to Draft Convention Limiting Hours of Work in Coal Mines

Reference was made in the LABOUR GAZETTE, July, 1931, page 794, to a Draft Convention which had been adopted at the Fifteenth Session (May 28-June 18, 1931) of the International Labour Conference, limiting hours of work in coal mines with a view to uniformity and the establishment of stability in this industry. The text of the Draft Convention was printed on pages 798-801 of the same issue.

The text of the Draft Convention was submitted to the Law Officers of the Crown for examination, with a view to determining whether and to what extent the subject matter lay within the competence of the Dominion Parliament or of the Provincial Legislatures. A report on the subject was submitted to the Privy Council on October 13 by the Minister of Justice and following is the text of a Minute of the meeting of the Privy Council which was approved by His Excellency the Governor General on October 26, 1932 (P. C. 2325):—

P.C. 2325 (October 26, 1932)

The Committee of the Privy Council have had before them a report dated 13th October, 1932, from the Minister of Justice, submitting that he has had under consideration, upon reference from the Department of Labour, the authentic text of the draft convention limiting hours of work in coal mines, adopted by the International Labour Conference at its Fifteenth Session (28th May—18th June, 1931), with a view to determining whether and to

what extent the subject matter of this draft convention lies within the competence of Parliament or of the provincial legislatures, in order that the said draft convention may be brought by the Dominion Government, in discharge of its obligation under Article 405 of the Treaty of Versailles and the corresponding article of the other Treaties of Peace, before the authority or authorities within whose competence the matter lies, for legislative or other action.

The Minister observes that the draft convention embodies various provisions with regard to the regulation of hours of work of workers employed in coal mines, that is to say, in any mine from which hard coal or lignite, or principally hard coal or lignite together with other minerals, is extracted. It contemplates that such provisions shall be given compulsory effect against the management of every mine to which such provisions are to be respectively made applicable. Ratification of the convention would consequently involve an obligation on the part of each Government concerned to give effect to the provisions of the convention by legislative action in so far as existing laws may not afford adequate authority for that purpose.

The provisions of the convention which require legislative action to make them effective clearly involve legislation which, in its subject matter, would be directly concerned with classes of subjects assigned exclusively to the Provincial Legislatures by sec. 92 of the British North America Act, 1867; in particular "Local Works and Undertakings" (sec. 92 (10)); "Property and Civil Rights in the Province" (sec. 92 (13)) and perhaps also "Generally all matters of a merely local or private nature in the Province" (sec. 92 (16)). While legislation upon the subject matter of the provisions of the convention might perhaps be enacted by the Parliament of Canada in an ancillary or incidental way in relation to any coal mine which has been declared to be a work for the general advantage of Canada: (sec. 91 and sec. 92 (10) (c), British North America Act, 1867); Union Colliery Company of British Columbia v. Bryden (1899) A. C. 580, 585, the Minister of Justice is of opinion that legislative jurisdiction touching that subject matter is, as regards those parts of Canada included within the several Provinces, primarily vested in the Provincial Legislatures and that it is within the competence of the several Provincial Governments by appropriate legislative action to give effect to the proposals of the convention generally and comprehensively, except for those parts of Canada which are not included within the limits of any province. As to the latter, exclusive legislative jurisdiction in relation to the subject matter of the convention is vested in the Parliament of Canada. The Minister observes that the decision of the Supreme Court of Canada in the matter of *Legislative Jurisdiction over Hours of Labour* (1925) S.C.R. 505, affords strong support for the opinion above expressed.

The Committee concur in the foregoing and advise that a copy hereof, together with an authenticated copy of the Draft Convention, be transmitted to the Lieutenant-Governors of the respective provinces for the consideration of their respective Governments with a view to the enactment of legislation or such other action upon the subject-matter of the Draft Conven-

tion, within the provincial sphere of jurisdiction, as each Government may be advised to take.

### Ratification of Conventions

*Industrial and Labour Information*, the weekly publication of the International Labour Office, announces in its issue of October 17 the ratification by Spain of six Conventions adopted at various sessions of the International Labour Conference. These six ratifications, together with others previously registered (including eight registered a few weeks ago), bring the total number standing in the name of Spain to thirty—the largest number recorded for any of the States Members of the Organization. Spain has now ratified all but three of the Conventions so far adopted—that relating to the inspection of emigrants on board ship (1926), the revised Convention for the protection against accidents of workers employed in loading or unloading ships (1932), and the Convention fixing the minimum age for admission of children to non-industrial employment (1932). In connection with the second of these three, it may be noted that the original Convention of 1929 for the protection of dock workers was among the eight Conventions ratified by Spain last August.

The Convention which has so far obtained the largest number of ratifications (28) is that adopted in 1925 concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents—a problem which, by its very nature, is peculiarly susceptible of settlement by international compact.

Of the thirty-three Conventions, all but four are in force and binding upon those States which have ratified them. Two of the four not yet in operation are those adopted at this year's Session of the Conference. Another is the Convention of 1930 for the regulation of hours of work in commerce and offices; this has obtained the two ratifications required, but will not come into force until next August, twelve months after the second ratification (that of Spain) was registered.

There remains the Convention of 1931 for the limitation of hours of work in coal mines. This also has been ratified by Spain, but, under a special provision included in the Convention, it will not come into force until six months after its ratification by two out of seven specified States: Belgium, Czechoslovakia, France, Germany, Great Britain, the Netherlands and Poland. Negotiations with a view to simultaneous ratification by those countries have been initiated by the British Government.

### Admission of Iraq to the League of Nations

On October 3, 1932, the Kingdom of Iraq was admitted to the League of Nations by the unanimous vote of the fifty-two delegations attending the Thirteenth Session of the Assembly of the League. At the same time, in accordance with the Peace Treaties, Iraq became a Member of the International Labour Organization. Following the admission of Mexico a year ago and of Turkey three months ago, this event marks a further stage in the progress of the League and the Labour Organization towards complete universality, and brings the number of Members of the Organization up to 58. It is also of particular significance in that Iraq is the first mandated territory to be declared to be able to stand alone and to take its full place in the community of nations.

Direct contact between the International Labour Office and Iraq had already been established before Iraq's admission to the League. In 1931 a Committee was appointed by the Iraq Cabinet to prepare draft labour legislation, and a small delegation, headed by the present Minister for Foreign Affairs, visited the Office in order to obtain informa-

tion which would assist the Committee in its task. Thus the way has been prepared for fruitful co-operation between the Office and the newest Member of the Organization.

### Publications of the Office

*Pneumoconiosis*.—The International Labour Office has just added to its "Studies and Reports" Series a bibliography, under the head of "Pneumoconiosis", of all the works published up to December 1931 on the general physiology and pathology, clinical pathology, and radiology of pneumoconiosis. This bibliography includes works dealing not only with the harmful effects of silica, but also with those due to dusts in general. It does not, however, as a rule mention the numerous works on medicine, medical pathology or industrial medicine which contain chapters on pneumoconiosis.

The publication is intended only as a preliminary step leading towards the drawing up of a full bibliography, which might subsequently also cover the questions raised in the field of health and legal compensation by diseases due to dusts.

### Share-the-Work Movement in the United States

The Directors of the American Petroleum Institute, which is represented by virtually the entire oil industry in the United States, has recommended its member companies, as an emergency measure, to reduce working hours to a maximum of forty a week or an equivalent. Mr. Walter Teagle, President of the Standard Oil Company of New Jersey, and Chairman of the Co-ordination Committee of the "Share-the-Work" movement of the Federal Reserve Banking and Industrial Committees, estimated that the introduction of the forty-hour week would increase the number of employees by 31 per cent.

The United States Chamber of Commerce has endorsed the efforts which are being made by the co-ordination group of the "Share-the-Work" movement set up by the Federal Reserve Banking and Industrial Committees to examine methods of spreading the existing volume of employment. The President of the Chamber of Commerce was also authorized to circularize the affiliated organizations, asking each one to inform its members of the methods of spreading work most applicable in each field of business and that each

organization should inform the Chamber of Commerce of the United States at least once a month for six months of the number of weekly hours per employee in each enterprise, and the extent to which the spreading of employment had been effected. The committee did not recommend any specific method or methods of spreading work, but suggested that the Board of the Chamber of Commerce should authorize the collection and dissemination of information on plans which have been successfully followed. In view of the extent of unemployment, the Board was also advised to urge employers to support the "Share-the-Work" movement by a wider distribution of work in offices, shops, banks and all other places of business, and that hours of work should be restricted to not more than forty in the week for each person employed during the present emergency.

The report of the United States Chamber of Commerce on this subject was adopted following an interview between the President of the Chamber of Commerce and President Hoover.

## SEVENTH CENSUS OF CANADA, 1931

A PRELIMINARY account of the results obtained by the Seventh Census of Canada, showing the numbers of the wage earners of Canada at work and not at work on June 1, 1931, has been published by Dominion Bureau of Statistics in bulletin form. A re-

port giving the figures in so far as they related to cities and towns with a population of 5,000 or over, was given in the *LABOUR GAZETTE*, July, 1932, page 784. The following is the text of the Bulletin (omitting Table II of Part II):

### Wage Earners of Canada at Work and Not at Work on June 1, 1931, Together with Causes given by Wage Earners reporting as "Not at Work"

The group of "wage earners" is one of three into which the "gainfully occupied" population is divided at the census. The other two are described as "employers" and as workers "on own account," respectively, the workers "on own account" including such classes as farmers, country blacksmiths, small storekeepers, doctors, lawyers and others who give their own time and labour to their occupation, and do not employ others therein. The "wage earners" are much the largest of the three groups, and, as defined by the census, include each and every person "who works for salary or wages, whether he be the general manager of a bank, railway or manufacturing establishment or a day labourer."

At the census of June 1, 1931, a comprehensive investigation was made of the problem of "unemployment" among the wage earners of Canada. In the first place, every wage earner in the country was asked whether or not he was at work on the date of the census, Monday June 1, 1931, and those who answered in the negative were further asked the reason for not being at work on the above date, the reasons to be stated under such headings as "no job," "temporary lay off," "strike or lock-out," "illness," "accident," etc. This investigation was made in order to get a clear and sharply defined conspectus of the employment situation at a particular point of time.

In the second place, every wage earner in the country was asked to state how many weeks he had been out of work during the twelve months preceding the date of the census—that is, how many weeks he had been out of work between June 1, 1930 and June 1, 1931, together with the number of weeks out of work for each of the specified causes, "no job," "temporary lay off," "illness," "accident," "strike or lockout," "other causes." A comprehensive analysis of the information secured under this second heading classified by occupation, birthplace, citizenship, etc., is in progress.

The present bulletin deals with the first of the two enquiries—the analysis of the wage

earning population as "at work" or "not at work" on a specified date—the official date of the census, June 1, 1931—and the causes stated for not being at work on that date.

The bulletin falls into two parts. Part I is concerned with Dominion and provincial totals of wage earners at work and not at work on June 1, 1931, and with the reasons assigned by the latter for not being at work on that day. Part II is a record of those at work and not at work on June 1, 1931, in every urban community of 1,000 population and over in the Dominion. In Part II, chief attention is devoted to wage earners of 20 years of age and over who are out of the apprenticeship stage and in most cases have others dependent upon them. In this part the tables give the number at work and not at work and do not enter into any analysis of the causes, since this analysis has been made in Part I in sufficient detail for certain broad conclusions as to the reasons for not being at work to be drawn. Totals are given by provinces for cities of 30,000 and over, urban communities of between 5,000 and 30,000, and smaller urban communities of between 1,000 and 5,000 population.

#### PART I—WAGE EARNERS "AT WORK" AND "NOT AT WORK" IN THE DOMINION AND THE PROVINCES ON MONDAY, JUNE 1, 1931.

The grand total number of persons in the Dominion coming within the census definition of "wage earners" was 2,564,879 at the date of the census. Of this total, 2,093,211 or 81·39 per cent, were actually at work on the date of the census, while 471,668 or 18·61 per cent were not at work on the date of the census. In other words, out of every 10,000 wage earners in the Dominion, 8,139 were at work and 1,861 were not at work on June 1, 1931. Of those not at work, 392,809 stated that they were not at work owing to having "no job". In the consideration of this figure it has to be remembered that even in times of great industrial activity there are always many

thousands of workers "between jobs", while many thousands more are casual labourers, who may have "no job" to-day but may be employed to-morrow. This figure of 392,809, being 15·32 per cent of all the wage earners of the Dominion, or 1,532 out of every 10,000, may be regarded as giving the number of "the unemployed", in the ordinary meaning of the term, as at the date of the census. Approximately five out of every six who were not at work on June 1, 1931, gave the reason as "no job".

The other reasons advanced by wage earners for not having been at work on June 1, 1931, were of less importance. The considerable total of 42,443 reported that they were not at work owing to "temporary lay off". This number, however, was only 1·66 per cent of the wage earners of the Dominion or one out of every sixty wage earners in the country. Further, these wage earners had a job to go back to, so that their position was quite different from that of those reporting "no job". "Strike or lockout" was given in only 379 cases as the reason for not being at work on June 1, so that only about one out of every 7,000 wage earners in the country was not at work as the result of an industrial dispute—an excellent record in the circumstances.

Personal reasons were assigned by those not at work on June 1, 1931, in 30,177 cases, including 25,718 cases of illness and 4,459 cases of accident. The 25,718 constitute about one per cent of the grand total number of wage earners in the country, and this might be taken to indicate that the average toll taken by illness among our wage-earning population is about one per cent of normal full time or about three days in the working year. "Accident" cases were responsible for about one-sixth of one per cent of the wage earners not being at work on the date of the census—one person out of every six hundred. Thus "accident" would appear to be a minor cause of loss of time, averaging half a day per wage earner per annum.

Various reasons not lending themselves conveniently to tabulation were assigned by 2,277 persons for not being at work on June 1, 1931, while in 3,583 cases the reason for not being at work could not be obtained. As these two groups taken together were less than one-quarter of one per cent of the total number of wage earners, the lack of definite information in their cases does not materially affect the delineation of the general employment situation on the date of the census.

#### Sex Distribution of Wage Earners at Work and Not at Work on June 1, 1931

Heretofore the total wage earning population of the Dominion has been considered, without distinction of sex. When that dis-

tinction is made, as in Table I on next page, it is at once observed that the females "not at work" on June 1, 1931, are a much smaller percentage of the total female wage earners than the males "not at work" are of the total male wage earners. Out of 2,017,606 male wage earners in Canada on the date of the census, 1,594,612 or 79·03 per cent of the total were at work and 422,994 or 20·97 per cent were not at work. On the other hand, out of a total of 547,273 female wage earners in Canada at the date of the census, 498,599 or 91·11 per cent were at work and only 48,674 or 8·89 per cent were not at work. Thus the percentage "not at work" among male wage earners was considerably more than twice as large as among female wage earners.

If the wage earners with "no job" at the date of the census are compared—the really "unemployed"—the same conclusion is reached. Out of 2,017,606 male wage earners resident in Canada at the date of the census, 356,549 or 17·68 per cent, or rather more than one-sixth, had "no job"—were unemployed at the date of the census. Out of 547,273 female wage earners, however, only 36,260 or 6·63 per cent of the total had "no job". In other words, one out of every six male wage earners and one out of every fifteen female wage earners was unemployed at the date of the census.

Reasons other than "no job" were given for not being at work on June 1, 1931, by 3·29 per cent of all male wage earners and by 2·26 per cent of all female wage earners. Among these reasons "temporary lay off" accounted for 1·83 per cent of all male wage earners and 1·00 per cent of all female wage earners not being at work on the date of the census. Again, "strike or lockout" accounted for the absence from work of 353 males and of only 26 females.

Among the personal reasons for not being at work, "illness" bulked equally large among male and among female wage earners, 1·00 per cent of each sex being not at work on June 1, 1931, for this reason. On the other hand, the greater hazards to which males are subjected in the course of their employment and outside of it are shown by the fact that 0·21 per cent of all male wage earners and only 0·04 per cent of all female wage earners were not at work on June 1, 1931, as a result of accidents.

Preliminary general results of the investigation of wage earners at work and not at work on June 1, 1931, and the reasons given by those not at work are given for the Dominion as a whole by numbers and percentages, in the following table.

TABLE I—TOTAL NUMBER OF WAGE-EARNERS IN CANADA AT WORK AND NOT AT WORK ON JUNE 1, 1931, WITH CAUSES FOR WAGE-EARNERS NOT BEING AT WORK ON THAT DATE

(Preliminary figures)

	Total wage-earners			P.C. of wage-earners		
	Both sexes	Males	Females	Both sexes	Males	Females
	No.	No.	No.			
Total number of wage-earners.....	2,564,879	2,017,606	547,273	100.00	100.00	100.00

Total number of wage-earners not at work.....	471,668	422,994	48,674	18.39	20.97	8.89

### Comparison by Provinces of Causes for Not Being at Work

While in the Dominion as a whole, 18.39 per cent of all wage earners of both sexes were not at work on June 1, 1931, the corresponding figure for the provinces varies all the way from 6.79 per cent in Prince Edward Island to 24.69 per cent in British Columbia. Such wide differences make a closer analysis necessary.

**"No Job."**—First, those of both sexes who have "no jobs"—the really unemployed—are shown in Table II to vary in actual numbers all the way from 620 in Prince Edward Island to 100,442 in Quebec and 130,442 in Ontario. When we refer to the percentage figures of Table III, we find that the variation is from 5.04 per cent of all wage earners in Prince Edward Island to 21.55 per cent in British Columbia. The Prairie Provinces show higher percentages of "no jobs" than the Dominion percentage of 15.32, Manitoba showing 18.84 per cent of all wage earners as having no jobs at the date of the census, Saskatchewan 18.10 per cent and Alberta 17.04 per cent. On the other hand, Quebec with 14.49 per cent and Ontario with 13.52 per cent of jobless at the date of the census were below the average of the Dominion, New Brunswick with 16.79 per cent of jobless, was distinctly worse off than Nova Scotia, which had only 12.03 per cent of jobless on June 1. These figures indicate the relative position of the provinces with regard to employment and unemployment.

**"Temporary Lay Off."**—"Temporary lay off" accounted for 1.66 per cent of all wage

earners (1.83 per cent for males and 1.00 per cent for females) being away from their work on Monday, June 1, 1931, the total of 42,443 including 36,971 males and 5,472 females. The highest percentage of "temporary lay off" were found in Nova Scotia with 5.08 per cent of all wage earners and 6.12 per cent of all male wage earners "laid off." Alberta and British Columbia reported 3.33 per cent and 1.70 per cent respectively of all wage earners "laid off." In all three provinces a large proportion of those temporarily "laid off" were employed in the coal mines. In the chief industrial provinces of Ontario and Quebec, the percentages of "temporary lay off" were 1.78 and 0.88 respectively.

**"Strike or Lockout."**—The only province where the number of wage earners reporting themselves as not at work owing to "strike or lockout" was an appreciable fraction of the total working force was British Columbia, where nine per ten thousand of all male wage earners were not at work on June 1, 1931, for this reason. The actual number in this province not at work owing to differences with employers was 169.

**"Illness."**—"Illness," as a personal reason for absence from work, may be expected to account for a fairly even amount of absence from work throughout the various provinces. However, while the Dominion average is exactly one per cent of the total number of wage earners for both sexes as well as for males and females respectively, Nova Scotia shows 1.64 per cent of all males giving illness as the reason for not being at work on June 1, 1931. Quebec came next with 1.22 per

TABLE II.—WAGE-EARNERS OF CANADA AT WORK AND NOT AT WORK ON MONDAY, JUNE 1, 1931, BY SEX AND PROVINCE, WITH NUMBERS NOT AT WORK FOR VARIOUS CAUSES

cent of all males reporting absence from work as due to illness. Ontario was slightly below the Dominion average with 0.94 per cent of its male wage earners not at work on June 1, 1931, because of illness. In the Prairie Provinces the proportions were lower still, Manitoba showing 0.80 per cent, Saskatchewan 0.58 per cent, Alberta 0.65 per cent of male wage earners not at work because of illness. British Columbia was higher with 0.91 per cent of male wage earners not at work on account of illness. Doubtless the age distribution of the wage earners would go far to account for these differences. It may be noted that among female wage earners the differences between the provinces are smaller, the highest proportion of females not at work on account of illness being 1.18 per cent in Nova Scotia and the lowest 0.78 per cent in Saskatchewan, as compared with the Dominion average of 1.00 per cent. This would appear to be accounted for by a more uniform age distribution of female wage earners throughout the Dominion.

"Accident".—Among male wage earners, the highest percentages of "not at works" on ac-

count of accidents were found in British Columbia with 0.34 per cent and in Nova Scotia with 0.32 per cent not at work on June 1, 1931, owing to accidents, as compared with the Dominion average of 0.21 per cent, or 21 per 10,000 wage earners. The lowest percentages were found in the agricultural provinces, Prince Edward Island with 0.11 per cent and Saskatchewan with 0.12 per cent. Ontario and Quebec indicated 0.17 per cent and 0.19 per cent respectively not at work as the result of accidents. Lumbering and mining may account for the relatively high figures of British Columbia and lumbering and fishing for those of Nova Scotia.

*Statistical Tables.*—The actual figures of wage earners at work and not at work on June 1, 1931, are given by province and by sex in Table II with the causes of absence from work. Table III gives percentages of wage earners at work or not at work for various reasons on the date of the census, and Table IV gives percentage figures showing how largely each of the causes for not being at work bulked with the 471,000 wage earners not at work on that day.

TABLE III.—PERCENTAGES OF CANADIAN WAGE-EARNERS AT WORK AND NOT AT WORK ON MONDAY, JUNE 1, 1931, BY SEX AND PROVINCE, WITH PERCENTAGES NOT AT WORK FOR VARIOUS CAUSES

## PART II.—URBAN WAGE EARNERS AT WORK AND NOT AT WORK ON JUNE 1, 1931

The wage earners of Canada are resident in proportionately greater numbers in the urban communities, while employers and workers "on own account" are proportionately more numerous in rural areas. Indeed many wage earners who reside outside of the urban communities find their daily work within them. The census, however, deals with people at their residence and allocates to Montreal, Toronto or any other urban community only those wage earners who are actually resident within the limits of the municipality. \*

The following tables are concerned, therefore, only with wage earners resident within the 533 urban municipalities of 1,000 population or over. Further, in these urban tables only the wage earners of 20 years and over are included as being past the apprentice stage and as having in the majority of cases other persons dependent upon them for support. Even when the wage earners of under 20 years are left out of account, we find that these 533 urban municipalities of 1,000 population and over, with an aggregate population of 5,160,901 or 49.73 per

cent of the total population of Canada, had as residents within their bounds 1,544,014 wage earners of 20 years and over, or 60.2 per cent of all the wage earners of *all ages* in the Dominion of Canada. Further these same 533 urban municipalities had as nearly as can be estimated some 220,000 wage earners of under 20 years of age included in their population, so that their grand total population of wage earners may be estimated at 1,764,000 out of a grand total of 2,564,879 for the Dominion as a whole, or 68.8 per cent of the grand total.

The 533 urban communities of 1,000 population contained on June 1, 1931, an aggregate of 1,544,014 wage earners of 20 years and over, including 1,218,034 males and 325,980 females. Of these the total number not at work on June 1, was 290,177, 263,042 males and 27,135 females. Statistics of the reasons why these wage earners were not at work on June 1 have not yet been compiled, but if the proportions shown in Table IV for all Canada are used (84.29 per cent for males and 74.5 per cent for females) then about 221,700 male and 20,125 female wage earners of 20 years and over in the 533 municipalities on the date of the census had "no job."

TABLE IV—PERCENTAGE DISTRIBUTION OF CAUSES ASSIGNED BY WAGE-EARNERS FOR NOT BEING AT WORK ON JUNE 1, 1931

(Preliminary figures)

Generally speaking, the percentage of wage earners not at work was highest in the largest places, and this was true for both sexes. Thus, taking the three distinct classes of municipalities in Table I, the percentage of all wage earners not at work on June 1 was 17.71 in communities of 1,000 to 5,000, 17.92 in communities of 5,000 to 30,000 and 19.34 in communities of 30,000 and over. The corresponding figures for male wage earners were 19.97 per cent, 20.55 per cent and 22.37 per cent respectively, and for female wage earners 6.34 per cent, 6.52 per cent and 9.17 per cent respectively.

Finally, in the 533 urban communities as a whole, containing practically one-half the population of the Dominion, the percentage of wage earners of 20 years and over of both sexes not at work was on June 1, 1931, 18.79 per cent as compared with 18.39 per cent for all wage earners of both sexes in the Dominion. The percentage of adult male urban workers

not at work was 21.60 per cent as compared with 20.97 for the Dominion. The percentage of females not at work was 8.32 per cent as compared with 8.89 per cent for the Dominion. On the whole, then, it appears that urban male wage earners were rather less fully employed in urban communities than outside of them, and that female wage earners were rather more fully employed in urban communities than outside of them.

In this Part, Table I (page 1194) is a summary by province and sex of the aggregate number of wage earners and of wage earners "not at work" in cities of 30,000 and over, in cities and towns of between 5,000 and 30,000 population, and in towns and villages of 1,000 to 5,000 population. Table II gives the figures of total wage earners and of wage earners not at work in each of the 533 urban municipalities of over 1,000 population. (Table II is omitted in the present issue of the LABOUR GAZETTE.)

TABLE I—WAGE-EARNERS, 20 YEARS OF AGE AND OVER, NOT AT WORK JUNE 1ST, 1931 FOR URBAN LOCALITIES HAVING 1,000 POPULATION AND OVER

## Ottawa Emergency Relief Measures

In connection with the Ottawa Emergency Relief Campaign to raise \$50,000 for work in the city during the coming winter, a “news-reel” was shown in the local theatres in which the Prime Minister expressed his satisfaction with the plan, and Mayor J. J. Allen gave details of the arrangements. Mayor Allen said:

“The municipal authorities, in co-operation with the principal relief agencies and public-spirited citizens of Ottawa, have developed a well-balanced plan for the administration of public relief in this city. Under this plan, all family relief will be handled by and through the Ottawa Welfare Bureau only. All single and transient men will be cared for by the

Union Mission, and war veterans by the Canadian Legion. All single unemployed women will be looked after by the women’s organizations. The health and medical needs of war veterans, single, and transient men will be taken care of by the Red Cross Society, with the Ottawa General Hospital assisting in medicines, etc., and the Civic Hospital will be responsible for the more serious cases.

“Family medical needs will be dealt with through the Ottawa Welfare Bureau. The Local Council of Women assumes responsibility for the collecting, repairing, making and purchasing of clothing, also the distribution of the

same, but only on the request of the Welfare Bureau or the Union Mission.

"A Citizens' Relief Committee, under the chairmanship of Mr. Fred Bronson, is appealing to the public from November 14-19, inclusive, for \$50,000 to provide for the usual maintenance requirements covering the next twelve months of the Welfare Bureau, the Union Mission, and also for the requirements of the Red Cross Society in conducting the observation hospital for veterans and single men. A sum of \$25,000 will be used for direct

relief purposes and set up as a trust fund with the city, for the payment of accounts incurred by these agencies. Actually, this special fund of \$25,000 subscribed by the citizens really provides for \$75,000 of relief for our fellow-citizens in distress, as the federal and provincial governments refund to the municipalities two-thirds of all direct relief.

"Every citizen who has money or steady employment should be willing, or even at some sacrifice, to assist his less fortunate neighbours in this emergency."

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1932

THE business of the offices of the Employment Service of Canada during the third quarter of 1932 declined considerably in volume from that transacted during the corresponding quarter of last year, as there was a loss of about 11 per cent, both in opportunities for employment and also in placements in regular and casual work. Of the declines recorded in construction and maintenance, services, manufacturing, trade and logging, that in the first named group was by far the largest, accounting for over 60 per cent of the total decrease. Reduced placements in this division were caused by fewer men having been sent out for work on relief projects sponsored by the Government, the highway camps and other relief undertakings, which continued in operation, having received their full quota of men earlier in the season, and only occasional replacements of workers necessary. Farming showed a fairly substantial increase, as a result of harvesting operations in the west, and transportation also showed slight improvement. Changes in the other groups were minor only. Provincially, New Brunswick, Manitoba and Saskatchewan registered gains in vacancies and placements. Quebec showed an increase only under the first comparison and a decrease under the second. The remaining provinces recorded declines in both instances. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces from July to September, 1932.

From the chart on page 1211 which accompanies the article on the work of the employment offices for the month of September, it will be noted that the trend of the curves of vacancies and placements in relation to applications was downward during the first half of July, of August, and the latter half of September, but followed an upward trend during

the remaining weeks of these months, the level of vacancies at the close of the quarter being 2 points and that of placements only a fractional point above the levels attained at the close of the corresponding quarter in 1931. During the period July to September, 1931, there was an average of 44.1 vacancies and 42.3 placements for each 100 applications for employment, as compared with 58.0 vacancies and 55.4 placements for each 100 applications during the period under review.

The average number of positions offered daily during the present quarter was 1,123, of applicants registered 1,935, and of placements effected 1,072, in contrast with a daily average of 1,254 vacancies, 2,846 applications, and 1,205 placements in regular and casual employment during the corresponding quarter of 1931.

During the three months July to September, 1932, the offices reported that they had made 86,896 references of persons to positions, and effected a total of 82,490 placements, of which 45,376 were in regular employment and 37,114 in casual work. Of the placements in regular employment 34,489 were of men and 10,887 of women, while casual work was found for 29,186 men and 7,928 women. Comparison with the corresponding period of 1931 showed that 92,741 placements were then made, of which 44,102 were in regular employment and 48,639 in casual work. Applications for employment during the period under review were received from 111,557 men and 37,387 women, a total of 148,944, in contrast with a registration of 219,117 persons during the same period in 1931. Employers notified the Service during the quarter July to September, 1932, of 86,425 vacancies, of which 65,088 were for men and 21,337 for women, as compared with 96,557 opportunities for work during the corresponding period a year ago.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN SEPTEMBER, 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on October 1, was 8,020, the employees on their payrolls numbering 796,165 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

August was 1,732, having an aggregate membership of 162,186 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 71 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of October, 1932, as Reported by Employers

There was an improvement in employment at the beginning of October, according to statements received by the Dominion Bureau of Statistics from 8,020 firms, whose staffs aggregated 796,165 persons, as compared with 790,967 in the preceding month. As employment has frequently shown a falling-off on October 1 in the eleven years of the record, the increase this year is unusually interesting. Activity, however, continued at a low level as compared with previous years for which statistics are available. The index (based upon the average for the calendar year 1926 as 100) stood at 86.7 on October 1, 1932, compared with 86.0 on September 1, 1932, and 103.9 on October 1, 1931. On the same date in the ten preceding years, the index was as follows: 1930, 116.2; 1929, 125.6; 1928, 118.8; 1927, 110.3; 1926, 106.5; 1925, 99.5; 1924, 95.0; 1923, 100.7; 1922, 95.8, and 1921, 91.3.

The most pronounced gains since September 1 were in manufacturing, notably in vegetable food and textile factories; in the latter, the increase was the second largest on record for October 1. Improvement was also indicated in logging, mining, transportation, highway construction and trade. In some of these industries the increases were seasonal in character. On the other hand, communications, building construction and services reported reduced activity.

#### Employment by Provinces

Firms in the Maritime Provinces and British Columbia showed decreases, but in Quebec, Ontario and the Prairie Provinces the trend

was upward, the largest advances taking place in the prairie area.

*Maritime Provinces.*—A decline was indicated in the Maritime Provinces, where the 577 co-operating employers reduced their payrolls from 60,674 persons on September 1 to 58,639 at the beginning of October. This shrinkage involved more workers than that recorded on the same date of last year, when the index was higher than on October 1, 1932. Mining, manufacturing, transportation and services reported the bulk of the decrease, while there were gains in building and highway construction.

*Quebec.*—There was a further increase in Quebec; this took place chiefly in manufacturing (notably of textile products), in logging, shipping and highway construction. On the other hand, building construction showed decided curtailment, and services were also slacker. Statistics were compiled from 1,940 firms with 232,128 workers, compared with 231,018 at the beginning of September. Losses had been noted on October 1, 1931, but the index then was higher.

*Ontario.*—Improvement was indicated in Ontario, according to 3,562 employers of 322,251 persons, or 2,954 more than in the preceding month. Curtailment in staffs had been reported on October 1 of a year ago, but employment was then in greater volume. Manufacturing as a whole (particularly of textile and canned products), mining and retail trade showed heightened activity, while employment decreased in construction, logging and services.

**Prairie Provinces.**—There was a further increase in employment in the Prairie Provinces at the beginning of October. This took place mainly in coal mining, construction and transportation, but manufacturing (notably of iron and steel and vegetable food products), and trade also showed improvement. Services, on the other hand, were seasonally slacker, and communications also released employees. The trend of employment on October 1 in previous years has frequently been downward; a loss was recorded on that date in 1931, but the index then was higher. Returns for the date under review were received from 1,154 firms with an aggregate working force of 116,037

### Employment by Cities

The trend of employment was downward in Quebec City, Ottawa, Windsor and the adjacent Border Cities and Vancouver, but upward in Montreal, Toronto and Hamilton, while in Winnipeg practically no general change took place.

**Montreal.**—There was a large increase in employment in Montreal, where the 1,099 co-operating firms employed 129,773 persons, or 2,359 more than on September 1. Manufacturing showed the greatest gain, but there was also improvement in transportation and construction; within the manufacturing group, textile, vegetable food and tobacco and bever-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

employees, compared with 112,504 on September 1.

**British Columbia.**—Employment in British Columbia showed moderate curtailment, mainly in manufacturing, transportation and services, while logging, building and trade reported greater activity. Data were tabulated from 787 employers, whose payrolls declined from 67,474 persons on September 1 to 67,110 at the beginning of October. Losses on a rather larger scale were registered on October 1, 1931, but the index then was many points higher.

Table I gives index numbers by economic areas.

age factories reported considerable improvement, while iron and steel and some other groups released employees. General curtailment had been noted on the corresponding date of last year, but employment was then in greater volume.

**Quebec.**—Activity in Quebec decreased at the beginning of October, 738 workers having been laid off since September 1 by the 149 employers whose returns were compiled, and who had 12,521 on their paylists on the date under review. There were seasonal losses in services and construction, and manufacturers were also slacker. The index was lower than at

the beginning of October, 1931, when an increase had been reported.

*Toronto.*—Expansion was indicated in Toronto, according to 1,206 firms employing 111,564 persons, compared with 109,471 in their last report. Manufacturing (particularly of textile, electrical apparatus and vegetable food products) was much busier, and trade also absorbed more workers. Smaller additions to staffs had been reported on October 1 of a year ago, but employment was then generally more active.

*Ottawa.*—Construction was not so active, while other groups showed comparatively little change. The forces of the 155 employers furnishing data aggregated 11,988 workers, or 498 fewer than on September 1. The index of employment was lower than on the same date in 1931, when gains had been indicated.

*Hamilton.*—An increase was registered in manufacturing, largely in textile factories. The non-manufacturing industries, however, showed little general change. Statements were tabulated from 234 firms with 24,308 employ-

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative Weight of Employment by Districts as at Oct. 1, 1932.....	100.0	7.4	29.1	40.5	14.6	8.4

ees, compared with 24,212 in the preceding month. The index number at the beginning of October of last year was higher; the employment trend then was also upward.

*Windsor and the Adjacent Border Cities.*—There was a decrease in the number employed in the Border Cities, mainly occurring in the automobile trades. One hundred and thirty-five establishments recorded 7,492 employees, as against 9,203 on September 1. An increase had been reported on October 1, 1931, when employment was in greater volume.

*Winnipeg.*—Little general change was shown in Winnipeg on October 1, when the 389 co-operating firms employed 35,206 workers, or practically the same number as at the beginning of September. Manufacturing and trade were slightly more active; transportation released some employees, while the fluctuations in other industries were small. Declines had been indicated at the beginning of October of a year ago, but the index then was higher than on the date under review.

**NOTE.**—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative Weight of employment by Cities as at Oct. 1, 1932.....	16.3	1.6	14.0	1.5	3.1	0.9	4.4	3.4

*Vancouver.*—There was a small loss in employment in Vancouver, according to 339 employers with 27,368 persons on their payrolls, compared with 27,466 on September 1. Manufacturing reported a slight decline, and there was also a falling-off in transportation; construction, however, showed improvement, and trade was rather brisker. A large reduction had been recorded on October 1, 1931, but the index then stood at 99.7, as compared with 88.5 at the beginning of October of this year.

Index numbers by cities are given in Table II.

### Employment in Manufacturing

There was a further increase in manufacturing plants, 4,933 of which reported 417,674 operatives, compared with 413,055 in the preceding month. Large gains were recorded in textile and vegetable food factories, and improvement was also shown in fur, tobacco and beverage, electrical apparatus and non-ferrous metal plants. On the other hand, important

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

declines were indicated in the iron and steel group, chiefly owing to curtailment of operations in automobile works. Lumber, pulp and paper, electrical current and animal food factories also reported reductions, in some cases of a seasonal nature. A pronounced decrease in employment had been noted on Octo-

ber 1, 1931, but the index was then many points higher. The advance on the date under review slightly exceeded the average gain on October 1 in the last decade.

*Animal Products—Edible.*—There were losses in dairies and fish-preserving establishments. Statistics were received from 232 manufactur-

\*The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

ers, employing 19,844 persons, as compared with 20,411 in the preceding month. This contraction, which was most pronounced in the Prairie Provinces and British Columbia, was on a much smaller scale than that registered on the corresponding date of last year, when the index was several points lower than on October 1, 1932.

*Fur and Fur Products.*—A seasonable gain occurred in this group, in which 47 firms increased their staffs by 134 persons to 1,779 at the beginning of October. A decline had been noted on October 1, 1931, but employment in this industry was then rather more active.

*Leather and Products.*—Footwear factories reported small reductions in staffs, most of the curtailment taking place in Quebec. The 246 employers making returns reported 18,422 workers, or 135 fewer than on September 1. Improvement had been noted at the beginning of October of a year ago, and the index number was then slightly higher than on the date under review.

*Lumber and Products.*—Further seasonal reductions in personnel were indicated in the lumber group, in which employment was at a much lower level than on October 1, 1931. The decreases took place almost entirely in rough and dressed lumber mills, while furniture factories were decidedly busier. A combined working force of 30,195 persons was reported by the 762 co-operating manufacturers, as compared with 30,906 at the beginning of September. The tendency was downward in the Maritime and Prairie Provinces and Quebec, but upward in Ontario and British Columbia.

*Musical Instruments.*—A slight loss was registered in musical instrument plants, in which employment was not so brisk as during last autumn. Thirty-six establishments reported 1,408 employees, as compared with 1,438 in the preceding month.

*Plant Products, Edible.*—Practically all branches of the vegetable food division showed improvement; the largest gains, however, occurred in canning, sugar and syrup and chocolate and confectionery factories. The staffs of the 396 reporting firms aggregated 34,506 persons, or 3,365 more than in their last report. Employment was brisker in all provinces, but firms in Ontario showed the most pronounced advances. The general increase compared favourably with the decline registered on the corresponding date in 1931, when the index was a few points lower.

*Pulp and Paper Products.*—There was a decrease in the staffs reported by 557 employers in this group, who had 52,492 workers on their

payrolls, as compared with 53,249 at the beginning of September; this took place very largely in pulp and paper mills. Considerable gains were recorded in the Maritime and Prairie Provinces, while there were losses in Quebec, Ontario and British Columbia. General improvement had been indicated at the beginning of October a year ago, and the index number was then higher.

*Rubber Products.*—Employment in rubber goods showed a slight increase on October 1, 1932; data were compiled from 44 firms with 10,324 employees, as against 10,275 in their last report. A falling-off had been recorded on the same date in 1931, but employment was then more active.

*Textile Products.*—All branches of the textile group reported heightened activity, but the greatest gains occurred in garment and personal furnishing, hosiery and knitting, cotton, woollen, silk and miscellaneous textile factories; 860 manufacturers enlarged their payrolls from 79,627 workers at the beginning of September, to 83,557 on the date under review. Quebec and Ontario recorded the bulk of this expansion. Smaller gains had been noted at the beginning of October last year, and the index then was lower than on October 1, 1932. The advance indicated on the date under review was, in fact, the second largest in this record.

*Tobacco, Distilled and Malt Liquors.*—There was an increase in employment in these industries at the beginning of October, according to the 152 establishments furnishing statistics, which employed 14,854 workers, or 313 more than on September 1. Employment was in greater volume than in the autumn of 1931, when curtailment had been shown.

*Clay, Glass and Stone Products.*—Small additions to staffs were indicated in building material plants, in which activity was much less than on October 1, 1931. The forces of the 183 co-operating employers were increased by 55 persons to 7,647 at the beginning of October.

*Electric Current.*—There was a decrease in electric current plants on October 1, when 91 establishments reported 14,022 workers, compared with 14,471 on September 1. A smaller decline had been indicated on the corresponding date of last year, when the index number stood at 132.4, compared with 113.9 on October 1, 1932.

*Electrical Appliances.*—Additions to staffs were made in electrical apparatus works, 92 of which had 11,725 employees, or 373 more than in their last report. This gain was larger than that noted on October 1, 1931, but the

index number was then many points higher. Most of the increase occurred in Ontario.

*Iron and Steel Products.*—The heating appliance, small hardware, tool, foundry and machine shop divisions of the iron and steel group registered increased employment, while there were reductions in the automobile, machinery, shipbuilding and iron pipe branches. Statements were received from 761 manufacturers, whose payrolls aggregated 79,799 persons, as compared with 81,057 in the preceding month. Employment declined in all except the Prairie Provinces and British Columbia. Much more extensive curtailment had been indicated at the beginning of October last year, but employment was then in considerably greater volume.

*Non-Ferrous Metal Products.*—A combined working force of 12,648 persons was reported by the 132 co-operating employers, who had 12,495 employees at the beginning of September. There was general but slight improvement in most of the industries coming under this heading; the index was much lower than in the autumn of 1931.

### Logging

Statements were tabulated from 209 logging companies, whose staffs were enlarged by 741 workers to 7,742 on the date under review. This advance was on a smaller scale than in the early autumn of 1931, when the index was much higher; in fact, employment on October 1, 1932, was in smaller volume than in the autumn of any other year since 1921. Camps in Quebec absorbed most of the extra men reported at the beginning of October in the present year.

### Mining

*Coal-Mining.*—There was an increase in coal mines, in which employment was not so brisk as on October 1, 1931, when the improvement was more marked. Returns were received from 87 operators employing 23,918 persons, as compared with 23,481 in their last report. The gains were indicated in the Prairie coal fields, while the tendency in the Maritime Provinces and British Columbia was downward.

*Metallic Ores.*—Employment in this group showed an increase on October 1; 68 employers reported 15,621 workers, or 195 more than at the beginning of September. Ontario registered most of the advance. Losses had been noted on the corresponding date last year, when the index number was a few points higher.

*Non-Metallic Minerals, other than Coal.*—Slightly greater activity was reported in this

group, in which statistics were received from 76 firms employing 4,832 persons, or 78 more than on September 1. The index was decidedly lower than on October 1, 1931, although losses had then been indicated.

### Communications

There was a falling-off in employment in communications, in which the companies and branches furnishing data reported 23,853 employees, as compared with 24,315 on September 1. The index was lower than in the autumn of 1931.

### Transportation

*Street and Electric Railways and Cartage.*—An advance was indicated in local transportation, 494 persons being added to the forces of the 172 co-operating firms, who reported 24,843 on their payrolls. Employment in this industry was in practically the same volume as on October 1 last year.

*Steam Railways.*—Statistics were tabulated from 96 employers in the steam railway operation group, whose payrolls rose from 61,037 on September 1 to 61,306 at the beginning of October. A loss had been indicated on the same date of last year, but the index was then higher. There were slight reductions on the date under review in all except the Prairie Provinces, where the improvement was considerable.

*Shipping and Stevedoring.*—Slight gains were registered in the water transportation group, in which 90 companies employed 15,783 workers; this was an increase of 91 as compared with their payrolls in the preceding month. An important contraction had been noted on October 1 last year, when the index was slightly lower than on the date under review.

### Construction and Maintenance

*Building.*—There was another decline in employment in building, 1,666 persons being let out from the forces of the 667 co-operating contractors. They had 19,713 employees; this number was smaller than that reported at the beginning of October of a year ago, although a larger decrease had then been indicated. In the Maritime Provinces and British Columbia, improvement was shown, while the trend was unfavourable in Quebec, Ontario and the Prairie Provinces.

*Highways.*—Employment in this group increased in all provinces except Ontario and British Columbia, the gains being partly due to the unemployment relief works being carried on in some localities, though generally on a greatly reduced scale as compared with last year. Statements were tabulated from 346 em-

ployers, whose staffs, standing at 47,935, were larger by 1,225 workers than on September 1. The number of persons employed in the group was very much smaller than on October 1, 1931.

**Railways.**—A slight increase in employment was reported on railway construction. The forces of the 37 companies and divisional superintendents furnishing returns rose from 29,257 at the beginning of September to 29,303 on the date under review. Shrinkage was registered on October 1, 1931, but the level of employment then was higher.

### Services

The closing of summer hotels, together with losses in laundries and dry cleaning establishments, accounted for a decrease of 1,836 persons in the staffs of the 297 firms in this group whose returns were received, and who employed 21,128 on October 1. The seasonal de-

clines also indicated on the same date last year involved a rather smaller number of workers, and employment was then more active.

### Trade

Retail and wholesale trading establishments increased their personnel; 863 firms reported 82,514 employees, compared with 81,547 in the preceding month. The index stood at 114.5, compared with 120.8 on October 1, 1931.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of September, 1932

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades, or who are idle due to illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Further though slight gains in the volume of work afforded local trade union members was shown at the close of September from the previous month, the percentage of idleness standing at 20.4 in contrast with 21.4 per cent in August. The September percentage was based on the returns furnished to the Department of Labour by a total of 1,732 local unions embracing a membership of 162,186 persons. Some falling off in activity, however, was manifest from September last year, when 18.1 per cent of the members reported were without work. With the exception of Nova Scotia and Manitoba, all provinces reflected a more favourable employment tendency than in August, the manufacturing, transportation, and lumbering and logging industries showing some advancement, while activity in fishing and mining subsided slightly. Building and construction indicated an almost unchanged situation from the previous month, unemployment remaining at a quite high level. The most noteworthy improvement from

August was reflected by Alberta unions, the coal mines in the province being largely responsible for the change. In the Nova Scotia mines, however, employment was at a somewhat lower level, the drop in activity of about 3 per cent reported in the province as a whole, being chiefly attributable to this source. In Manitoba fractional recessions only were indicated. The employment increases in the other provinces were slight, the situation for New Brunswick, Ontario and British Columbia unions being but nominally upward. In making a comparison with the returns for September last year Manitoba and Saskatchewan unions alone reported advances in the volume of work afforded during the month reviewed, which were, however, slight. Of the contractions in the remaining provinces the most substantial was registered in Ontario, where a change of over 4 per cent was noted, the declines in the various provinces ranging from this figure to 0.9 per cent in Quebec.

Records are kept separately each month of unemployment in the largest city in each province with the exception of Prince Edward Island. The employment movement in Vancouver, Regina, Toronto, Montreal, Saint John and Halifax unions was toward greater activity during September than in the preceding month, though the improvement was not outstanding in any one city, Vancouver with a 2.9 per cent gain showing the greatest expansion while in Halifax and Saint John increases of less than 1 per cent were registered. In Winnipeg and Edmonton the situation remained much the same in both months compared,

with a slight tendency in a favourable direction. Saint John unions showed much slacker conditions during September than in the corresponding month last year, particularly in building and construction, and in Toronto and Halifax noteworthy recessions occurred. Declines of more moderate proportions were reflected by Edmonton unions. On the other hand, unemployment for Vancouver, Regina, Montreal and Winnipeg unions eased up slightly during September.

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1926, to date. The curve during September followed a course

gains in employment were shown, but these tradesmen formed but a small share of the total membership in the manufacturing group, and hence did not materially affect the situation. Increases on a smaller scale, though noteworthy, were reflected by glass, brewery, textile and fur workers, lesser gains being recorded among bakers and confectioners, general labourers, leather workers and printing tradesmen. On the contrary, slacker conditions prevailed for cigarmakers and hat and cap makers, and activity for pulp and paper makers eased off to some extent. Among iron and steel workers, the balance of employment was unfavourable, though the change

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

slightly downward from that of the previous month indicative of a better employment volume though activity as shown by the curve was somewhat retarded from September a year ago.

From unions in the manufacturing industries 456 reports were received in September, covering a membership of 43,337 persons, 9,217 or 21.3 per cent of whom were without work at the close of the month, contrasted with percentages of 22.5 in August and 20.0 in September, 1931. The garment trades during September continued in the better trend manifest in the previous month, and were responsible, to a large extent, for the more favourable situation obtaining in the manufacturing industries as a whole, from August. Among wood workers and metal polishers pronounced

was nominal. Compared with the situation in September last year, garment workers, as in the previous comparison, indicated improvement involving the greatest number of members, and among pulp and paper makers the gains, though of much lesser degree, were noteworthy. Among metal polishers, wood, glass and fur workers the percentage increases were large. A somewhat higher level of activity was afforded leather workers. Of the contractions which slightly more than offset these gains, the most pronounced were reported by iron and steel workers, printing tradesmen and general labourers. Cigar makers and hat and cap makers reported very heavy percentage reductions from September last year which, however, involved few workers. A substantial drop in activity was reported by textile work-

ers, and among butchers and meat cutters, and bakers and confectioners also less work was available.

The employment situation for coal miners varied but slightly during September from the previous month, the 45 unions from which returns were tabulated with 15,126 members, showing 12.3 per cent of the members idle on the last day of the month, contrasted with 11.8 per cent in August. The improvement in conditions reported by Alberta miners in August continued throughout September, and

with increasing impetus. On the other hand, Nova Scotia miners were less actively engaged, fire in one of the mines being a contributing cause, and in British Columbia mine closings affected the situation adversely to a marked degree. In addition to the unemployment recorded a large number of miners continued to work but a few days a week. A large drop in the volume of employment available to Alberta and British Columbia miners was shown from September last year, when 6.2 per cent of inactivity was reported in the mining group as a whole, and in Nova Scotia declines of lesser magnitude occurred.

Building and construction remained quite slack in September, showing little change in conditions from the previous month. This was manifest by the reports received from 229 unions of building tradesmen, with a combined membership of 20,269 persons, 12,459, or 61.5 per cent of whom were reported idle on the last day of the month in contrast with 61.2 per cent in August. Granite and stonecutters, and bricklayers, masons and plasterers reported employment gains of 4.4 per cent and 4.2 per cent respectively from August, and among plumbers and steamfitters, tile layers, lathers and roofers, hod carriers and building labourers, and bridge and structural iron workers increases on a smaller scale were noted. Losses in employment sufficient to slightly more than counteract this improvement was recorded by painters, decorators and paperhangers, carpenters and joiners, and electrical workers. Compared with the situation in September last year in the building trades when 47.5 per cent of unemployment was recorded, tile layers, lathers and roofers indicated a more favourable employment volume during the month reviewed, while in the other trades quieter conditions prevailed, bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters, painters, decorators and paperhangers, and plumbers and steamfitters all showing large increases in slackness.

Employment in the transportation industries during September continued upward from August, though the change was slight, the 757 unions making returns, with 61,028 members, showing 11.3 per cent of inactivity, compared with 12.3 per cent in August. Railway employees, whose returns constituted about 80 per cent of the total group membership reported, were slightly better engaged than in August, and navigation workers registered important increases in activity. Employment for teamsters and chauffeurs, and street and electric railway employees, however, subsided slightly. More favourable conditions prevailed for transportation workers also than in September, 1931, when 12.0 per cent of the mem-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

bership involved was idle, steam railway employees and navigation workers, as in the previous comparison, accounting for the change. Inactivity for teamsters and chauffeurs was in somewhat greater volume than in September a year ago, while the situation for street and electric railway employees remained practically the same.

Retail clerks with 6 associations including 1,101 members in September, showed that 21 or 1.9 per cent were without work on the last day of the month contrasted with percentages of .7 in August and 3.6 in September last year.

There was a moderate decline in activity indicated by civic employees during September from the preceding month, 7.1 per cent of the members being reported idle in comparison with 5.3 per cent in August. The September percentage was based on the returns furnished to the Department by 71 unions of these workers, with a total membership of 7,292 persons. Substantial employment losses were reflected from September last year when .3 per cent of idleness was recorded.

Continued improvement and on a somewhat larger scale was registered in the miscellaneous group of trades during September, the 122 unions from which returns were received, with 4,299 members, showing 20.0 per cent of idleness compared with 23.1 per cent in August. The situation varied very slightly from September last year when the unemployment percentage stood at 20.2. Increases in activity from August were registered by stationary engineers and firemen, theatre and stage employees, and barbers, while the trend for unclassified workers and hotel and restaurant employees was less favourable. The most

noteworthy unemployment increase from September last year was reported by hotel and restaurant employees, though among stationary engineers and firemen and theatre and stage employees the percentages of idleness recorded were slightly above those shown in September, 1931. Barbers and unclassified workers, however, registered somewhat heightened activity from September a year ago.

More depressed conditions prevailed for fishermen during September than in either the previous month or September last year, as shown by the reports tabulated from 2 associations of these workers with a membership numbering 705 persons. Of these 75, or 10.6 per cent, were without employment on the last day of the month in comparison with percentages of 5.7 in August and 6.0 in September, 1931.

Lumber workers and loggers continued quite slack in September, although the situation showed some improvement from August. This was indicated by the returns received from 4 unions with 1,299 members, 549, or 42.3 per cent of whom were unemployed at the close of the month contrasted with 45.4 per cent of idleness in August. Operations were largely restricted from September last year when 24.6 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for September of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for September, 1932

The volume of business transacted by the offices of the Employment Service of Canada, as shown by the average number of placements effected daily during September, 1932, showed a gain of 18 per cent over that of the previous month, but a decline of 25 per cent from September a year ago. In the former comparison, increased placements over August were recorded in all industrial divisions except construction and maintenance, the largest increase being shown in farming, due to continued harvesting operations in the West, while in comparison with September, 1931, although a noteworthy gain again took place in this same group, a very heavy decline was shown in construction and maintenance, followed by others of lesser degree in services, manufacturing and mining. Minor changes only occurred in the remaining sections, log-

ging and transportation showing slight gains, which slightly more than offset the small decline in trade.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications rose several points during the first half of the month, but recorded a very sharp decline during the latter half of the period under review, although at the close of the month it was slightly above the levels recorded at the end of September a year ago. The ratio of vacancies to each 100 applications was 65.8

during the first half and 54.0 during the second half of September, 1932, in contrast with the ratios of 50.3 and 52.0 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review were 60.6 and 51.2 as compared with 47.4 and 50.7 during the corresponding month of 1931.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September, 1932, was 1,285, as compared with 1,052 dur-

ing to vacancies and effected a total of 29,944 placements. Of these, the placements in regular employment were 18,573, of which 14,645 were of men and 3,928 of women, while placements in casual work totalled 11,371. The number of vacancies reported by employers was 24,314 for men and 7,797 for women, a total of 32,111, while applications for work numbered 53,437, of which 39,345 were from men and 14,092 from women.

The following table gives the placements effected by the offices of the Employment

# POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o-o-o

ing the preceding month, and with 1,669 in September a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,138, in comparison with 1,808 in August, 1932, and with 3,259 in September last year.

The average number of placements made daily by the offices of the Service during September, 1932, was 1,198, of which 743 were in regular employment and 455 in work of one week's duration or less, as compared with a total daily average of 1,014 during the preceding month. Placements in September a year ago averaged 1,604 daily, consisting of 797 placements in regular and 807 in casual employment.

During the month of September, 1932, the offices of the Service referred 31,722 persons

Service in Canada, each year, from January, 1922, to date:—

\*1,228 Placements effected by offices since closed.

in Nova Scotia were over 9 per cent less than in the preceding month and nearly 47 per cent below the corresponding month of last year. Similar percentages of change in placements were recorded under both comparisons. The decrease in placements from September, 1931, was almost entirely due to losses in the highway division of construction and maintenance, under which group much work was provided in relief of unemployment during the corresponding month of last year. Of the declines in other groups, that in services was the largest. Minor gains were reported in trade, manufacturing and finance. Placements by industrial divisions included: manufacturing, 18; construction and maintenance, 55; trade, 23; and services 328, of which 243 were of household workers. Regular employment was found for 28 men and 72 women.

#### NEW BRUNSWICK

There was a decline of less than one per cent in the number of orders received at Employment Offices in New Brunswick during September when compared with the preceding month, but a gain of over 73 per cent in comparison with the corresponding month last year. Placements were on practically the same level as in August, but were nearly 77 per cent higher than in September, 1931. The gain in placements over September of last year was entirely due to work provided in relief of unemployment on highway construction. Placements in other groups were on practically the same level as last year, except in services, where a decline was reported. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 19; construction and maintenance, 522; and services 415, of which 295 were of household workers. During the month 9 men and 56 women were placed in regular employment.

#### QUEBEC

During September, Employment Offices in the Province of Quebec received orders for nearly 24 per cent more workers than in the preceding month and 22 per cent more than during the corresponding month of last year. There was a gain of nearly 23 per cent in placements when compared with August, and of over 8 per cent in comparison with September, 1931. This increase in placements over September last year was made up of gains in services, construction and maintenance, manufacturing and finance, offset in part by declines in all other groups. None of the losses, however, were large. Industrial divisions in which most of the place-

ments were effected during the month were: manufacturing, 104; logging, 215; construction and maintenance, 186; trade, 73; and services, 998, of which 880 were of household workers. There were 599 men and 819 women placed in regular employment during the month.

#### ONTARIO

Orders listed at Employment Offices in Ontario during September called for over 10 per cent less workers than in the preceding month and nearly 51 per cent less than during the corresponding month of last year. There was a decline also in placements of over 12 per cent when compared with August, and of over 51 per cent in comparison with September, 1931. All industrial divisions, except logging, where a small gain was reported, participated in the reductions in placements from September of last year, those in construction and maintenance, services, manufacturing and farming being the most noteworthy. Placements by industrial divisions included: manufacturing, 569; logging, 145; farming, 827; transportation, 74; construction and maintenance, 3,514; trade, 335; and services 3,217, of which 1,962 were of household workers. Placements in regular employment numbered 1988 of men and 1,456 of women.

#### MANITOBA

Opportunities for employment, as indicated by orders received at Employment Offices in Manitoba during September, were nearly 34 per cent less than in the preceding month and nearly 10 per cent below the corresponding month of last year. There was a decline also in placements of over 33 per cent when compared with August and of more than 7 per cent in comparison with September, 1931. A large reduction in the number of placements made on highway construction accounted for the decline from September of last year, as trade and transportation were the only other groups to show any decline and these were quite small. The largest increase was in farming, while moderate improvement was reported in manufacturing, logging and services. Placements by industrial divisions included: manufacturing, 59; logging, 32; farming, 968; construction and maintenance, 1,058; trade, 55; and services 1,078, of which 938 were of household workers. There were 1,273 men and 468 women placed in regular employment.

#### SASKATCHEWAN

There was a gain of nearly 46 per cent in the number of workers required through Employment Offices in Saskatchewan during Sep-

tember, when compared with the preceding month and of nearly 64 per cent in comparison with the corresponding month of last year. Placements were over 34 per cent in excess of August and nearly 55 per cent above September 1931. A substantial increase in farm placements over September of last year and a fair gain in the services group accounted for the increase under this comparison. Trade and mining also showed improvement. The only loss of importance was in the highway division of construction and maintenance, due to a reduction in placements on relief work. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 33; farming, 4,400; mining, 38; construction and maintenance, 285; trade, 67; and services, 820, of which 600 were of household workers. Positions in regular employment were secured for 4,461 men and 434 women.

#### ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during September, were nearly 131 per cent higher than in the preceding month and 18 per cent above the corresponding month of last year. Placements were 120 per cent above August and nearly 10 per cent in excess of September, 1931. As in Saskatchewan, farm placements were considerably higher than in September last year and accounted for the gain under this comparison. The increase in this group was partly offset by declines in construction and maintenance, fewer men being sent to relief work on highway construction than in the corresponding month of 1931. There was also a considerable reduction in the number of workers placed in mining, but the changes in other groups were small. Placements by industrial divisions included: manufacturing, 39; farming, 4,960; mining, 32; construction and maintenance, 641; and services 613, of which 479 were of household workers. Placements in regular employment numbered 5,209 of men and 386 of women.

#### BRITISH COLUMBIA

During the month of September, positions offered through British Columbia Employment Offices were nearly 10 per cent higher than in the preceding month, but nearly 55 per cent less than during the corresponding month of last year. There was a gain of over 10 per cent in placements when compared with August, but a loss of nearly 54 per cent in comparison with September, 1931. Although placements on highway construction were

quite heavy, they were considerably less than during September of last year, at which time large numbers of men were being provided with employment on relief work. The decline in this group accounted for the adverse situation in the province as a whole, as the changes in other divisions were small. Transportation showed the largest gain. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 29; logging, 33; farming, 88; transportation, 129; construction and maintenance, 1,991; trade 41; and services 625, of which 421 were of household workers. During the month 1,078 men and 237 women were placed in regular employment.

#### Movement of Labour

During the month of September, 1932, the offices of the Employment Service of Canada effected 18,573 placements in regular employment, 12,599 of which were of persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter, 298 were granted the Employment Service reduced transportation rate, 262 going to centres within the same province as the despatching office and 36 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Persons benefiting by the Employment Service reduced transportation rate in Ontario during September were 13 in number, all of whom went to provincial centres. Of these, the Sudbury office was instrumental in the transfer of 9 miners to Port Arthur and 1 tin-smith to Timmins. In addition, the Timmins zone received 1 blacksmith from North Bay, while to employment within its own zone Port Arthur despatched 2 bushmen. The business transacted by Manitoba offices during September involved an issue of 88 reduced rate certificates, 59 provincial and 29 interprovincial. The former were secured at the Winnipeg office by 55 farm hands, 1 farm domestic, 1 piano teacher, 1 hotel general, and 1 construction teamster going to employment at centres within the Winnipeg zone. The movement to other provinces from Winnipeg included 12 bushmen proceeding to Port Arthur, 1 town domestic to Regina, and 15 farm workers to various agricultural districts in the province of Saskatchewan. The one remaining interprovincial transfer was of a construction labourer conveyed from St. Boniface to

Prince Albert. The offices in Saskatchewan granted 76 certificates to persons travelling at the reduced rate during September, these going to provincial employment. The majority were destined to rural localities of the province, 44 farm hands journeying from Saskatoon, 22 from Regina and 4 farm hands and 1 farm household worker from Moose Jaw. Proceeding from Regina also 3 highway construction workers went to Yorkton and 2 teachers to Moose Jaw. In Alberta 117 workers took advantage of the Employment Service reduced transportation rate in September, 110 going within the province and 7 to points outside. The latter were farm hands transferred from Edmonton to Saskatoon and vicinity. The provincial movement from Edmonton comprised the transfer of 80 farm hands, 2 farm household workers, 16

mine workers, 1 bushman, 1 bricklayer, and 1 housemaid to centres within the Edmonton zone, and 5 farm hands to Drumheller, which zone was also the destination of 4 farm hands despatched from Calgary. Securing certificates at British Columbia offices 4 workers journeyed to provincial employment, the New Westminster office transferring 2 fruit sorters to Penticton, and Vancouver 1 mine worker and 1 hotel cook within its own zone.

Of the 298 workers who profited by the Employment Service reduced transportation rate during September, 135 were conveyed by the Canadian National Railways, 160 by the Canadian Pacific Railway, 1 by the Temiskaming and Northern Ontario Railway, 1 by the Northern Alberta Railway, and 1 by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during September, 1932

The value of the building permits issued by 61 cities during September stood at \$2,203,230; this was a decrease of \$1,128,048, or 33.9 per cent, as compared with the total of \$3,331,278 in August, 1932, and of \$8,204,769, or 78.8 per cent, in comparison with the aggregate of \$10,407,999 recorded in September last year.

Some 50 cities furnished detailed statistics for September, showing that they had issued 400 permits for dwellings estimated to cost approximately \$1,000,000, and over 1,800 permits for other buildings valued at over \$1,000,000. During August, authority was granted for the erection of about 300 dwellings and 2,000 other buildings, estimated to cost approximately \$900,000 and \$2,200,000, respectively.

Saskatchewan reported an increase in the estimated value of building as compared with August, 1932, but elsewhere there were declines, that of \$689,796, or 60.2 per cent in Quebec being greatest.

As compared with September, 1931, there were losses in all provinces. In this comparison also Quebec showed the largest loss of \$4,039,086, or 89.9 per cent.

The larger cities—Montreal, Toronto, Winnipeg and Vancouver—registered lower totals of permits issued than in either the preceding month or the same month of last year. Of the other centres, Sydney, Westmount, Chatham, Fort William, Niagara Falls, St. Thomas, East Windsor, Brandon, Kamloops and Nanaimo showed increases as compared with both August, 1932, and September, 1931.

*Cumulative Record for First Nine Months, 1932.*—The following table gives the value of the building authorized by 61 cities during September, and in the first nine months of

each year since 1920, as well as index numbers for the latter, based upon the total for the corresponding period of 1926 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in September	Value of permits issued in first nine months	Indexes of value of permits issued in first nine months (1926=100)	Average indexes of wholesale prices of building materials in first nine months (1926 average=100)
1932.....	\$ 2,203,230	\$ 32,340,749	26.9	77.3
1931.....	10,407,999	88,602,995	73.7	83.8
1930.....	11,093,026	126,361,350	105.2	94.1
1929.....	17,117,017	186,011,017	154.8	99.6
1928.....	20,374,149	165,621,634	137.8	97.8
1927.....	14,462,243	141,152,535	117.5	95.8
1926.....	11,047,503	120,163,936	100.0	100.7
1925.....	10,140,853	98,364,181	81.9	104.2
1924.....	15,055,250	96,817,333	80.6	108.3
1923.....	10,768,898	108,319,972	90.1	111.7
1922.....	11,597,034	116,778,450	97.2	108.5
1921.....	10,907,828	88,573,442	73.7	126.8
1920.....	9,842,677	96,146,278	80.0	155.3

The aggregate for the first nine months of this year was lower than in 1931 and earlier years of the record; the average index numbers of wholesale prices of building materials, however, were also much lower in 1932 than in any other year of the record.

The accompanying table gives the value of the building permits issued by 61 cities during August and September, 1932, and September, 1931. The 35 cities for which records are available since 1910 are marked by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

## Great Britain

The British *Ministry of Labour Gazette*, October, 1932, summarized the employment situation as follows:—

Employment at September 26 showed little change on the whole as compared with August, 22. It improved in coal mining, iron and steel manufacture, the motor vehicle, boot and shoe, and pottery industries, and in the woolen and worsted, silk and artificial silk weaving, linen, jute, hosiery, lace, and carpet industries. In a number of these industries an improvement normally occurs at this time of the year. On the other hand, there was a seasonal decline in hotel, boarding house, etc., service, the distributive trades and most of the transport services, and in the building, contracting, and brick and tile industries. A decline also occurred in textile bleaching, dyeing, finishing, etc., and in the engineering industry. There was some improvement in the North-Eastern and Midlands Divisions and in Wales and Northern Ireland, but in the South of England and in Scotland employment showed a decline. It was still moderate, how-

ever, in the southern divisions, and bad in all other areas.

Among the workpeople, numbering approximately 12,770,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at September 26, 1932 (including those temporarily stopped as well as those wholly unemployed), was 22·9, as compared with 23·1 at August 22, 1932, and with 22·6 at September 21, 1931. The percentage wholly unemployed at September 26, 1932, was 17·9, as compared with 17·4 at August 22, 1932, while the percentage temporarily stopped was 5·0, as compared with 5·7. For males alone, the percentage at September 26, 1932, was 26·5, and for females, 13·6; at August 22, 1932, the corresponding percentages were 26·5 and 14·2.

At September 26, 1932, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,119,218 wholly unemployed, 639,160 temporarily stopped, and 99,633 normally in casual employment, making

a total of 2,858,011. This was 1,817 less than a month before, but 33,239 more than a year before. The total included 2,303,182 men, 79,644 boys, 420,034 women and 55,151 girls. Comparison of the numbers on the registers and of the percentages unemployed with the figures for a year before is affected by the results of legislative and administrative changes.

The 2,119,218 wholly unemployed included 731,088 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,039,637 insured persons with applications for transitional payments; 208,797 insured persons not in receipt of insurance benefit or transitional payments; and 139,696 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at September 26, 1932, was 2,930,259.

#### United States

The Bureau of Labor Statistics of the U.S. Department of Labor reports the changes in employment and pay rolls in September 1932, as compared with August, 1932, based on pay-roll reports ending nearest the 15th of the month, received from 54,851 identical establishments in 15 major industrial groups, having in September 4,248,706 employees, whose combined earnings in one week were \$79,486,136. The combined total of these 15 industrial groups (not including building construction for which complete data are not yet available) shows an increase of 3.6 per cent in employment and an increase of 2.6

per cent in pay rolls over the month interval.

The greatest gains in employment and pay rolls from August to September were reported in the canning and preserving industry, in which seasonal increases of 26.6 per cent in employment and 14.6 per cent in pay rolls were shown. The anthracite mining industry reported an increase of 13.6 per cent in both items, and the retail trade group reported a gain of 7.2 per cent in number of workers combined with an increase of 6.3 per cent in pay rolls. Employment in the bituminous coal mining industry in September was 5.1 per cent above the August level, and pay rolls were 14.4 per cent higher than in the preceding month. The manufacturing group of industries reported a gain of 4.5 per cent in employment and 5 per cent in pay rolls, and the dyeing and cleaning group reported an increase of 4.7 per cent in number of workers and 8.5 per cent in total earnings. Employment in the quarrying and non-metallic mining and in the metalliferous mining groups showed gains of 2.4 per cent and 2.2 per cent, respectively, with slightly larger gains in pay rolls, and the wholesale trade group reported an increase of 0.9 per cent in employment coupled with a decline of one-tenth of 1 per cent in pay-roll totals. In the remaining 6 industrial groups (crude petroleum producing, telephone and telegraph, power and light, electric railway and bus operation, hotels, and laundries) decreases in employment combined with slightly larger declines in pay rolls were reported. The decreases in employment in these groups, with the exception of the crude petroleum group, were 1 per cent or less.

In a recent statement, President William Green, of the American Federation of Labour, estimates that the total number of unemployed in the United States in September was 10,900,000. This estimate is based "government indexes."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the

work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodeling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or

vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair

and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which

render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of Customs and Immigration Building at Trout River, P.Q. Name of contractor, Mr. Joseph Delisle, Verdun, P.Q. Date of contract, September 3, 1932. Amount of contract, \$12,000 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete workers.....	\$0 35	8
Concrete mixer operator.....	0 45	8
Cement finishers.....	0 50	8
Brick and hollow tile layers.....	0 80	8
Structural steel workers.....	0 80	8
Carpenters and joiners.....	0 55	8
Sheet metal workers.....	0 60	8
Roofers, felt and gravel.....	0 50	8
Metal lathers.....	0 55	8
Plasterers.....	0 80	8
Painters and glaziers.....	0 55	8
Plumbers and steamfitters.....	0 60	8
Electricians.....	0 60	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Teamsters.....	0 35	8
Motor truck driver.....	0 40	8

Covering the Armoury with new roof, Brockville, Ont. Name of contractors, Messrs. Heather & Little, Toronto, Ont. Date of contract, October 13, 1932. Amount of contract, \$1,070 and \$12 per 100 square feet for any new

roof boarding required. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Stonemasons.....	\$0 90	8
Sheet metal workers.....	0 70	8
Roofers (built up felt roofing).....	0 60	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8
Teamster.....	0 40	8
Motor Truck driver.....	0 45	8

Re-roofing the Armoury at Beaufort, P.Q. Name of contractors, Mr. Ulric Latouche of Courville, and Mr. Ulysse Ste. Marie of Beaufort, P.Q. Date of contract, October 4, 1932. Amount of contract, \$1,825. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 55	8
Sheet metal workers.....	0 60	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8
Teamsters.....	0 40	8
Motor truck driver.....	0 45	8

Wharf reconstruction at St. Simeon, county of Charlevoix, P.Q. Name of contractors, Laflamme & Laflamme Ltd., Montreal, P.Q. Date of contract, October 17, 1932. Amount of contract, approximately \$9,960. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 55	8
Timbermen.....	0 42	8
Engine and motor drivers.....	0 50	8
Drill runners.....	0 45	8
Blacksmiths.....	0 50	8
Quarrymen.....	0 40	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Teamsters.....	0 35	8
Labourers.....	0 35	8

Demolition and reconstruction of the existing timber trestle and pier and construction of an extension to same, also the building of a steel warehouse at Leamington, Ontario. Name of contractors, The Chatham Dredging & General Contracting Co., Ltd., Chatham, Ont. Date of contract, October 19, 1932.

Amount of contract, approximately \$144,783.23. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer—steam.....	\$0 65	8
Hoist engineer—gasolene.....	0 50	8
Stationary fireman.....	0 40	8
Concrete mixer operator.....	0 45	8
Compressor operator.....	0 45	8
Carpenter.....	0 60	8
Timberman.....	0 45	8
Blacksmith.....	0 55	8
Blacksmith's helper.....	0 40	8
Labourer.....	0 35	8
Driver, team and wagon.....	0 65	8
Structural steel workers.....	0 80	8
Sheet metal roofers.....	0 65	8
Felt and gravel roofers.....	0 55	8
Bricklayers.....	0 80	8
Painters.....	0 60	8
Electricians.....	0 65	8
Plumbers.....	0 65	8
per month and board		
Tug captain.....	\$150 00	
Tug engineer.....	125 00	
Tug fireman.....	60 00	
Tug deck hands.....	45 00	

#### Contract in Group "B" (Interior Fittings, etc.)

Supply and delivery of crates for the Onion Warehouse at Kelowna, B.C. Name of contractors, The Dominion Construction Co., Ltd., Vancouver, B.C. Date of contract, October 24, 1932. Amount of contract, \$4,200. The "B" labour conditions were inserted in the contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in October, 1932, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	\$ 713 70
<i>Making and repairing rubber stamps, dater, etc.—</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	110 34
<i>Making and supplying letter carriers' uniforms—</i>	
Jas. Coristine & Co., Ltd., Montreal, P.Q.....	562 50
Miner Rubber Co., Ltd., Granby, P.Q.....	285 74
Dominion Rubber Co., Ltd., Ottawa, Ont.....	185 93
Kaufman Rubber Co., Ltd., Kitchener, Ont.....	184 26
Gutta Percha & Rubber Co., Ltd., Ottawa, Ont.....	186 77
Quesnel & Frere, Montreal, P.Q.....	184 18
Woods Manufacturing Co., Ltd., Ottawa, Ont.....	498 47
<i>Mail Bag fittings—</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	418 91

## Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was recently notified that the following contracts were awarded by the Vancouver Harbour Commissioners under the above-mentioned conditions:—

### *Vancouver Harbour Commissioners*

Excavation work in connection with the construction of an extension to Grain Elevator No. 1, Vancouver, B.C. Name of contractors, W. C. Arnott & Co., Vancouver, B.C. Date of contract, July 19, 1932. Amount of contract, \$2,500. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 87½	8
Gasoline shovel operator.....	1 12½	8
Labourers.....	0 45	8
Stationary engineer (steam).....	1 00	8
Steam shovel operator.....	1 12½	8
Teamsters.....	0 50	8
Teamsters with team and wagon...	1 00	8
Truck drivers.....	0 50	8

Construction of the superstructure of an extension to Grain Elevator No. 1, Vancouver, B.C. Name of contractors, Messrs. Carter-Halls-Aldinger Co., Ltd., Vancouver, B.C. Amount of contract, \$95,729. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 87½	8
Concrete labourers.....	0 45	8
Electricians.....	1 00	8
Electricians' helpers.....	0 50	8
Gasoline shovel operator.....	1 12½	8
Labourers.....	0 45	8
Millwrights.....	0 60	8
Millwrights' helpers.....	0 45	8
Re-inforcing men (steel).....	0 75	8
Stationary engineer (derrick).....	1 00	8
Tower hoist engineer.....	0 90	8
Steam shovel operator.....	1 12½	8
Teamsters.....	0 50	8
Teamster, team and wagon.....	1 00	8
Truck drivers.....	0 50	8

## Family Allowances in New Zealand

The annual report of the pensions department of New Zealand contains a review of the administration of family allowances for the year ending March 31, 1932. The Family Allowances Act was outlined in the LABOUR GAZETTE for May, 1927, page 517. It was adopted in 1926, and provides for the granting of allowances towards the maintenance of children by parents of limited income. The allowance is at the rate of 2 shillings per week for each child in excess of two, the average weekly income of the applicant and his wife and children (including allowance) not to exceed four pounds, plus 2 shillings for each child. The total of four pounds was reduced by the Finance Act of 1931 to £3 12s.

According to the annual report for 1932, the claims lodged during the year totalled

3,443, which, with the 279 outstanding from the previous year, made a total of 3,722 dealt with. Of these, 3,040 were accepted and 350 rejected. Of the rejected claims 146 represent cases where the income of the family was in excess of the limit allowed. 389 new claims from Maoris were finally dealt with during the year, 260 being granted and 129 rejected.

The total children included in the 7,332 allowances in force as at March 31, 1932, numbered 34,546, the average per family being 4.71.

The total amount paid during the year was £90,100, while the total annual value of all allowances in force at the close of the year was £101,608.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Pulp, Paper and Paper Products

IROQUOIS FALLS, STURGEON FALLS, ESPANOLA, SAULT STE. MARIE, FORT WILLIAM, FORT ARTHUR, ONTARIO AND PINE FALLS, MANITOBA.—ABITIBI POWER AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER UNIONS.

The agreements covering the manufacture of newsprint between this company and the various unions were last mentioned in the *LABOUR GAZETTE* as follows: Iroquois Falls in December, 1931; Sturgeon Falls, Espanola and Sault Ste. Marie (formerly the Spanish River Pulp and Paper Mills Limited) in May, 1926; Fort William (the Fort William Paper Company Limited) in May, 1926; Port Arthur (the Thunder Bay Paper Company Limited) in April, 1930; Pine Falls, Manitoba (the Manitoba Paper Company Limited) in December, 1931. As mentioned in the *LABOUR GAZETTE*, December, 1931, pages 1354 and 1355, a wage reduction of 5 per cent was made August 15, 1931, applying to all these mills. The agreements were further amended June 1, 1932, to be in effect until May 1, 1933, providing for further wage reductions of from  $7\frac{1}{2}$  to  $9\frac{1}{2}$  per cent, but establishing a minimum rate of 38 cents per hour.

PORT ARTHUR, ONTARIO.—PROVINCIAL PAPER MILLS LIMITED (A SUBSIDIARY OF THE ABITIBI POWER AND PAPER COMPANY LIMITED) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.

This agreement, which refers to the manufacture of paper other than newsprint, is in effect from June 14, 1932, to April 30, 1933 and thereafter from year to year until notice.

The agreement is similar to the one summarized in the *LABOUR GAZETTE*, July, 1929, page 803, with the exception of wage reductions of from 10 to 15 per cent from the 1929 rates.

### Manufacturing: Printing and Publishing

WINDSOR, ONTARIO.—PUBLISHERS OF A DAILY NEWSPAPER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 553.

Supplementary agreement to be in effect from February 1, 1932, to December 30, 1932.

This agreement amends the one summarized in the *LABOUR GAZETTE*, September, 1931, page 1036, and July, 1929, page 803, by reducing wages approximately 10 per cent, which makes the wage rate 95 cents per hour for day work and \$1.03 $\frac{1}{2}$  for night work with \$2 per week extra for the lobster shift.

WINDSOR, ONTARIO.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 553.

The agreement which was summarized in the *LABOUR GAZETTE*, July, 1929, page 804, was verbally extended from January 1, to December 31, 1932, with the following change:

Wages for journeymen: \$39.60 per week for day work and \$42.60 per week for night work (a reduction of approximately 10 per cent from the previous rate).

TORONTO, ONTARIO, AND CERTAIN OTHER CITIES.

—THREE ELEVATOR CONSTRUCTION AND MAINTENANCE COMPANIES AND THE INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS, LOCALS No. 50 (TORONTO), No. 90 (HAMILTON), No. 96 (OTTAWA), No. 89 (MONTREAL), No. 101 (QUEBEC), No. 102 (WINNIPEG), AND No. 82 (VANCOUVER).

The standard international agreement which was summarized in the *LABOUR GAZETTE*, December, 1930, June, 1928, and December, 1927, provides that the wage rate for journeymen in each city be determined by the average rate of the five highest paid of seven specified building trades. The rates at June 1, 1931, were given in the *LABOUR GAZETTE*, August, 1931, page 932. The rates in effect under this agreement at October 1, 1932, were as follows:

Wages per hour: Local No. 50—Toronto, \$1. Local No. 90—Hamilton, \$1.05 $\frac{1}{2}$ , St. Catharines, \$1.05 $\frac{1}{2}$ , London, 93 cents, Kitchener, 83 cents, Windsor, \$1.25. Local No. 96—Ottawa, 94 $\frac{1}{2}$  cents. Local No. 89—Montreal, 89 cents. Local No. 101—Quebec, 84 cents, Halifax, 99 cents. Local No. 102—Winnipeg, \$1.28. Local No. 82—Vancouver, \$1.15.

SASKATOON, SASK.—SASKATOON MASTER PLUMBERS ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 264.

Agreement made following strike reported in the *LABOUR GAZETTE*, August, 1932, page 858, to be in effect from July 6, 1932, to February 28, 1934, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1930, page 1091, with the following exceptions:

Hours are changed from 44 to 40 per week with time and one-half for all work done on Saturdays except for emergency jobbing work or setting of sleeves or inserts on Saturday mornings, which may be done at single time rate of pay.

Wages per hour for journeymen plumbers and steamfitters: \$1.05 (a reduction of 25 cents per hour).

### Construction: Shipbuilding

VANCOUVER, B.C.—B.C. MARINE ENGINEERS AND SHIPBUILDERS LIMITED AND THE BOILERMAKERS AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL No. 1.

Agreement to be in effect from June 20, 1932, to June 20, 1933, and thereafter until 30 days' notice of change from either party.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, October, 1931, page 1140, with the following exception:

Wages are reduced 10 per cent from the previous rate and are now as follows: acetylene welders and burners, \$5.82 per day; acetylene welders' helpers, \$3.87; anglesmiths, \$6.30; anglesmiths' helpers, \$4.72; boilermakers, chippers and caulkers, riveters, shipfitters, drillers and tappers, \$6.30; ironworkers' helpers, \$4.72; holders-on, \$5.33; punch and shear men, \$5.35; passer boys, \$3.20; reamers and countersinkers, \$4.95; rivet heaters, \$4.77; frame benders' helpers, \$5.06; drilling out rivets, \$5.33.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was characterized by a seasonal advance in retail prices of food and a decline in clothing. Wholesale prices were lower, the decrease being chiefly in farm products and in raw materials. This decline in the index number more than offset the increases occurring during August and September.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average prices in sixty-nine cities showed a slight increase at the beginning of October at \$7.07 as compared with \$6.98 for September. Comparative figures for earlier dates are \$7.84 for October, 1931; \$10.32 for October, 1930; \$11.68 for October, 1929; \$10.23 for October, 1922; \$16.92 for June, 1920 (the peak); and \$7.99 for October, 1914. The most important changes were seasonal advances in the prices of eggs, butter and cheese, while the prices of beef, mutton, fresh pork, evaporated apples, prunes, granulated sugar and potatoes were lower. Including the cost of fuel and rent with that of foods the total budget was \$16.40 at the beginning of October as compared with \$16.34 for September. These figures compare with \$17.86 for October, 1931; \$20.68 for October, 1930; \$21.96 for October, 1929; \$20.87 for October, 1922; \$26.92 for July, 1920 (the peak); and \$14.48 for October, 1914. Fuel was slightly lower, due to somewhat lower prices for anthracite coal and wood. Rent showed a slight decline in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was lower at 65.0 for October as compared with 66.9 for September; 70.4 for October, 1931; 81.0 for October, 1930; 96.8 for October, 1929; 94.8 for October, 1922; 164.3 for May, 1920 (the peak); and 66.8 for October, 1914. One hun-

dred and twenty-nine prices quotations were lower, forty-seven were higher and three hundred and twenty-six were unchanged.

In the classification according to chief component materials seven of the eight main groups were lower and one advanced. The groups which declined were: the Vegetables and Vegetable Products group, due mainly to lower prices for grains, bran and shorts; the Animals and their Products group, because of decreases in the prices of steers, hogs, lambs and fresh meats which more than offset higher prices for calves, lard and eggs; the Fibres, Textiles and Textile Products group, mainly because of decreased quotations for raw cotton, certain cotton fabrics, raw jute, raw silk and worsted cloth yarns; the Wood, Wood Products and Paper group, due to lower prices for newsprint and wood pulp; the Iron and its Products group, because of declines in the prices of steel tank plates, automobile body plates and galvanized steel sheets; the Non-Ferrous Metals and their Products group, due to lower quotations for electrolytic copper, imported copper wire bars, lead, tin and zinc; and the Non-Metallic Minerals and their Products group, due to declines in the prices of sulphur, quicklime and crushed stone, which more than offset higher prices for coal. The Chemicals and Allied Products group was slightly higher, due to increased prices for shellac, whitelead and fertilizer.

In the grouping according to purpose both consumers' goods and producers' goods declined, the former because of decreased prices for flour, bran, shorts, fresh and cured meats, denim and silk hosiery which more than offset higher prices for coffee, potatoes, eggs and lard, and the latter due mainly to lower prices for wheat, oats, flax, steers, hogs, lambs, hides, copper, lead and zinc.

In the grouping according to origin raw and partly manufactured goods declined because of lower prices for flax, wheat, oats, steers, hogs, lambs and copper which more than offset advances in the prices of potatoes, calves eggs and scrap steel. Lower prices for flour, bran, shorts, cured meats, cheese and sun-dried print caused a decline in the fully and chiefly manufactured goods group. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each

month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries,

(Continued on page 1232)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 1224)

page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3;

1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9;

# CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1932\*

(Average prices in 1913=100)

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

1928, 128.5; 1929, 128.0; 1930, 127.6, Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

## Retail Prices

The decline in beef prices continued in most localities, sirloin steak being down in the average from 24.8 cents per pound in September to 24 cents in October, rib roast from 18.2 cents per pound to 17.9 cents and shoulder roast from 12.7 cents per pound to 12.5 cents. Mutton was 1 cent per pound lower in the average at 19.2 cents, decreases occurring in most localities. Fresh pork declined in the average from 15.9 cents per pound in September to 15.7 cents in October, while breakfast bacon was up from an average price of 21.7 cents per pound in September to 22.8 cents in October. Lard was ½ cent per pound higher at 12.6 cents.

Eggs showed a substantial seasonal advance, fresh being up from 25.6 cents per dozen in September to 30.3 cents in October and cooking from 20.7 cents per dozen to 24 cents. Milk was unchanged at an average price of 9.4 cents per quart. Butter was higher at the beginning of October in practically all localities, dairy averaging 23 cents per pound as compared with 20.8 cents in September and creamery averaging 26.9 cents per pound as compared with 25 cents. Cheese was slightly higher at an average price of 20 cents per pound as compared with 19.8 cents in September.

Bread was unchanged at an average price of 5.8 cents per pound. Canned tomatoes and peas were again fractionally higher. Onions were generally lower at the average price of 3.5 cents per pound as compared with 4.5 cents in September and 6.4 cents in August. The price of potatoes continued downward at 80.4 cents per ninety pounds in October as compared with 89.7 cents in September and \$1.21 in August. Prunes were somewhat lower in many localities, the average price being 10.8 cents per pound in October as compared with 11.2 cents in September. Granulated sugar was slightly lower at 5.8 cents per pound. Anthracite coal was down

from an average price of \$15.34 per ton in September to \$15.27 in October. Lower prices were reported from Charlottetown, Moncton, Sherbrooke, Montreal, Windsor, Timmins, Port Arthur and Fort William. Bituminous coal was also lower at an average price of \$9.47 per ton in October as compared with \$9.65 in September. Hardwood in stove lengths was down from \$12.89 per cord in September to \$12.78 in October. Lower quotations for rent were reported from Moncton and Winnipeg.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from an average price of 51.9 cents per bushel in September to 48.2 cents in October. The high price during the month was 49.3 cents per bushel reached on October 3rd and 22nd and the low 46 cents per bushel reached on the 29th. Prices during the first half of the month declined gradually when some recovery occurred lasting until the 24th. This was followed by a sharp break of 4½ cents per bushel in two days accompanying a decline in sterling exchange. The weakness was also said to be due in part to the large offerings of Canadian wheat and to increased shipments from the southern hemisphere. Some comparative figures in earlier years are as follows:—for 1913, 88.2 cents per bushel; 1920, \$2.51 per bushel; and 1926, \$1.50 per bushel. Other grains were also substantially lower, western barley being down from an average of 28.9 cents per bushel to 25.7 cents, flax from 78.5 cents per bushel to 70.8 cents, western oats from 26.1 cents per bushel to 23.5 cents, rye from 31.9 cents per bushel to 29.2 cents. Flour at Toronto was 10 cents per barrel lower at \$4.50. Bran and shorts at Montreal were down \$1.20 per ton, the former to \$17.25 and the latter to \$19.25. Raw sugar at New York was up from \$1.20 per hundred pounds to \$1.28 (Canadian funds), while granulated at Montreal was unchanged at \$4.37 per hundred pounds. Ceylon rubber at New York was down from 4.3 cents per pound to 3.8 cents. In livestock, choice steers at Toronto declined from \$5.36 per hundred pounds to \$4.70 and at Winnipeg from \$4.17 per hundred pounds to \$3.63. Bacon hogs at Toronto were down from \$5.11 per hundred pounds to \$4.50, at Winnipeg from \$4.87 per hundred pounds to \$3.78 and at Montreal from \$5.64 per hundred pounds to \$4.84. Lambs at Toronto declined from \$5.46 per hundred pounds to \$4.77 and at Winnipeg

the price was 89 cents per hundred pounds lower at \$3.64. Creamery butter at Montreal was slightly lower at 24 cents per pound, while the price at Winnipeg advanced 1 cent per pound to 24 cents. Fresh eggs at Montreal showed a substantial seasonal advance being up from 33 cents per dozen to 39.4 cents. The price at Toronto advanced from 28.9 cents per dozen to 37 cents. The price of raw cotton at New York was down from 8½ cents per pound to 7.2 cents. This decline followed the issuing of the government crop estimate of October 1st which was considerably higher than at the beginning of September. Raw silk at New York was down from \$2.11 per pound to \$2.02. The price of newsprint was down from \$2.31 per hundred pounds to \$1.89. This is a fall of \$8.40 per ton to \$37.80, the lowest price on record. In non-ferrous metals electrolytic copper at Montreal was down from \$7.62 per hundred pounds to \$7.31, while tin at Toronto declined from 31.8 cents per pound to 31.5 cents. United States anthracite coal advanced from \$12.98 per long ton to \$13.33, while western domestic coal at Lethbridge advanced from \$4.75 per ton to \$5.

### Relief Wages in New York State

The New York State Temporary Relief Administration in a report on the first seven months of its work states that of \$20,000,000 of state and local funds expended for work relief approximately 85 per cent went for wages and 15 per cent for materials. The state contributed slightly less than half of the sum mentioned.

An analysis of work projects during the winter and spring showed that 40 per cent of them were on highway construction. The remainder were: sanitation, 16 per cent; water supply, 8 per cent; parks and playgrounds, 12 per cent; utilities and structures, 8 per cent; general public improvements, 3 per cent; clerical and professional, 11 per cent; miscellaneous, 2 per cent. The study of the local bureaus showed a high proportion of young and middle-aged people registered for employment, the rate of men and women over fifty-five running only from 7 to 15 per cent.

During October a total of 2,927 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 14 of which were fatal cases; in Schedule 2 industries 196 accidents were reported, including 10 fatal cases; and 219 accidents to employees of the Crown, 8 of which were fatal were reported during the month, making in all 3,342, of which 32 were fatal.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for October, 1932, page 1126.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 61.4 for September, an advance of 2.5 per cent for the month. Foods as a whole were 0.1 per cent higher, advances in cereals and meat and fish being partly offset by a decline in other foods. Non-foods were 3.7 per cent higher for the month with advances in all of the seven groups.

The *Statist* index number on the base of 1867-1877=100, was 80.4 at the end of September, a decline of 0.4 per cent for the month due to a substantial decline in textiles and a smaller decline in animal food. The other groups all showed advances.

**COST OF LIVING.**—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 143 at October 1, an advance of 1.4 per cent for the month due to higher food prices and also to an advance in the fuel and light group.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 81 for September, an increase of 1.3 per cent for the month. Foods on the whole showed a slight decline, while industrial materials with the exception of textiles were higher than for August.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 95.1 for September, a fall of 0.3 per cent for the month, due almost entirely to reductions in agricultural products.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 119.5 for September, a decline of 0.7 per cent for the month due to decreases in the prices of food, clothing and sundries. Rent was unchanged, while the heat and light group showed a small advance.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base: average annual expenditure, four chief centres 1909-1913=1000, was 1299 for August, showing no change from the July level. Increases in foodstuffs, etc., of vegetable origin and in animal products were offset by declines in all other groups.

**COST OF LIVING.**—The official index number on the base 1926-1930=1000 was 821 for August, a fall of 2.2 per cent from the May level. Groceries was the only group to show an advance for this period.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 65.3 for September, an advance of 0.2 per cent for the month. Advances in hides and leather products, textile products, building materials and housefurnishing goods were partly offset by declines in fuel and lighting materials and chemicals and drugs. No changes were recorded for the farm products, foods and metals and metal products groups.

*Bradstreet's* index number, which is the sum total of the prices per pound of 96 commodities of common consumption was \$6.9658 at November 1, a fall of 4.3 per cent for the month. With the exception of chemicals and drugs which were unchanged all groups were included in the general decline. Breadstuffs fell 8.9 per cent and livestock 6.1 per cent in the month.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 125.2 for September, a decrease of 2.6 per cent for the month due to declines in food, clothing and shelter, partly offset by an increase in fuel and light.

According to a statement issued by the Ministry of Health, the total number of persons in receipt of poor relief (domiciliary and institutional) in England and Wales at the end of June, 1932, was 1,180,616. This compares with 1,188,077 at the end of March, 1932, and with 966,930 in June, 1931. The increase recorded in the three previous quarters continued during the first two weeks of April; thereafter there was a decline for three weeks. The numbers rose again in May (except in the week following the Whitsuntide holiday), but fell steadily in June.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1932

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the third quarter of 1932, was 226, there being 78 in July, 74 in August and 74 in September.

The report for the second quarter of 1932 was given in the *LABOUR GAZETTE*, August, 1932, page 936. In the third quarter of 1931, 275 fatal accidents were recorded (*LABOUR GAZETTE*, November, 1931, page 1269). The supplementary lists of fatal industrial accidents on page .... contain 24 fatalities for the first half of 1932 and 2 fatalities for 1931. In this series of reports it is the custom to record industrial accidents on the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada, from certain other official sources, and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the third quarter of 1932 were as follows: agriculture, 67; logging, 19; fishing and trapping, 1; mining, non-ferrous smelting and quarrying, 27; manufacturing, 22; construction, 23; electric light and power, 4; transportation and public utilities, 45; trade, 9; service, 9.

Of the mining accidents, 10 were in "metallic mining," 13 in "coal mining," 2 in "non-metallic mineral mining and quarrying, n.e.s.," and 2 in "structural materials."

Of the accidents in manufacturing, one was in "vegetable foods, drink and tobacco," one in "animal foods," 5 in "saw and planing mill products," 5 in "wood products," 5 in "pulp, paper and paper products," one in "printing and publishing," one in "iron, steel and products," and 3 in "non-metallic mineral products."

In construction there were 13 fatalities in "buildings and structures," 5 in "highway and bridge," and 5 in "miscellaneous construction."

In transportation and public utilities, there were 16 fatalities in "steam railways," one in "street and electric railways," 18 in "water transportation," 4 in "air transportation," 4 in "local transportation," and 2 in "storage."

In trade there were 5 fatalities in "wholesale," and 4 in "retail."

Of the fatalities in service, 5 were in "public administration," one in "custom and repair," and 3 in "personal and domestic."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:—

On September 1, a mushroom farmer and his helper were poisoned while using calcium cyanide to exterminate mice in a shed, at Woodville, Ontario.

On July 27, five river drivers were drowned near Deux Rivières, Quebec, when their boat capsized in rapids; and two jobbers in logging were drowned from a raft in the Montmorency River, on September 17.

Two miners were killed in an explosion at Rouyn, Quebec, on July 11, when a lightning struck the safety electrical detonating equipment. Two coal miners were overcome by carbon monoxide gas while rescuing children in a mine in Queen's County, New Brunswick, on July 28. Two gas well drillers lost their lives following an explosion of gas in a well near Dresden, Ontario, on September 7.

When a boiler exploded and their engine was derailed near St. Malachie, Quebec, on August 5, the engineer, fireman and brakeman lost their lives. A stevedore fell down a hold of a ship at Windmill Point, Quebec, on August 26, striking another stevedore in falling and both of them were killed. On September 10, the first officer and fireman were drowned when their collier was wrecked in a storm off Cape Percy, Nova Scotia. On July 1, a pilot and two mechanics were killed in a plane crash near Mazenod Lake, Northwest Territories.

On July 11, two fumigators were poisoned by hydrocyanic gas in an apartment, in Toronto, Ontario.

*Supplementary Lists of Accidents.*—The supplementary list of accidents occurring during the first half of 1932, to be found after the main table of accidents, contains 24 fatalities, of which 3 were in logging, one in fishing and trapping, 2 in mining, non-ferrous smelting and quarrying, 4 in manufacturing, 4 in construction, 5 in transportation and public utilities, one in trade, and 4 in service. One of these accidents occurred in January, 2 in February, 2 in March, 6 in May and 13 in June.

Concluding the lists is a supplementary list of accidents occurring during 1931. This includes 2 fatalities, both of which were in construction and both occurred in October.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1932

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE AND STOCK-RAISING—</b>				
Farmer.....	Near Chatham, Ont.....	about July 1..	70	Foot cut by mower when team took fright. Died July 27.
Farmer.....	Near Chatham, Ont.....	" 2..	about 55	Gored by cow.
Farmer.....	St. Cyr, Que.....	" 3..	45	Gored by bull.
Farmer.....	Near Windsor, Ont.....	" 11..	15	Burned in fire that destroyed home.
Farm hand.....	Near Woodstock, Ont.....	about July 11..	31	Kicked by horse.
Farmer.....	Near Bismark, Ont.....	about July 13..	39	Struck by lightning.
Farmer.....	Near Mundare, Alta.....	July 13..	26	Buried under cave-in of well when cribbing collapsed.
Farmer.....	Near Rocanville, Sask.....	" 12..	.....	While repairing binder it fell on him.
Farmer.....	Brookdale, Man.....	" 18..	60	Struck by lightning.
Farmer.....	Near Richmond, Ont.....	about July 19..	.....	Struck by pulley during haying operations.
Farmer.....	Near Port Perry, Ont.....	" 20..	78	Thrown from seat of rake when horses ran away.
Labourer.....	Longueuil, Que.....	" 23..	27	Kicked by horse.
Farmer.....	St. Elmo West, Ont.....	" 23..	30	Kicked by horse. Died July 24.
Farmer.....	Near Lloydminster, Sask.....	" 25..	.....	Burned in fire that destroyed his home.
Farmer.....	Buttontown, Ont.....	" 27..	60	Gored by steer. Died July 28.
Farmer.....	Macamie, Abitibi, Que.....	" 30..	60	Gored by bull.
Farmer.....	Champany, Que.....	Aug. 2..	55	Gored by bull.
Farmer.....	St. Paul du Buton, Que.....	" 3..	.....	Gored by bull.
Farmer.....	Near Barwick, Ont.....	" 6..	19	Struck by piece of timber hurled from saw.
Bee farmer.....	Deschambault, Que.....	" 8..	28	Congestion of lungs from using mask.
Farm labourer.....	Outlook, Sask.....	" 10..	47	Kicked by horse. Died Aug. 12.
Farmer's son.....	Near Winterburn, Alta.....	" 11..	22	Thrown from horse.
Farm hand.....	Near Fort William, Ont.....	Aug. 12..	50	Kicked by horse.
Farmer.....	Notre Dame d'Issoudun, Que.....	" 12..	52	Struck by arm of thresher. Died Aug. 14.
Farmer.....	Near Ellwood, Alta.....	" 16..	.....	His truck overturned when it struck a calf.
Farmer.....	Cooks' Mills, Ont.....	about Aug. 17..	.....	Kicked by horse.
Farmer.....	Near Grenville, Que.....	Aug. 17..	35	Struck by auto while driving cow.
Farmer.....	Key River, Alta.....	" 18..	48	Kicked by horse.
Farmer.....	Near St. Henedine, Que.....	" 19..	30	Crushed under falling rock in trench.
Farmer.....	Near Scotsguard, Sask.....	" 20..	40	Struck by lightning.
Farmer's son.....	Near Lampman, Sask.....	" 20..	12	Thrown from wagon when horses bolted.
Farm hand.....	Near Cayuga, Ont.....	" 22..	25	Run over while trying to stop runaway team.
Farmer.....	Near Birtle, Man.....	" 24..	.....	Struck by lightning.
Farmer.....	Near Regina, Sask.....	" 27..	63	Fell from hay loft. Died Aug. 30.
Farm hand.....	Phillipsburg, Ont.....	" 29..	43	Trampled by runaway team.
Farmer.....	Near New Dundee, Ont.....	Sept. 1..	.....	Overcome by the heat.
Mushroom farmer.....	Woodville, Ont.....	" 1..	.....	Poisoned by fumigating gas in mushroom shed.
Helper.....	".....	" 1..	.....	"
Farmer.....	Near Fall Brook, Ont.....	" 1..	70	Collapsed after rescuing horses from burning barn
Farmer.....	Near Chatham, Ont.....	" 1..	40	Fell from wagon.
Farmer.....	Near Masham, Que.....	" 2..	66	Thrown from load of hay when truck struck wagon. Died Sept. 6.
Farmer.....	Isle Verte, Que.....	" 4..	23	Collision of auto with his wagon.
Thresher.....	Near Wainwright, Alta.....	" 5..	33	Drawn into threshing machine.
Farm hand.....	Near Whitewood, Sask.....	" 6..	.....	Kicked by horse. Died Sept. 7.
Farmer.....	Near Aurora, Ont.....	" 7..	78	Struck by auto while leading horse on road.
Farmer.....	Near Adolphustown, Ont.....	Sept. 8..	55	Fell 18 ft. from hay mow.
Farmer.....	Near Fontheill, Ont.....	" 9..	73	Fell from load of hay.
Farmer's wife.....	Near Rocanville, Sask.....	" 10..	.....	Trampled by cow while driving cows into yard.
Dairy farm worker.....	Near Ottawa, Ont.....	" 12..	23	Fell from truck and was run over.
Farmer.....	Near Vulcan, Alta.....	" 14..	50	Struck by feeder of threshing machine when it fell.
Farmhand.....	Near Govan, Sask.....	" 15..	18	Fell on fork when he jumped from separator. Died Sept. 19.
Farmer.....	Near Havelock, N.B.....	" 15..	47	Dragged under reaper when horses bolted. Died Sept. 16.
Farmer.....	Gardenton, Man.....	" 16..	68	Killed by enraged bear.
Farmer.....	Legal, Alta.....	" 16..	28	Trampled by bull. Died Sept. 17.
Thresher.....	Near Harris, Sask.....	" 17..	39	Crushed between engine and separator of threshing outfit.
Farmer.....	Edmore Dist., Sask.....	" 17..	22	Thrown from wagon.
Rancher.....	Near Kaslo, B.C.....	" 19..	.....	Accidental discharge of his rifle.
Rancher.....	Erickson, B.C.....	about Sept. 19..	76	Attacked by bull.
Rancher.....	Midnapore, Alta.....	Sept. 20..	52	Caught beneath wagon when team bolted.
Farmer.....	Near Readlyn, Sask.....	" 20..	44	Overcome by gas in old mine shaft from which he was hauling home coal.
Farmer.....	St. Come de Beauce, Que.....	" 21..	65	Caught in thresher.
Thresher.....	Near Parkhill, Ont.....	" 21..	.....	Struck by flying cable. Died Sept. 27.
Farmer.....	N.D. des Anges, Que.....	" 25..	58	Stumbled on stone while searching for stray hens.
Farmer's wife.....	Near Petrolia, Ont.....	" 27..	.....	Gored by bull while milking cows.
Farmer.....	Near Millet, Alta.....	" 27..	22	Caught in threshing machine. Died Sept. 30.
Farmer.....	Near Newdale, Man.....	" 29..	22	Killed while cleaning jammed shot gun.
Farmer.....	Near Kamloops, B.C.....	about Sept. 30..	31	Accidental discharge of shot gun when mower struck rock.
Logger.....	Mermaid Bay, B.C.....	July 13..	27	Struck by rolling log.
Workman.....	Near Burnaby, B.C.....	" 14..	28	Anchor tree broke and fell on him.
Logger.....	Near Newlands, B.C.....	" 23..	.....	Fell from hand car. Died July 25.

River driver			23	
River driver			32	
Labourer	Thorold, Ont.	" 30..	45	Struck by falling tree.
Logger	Annis, B.C.	Aug. 1..	49	Crushed by falling tree.
Hooktender	Squamish, B.C.	" 4..	50	Struck when skid swung.
Faller	Hanson's Island, B.C.	" 11..	47	Struck by falling snag.
Boomman	Esquimalt, B.C.	" 22..	41	Slipped from boom and was drowned.
Logger	Rivière des Neiges, Que.	" 27..	31	Cut his wrist with axe. Infection. Died Sept. 12.
Grader	Fanny Bay, B.C.	" 29..	40	Injured when he jumped off runaway speeder.
Logger	Ocean Falls, B.C.	" 29..	30	Struck by saw and lift..
Logger	Near Courtenay, B.C.	Sept. 3..		Speeder on which he was riding ran away on grade crashing into logging train.
Jobber	Montmorency River, Que.	" 17..	27	Drowned from raft.
Jobber			43	
FISHING AND TRAPPING—				
Fisherman	Off Cape Spear, N.B.	Sept. 16..		Fell from boat and was drowned.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining—				
Miner	Anyox, B.C.	July 5..	23	Fell from mine bench.
Miner	Schumacher, Ont.	" 7..	34	Miner's phthisis. First laid off July 22, 1925.
Miner	Kirkland Lake, Ont.	" 8..	30	Fall of rock.
Miner	Rouyn, Que.	July 11..	40	Explosion when lightning struck safety electrical detonating equipment.
Miner			35	
Miner	Near Amos, Que.	" 16..		Fell down shaft when hoist fell.
Mucker	Wawa, Ont.	" 20..	19	Cut finger by rock, infection. Died Aug. 1.
Miner	Red Lake, Ont.	Aug. 16..	32	Killed during blasting operations.
Prospector	Prince George, B.C.	Sept. 11..		Drowned when canoe capsized in rapids.
Miner	Stewart, B.C.	" 29..		Bucket in which he was riding fell when tramway collapsed.
Coal mining—				
Miner	Queen's Co., N.B.	July 4..	44	Fell down mine shaft.
Miner	Cumberland, B.C.	" 4..	60	Buried when roof caved in.
Miner	Queen's Co., N.B.	" 28..	32	Overcome by carbon monoxide gas while rescuing children in mine.
Miner			48	
Miner	Sydney Mines, N.S.	Aug. 1..		Crushed by falling stone.
Miner	Glace Bay, N.S.	" 2..		Crushed by falling stone.
Driver	Hillcrest, Alta.	" 10..	45	Fell between two cars. Died Aug. 11.
Miner	Glace Bay, N.S.	" 10..	44	Struck by fall of coal.
Driver	Corbin, B.C.	" 31..	25	Smothered by fall of coal.
Miner	Saunders, Alta.	Sept. 7..	49	Struck by falling piece of clod.
Miner	Nordeg, Alta.	" 16..	58	Crushed by cave-in.
Mine worker	Estevan, Sask.	" 17..	32	Explosion of gun powder on electric mine train.
Mine worker	Estevan, Sask.	" 27..	24	Run over by mine car.
Non-Metallic mineral Mining and Quarrying, n.e.s.—				
Gas well driller	Near Dresden, Ont.	Sept. 7..	36	Explosion of gas well. Died Sept. 8.
Gas well driller			47	
Structural Materials—				
Hoist engineer at gravel pit	Lethbridge, Alta.	July 16..	45	Fell off truck.
Craneman in gravel pit	Near Weston, Ont.	Aug. 23..	37	Buried under cave-in following blasting.
MANUFACTURING—				
Vegetable foods, drink and tobacco—				
Worker at milling plant	Prince Albert, Sask.	Sept. 12..	21	Suffocated in bran bin.
Animal foods—				
Machinist at salmon cannery	Steveston, B.C.	July 2..	52	Drowned.
Saw and planing mill products—				
Canter	Fairview, Alta.	July 1..		Struck head on saw.
Sawyer	Matane River, Que.	July 15..	27	Struck by detached circular saw. Died July 26.
Saw operator	Welsford, N.B.	Aug. 2..	30	Caught in saw.
Worker in cedar mill	Hammond, B.C.	Sept. 8..	23	Fell from roof of dry kiln.
Saw operator	Kirkland Lake, Ont.	" 10..	40	Struck by piece of fly wheel of wood-sawing machine when it broke.
Wood Products—				
Labourer with timber preservers	Sioux Lookout, Ont.	Aug. 2..	52	Struck by piece of wood while unloading wood from flat car and fell from car. Died Aug. 6.
Press operator with casket mfrs.	London, Ont.	Aug. 15..	38	Scratched hand while handling steel, blood poisoning. Died Aug. 20.
Saw operator	Norwood, Ont.	Aug. 26..	38	Fell on saw.
Worker at shook mill	New Westminster, B.C.	" 29..	35	Fell from wharf at plant and was drowned.
Machinist at furniture factory	Listowel, Ont.	" 31..		Struck by piece of wood while shaping tops. Died Sept. 1.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1932—Continued

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—Con.</b>				
<i>Pulp, Paper and Paper Products—</i>				
Mill worker.....	Port Arthur, Ont.....	July 22..	27	Crushed between reel drum and roll of paper.
Foreman.....	Deesbien, Que.....	Aug. 5..	35	Buried under pile of rolling logs.
Steam fitter.....	Ottawa, Ont.....	Aug. 10..	58	Electrocuted while repairing pipe when it touched high tension wire.
Wood room cleaner..	Hawkesbury, Ont.....	Sept. 22..	51	Thrown against wall when he stepped on moving belt. Died Sept. 24.
Log scaler.....	Hull, Que.....	" 27..	about 55	Caught in log conveyor. Died Sept. 28.
<i>Printing and Publishing—</i>				
Printer's apprentice..	Halifax, N.S.....	Aug. 13..	19	Lead poisoning. Died Aug. 21.
<i>Iron, Steel and Products—</i>				
Machinist.....	Bracebridge, Ont.....	July 21..	40	While turning steel shaft in lathe, piece got in eye. Died Aug. 28.
<i>Non-Metallic Mineral Products—</i>				
Yard labourer.....	Sarnia, Ont.....	July 2..	36	Struck by falling pipe on July 29, 1930.
Worker at glass plant	Ville St. Pierre, Que.....	Aug. 9..	51	Wind blew pile of boxes on his head.
Worker in glass factory..	Kitchener, Ont.....	Aug. 6..	37	Pneumonicosis. First laid off Dec. 24, 1928.
<b>CONSTRUCTION—</b>

Painter.....	Vancouver, B.C.....	July 3..	50	Injured when scaffold gave way on Nov. 30, 1930
Labourer.....	Vancouver, B.C.....	" 6..	50	Buried under falling brick. Died Aug. 7.
Painter.....	Montreal, Que.....	" 20..	35	Fell from elevator.
Labourer.....	Mimico, Ont.....	" 21..	-	Crushed by fall of earth.
Painter.....	Sydney, N.S.....	" 26..	58	Fell from house.
Worker on storage tank..	Port Stanley, Ont.....	" 26..	28	Struck by falling piece of sheet steel.
Painter.....	Hamilton, Ont.....	Aug. 4..	50	Took weak spell and fell to floor.
Labourer.....	Quebec, Que.....	" 10..	47	Collapse of part of ceiling of reservoir.
Workman.....	St. Charles de Bellechasse, Que.....	" 18..	29	Fell from roof of church.
Worker with roofing company..	Winnipeg, Man.....	" 24..	27	Explosion while using acetylene torch.
Plasterer.....	Montreal, Que.....	" 29..	26	Electrocuted when he touched socket of extension cord.
Worker on power house..	Masson, Que.....	Sept. 9..	20	Crushed between concrete car and scaffold. Died Sept. 10.
Bricklayer.....	Stratford, Ont.....	" 13..	77	Fell from chimney. Died Sept. 16.
<i>Highway and Bridge—</i>				
Contractor.....	Ecumsecum, N.S.....	July 31..	-	Pinned under truck when it overturned.
Highway worker.....	Irish Cove, N.S.....	Aug. 3..	30	Fell under wheels of truck.
Powderman.....	Donald, B.C.....	" 24..	58	Premature explosion of charge.
Labourer.....	Near Dundalk, Ont.....	Sept. 14..	45	Fell from truck and was run over.
Pile driver.....	Vancouver, B.C.....	" 28..	47	Fell off swerving truck.
<i>Miscellaneous—</i>				
Worker on dredge..	Toronto, Ont.....	July 25..	25	Fell into bay and was drowned.
Labourer on power tunnel construction	Near Buckingham, P.Q.....	" 27..	29	Crushed by rock falling from roof of tunnel.
Carpenter on dam construction..	Calgary, Alta.....	Aug. 26..	42	Fell from dam into river and was drowned.
Labourer on power development..	St. Louis de Gonzague, Qué.....	" 29..	25	Fell from freight car and was run over.
Well digger.....	Highland Creek, Ont.....	Sept. 1..	50	Fell down shaft of well.
<b>ELECTRIC LIGHT AND POWER—</b>				
Operator.....	Midland, Ont.....	July 4..	26	Burns from an electric arc. Died July 7.
Lineman.....	Sydney, N.S.....	Aug. 1..	33	Electrocuted when he came in contact with partially bare primary wire.
Lineman.....	Montreal, Que.....	" 23..	34	Explosion while repairing wires in manhole.
Lineman.....	Humberstone, Ont.....	Sept. 23..	41	Electrocuted when he came in contact with high tension wire.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways—</i>				
Railway worker.....	Hawthorne, Ont.....	July 5..	-	Killed when gasoline speeder jumped tracks.
Carpenter.....	Wainwright, Alta.....	" 12..	60	Struck by falling post.
Section foreman.....	Gracefield, Que.....	" 16..	55	Thrown from speeder when crow-bar fell off and jammed in wheel.
Signalman.....	Near Welland, Ont.....	" 25..	35	Collision of motor car with jigger on which he was riding.
Labourer.....	Assiniboia Sd., Sask.....	" 27..	31	Crushed by plough between corner post of car and door.
Labourer.....	Near Dundas, Ont.....	Aug. 1..	62	Collision of train with gas car on which he was riding.
Bridgeman.....	Rochford Bridge, Alta.....	" 3..	25	Fell 35 feet from bridge to ground. Died Aug. 7.
Engineer.....	Near St. Malachie, Que.....	" 5..	47	Boiler explosion and derailment.
Fireman.....			43	
Brakeman.....			44	Fell beneath wheels of his train during switching operations.
Conductor.....	Glencoe, Ont.....	" 12..	56	
Yardman.....	Moose Jaw, Sask.....	" 30..	47	Struck by car while opening knuckles between cars.
Engineer.....	Coalspur, Alta.....	Sept. 1..	52	Struck by piece of feed water pump when it blew off.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1932—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Con.</i>				
<i>Steam Railways—Con.</i>				
Engine tester.....	Winnipeg, Man.....	" 9..	58	Fell from top of freight train.
Conductor.....	Dutton, Ont.....	" 17..	58	Fell from roof of car.
Conductor.....	Near Glencoe, Ont.....	" 28..	-	Collision of two freight trains.
<i>Street and Electric Railways—</i>				
Lineman.....	Vancouver, B.C.....	July 27..	50	Electrocuted while working on high tension pole.

Labourer.....	Burnaby, B.C.....	Oct. 15..	.....	Injured in excavation.
Labourer.....			.....	

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Mechanics' Lien covers building of Several Structures under One Contract

Several lien claimants and mortgagees appealed from the judgment of the Assistant Master in an action under the Mechanics' Lien Act of Ontario, seeking to establish mechanics' liens in respect of five twin duplex dwellings. The appeals were heard in the Court of Appeal at Toronto by Chief Justice Mulock, Mr. Justice Masten and Mr. Justice Grant, who allowed the appeals, applying the following principles to the case:

(1) The phrase "entire contract" in section 32 (2) of the Mechanics' Lien Act, which provides that "Where an owner enters into an entire contract for the supply of materials to be used in several buildings the person supplying such material may ask to have his lien follow the form of the contract and that it be for an entire sum on all the buildings....." should not be given a strict construction. The Assistant Master held that the phrase "entire contract" meant a contract whereunder all the obligations of one party had to be fulfilled before that party could call on the other for fulfilment of his obligations. Mr. Justice Masten said that he could not agree with the interpretation placed on the phrase by the Assistant Master. Subsection 2 of section 32 was first incorporated in the statute in 1923 and gave statutory recognition to the principle previously enunciated in the cases that a person supplying material under one contract or arrangement for use in the erection of several buildings was entitled to a general lien for the whole sum on all the buildings (Reference to *Ontario Lime Co. v. Grimwood* (1910)). The subsections should be given a liberal construction, and it is not necessary to the validity of a lien that there should be even a binding preliminary agreement, or that prices should have been previously fixed, or that the total quantity to be required had been agreed on or even known. What is essential is that the parties must have had in contemplation one contract or arrangement covering all of the buildings, and not a separate arrangement as to each building. The word "entire" means "one" contract or arrangement as distinguished from separate contracts (Reference to *Morris v. Tharle* (1894), *Dunn v. McCallum* (1907), *Fulton Hardware v. Mitchell* (1923)).

2. A wage earner, as well as a material man, is entitled to have his lien follow his contract for an entire sum upon all the buildings. This right was recognized before section 32 (2) was passed, and although this subsection mentions only material men, the subsection should not be construed as cutting down the rights of wage-earners.

3. A prior mortgagee who has a priority over subsequent mortgagees and lien holders does not lose that priority over the lien holders by postponing his mortgage in favour of the subsequent mortgages.

*Boake versus Guild* (Ontario) 1932, *Ontario Weekly Notes*, vol. 41, page 331.

### Effect of sick leave allowance on question of time-loss

An employee of the Soldier Settlement Board in Saskatchewan was engaged at a salary of \$150 a month. Under the regulations of the Board he was entitled to one and a half days of sick leave for each completed month of service. The regulations also provide for a retiring allowance of one month's salary for each two completed years of service; if however the employee suffers a protracted illness which lasts beyond the length of his accumulated sick leave he receives no pay for such additional time.

The employee in question sustained personal injuries on June 18, 1931, when he was struck by an automobile. In an action for damages the District Court found that the driver of the car had been negligent, and awarded the plaintiff the sum of \$320 and costs. The damages awarded were made of \$20 paid for medical attendance, \$150 general damages for pain and suffering, and \$150 for one month's pay during the time the plaintiff was incapacitated immediately after the accident. The defendant appealed on the question of the amount of damages only, and the appeal was limited to the sum of \$150 allowed for loss of time.

Mr. Justice Martin, in the Court of Appeal, gave the following judgment:

"In referring to general damages, the learned trial Judge said: 'So far as general damages are concerned, the plaintiff undoubtedly suffered a great deal of pain and suffering, but he was back at work within a month, and I think if he is allowed \$150 general damages that would afford some solatium and yet not penalize the defendants unfairly.' From this statement, and from the fact that the learned trial Judge dealt separately with the question of a month's pay as damages for loss of time, it may at once be concluded that the matter of loss of time was not included in the assessment of the amount of \$150 as general damages.... In the present case the learned trial Judge treated the time lost by reason of the accident as capable of exact assessment and allowed a full month's wages, viz., \$150. With deference, he should have treated the time lost as an element for consideration in the assessment of general damages, and should have allowed a fair and reasonable compensation for it, having

in view the fact that the probability of the plaintiff having worked during the whole month was subject to many contingencies. As to what is fair and reasonable under any circumstances, is not, of course, capable of accurate definition, for it would be difficult to find any two Judges, or any two jurymen, who would agree on exactly the same amount. Here, I think, the sum of \$100 would be a fair and reasonable amount, and this should be added to the amount assessed as general damages.

"There is, however, another feature in the case which requires attention. The plaintiff received from his employers full pay for the month he was absent from his work, because he had the accumulated sick leave, as above explained. For this reason, it is contended that he suffered no loss in respect of the loss of time, or at least that the only loss he suffered was the consequent reduction in the amount of his accumulated sick leave. I do not think this contention can help the defendants. In actions for negligence causing personal injury, the damages are not subject to deduction because of money paid to the plaintiff by an insurance company, under a policy of insurance against accident, as a compensation for the same injury: The reason for the rule appears to be that the fact that the plaintiff has provided against accident and is entitled to certain benefits from an insurance policy in the event of accident or sickness occurring does not diminish the wrong done him by the accident, nor the liability of the wrongdoer to pay for such wrong.

"I agree with the learned trial Judge that this principle should be applied in the present case. Under the terms of his employment the plaintiff was entitled to one and one-half days sick leave for each month he worked; this sick leave accumulated until he had to his credit at the time of the accident more than sufficient to equal the time he was absent by reason of his injuries; the allowance of sick leave was a part of the contract of employment, and in effect, was a kind of insurance against illness, and I do not think that the damages to which the plaintiff is entitled should be subject to deduction by reason of the benefits derived by him from the terms of his employment.

"In the result, the judgment below should be varied by reducing the amount allowed by the trial Judge to the sum of \$270 with costs of the action. The defendants are entitled to the costs of the appeal, to be set off against the judgment."

*Tubb vs. Lief and Gordon* (Saskatchewan) 1932, *Western Weekly Reports*, vol. 3, page 245.

#### Payment of work done by school trustee under contract with Board

A board of school trustees in Saskatchewan awarded a contract for repairs of the school house, and provided that the excavation of the basement should be done by the ratepayers by day labour. Some of this work was done by two of the trustees, who were paid for it by cheque of the board, issued by themselves as respectively chairman and secretary. Two ratepayers sued on behalf of the ratepayers of the district to recover the amount so paid on the ground that the payment was a violation of section 130 and 239 of the School Act of the Province. Section 130 provides that a trustee shall not enter into any contract in which he has a pecuniary interest; and section 239 provides that any two ratepayers may recover as a debt for the school district, the sum for which the district has been rendered liable through such action. Two ratepayers having sued under the latter section the District Court dismissed the action, holding that neither of the sections referred to could be relied upon in support of the action. On appeal by the plaintiffs this judgment was affirmed by the Court of Appeal. Chief Justice Haultain stated that the payment authorized by the defendant did not come within the provisions of section 239, "which was clearly intended only to oblige boards of trustees and individual members of such boards to keep within the limits, both as to amount and subjects of expenditure required or authorized by the Act. The work done in the present case," the judgment continued, "and the expenditure incurred therefor were clearly within the competence of the board in respect of both subject and cost. Section 130 of *The School Act* provides that a trustee shall not enter into any contract in which he has a pecuniary interest with the board of which he is a member, and that if he does so, he shall *ipso facto* vacate his seat, and shall also be liable to a fine not exceeding \$25 on complaint laid before a justice of the peace by any two ratepayers. This section cannot be relied on in support of the present action. The plaintiffs also claim the sum of \$45, the value of a certain quantity of lumber belonging to the district, which they allege the defendant has wrongfully taken. If the district has any claim in the matter, the right of action is in the trustees under their corporate name. There is nothing in the Act giving two ratepayers the right to bring such an action on behalf of the district."

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THERE was rather more than the customary seasonal contraction in industrial employment in Canada at the beginning of November, when the 8,125 firms furnishing employment returns to the Dominion Bureau of Statistics reported 780,301 employees, as compared with 799,100 on October 1. Each of these firms employed a minimum of 15 workers. Reflecting the reduction, the index (based on the average for the calendar year 1926, as 100) declined from 86.7 in the preceding month to 84.7 on the date under review, as compared with 103.0 on November 1, 1931. On that date in the preceding ten years, the index was as follows: 1930, 112.9; 1929, 124.6; 1928, 118.9; 1927, 108.8; 1926, 104.0; 1925, 98.3; 1924, 94.1; 1923, 100.0; 1922, 97.0 and 1921, 91.3.

At the beginning of November, 1932, the percentage of idleness reported to the Department of Labour by local trade unions was 22.0 in comparison with 20.4 per cent at the beginning of October and 18.3 per cent at the beginning of November, 1931. The percentage for October was based on the returns tabulated by the Department of Labour from 1,765 labour organizations covering a membership total of 162,682 persons.

Reports received from the Offices of the Employment Service of Canada during October, 1932, indicated a marked decline in vacancies, applications and placements when the figures were compared with those of the corresponding month a year ago, the outstanding loss occurring in the highway division of construction and maintenance. Vacancies in October, 1932, numbered 23,222, applications 56,877, and placements in regular and casual employment 22,205.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly higher at \$7.09 for the beginning of November as compared with \$7.07 for October. Comparative figures for earlier dates are \$7.82 for November, 1931; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.08 for November,

1921; \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was 64.8 for November as compared with 65.0 for October. Corresponding figures for earlier dates are 70.7 for November, 1931; 79.5 for November, 1930; 95.7 for November, 1929; 164.3 for May, 1920 (the peak); and 67.2 for November, 1914.

The loss in working time caused by industrial disputes in Canada during November showed a marked decline from the similar loss in the previous month. Twelve disputes were in progress at some time during the month, involving 1,130 workers, and resulting in the loss of 3,653 working days. Corresponding figures for October were: fifteen disputes, 2,225 workers, and 14,470 working days; and for November, 1931, twelve disputes, 1,681 workers and 21,315 working days. Particulars of the disputes which occurred or were in progress during November, will be found on another page of this issue.

### Dominion Contributions to Direct Relief.

Under the provisions of The Relief Act, 1932, the Dominion Government is contributing to the expenditures of the provinces, and through the provinces to the municipalities in respect of direct relief expenditures. The basis of the Dominion contribution to the provinces in respect to direct relief is largely the same as under the provisions of the Unemployment and Farm Relief Act, 1931. That is to say, the Dominion is contributing 33½ per cent of municipal expenditures for direct relief and 50 per cent of provincial expenditures for direct relief in unorganized territory. In the case of certain indigent municipalities, arrangements have been made with the province concerned whereby the Dominion pays more than 33½ per cent.

The speech of the Minister of Labour in the House of Commons on November 22, in which he described various undertakings and expenditures for the relief of unemployment throughout Canada, is reproduced elsewhere in this issue.

**Interprovincial  
unemployment  
conference to  
be held at  
Ottawa,  
January 17.**

The Right Hon. R. B. Bennett, Prime Minister, announced in the House of Commons on November 22 that a conference between the Dominion and provincial governments would be held at Ottawa before the reopening of Parliament next January for the purpose of considering the subject of unemployment and similar problems. Contributory unemployment insurance is to be one of the major subjects on the agenda. It was announced later that this conference would open on Tuesday, January 17. The Prime Minister's statement in the House appears on another page of this issue.

**Unemployment  
insurance and  
the "I.L.O."**

In connection with the forthcoming interprovincial conference to consider the question of establishing a system of unemployment insurance for the Dominion, it may be recalled that the Recommendations concerning Unemployment, which was adopted by the First International Labour Conference held at Washington in 1919 (LABOUR GAZETTE, December, 1919, page 1445), contained the following section:—

iii. The General Conference recommends that each Member of the International Labour Organization establish an effective system of unemployment insurance, either through a Government system or through a system of Government subventions to associations whose rules provide for the payment of benefits to their unemployed members.

The subject of unemployment insurance is included in the Agenda of the 1933 session of the International Labour Conference (LABOUR GAZETTE, February, 1932, page 190). The last report of Mr. Albert Thomas as Director of the Office, which was presented to the Conference this year, contained the following remarks on the subject (May, 1932, page 581):—

"Until this year, the Governing Body has been unable to place the question on the Agenda of a session of the Conference. That has now been done, and the question will be discussed at the next session. It will be considered in the widest possible form. The item includes both unemployment insurance and unemployment relief. Social insurance, which was recommended as early as 1919, must, it would seem, be extended and consolidated. It should also be supplemented by relief measures. It would certainly be desirable to distinguish clearly between the two ideas. The present intensity of unemployment, its extent and its duration have exceeded everything which the actuaries could have foreseen. In the light of this experience it would seem

unwise in future to reckon for the relief of the unemployed exclusively on the funds paid by employers, workers and Governments to insurance institutions in the form of regular contributions. In addition to insurance in the strict sense intended to cover a definitely limited risk which is regarded as normal, consideration will no doubt have to be given to the establishment of supplementary relief institutions to deal with periods of abnormal unemployment. This will be one of the subjects to be discussed at next year's Conference, and further progress should result."

**I.L.O.  
Conference on  
Reduction of  
Working  
Hours.**

Reference is made elsewhere in this issue to a Preparatory Conference which is being held in Geneva, Switzerland, opening on January 10, 1933, under the auspices of the International Labour Organization (League of Nations), to study the question of the reduction of hours of work as a means of relieving unemployment. An Order in Council was passed on December 12, sanctioning Canadian participation in this meeting and authorizing the appointment of three Canadian representatives: one on behalf of the Government, one on behalf of the Employers and one on behalf of the Workers. The Provincial Governments have also been invited to be represented by advisers if they see fit.

**52nd Conven-  
tion of American  
Federation  
of Labour.**

The proceedings at the 52nd annual convention of the American Federation of Labour are outlined on another page of this issue.

In view of the existing depression, "the paramount purpose of the convention" was declared to be to obtain shorter working time, namely a working week of five days and working day of six hours, the shorter working period to be effected without decreases in pay, but with steady future increases to correspond with increases in production. The convention also adopted a comprehensive policy on unemployment, including adequate relief funds from federal appropriations, and the holding of a national economic conference to consider national economic planning "to a limited degree." Compulsory unemployment insurance, under state auspices, was among the measures recommended by the convention.

**Proctor and  
Gamble adopt  
5-day week.**

The five day week of forty hours' work was adopted in October by Proctor and Gamble, manufacturers of soap products in the United States and Canada. The company's Canadian

plant is at Hamilton, Ontario, which had been operating previously on a 50-hour week basis. The staff which numbered about 225 was expected to increase as the result of the change. Officials of the company stated that wages would not be seriously affected.

### Progress of co-operative banks in Canada

In addition to the labour legislation enacted by the Nova Scotia Legislature this year (LABOUR GAZETTE, August, 1932, page 865), an

Act was passed to provide for the organization of co-operative savings and credit societies. The Act has been proclaimed as effective from November 14, 1932. Under its provisions credit unions are authorized to receive the savings of members either as payment on shares or as deposits, to make loans to members exclusively for provident or productive purposes, and to "make loans to a co-operative society or other organization having membership in the credit union." They are empowered also to invest in trust securities and to borrow money. Any seven or more residents of Nova Scotia can organize and incorporate a credit union. It is provided that the par value of the shares is not to exceed \$10 and that credit unions "shall be limited to groups (of both large and small membership) having a common bond of occupation or association, or to groups within a well defined neighbourhood, community or rural district or fishing village."

In the *Canadian Co-operator*, November, 1932, the editor explains the new legislation: "A credit union," he says, "is a local co-operative bank. It has the advantage alike of cultivating habits of systematic thrift, and of providing credit accommodation to its members for providential and productive purposes. So far as the working class is concerned, the credit union puts at its service accommodation it has not previously enjoyed. The ordinary chartered bank does not cater for the financial credit needs of working people. Even for the farming community the facilities are not as good as those provided for commercial and manufacturing concerns. That may not be due altogether to the neglect or indifference of the banks. The type of security the farmer has to offer is not as negotiable as that of commercial and manufacturing enterprises.

"We have now satisfactory co-operative credit legislation in the provinces of Quebec, Ontario and Nova Scotia. The Canadian Co-operative Congress held at Regina in July last urged upon the governments of the other provinces to secure the enactment of similar legislation. The credit union is a very useful form of co-operative activity and its introduction in many communities would probably lead

to the establishment of consumers and other types of co-operative societies, and to the general cultivation of the co-operative spirit in the community."

### Problem of average earnings in workmen's compensation

A question having arisen as to the effect of past unemployment upon the amount of compensation payable to workmen who have been disabled in industry, Mr. E. S. H. Winn, K.C., chair-

man of the Workmen's Compensation Board of British Columbia, recently made the following statement as to the policy of the Board in determining the "average wages" on which the amount of compensation is based:—

"Compensation paid to a workman injured in an industry coming within the scope of the Workmen's Compensation Act," he said, "is fixed by the Statute at 62½ per cent of his average earnings. Consequently, just to the extent that the average earnings of each individual workman has been affected by periods of unemployment and reduced rate of wages his compensation will be affected, when he is unfortunate enough to meet with an accident at work. The workman, therefore, who has been steadily employed has a larger amount of earnings than the workman spasmodically employed. Consequently, the workman having the larger earnings is paid more compensation than the workman having had lower wages.

"The Statute provides that the compensation shall not be less than five dollars per week, unless the average earnings are less than that figure, in which case the compensation equals the average earnings. When the employment has been such that no satisfactory basis of average earnings can be arrived at the injured workman receives five dollars per week, in addition to the necessary hospital and medical attention indicated in his particular case.

"The compensation awarded in respect of time loss and permanent disablement is paid from an Accident Fund created under the Statute. That fund is wholly maintained by levies made on employers engaged in the various industries. As amongst the individual employers in any type of industry the cost is distributed in exact proportion to the actual pay-roll expenditure. The employer who pays out \$20,000 in wages in any year pays just ten times as large an assessment to the Accident Fund as does his smaller competitor whose expenditure in wages is \$2,000. The percentage rate of assessment applicable to each is the same. Assessments are based on actual wages paid, and compensation is based on actual wages earned. For periods of unemployment

no assessments are collected. For periods of low wages the rate of assessment applicable to the payroll yields a correspondingly reduced contribution to the Accident Fund. If the rate of wages falls to one-half and actual wage expenditure falls accordingly, the assessment levied and based on a percentage of that payroll must yield a similarly lesser amount for the Accident Fund, out of which compensation is payable. The difficulty of arriving at a basis for calculating average earnings in periods of broken or seasonal employment is manifest. In past years the peak of employment has been reached in the summer months, with a falling off in winter. Pensions to dependants of workmen losing their lives in industry do not fluctuate up or down with current rates of wages, but remain constant, being fixed by the Statute."

#### **Unemployment question in Parliament of Great Britain**

The King's speech at the opening of the Parliament of Great Britain contained the following passage in reference to the prevalence of unemployment and the need for adequate provisions for its relief:—

"Large numbers of my people are still unable to find employment and the persistence of this situation causes me the greatest anxiety. Unemployment as we have known it for some years is undoubtedly the gravest of social problems. In particular I am distressed that many young men and women have never in their lives had an opportunity of regular employment. In the view of my Ministers any provision for unemployed persons should not only afford material assistance but should also be designed to maintain their *morale* and fitness to resume work when opportunities can be found. My Government intend to bring forward measures dealing comprehensively with unemployment insurance and with the treatment of those unable to obtain work and the considerations I have mentioned will be borne in mind in framing their proposals."

#### **Suggestions for organization of welfare and relief services**

The Canadian Council on Child and Family Welfare has made a valuable contribution to the solution of the problem of unemployment relief by the timely publication of a pamphlet entitled "In Times Like These" containing practical suggestions for the organization of community welfare and relief services, especially those dealing with the unemployed man and his family. Miss Charlotte Whitton, the Executive Director of the Council, points out the difficulty

of arriving at rules of organization that would be generally applicable in a country of such varied social conditions as Canada; the primary object of the Council, was rather "to set forth in a simple form fundamental principles and practices which the best of experience appears to endorse." No effort, therefore, has been made to prescribe any system for a particular community; but in offering these general suggestions the Council intimates that it will place its experience at the disposal of any community desiring advice on the question of a suitable form of relief service.

"The principles underlying the effective organization of unemployment relief, and of all other welfare measures," it is declared, "are simply those of good business administration. . . . Expenditures that are intended to provide social aid, if dispensed through indifferent or incompetent hands, admit of the most dangerous misuse. Even with supervision, if this be insufficient or unskilled, such measures have a subtle and potent capacity to undermine the independence of the recipient. There are two essentials to the safeguarding of welfare expenditures,—the first is the provision of efficient accounting and competent staff and office administration, the second is the assurance of the training, discretion, and good judgment of the worker prescribing and supervising the expenditure for each individual applicant."

The limits of municipal and voluntary organization are defined, and the proper division of work between public and private agencies is described in the pamphlet, which proceeds to outline the organization of actual relief machinery in small and large communities, and to state the fundamental principles of good social work. The last section deals with the functions of the churches and volunteers as partners in social work.

Three supplements are issued with the main pamphlet under the following titles: (1) the actual provision of relief (food, clothing, fuel, shelter, etc.); (2) the organization of special services for problems of particular type (homeless men, unemployed women, ex-service men); and (3) the organization of relief work programs (in co-ordination with the social work program). The preparation of the handbook was directed by Mrs. G. Cameron Parker, Acting Director of the Council.

"In Times Like These" may be obtained from the Canadian Council on Child and Family Welfare, Ottawa, for 10 cents, the price of each supplement, if forwarded separately, being 5 cents.

### Need for trained social workers in Canada

Addressing the Social Workers' Club of Montreal on November 22, Mrs. G. Cameron Parker, President of the Canadian Association of Social Workers, suggested that a need existed in Canada for a Canadian Foundation of the Rockefeller type that would encourage and promote the organization of social work in places where the community is unable to organize for this purpose, particularly among the scattered population in the west. Social work has been organized in eastern Canada, she stated, especially in Montreal, Toronto, Ottawa and other cities, but elsewhere it is left in the hands of permanent officials, or of men appointed without regard to their experience in such work. "There has been," the speaker continued, "a lack of system and of unification of relief methods; valuable opportunities for constructive work in families have been lost owing to the fact that many of those having the responsibility of administering such relief have no conception beyond vouchers for rent, food and garments for the distressed; whereas trained workers could do much to build up and maintain the *morale* of the unemployed.

Speaking of the work of the Association and its members Mrs. Parker said: "We are the people who will have to deal with the wreckage caused by this distress. Our profession has not made its way to the point where public authorities and the community have any conception that this profession can better than any other, cope with the situation."

### Garden allotments at Fredericton, N.B.

An article in the LABOUR GAZETTE, August, 1932, page 877, described the progress of the movement in Canada for providing garden allotments as a means of

alleviating the hardships resulting from unemployment, reference being made to the work carried on by the Rotary Club at Fredericton, New Brunswick. Further particulars of this work have been received from Mr. C. F. Bailey, chairman of the Relief Garden Committee of the Club.

The unemployment relief garden project in the City of Fredericton met with considerable success during the past summer. The Club expended approximately \$200 in the purchase of seed, fertilizer and spray material to 56 families who undertook to operate a relief garden. While an opportunity was given to any deserving family to take advantage of this project, the work centred largely at Victoria Mills. In this section of the city many

families are in distress because the Fraser Companies' Mill has not been operating for three years. A large number of these families had no land adjoining their homes suitable for garden purposes, but the Dominion Experimental Station granted the use of a piece of land nearby, which was taken over by 31 families and divided into an equal number of gardens. The Experimental Station also granted a piece of land adjoining, which was used as a community potato field. The 31 families combined to prepare the land and plant the potatoes. During the balance of the summer each family had a definite number of rows to care for and harvest.

In order to stimulate an interest in this garden project and insure that the gardens would be well cared for, the Fredericton Experimental Station Athletic Association offered \$35 in prizes for the best kept gardens. During the summer a special committee of the Experimental Station staff scored the gardens and later awarded the prizes. Members of the Federal and Provincial Departments of Agriculture assisted by giving advice as to the control of insects and plant diseases. An Unemployment Relief Garden Association was formed, and all communications were directed to the Secretary of this Association.

As to the effects of this communal effort, a few of the gardens that adjoined the cultivators' homes showed poor results. On the other hand, the 31 gardens on the Dominion Experimental Station property were all well handled. This was attributed to the spirit of rivalry that would naturally develop where gardens of this kind were placed side by side. The Superintendent of the Experimental Station made it clear to all those operating gardens on the Station property that any neglected garden would be ploughed under rather than allow anyone, unworthy of assistance, to pass discredit on the project.

The Association estimates that the cultivators harvested on the 31 gardens (located on the Dominion Experimental Station property) an average of 4½ barrels of potatoes, 2 barrels carrots, 2 barrels beets, 4 barrels turnips, 1 bushel onions, one-half bushel dried beans, 8 quarts dried peas, 3 bushels tomatoes (ripe and green), 2 bushels corn, 12 heads cabbage and all the lettuce, radish, green beans, green peas, etc., needed in their homes throughout the summer months. The value of the crop produced on the 56 gardens based on prevailing prices in the Fredericton market is estimated at \$1,227.81.

Mr. C. F. Bailey expresses the opinion that if a similar project were launched another year in every urban community and should

meet with the same success, it would go a long way toward relieving want as well as give employment to a great many people during the summer months who would otherwise be idle. The Fredericton Rotary Club and the Dominion Experimental Station will be glad to give the benefit of their experience to any group that may contemplate similar work in any other part of the province.

### 6-hour day recommended for pulp and paper industries

An editorial in the November issue of *Pulp and Paper of Canada*, the official organ of the Technical Section of the Pulp and Paper Manufacturing Industry, makes the following recommendations as to the need for a reduction in working hours in the industry: "There has been no fundamental change in working hours for twenty-five years. At that time industry on this continent was readjusting itself to the eight-hour day, and the paper industry generally was changed from two to three shifts. Even that change is not yet complete, for we know of some isolated instances of plants still operating on the two-shift basis. . . . That change involved an addition of approximately 50 per cent of the number of employees on shift work. The next step is naturally to four shifts of six hours each. Some paper mills and some other industrial plants have already adopted the plan. But shortening of hours and spreading of employment should extend further to be fair, and industry must be kept alive.

"The question in the minds of a great many industrialists to-day is whether we are not again at a point where another fundamental change in working hours is necessary. The problem is seriously complicated by the abnormal amount of unemployment. But unemployment is not an entirely new factor that appeared only with the current financial crisis. Unemployment has been gradually increasing with the continued perfection and efficiency of machinery. The steam shovel does the work of a dozen men in a ditch. Increased speed and better control of stock quality enables four paper machines to produce what formerly required five. Other industries can tell the same tale. Consolidation of companies has reduced the amount of clerical help necessary. And industry does not concern itself with opportunities for re-employment of the workers so released, in many cases. . . . It is obviously time for a change, although it is unfortunate that the need for such a fundamental change should be complicated by the abnormal circumstances of a general business depression. However, so many assertions of improvement in business conditions are being made, it seems

to us that the present would be not such a bad time for such a change to be made. The relief of unemployment by providing useful work would put an entirely new spirit on the nation. Such a movement should be general, at least in Canada and the United States, and if the field could be further extended it would do just that much more to improve world conditions in industry."

### Death of Joseph Marks, Ontario labour pioneer

Mr. Joseph Marks, a pioneer of the labour movement in Ontario, passed away on November 14, at an advanced age. He had been associated with the movement for the past fifty years, and was the leading spirit in the organization of the Industrial Brotherhood of Canada in 1891, a union of labour men not members of the various craft unions of the time. Through Mr. Marks, the Brotherhood established the *Industrial Banner* in 1891, an influential labour paper of which he continued to be the editor for some years after its removal to Toronto in 1912. In the meantime the Labour Educational Association of Ontario was organized by Mr. Marks to carry on in a larger way the educative work of the earlier Brotherhood. After its foundation, he took no part in trade union activities but devoted himself to the work of the Association. The influence of Joseph Marks was widely felt, and it was always exercised with the single object of bettering the conditions of the lives of his fellow men.

About 8,000 men returned to work on November 23 in the shops of the Canadian Pacific Railway. About half this number are employed in the Angus Shops, Montreal, the remainder being in the shops at McAdam, New Brunswick; Carleton Place, Ont.; North Bay, Ont.; Winnipeg, Calgary and Vancouver. The re-opening of the shops followed lengthy conferences between the management and representatives of the shop crafts employees, acting under the chairmanship of Mr. Frank McKenna, chairman of C.P.R. System Federation No. 125, Montreal.

The Department of Pensions and National Health (Ottawa) has published in its series of "Little Blue Books" a pamphlet entitled "Good Food for Little Money," prepared by Dr. Helen MacMurchy, chief of the Division of Child Welfare. Useful information is given as to food values and a balanced diet suitable for both adults and children, the purpose of the pamphlet being to show how families may secure the highest nutritive value from their expenditures of money for food.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation throughout Canada at the end of November was reported by superintendents of the Employment Service of Canada to be as follows:—

Some farmers in the province of Nova Scotia were still busy with fall ploughing, but there was no demand for farm help. Fairly plentiful catches of fish were reported along the coast. Lumbering operations remained quiet. Coal mines in the New Glasgow area operated from two to six days per week, while water shipping activities from salt mines were about ended for the season. Slackness prevailed in the coal mines in Cape Breton and vicinity, as they were open only one or two days per week. All bakers and manufacturers of foodstuffs were somewhat busier in preparation for the Christmas trade, and oil companies reported business fair, due to the lateness of the season. Foundries and machine shops stated operations were slow, but in the iron and steel industry as a whole no shutdowns were reported. Sawmills were running part time only. Municipal and street and sewer work continued with a few small gangs of men placed on relief shifts. The Department of National Defence at Halifax also added about fifty men to its relief camps, but building construction throughout the province was slow. Passenger and freight traffic was fair, also trade. A number of requests were received for char workers and women domestics, and these were easily filled.

Farmers in New Brunswick were busy cutting wood or hauling seaweed for compost. City markets were well stocked and prices were better than for some time. Fishermen were preparing for the smelt fishing season, which opened along the Gulf of St. Lawrence and Northumberland Straits on November 25. Lobster fishing in Saint John and Charlotte counties was good, but salmon light. A small crew had been sent to cut hardwood in King's county, but elsewhere lumbering was quiet. Manufacturing also showed no improvement, with confectionery and foodstuffs alone showing any activity. No new work in building construction was in sight, but road construction and other works of a public nature were being carried on by the various municipalities as relief measures. Costal steamers still continued busy, carrying winter supplies to the smaller centres, but land transportation, both passenger and freight, was only fair. Trade likewise was dull. There was little change in requirements for help in domestic service.

Montreal alone in the province of Quebec reported any requests for farm help. This city

also recorded the first call of the season for bushmen. At Rouyn, several placements were effected in this industry, but there was a reduction of fifty per cent in this fall's activity, as compared with that of the corresponding season a year ago. Mining also was very quiet, except at Rouyn, where mining syndicates were making active researches with good prospects. Some improvement in manufacturing was reported by Hull, Montreal, Sherbrooke and Three Rivers, but for the most part there was little vital change. In Quebec city, leather and furs operated on a large scale, but other factories on reduced time. Conditions in the building trades also were far from satisfactory, and many bricklayers, masons, plasterers, painters and so forth throughout the province were unemployed. The municipality of Montreal still had a number of men on unemployment relief work, and large contracts had been signed for sewer construction, which would afford work for thousands. Trade and transportation also were dull. In Montreal, in the Domestic and Personal Service Division, there was a certain number of vacancies, but not sufficient to counterbalance the number of constantly increasing applicants. In Quebec city, placements were above the average, but at reduced wages.

The demand for farm help in Ontario was considerably reduced, although the call for single men for the winter was somewhat better than was anticipated. Pulp camps were rapidly being filled with bushmen, but some difficulty was experienced in obtaining men as quickly as desired since they were required to pay their own transportation, however, applicants for bush work were still very plentiful. Very few men were being taken on at the mines, and there did not appear much chance of improvement in the near future. The majority of manufacturing industries were operating as usual, some with reduced staffs and some with shortened working hours. All of the larger concerns in the iron and steel group continued at a low level of activity, and it was considered that at least sixty per cent of the registration of unemployed in Brantford was attributable to inactivity in this line of industry. Textiles were somewhat busier, in fact, at St. Thomas one concern was operating overtime with a full staff, but tire and rubber companies, as well as furniture factories, were still much below par. Little building or construction work was being carried on throughout the province, either as a relief measure or otherwise, but highway construction continued active. A number of single men had been despatched to highway camps

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

	1932			1931		
	November	October	September	November	October	September
Trade, external aggregate..... \$		94,254,899	77,168,933	105,340,793	102,466,571	95,287,885

(1) Calculated from yields of Ontario bonds.

(2) For group figures, see articles elsewhere in this issue.

(3) Bradstreet.

(4) Figures for end of previous month.

(5) Figures for four weeks ending November 26, 1932, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending November 5, October 8 and September 10, 1932; November 7, 7, October 10, and September 12, 1931.

(7) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newspaper, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

(8) Excluding lines east of Quebec.

(9) Including lines east of Quebec.

(10) MacLean's Building Review.

for the Department of Northern Development, while additional camps were expected to open shortly, over 2,000 men already having found employment on the Eastern section of the Trans-Canada highway, these men being distributed among eighteen camps. Trade showed some improvement, due to the approaching holiday season, although in many instances former employees, for some time idle, were to be first absorbed before additional help was taken on. There was a fair demand for experienced women domestics, but wages were low.

A slight decrease was indicated in the call for farm help in Manitoba, orders received being mostly under the Relief plan. Quietness prevailed in logging and mining, and little change was reported in manufacturing. There was no activity in construction, other than street and sewer work, which was given out for the most part, on a rotation basis. The re-opening of the railroad shops in Winnipeg provided employment for about 1,800 men, but this was not expected to be of a permanent nature. Retail trade was moving faster and wholesale drygoods, footwear and clothing lines remained fairly active. Conditions remained practically unchanged in the women's group.

The majority of farm orders filled in the province of Saskatchewan were by men sent out on the Government Relief plan, and in some districts there were insufficient experienced men to meet requirements. There was no activity in logging and little in mining, as all the mines were filled, and a long waiting list remained. Building construction also was very quiet, but a few men were transferred to the relief camps at Prince Albert National Park. Registration of women domestics at Regina had increased, but vacancies showed a corresponding decline, while at Saskatoon there were a number of unfilled vacancies for domestics under the Government Relief scheme, but no applicants willing to accept them.

Requests for farm help in Alberta showed little change, and all the orders with any wages were easily filled. Many inquiries were made for men for board only, but these were difficult to fill as the men were in need of clothing. Logging was fair, with quite a few camps operating, most of these being manned by former employees. Conditions were slack in mining at Drumheller and Lethbridge, some mines laying off help, due to lack of orders, others working only three days per week. At Edmonton, the majority of mines were running steadily, but there was practically no call for men. Manufacturing was quiet. There was little construction work in progress, and many unemployed men receiving relief, for whom camps were being prepared. The re-

opening of the railway shops at Calgary furnished employment for about 900 men, but even with this help, employment conditions showed little alleviation, due to the arrival of drifters. Wholesale trade was quiet, retail a little busier, with collections very slow. There were sufficient applicants on hand in the Women's Domestic Section to fill all requirements.

There was no call for farm labour in the province of British Columbia. A few logging camps were opened, but there was little increase in sawmill crews. Some men were taken on at the local mines in Nanaimo, but these were mostly replacements and a great surplus of labour still remained in that district. Of the six fishing camps opened there this season, four had closed down, at least temporarily, and crews discharged. Manufacturing was quiet. A little construction was in progress, but was largely casual or relief work. The creation of a Gyro Park at Penticton also provided employment for a few men. Some work was available for longshoremen at New Westminster and Prince Rupert, while at Vancouver the grain movement continued strong and general cargo rather poor. Employees at the drydock at Prince Rupert were still on short time. Trade was fair. Quite a number of orders were received in the Women's Domestic Section, and these were readily filled, while many applicants were registering daily who were willing to accept any work offering for the winter.

#### EMPLOYERS' REPORTS

Employment at the beginning of November showed a seasonal contraction, which involved a greater number of workers than have been released, on the average, on the same date in the last eleven years. The staffs reported by employers were smaller than on November 1 in other years of the record. The Dominion Bureau of Statistics tabulated statements from 8,125 employers, whose payrolls were reduced from 799,100 persons on October 1, to 780,301 at the beginning of November. Reflecting this decrease, the index number (with the average for the calendar year 1926, as the base equal to 100) declined from 86.7 in the preceding month to 84.7 on the date under review, as compared with 103.0 on November 1, 1931. On the same date in the preceding ten years, it was as follows: 1930, 112.9; 1929, 124.6; 1928, 118.9; 1927, 108.8; 1926, 104.0; 1925, 98.3; 1924, 94.1; 1923, 100.0; 1922, 97.0 and 1921, 91.3.

The trend was upward in the Maritime Provinces, while elsewhere losses were recorded. In the Maritime Provinces, there was a considerable increase on November 1, most of

this taking place in manufacturing, logging, coal-mining and highway construction. In Quebec, construction and manufacturing registered pronounced curtailment, while logging and retail trade reported improvement. In Ontario, food, iron and steel, clay, glass and stone, lumber and tobacco and beverage factories, transportation and construction showed reduced activity, while logging and retail trade were seasonally busier. In the Prairie Provinces, coal-mining and retail trade showed gains, but manufacturing, transportation, construction and services showed contractions. In British Columbia, decreased employment was indicated in the food, lumber, transportation, construction and trade industries, while pulp and paper mills and logging showed rather more activity.

Additions to staffs were registered in Hamilton and Windsor and the adjacent Border Cities, while in Montreal, Quebec City, Toronto, Ottawa, Winnipeg and Vancouver there were reductions. In Montreal, manufactures, construction and transportation reported reduced activity, while there were gains in retail trade. Within the manufacturing group, there was also curtailment in textile, leather, tobacco and beverage and iron and steel plants; the iron and steel group reported a very large share of the general decrease. In Quebec City, construction and manufacturing showed curtailment, while other industries recorded only slight changes. In Toronto, most of the decline was in manufacturing and in transportation and building, while trade was seasonally busier. In Ottawa, curtailment was reported in construction, while manufacturing was slightly more active, and the changes in the other groups were small. In Hamilton, most of the increase took place in manufactures (particularly in textiles and iron and steel), but transportation and building afforded rather less employment. In Windsor and the adjacent Border Cities, improvement as compared with October 1 was reported, mainly in automobile plants. In Winnipeg, trade reported seasonal gains, but manufacturing, transportation and construction released help. In Vancouver, manufacturing on the whole showed no change, while communications, transportation and trade were not so active.

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the iron and steel, lumber and food-canning industries, although there were also losses in leather, building material, electric current, tobacco and beverage and non-metallic mineral works. On the other hand, pulp and paper, textile, rubber, electrical apparatus and non-ferrous metal factories registered advances. In the non-manufacturing industries there were increases

in logging, coal and metallic ore mining and retail trade, while communications, services, transportation and construction reported seasonally reduced activity.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1932.

#### TRADE UNION REPORTS.

Following several months of uninterrupted though small employment advances among local trade union members, the situation at the close of October declined to some extent, as manifest by the returns furnished to the Department by 1,765 labour organizations with a membership aggregate of 162,682 persons. Of these 35,788 or a percentage of 22.0 were idle on the last day of the month, as compared with 20.4 per cent in September. Depression continued more marked than in 1931, when at the close of October 18.3 per cent of unemployment was registered. In Ontario and Nova Scotia the employment tendency was toward greater activity during October than in the previous month, though the gains were less than 1 per cent, while all other provinces reflected an adverse situation. Of the contractions the most extensive was reported from Quebec where the Montreal garment trades were responsible to a large degree for the unfavourable employment movement. In New Brunswick declines on a more moderate scale were recorded, inactivity in the iron and steel trades of the province being a contributing factor. On October 21 railway car shop closings released a large number of workers, the effect of which was noticeable in the majority of the provinces, influencing both the iron and steel trades and railway operation. Each province shared in the retrogressive employment trend noted from October, 1931, New Brunswick unions especially showing a severe drop in activity while in Alberta, Ontario and Quebec also declines of noteworthy proportions occurred.

Appearing on another page of this issue is a more detailed article with tabular statements on unemployment among local trade unions at the close of October, 1932.

#### EMPLOYMENT OFFICE REPORTS.

During the month of October, 1932, the Offices of the Employment Service of Canada referred 23,858 workers to positions and effected a total of 22,205 placements. Of these, the placements in regular employment were 9,930, of which 6,522 were of men and 3,408 of women. Placements in casual work numbered 12,275. Employers notified the Service of 23,222

vacancies, of which 16,388 were for men and 6,834 for women. Applications for work were received by the Offices from 43,511 men and 13,366 women, a total of 56,877. A decrease in vacancies listed and placements effected and an increase in applicants registered was noted when the above figures were compared with those of the preceding month, but in comparison with October of last year all divisions recorded declines, the reports for September, 1932, showing 32,111 vacancies offered, 53,437 applications made and 29,944 placements effected, while in October, 1931, there were recorded 56,901 vacancies, 85,685 applications for work and 55,789 placements in regular and casual employment. A report in detail of the work of the Offices for the month of October, 1932, will be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during October, 1932, was \$3,056,137, as compared with \$2,203,530 in the preceding month and with \$8,442,627 in October, 1931.

The *MacLean Building Review* states that the November total for construction contracts in Canada was \$10,170,400. Over half of this total related to operations of an engineering nature. The November total exceeded the October total by 14.5 per cent. Quebec Province, during November, accounted for 48.6 per cent of the Dominion awards. They were valued at \$4,938,000. Ontario followed with \$2,860,500 worth which was 28.1 per cent. British Columbia had 11.8 per cent or \$1,195,700, while the Prairie Provinces show \$827,800 or 8.1 per cent, and the Maritime Provinces 3.4 per cent or \$348,300.

Well over half of the November awards appeared in the engineering group which took care of 59.8 per cent valued at \$6,083,100. The Residential group shared to the extent of \$2,074,600, which was 20.4 per cent. The Business Buildings group accounted for 12.8 per cent on a valuation of \$1,303,200. Seven per cent related to Industrial buildings valued at \$709,500.

#### Production and Trade

INDUSTRIAL  
PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 1252.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statis-

tics, states that while business operations in Canada, after adjustment for seasonal tendencies, were at a slightly lower level during October than in the preceding month, the relative stability of the current period presents a strong contrast with the marked declines in the same months of 1930 and 1931. Industrial activity is now at a lower level than in either of the two preceding years, but the pronounced downward trend has been replaced by a period in which greater resistance is manifested against reactionary tendencies. The business index was 75.3 in October compared with 77.1 in September, but the drop only counterbalanced the gain of the spring and summer, leaving the index in the same position as in April last.

A favourable development was the gain in mineral production. Eight factors used in this connection showed general increases. Exports of copper and nickel recorded marked gains. Zinc spelter was exported to the extent of 14,646,700 pounds in October compared with 14,530,000 pounds in the preceding month. Shipments of gold and silver were greater than in September. Exports of the better grades of asbestos were 5,707 tons compared with 3,834 tons. Imports of bauxite for the manufacture of aluminium showed a gain after seasonal adjustment. The output of coal was 1,229,167 tons compared with 914,467 tons in September, a gain, after seasonal adjustment, of 10 per cent. The index of mineral production was 99.3 in October compared with 89.5 in the preceding month.

The output of manufacturing plants was somewhat less in October than in September, after adjustment for seasonal tendencies. The index based on 29 factors was 70.6 compared with 74.3 in the preceding month. The indicators of the trend of the production of foodstuffs were mostly reactionary after seasonal adjustments. The manufacture of sugar was an exception, as the output showed a marked gain. Cheese exports were also considerably greater. The output of the milling industry showed a decline in output after seasonal adjustment. The gain in sheep and hog slaughterings was less than normal for the season, while cattle slaughterings showed a decline. The release of tobacco for consumption showed a decline after seasonal adjustment. Imports of crude rubber showed reaction from the high level of the preceding month, while a moderate gain was recorded in the manufacture of rubber tires. Automobile production showed moderate gains, but was at a low level. The imports of crude petroleum showed a gain, the total in October

being 83,449,000 gallons compared with 76,913,000 gallons in September. The production of leather boots and shoes was more than maintained after seasonal adjustment. Imports of raw materials by the textile industry, cotton and wool in the raw and intermediate stages, were acquired by Canadian manufacturers in greater volume indicating preparation for extended operations. The gain in the output of newsprint was less than normal for the season. Gains were recorded in the export of woodpulp, planks, boards and shingles. Production of steel ingots was at a low point, amounting to 17,102 tons. A slight gain was shown by pig iron, and imports of iron and steel products, reduced to a volume basis by the elimination of the price factor, showed a gain.

**Coal.**—Coal production in Canada during October totalled 1,229,167 tons. Although this tonnage represented a slight advance over the October, 1931, output of 1,226,032 tons, it was 20.3 per cent below the five-year average for the month of 1,541,308 tons. In October, the output of bituminous coal amounted to 632,584 tons, of sub-bituminous coal, 68,303 tons, and of lignite coal, 528,280 tons. Alberta mines produced 632,574 tons of coal in October, an increase of 25.9 per cent over the October, 1931, total of 502,641 tons. Nova Scotia's output totalled 343,174 tons as compared with 460,782 tons a year ago. A decline of 22.8 per cent was recorded in British Columbia's output; the month's total was 126,217 tons while in October, 1931, the production was 163,423 tons. The output from Saskatchewan's mines continues to advance, in October 113,571 tons were mined as against 84,518 tons produced a year ago. New Brunswick's output declined 6.8 per cent to 13,631 tons from the October, 1931, total of 14,629 tons.

Canada imported 1,331,774 tons of coal during October; in the preceding month 1,296,274 tons were imported, while the five-year average for the month was 1,872,413 tons. Imports of anthracite coal totalled 350,825 tons, consisting of 203,189 tons from the United States, 140,916 tons from Great Britain, and 6,720 tons from Germany. For the first time since April, 1932, the receipts of anthracite from the United States exceeded shipments from Great Britain. From May to October, inclusive, the Canadian anthracite requirements were drawn from the following sources; Great Britain, 55.1 per cent; the United States, 43.5 per cent; and Germany, 1.4 per cent. Bituminous imports in October included 949,388 tons from the United States, 31,425 tons from Great

Britain and 2 tons from Newfoundland. British Columbia importers received 134 tons of lignite from the United States in October.

Canadian coal exported amounted to 17,748 tons, a 73.7 per cent falling-off from the October, 1927-1931 average of 67,563 tons. Exports through Nova Scotia, New Brunswick and Quebec ports totalled 6,069 tons in October while Manitoba, Saskatchewan, Alberta and British Columbia ports cleared 11,679 tons.

Coal made available for consumption in Canada during October amounted to 2,543,193 tons or 24.0 per cent below the 1927-1931 average for the month of 3,346,158 tons. The October supply consisted of 350,825 tons of anthracite coal, 1,597,188 tons of bituminous coal, 68,303 tons of sub-bituminous coal and 526,877 tons of lignite coal.

**EXTERNAL TRADE.** A summary of Canadian trade in October, 1932, prepared by the Department of

National Revenue, shows that the merchandise entering Canada for consumption amounted to \$37,094,525 as compared with \$34,504,129 in the preceding month and with \$45,932,572 in October, 1931. The chief imports in October, 1932, were: Non-metallic minerals and products, \$8,625,559; Fibres, textiles and textile products, \$5,428,304; Agricultural and vegetable products, mainly foods, \$5,418,772.

The merchandise exported from Canada during October, 1932, amounted to \$56,626,095 as compared with \$42,186,815 in the preceding month and as compared with \$55,537,917 in October, 1931. The chief exports in October, 1932, were: Agricultural and vegetable products, mainly foods, \$27,892,204; Wood, wood products and paper, \$11,412,736; Animals and animal products \$4,929,425.

### Strikes and Lockouts

The time loss due to industrial disputes during November showed a marked decline from that recorded for the previous month, no strikes or lockouts involving large numbers of workers or lasting for any appreciable time occurring during the month. The number of strikes or lockouts recorded and the number of workers involved also showed a substantial decline. As compared with November, 1931, while the same number of strikes and lockouts were recorded, there was a sharp decline in the number of workers involved, and the time loss incurred was much less than during the same month last year when strikes involving saw-mill workers on the Pacific coast caused a time loss of approximately 15,000 working days.

There were in existence during the month twelve disputes, involving 1,130 workers, and resulting in a time loss of 3,653 working days, as compared with fifteen disputes, involving 2,225 workers and resulting in a time loss of 14,470 working days in October, 1932. In November, 1931, there were on record twelve disputes, involving 1,681 workers, and resulting in a time loss of 21,315 working days. At the end of the month there were on record three disputes involving approximately 282 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off by the unions involved.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was again slightly higher for November at \$7.09, as compared with \$7.07 for October. Comparative figures for earlier dates are \$7.82 for November, 1931; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.08 for November, 1921; \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. The advance was due mainly to seasonal increases in the prices of eggs, while the prices of beef, veal, mutton, pork, butter, bread, flour, rolled oats and beans were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.10 for November as compared with \$16.40 for October. Comparative figures for earlier dates are \$17.81 for November, 1931; \$20.60 for November, 1930; \$22.03 for November, 1929; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); and \$14.36 for November, 1914. Fuel was somewhat lower, due mainly to decreases in the prices of wood. In rent declines were reported from many localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 64.8 for November as compared with 65.0 for October. Figures for earlier dates are 70.7 for November, 1931; 79.5 for November, 1930; 95.7 for November, 1929; 164.3 for May, 1920 (the peak); and 67.2 for November, 1914. In the classification according to chief component materials three of the eight main groups were lower, four were higher and one was unchanged. The groups which declined were: the Animals and their Products group, mainly because of lower prices for hides, leather, steers, calves, hogs, lambs and fresh and cured meats; the Fibres, Textiles and Textile Products group, because

of reduced quotations for raw cotton, jute and certain lines of manufactured cotton; and the Non-Metallic Minerals and their Products group, due to decreases in the prices of coke, which more than offset advances in the prices of coal tar and sulphur. The groups which advanced were: the Wood, Wood Products and Paper group, because of higher prices for lumber and pulp; the Iron and its Products group, mainly because of higher quotations for steel tank plates, automobile body plates and scrap iron; the Non-Ferrous Metals and their Products group, due to higher prices for aluminium, lead, silver and zinc, which more than offset declines in the prices of antimony and copper wire bars; and the Chemicals and Allied Products group, due to increases in the prices of calcium chloride and zinc oxide. The Vegetables and Vegetable Products group was unchanged, lower prices for wheat, rye, gluten meal and shorts being offset by advances in the prices of barley, corn, oats, rolled oats and oatmeal.

The number of industrial accidents involving loss of one working day or more exceed two million a year in France. One workman is injured for every quarter hour worked in the year and one killed for every hour.

The 1932 edition of the "Code of Labour and Industrial Laws of the Province of Quebec," the annual publication containing the text of provincial and also of certain federal laws, has just appeared. It consolidates, in a form handy for reference, the existing body of labour legislation including that of the current year, with the rules and regulations in connection with the various laws. This useful compilation is the work of Mr. Gustave Franco, chairman of the Women's Minimum Wage Commission of the Province.

According to a return tabled in the House of Commons on November 21, Canada's disbursements in eight of the nine provinces for direct relief among unemployed war pensioners for the past three years has amounted to close to \$3,000,000. The sum disbursed in the fiscal year ending March 31, 1932, was double that of the previous year, and was nearly four times the amount disbursed in the year ending March 31, 1930. In all a total of \$2,985,512 has been distributed in those three years, of which \$1,725,918 was disbursed in the last fiscal year. In the 1930-31 fiscal year the total was \$813,452, and in the previous year \$446,142. Last year Ontario received the largest distribution, its unemployed war pensioners getting \$791,638. Manitoba was second with \$327,100, while Quebec had \$248,687.

## COMBINES INVESTIGATION ACT

### Investigation Into Alleged Combine in Distribution of British Anthracite Coal in Canada—Other Inquiries

NUMEROUS complaints have been made in recent months concerning prices of British anthracite coal in Canada. These complaints, made in the daily press, as well as in the Senate, the House of Commons and elsewhere, have been based on the opinion that the spread between the selling price of coal at the mines in Wales and Scotland and the selling price to consumers in Canada was unreasonably large and indicated the existence of a combine or monopoly.

Following a preliminary inquiry under the Dominion Fuel Board, which was completed early in November, the Minister of Labour directed that an investigation should be made under the Combines Investigation Act into the importation and distribution of British anthracite coal in Canada with the view of determining whether a combine existed.

The investigation commenced in Montreal on November 29 and is being conducted by Mr. F. A. McGregor, Registrar of the Combines Investigation Act. Mr. Gregor Barclay, K.C., of Montreal, is acting as counsel for the Dominion Government. The examination of Hon. Lorne C. Webster, president of the Canadian Import Company, Limited, and the British Coal Corporation, was completed during the first week's sessions.

#### **Alleged Coal Combine in Western Canada**

During November preliminary inquiries into an alleged combine of Winnipeg coal dealers and other coal producers and distributors in Manitoba, Saskatchewan and Alberta was commenced under the Combines Investigation Act. This preliminary inquiry was commenced upon receipt of a formal application for investigation under the Act. The applicants alleged that a combine had maintained prices and lessened production and competition to the detriment of the public.

#### **Inquiry into Ontario Raw Tobacco Trade**

A preliminary investigation under the Combines Investigation Act into an alleged combine of buyers of Ontario-grown tobacco was commenced at the end of November, following receipt of an application alleging that a combine had depressed prices paid to Ontario tobacco growers to unreasonably low levels, while no reductions in retail prices of tobacco had been made. Hon. Donald Sutherland of Ingersoll, Ontario, was appointed to act for the Registrar in conducting a preliminary investigation into the alleged combine.

## Conciliation and Arbitration in Argentina

The Director of the Department of Labour of the Argentine Province of Cordoba recently laid before the Legislature a Bill to provide for a system of conciliation and arbitration in industrial disputes. The Bill provides that the employer or the association representing the workers must inform the competent authorities of the existence of the dispute and ask for mediation. The body which is to try to effect conciliation is called the Labour Committee and is to be composed of three representatives of the workers and three representatives of the employers, all being chosen by the Department of Labour from lists of candidates submitted by the parties. If the efforts of the committee remain fruitless, the dispute shall be referred to an arbitration court, the members of which are to be appointed by the parties themselves. If the parties fail to reach an agreement as to the membership of the court, the justice of the peace whose turn it is to preside in the local court for the area to which the parties to the dispute belong shall

act as arbitrator. The award of the arbitration court shall be binding on the parties; penalties are provided for infringements.

His Majesty the King has been pleased to award the Imperial Service Medal to Mr. Donald Robb, letter carrier, of Montreal, and Mr. Henry Peter Howell, general construction foreman, Department of Railways and Canals.

The first annual report of "Cape Breton Tramways, Limited," a co-operative organization formed by the employees about a year ago, showed satisfactory conditions, making it possible to increase wages in the coming year. When the Cape Breton Electric Company went into liquidation last year the employees, 33 in number, pooled their savings and bought the rolling stock and operating rights of the concern. Mr. A. J. MacDonald, one of the senior employees, was appointed president and general manager of the new co-operative.

## WORKMEN'S COMPENSATION IN QUEBEC AND NEW BRUNSWICK IN 1931

### Province of Quebec

THE Quebec Workmen's Compensation Commission recently issued their fourth annual report, containing an outline of their operations during the calendar year 1931. These operations were partly under the Act of 1928, and partly under the new Act which took effect on September 1, 1931 (LABOUR GAZETTE, May, 1931, page 525). The Act of 1931 abolished the former system of self-insurance, and substituted a system of collective insurance somewhat similar to that in force in Ontario since 1915. Under its provisions, insurance companies are no longer permitted to write Workmen's Compensation Insurance for employers falling under Schedule 1 of the Act and the Commission is charged with the responsibility of collecting assessments and paying indemnities for accidents happening in the service of such employers. Schedule 2 of the Act provides for certain employers such as the Government, municipalities, railways, navigation companies, etc., who still have the privilege of acting as self-insurers or of covering their responsibility by policies issued by insurance companies.

The commission therefore had the double task of administering the earlier Act with respect to accidents happening before September, and of reorganizing their system under the new law. The problem of ascertaining the adequate rates to be charged under the Act of 1931 to the various groups of employers under schedule 1 was met by the temporary use of the provisional rates adopted by the Ontario Board for the same year. The commissioners expect to be in a position, at the end of 1932, to calculate the rates based on their own experience under the Accident Fund, but in the meantime they will continue to use the actual and provisional rates established by the Ontario Board. The number of employers assessed for the last four months of the year was 6,120. This number includes those employers who submitted estimates for their contractors and sub-contractors. This contracting group, mostly connected with forest industry, would add about 2,000 to the number of employers affected. The total assessment made on employers under Schedule 1 amounted to \$1,035,147, besides some arrears in many of which delay could not be avoided. "The Commission," it is stated, "is following up the collection of these arrears very closely, and at the end of the period of thirty days allowed for payment after the notice of assessment is sent out, a letter is sent to the employer concerned,

informing him of the addition of a penalty of 5 per cent for failure to pay the assessment. If, at the end of a further period of thirty days, the amount has not been paid, a second letter is sent informing the employer that an additional one per cent of the amount of the original assessment has been added. If this second letter does not result in the collection of the amount due, the Commission issues its decision against the employer concerned, so that it may be presented for homologation by the Superior Court, in accordance with Section 64 of the Act. Such decisions are executory fifteen days after the date of homologation by the Superior Court and are final and without appeal."

The total expenses of the administration of both acts during the year was \$172,161 but the respective cost for each Act could not be ascertained.

*Pension Fund.*—The report gives the following information as to the Pension Fund: "The capitalized value of all claims involving permanent incapacity or death is immediately charged to the accident fund. In other words, if a fatal accident involves the payment of pension to a widow and children and the capitalized value thereof represents a sum of \$8,000, that amount is immediately charged to the accident fund. In other words, the employers in each class pay the entire cost of the claims in each particular year including the capitalized value of pensions. As such capitalized values are charged immediately to the accident fund, it is necessary to treat such sums as a reserve, and to assume in our calculations a rate of interest which will probably apply over a period of years. . . . As a widow receives a lump sum payment equivalent to her pension for a period of two years in the event of re-marriage, it has been necessary to take into consideration the probability of re-marriage. No statistics in this connection are available for the Province of Quebec, and a Danish table has been used with modifications suggested by our actuary. No assessment has been made on employers of Schedule 1 to provide for a Disaster Emergency Fund. If a disaster were to occur at the present time, we would be obliged to deal with the payment of the indemnities thereunder according to the circumstances which might develop. It should be borne in mind, that the Commission has always the power to issue a supplementary assessment."

*Act of 1928.*—The Commission received 12,420 claims in respect to accidents which happened prior to September 1, 1931. "Owing to the industrial depression," it is stated, "the number of claims received proportionately was less than for the year 1930, when 20,900 claims were received for the period of twelve months. We may add, however, that in common with other jurisdictions, very numerous demands have been made for the re-opening of claims previously closed. In times of industrial depression, we believe that this has been the usual experience, and as the disposition of such re-opened files involves medical examinations by experts, our work has been considerably increased thereby. Such re-opened cases represent a very considerable addition to indemnities already awarded, even after deducting certain cases, where it has been proved that there has been diminution of incapacity. The total amount of indemnities awarded in the year 1931 amounted to \$2,758,785.19, including additional indemnities for re-opened cases. As stated in our previous reports, this amount represents indemnities only and does not include medical charges, transportation expenses, funeral expenses, etc., all of which are paid direct by the employer or his insurance company, without reporting the amount thereof to the Commission."

During 1931, 13,204 accidents involving the payment of compensation were disposed of, some of these accidents belonging to the previous or earlier years. Lumbering operations again provided the greatest number of accidents, namely 3,322, followed by industrial establishments 3,177. The work of building or demolishing, 1,888, together with the building and maintaining of roads, bridges, etc., 2,232, represent a total of more than 4,000.

Of the 13,204 accidents disposed of, 5,160 related to the Island of Montreal or approximately 40 per cent of the total. The power development at Beauharnois accounts for a considerable proportion of the 313 accidents disposed of for that county. The large number of accidents happening in the forest industry is reflected in the figures for the Counties of Champlain, Chicoutimi, etc.

A table is given showing the total and the average compensation paid to the various classes for temporary and permanent incapacity and for death cases. The total amount

paid was \$2,758,785, or an average of \$208.93 for each case. For temporary incapacity the amount paid was \$605,011.64 (average \$56.07); for temporary incapacity, \$482,645.62 (average \$208.21); and for permanent incapacity \$1,116,100.72 (average \$481). In connection with cases which finally proved fatal, \$677.34 was paid for temporary incapacity and \$554,349.87 (average \$5,835.26) was payable in the form of allowances to representatives of the deceased.

A table is given of the sex and marital condition of the injured workmen showing that only 281 out of a total of 13,204 cases were of women who had been injured in industry.

Of 2,318 claims involving permanent incapacity 1,673 were valued at less than 10 per cent of incapacity. Injuries to the fingers and hands account for a considerable percentage of this total. The cases of permanent total incapacity were somewhat higher proportionately for 1931 than in 1930. There were 15 such cases in 1930 and 14 in 1931, although the number of accidents disposed of was considerably less.

The number of minors who received injuries involving payment of compensation was 1,619. In this connection the commissioners point out that "the need to enforce a strict supervision in case of minors engaged in industry is only too evident."

The total number of claims under the Act of 1928, since it became effective on September 1, 1928, was 67,196.

The report contains numerous tables giving full particulars regarding the work of the year. It concludes with the following statement in regard to the staff:—

"Our staff has been greatly increased to provide for the administration of the Workmen's Compensation Act, 1931. On January 1, 1931, we had a total of 79 employees, and at January 1, 1932, this number had been increased to 125. The Commission has been faced with a heavy task in training the new members of our staff, the majority of whom had no previous insurance experience, but we feel that in the near future, some of the delays which have inevitably arisen will no longer occur, and that the record of the Commission in the past will be maintained."

The members of the Board are Mr. Robert Taschereau (Chairman), Mr. Simon Lapointe, and Mr. O. E. Sharpe.

### New Brunswick

The thirteenth annual report of the Workmen's Compensation Board of New Brunswick reviews the financial side of the administration of the Workmen's Compensation Act during the calendar year 1931, and

contains also, in their final form, the full statistics of the previous year. (As noted in the last issue (page 1178) a new Act, framed in accordance with the recommendations of a commission of inquiry into the operation of

workmen's compensation in the Province, was adopted this year by the provincial legislature.)

The total income of the Board for the year 1931 is estimated at \$701,466, in addition to a surplus carried over from 1930 of \$17,637. The estimated expenditure was \$518,393, leaving an estimated surplus of \$200,710. Payments during the year in respect to temporary total disability amounted to \$146,717; permanent partial disability payments totalled \$38,843; medical aid involved payment of \$34,459 for hospital and nursing services and \$51,668 for doctors' fees and transportation. For fatal cases \$71,134 was expended during the year, besides \$1,359 for burial expenses. The amount of compensation estimated for unreported claims and claims in process of assembly but not completed, was \$123,000. Revaluation of the Pen-

sion Reserve Fund was made during the year by Mr. T. Norman Dean, of the Ontario Board, who served as consulting actuary for the Royal Commission appointed by the provincial government, whose recommendations were embodied in the new Act of 1932. Mr. Dean recommended that the fund should be capitalized on a 5 per cent instead of the former 4 per cent basis. This change resulted in a surplus in the fund of \$158,123, which sum was transferred to the current fund.

The statistics for 1930 give the number of compensation cases in that year, as follows: fatal, 30; permanent total disability, 1; permanent partial disability, 8; temporary total disability, 42,760; minor disabilities and medical aid only, 7,204. The cost of accident compensation during 1930 was \$548,527.54.

### Workmen's Compensation in Quebec

The Quebec Workmen's Compensation Commission has issued a new order, approved on November 23, revoking Regulation No. 5 (LABOUR GAZETTE, July, 1932, page 771), and replacing it by the following new regulation (Section 2 is new).

#### REGULATION No. 5A.

Acting in virtue of the powers conferred upon it by article 77 of the Workmen's Compensation Act, 1931 (21 Geo. V, Chap. 100), the Quebec Workmen's Compensation Commission enacts that the saw-mill industry is only subject

to the Workmen's Compensation Act, 1931, under the following two conditions, to wit:

1. When generally employing seven or more workmen; and
2. When it constitutes the principal industry of the employer or an operation incidental to any industry subject to the authority of said act;

The industry thus excluded from the operation of the act may however, upon application by the employer to the Secretary of the Commission pursuant to article 78, be added to schedule 1.

The assessment which may be imposed shall never be less than \$50.

### Labour Recommendations to Quebec Social Insurance Commission

The Quebec Social Insurance Commission, at their final session at Montreal during November, received the recommendations submitted by a committee of the Trades and Labour Congress of Canada and the Railway Brotherhoods. The labour delegation was headed by Charles Masse, chairman, Quebec Legislative committee, Brotherhood of Locomotive Firemen and Enginemen, and included J. L. LaBrèche, chairman, legislative committee, Brotherhood of Railroad Trainmen; Hon. James Murdock, vice-president, and James Conley, Dominion legislative representative, Brotherhood of Railroad Trainmen; William L. Best, Dominion legislative representative, Brotherhood of Locomotive Firemen and Enginemen, and Alderman George R. Brunet,

chairman, provincial executive committee, Trades and Labour Congress of Canada.

The committee recommended that a joint conference be immediately convened of provincial and Federal government representatives in an effort to reach a practical solution of the unemployment problem. They also urged the establishment in Quebec of a compulsory system of health insurance to which the government, employers and employees would contribute. The system would include payments of benefits to expectant mothers, covering nursing services, confinement and medical fees. The committee also strongly recommended the adoption by the Province of the Dominion system of old age pensions. The chairman of the commission declared at the conclusion of the hearing that labour's contribution was one of the most constructive presented before the commission.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

### Proposed Accident Prevention Association in New Brunswick

At the suggestion of the Maritime Division of the Canadian Manufacturers' Association, employers in New Brunswick are taking steps towards the federation of associations for accident prevention. Amendments that were made this year in the Workmen's Compensation Act of the province were outlined in the last issue of the *LABOUR GAZETTE*, page 1178. Many of these amendments had been suggested by a committee of the association. Section 80 of the Act relates to the formation of employers' safety associations, its provisions being similar to the corresponding section in the Ontario Act. The section is as follows:—

80. (1) The employers in any of the classes may form themselves into an association for accident prevention and may make rules for that purpose; (2) If the Board is of opinion that an association so formed sufficiently represents the employers in the industries included in the class, the Board may approve such rules, and when approved by the Board and by the Lieutenant Governor in Council they shall be binding on all the employers in industries included in the class; (3) Where an association under the authority of its rules appoints an inspector or an expert for the purpose of accident prevention, the Board may pay the whole or any part of the salary or remuneration of such inspector or expert out of the accident fund or out of that part of it which is at the credit of any one or more of the classes as the Board may deem just; (4) The Board may in any case where it deems proper make a grant toward the expenses of any such association; (5) The moneys paid by the Board under this section shall be charged against the class represented by such association and levied as part of the assessment against such class; (6) The word "class" in this section shall include groups or such part of a class or parts of classes as may be approved by the Board.

In Ontario the safety associations in the various industries are federated in the Industrial Accident Prevention Associations, Incorporated. Similarly it is hoped that the employers' movement for industrial safety in New Brunswick may eventually be unified under one central organization.

### Cost of Compensation in Ontario —

In an address delivered at the recent quarterly meeting of the directors of the Industrial Accident Prevention Associations at Toronto, Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, called attention to the question of the reduction of accident and its relation to the cost of compensation. The criticism had been made that the amount paid out in awards had not

been commensurate with the reduction; there had been, it was stated, a pronounced reduction in the number of accidents from 1929, when more than 87,000 were reported, to a probable total of 45,000 in 1932, and a reduction from more than \$8,000,000 in benefits awarded in 1929 to a probable total of \$5,500,000 for 1932. Mr. Sinclair said there was no proper relation between the number of accidents reported in a month or in a year and the amount of money awarded in that month or year. Practically all serious cases were closed months, and in some cases years, after the date of the accident, and it was quite possible for a man to have been seriously injured in 1929, and carried on temporary total disability since that time with a final award made in 1932. In addition, silicosis, affecting the Mining Class in 1932, would throw a heavy load on the benefit figures for the year as there would probably be a special levy against Class 5 to take care of claims for silicosis in the mines, and many cases were given their permanent awards.

Mr. Sinclair stated that there was a strong tendency in times of depression to look upon the Workmen's Compensation Board as an unemployment insurance fund. Reports of injuries were received from the employer, the injured employee and the doctor, and if all three of these took into consideration hard times, and the difficulties of employment, there was a great danger of changing compensation into an unemployment fund. This problem lay largely in the hands of the employers who should see that proper reports were made to the Workmen's Compensation Board. In 1930 the average rate of assessment levied over the entire payroll in Schedule 1 would have been \$1.40 per \$100 of payroll, which has dropped to \$1.22 in 1931. The average rate for all years under compensation in Ontario was \$1.18 per \$100 of payroll; and when it was remembered that medical aid was very limited at the outset of the Act, that compensation was fixed on a basis of 55 per cent of wages, and that there had been material increases in benefits for medical aid, compensation and industrial diseases, the 1931 rate was not noticeably above the average for all years. Taking the 1931 adjusted rates, he pointed out that out of 401 separate rates 167 were decreased, 177 remained the same as in the former year, and only 57 had been increased; and on provisional rates for 1932, 142 decreased, 185 the same and only 73 increased out of 400 rates. The average compensation per case awarded in the four years, 1927 to 1930 inclusive, covering

only those cases that involved compensation to the injured worker or his dependants, showed an increase, running: \$147.96, \$166.50, \$171.30, \$189.88, while the number of accidents was decreasing. Never in the history of the Act had so many claims come up for reconsideration, and requests for cases to be reopened and increases made; also many demands for advances or commutation of pensions.

### Safety Rules for the Engineering Industry

The Industrial Accident Prevention Associations of Ontario recently published a useful booklet under the title "How to avoid Accidents in the Engineering Industry." The rules it contains are stated to represent the accumulated experience of employers, management and operators, and to be based on facts, not theory. The first section includes general engineering shop rules, which are followed by rules for operators of lathes, and of machines for drilling, shaping, screw making, boring, milling and gear-cutting, planing and grinding, and for power presses.

Rules are given for the prevention of electrical accidents, the correct use of hand tools, and for the use of crane drivers and slingers. Other sections refer to ladders, piling and storage of materials, first aid, skin infection, etc.

### Proposed Licensing of Contractors

Regulation of the building and contracting business in Ontario is being sought by a committee representative of the Construction Industry, and according to a statement made to the *Contract Record* by William B. Sullivan, president of the Toronto Builders' Exchange, it is expected that the next session of the provincial legislature will be asked to enact a law providing for a system of licensing. This, it is said, would not restrict competition, since it would be province-wide, and judging from the results in American states where such licensing had been tried, it might be expected to effect a material saving in the ultimate cost of buildings, as well as add to their safety.

## MINIMUM WAGES IN MANITOBA

THE Minimum Wage Board of Manitoba has re-issued Regulation 3, governing the occupation of all women workers, and boys under 18 years of age, in laundries, dyeing and cleaning establishments in Winnipeg and St. Boniface. The previous order, governing only female employees in these occupations, was published in the *LABOUR GAZETTE*, May, 1925, page 461. The new regulation applies to boys as well as to female employees, the Minimum Wage Act having been amended at the last session of the Provincial Legislature so as to provide for the inclusion of male employees under 18 years of age (*LABOUR GAZETTE*, May, 1931, page 503). Regulation 12 (governing women and boys employed in retail stores in greater Winnipeg and Brandon) was given in the *LABOUR GAZETTE*, December, 1931, page 1305, and Regulation No. 16, governing manufacturing industries in Winnipeg and Brandon, was given in the issue for May, 1932, page 540. The text of the new order, is as follows:—

### REGULATION GOVERNING THE OCCUPATION OF ALL WOMEN WORKERS AND BOYS IN LAUNDRIES, DYEING AND CLEANING ESTABLISHMENTS IN WINNIPEG AND ST. BONIFACE.

#### 1.—Conditions of Labour

(1) *Cleanliness*.—Every room and the floors, walls, ceilings, windows, and every other part thereof, and all fixtures therein, shall at all

times be kept in a clean and sanitary condition.

(2) *Drinking Water*.—A sufficient quantity of safe, fresh, drinking water within reasonable access of all workers, shall be provided, with sanitary appliances for drinking. A common drinking cup shall not be used.

(3) *Lighting*.—Artificial illumination in every workroom shall be installed, arranged and used, so that the light furnished will at all times be sufficient for the work carried on therein and prevent unnecessary strain to the vision or glare to the eyes of the worker.

Each workroom shall be lighted from outdoors, with windows, at least equal in size to one-eighth of the floor space, and opening on a street, lane or court at least ten feet wide, except where the work requires a low temperature or a subdued light.

(4) *Ventilation*.—There shall be a system of fans or alternative appliances, to forcibly remove the steam and overheated air, and there shall be at least 800 cubic feet of air space within each room for each employee working therein. Any employee working on a wet floor shall be supplied with a wooden grating upon which to stand.

(5) *Toilet Rooms*.—There shall be provided, suitable and convenient toilets, separate from those used by the opposite sex, and the number of such toilets shall not be less than one to every twenty-five persons employed at one time or fraction thereof. Such toilets must be thoroughly ventilated and open to the outside air, and must be kept in a clean and sanitary condition, and privacy assured at all times.

(6) *Wash Basins*.—Wash basins shall be provided in at least the proportion of one to twenty persons employed at one time, or fraction there-

of, and shall be separate from those used by the opposite sex. Individual towels, either cloth or paper, shall be furnished to the workers and shall be kept in a clean and sanitary condition.

(7) *Temperature*.—There shall be a thermometer in each workroom and the maximum temperature during working hours shall not exceed 75 degrees Fahrenheit, except when the temperature outdoors exceeds 75 degrees Fahrenheit.

(8) *Health and Injuries*.—All machinery and danger points shall be protected as far as possible by approved safety devices. All protection possible against occupational diseases shall be provided. Each establishment shall keep a first aid kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. A couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided.

(9) *Lunch and Rest Room*.—Where employees remain for lunch, suitable provision shall be made for dining and rest purposes.

## 2.—Hours

(1) *Hours of Labour*.—The hours of labour shall be not more than nine (9) hours in any day or more than fifty (50) in any week. No employee shall work between 7 p.m. and 7 a.m., nor on Sundays.

(2) *Overtime*.—Overtime may be worked only on permit from the Bureau of Labour, not oftener for any employee than thirty-six (36) days in one year. No overtime is to exceed three (3) hours in any day or six (6) hours in any week. These permits are good only for dates specified and a record of each employee's overtime must be kept for inspection purposes. When work is being performed on overtime permit all employees must be off the premises by 9 p.m. No minor under seventeen (17) years of age shall work overtime. There shall be extra pay at not less than the regular rate for all overtime worked.

(3) *Lunch Hour*.—At least one hour shall be allowed for lunch.

(4) *Delays*.—An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

## 3.—Wages

(1) *The Minimum Wage—Women*.—No experienced employee of eighteen years of age or over shall be paid wages at a rate less than twelve dollars (\$12) per week.

(2) *Inexperienced Employees*.—No inexperienced employee shall be paid wages at a rate less than \$9 per week for the first six months of employment, and \$10 per week for the second six months, and \$11 per week for the third six months, after which period she shall be considered an experienced employee.

(3) *Part-Time Workers*.—Employees working as part time workers shall be paid, if experienced, at a rate of not less than twenty-five cents (25c.) per hour, and if inexperienced, at a rate of not less than twenty cents (20c.) per hour. The total number of inexperienced workers shall not exceed twenty-five per cent (25%) of the total experienced employees.

### 3a.—Wages

(1) *The Minimum Wage—Boys*.—No boy under 18 years of age shall be paid wages at a

rate less than eight dollars (\$8) per week for the first six months of employment; nine dollars (\$9) per week for the second six months, and ten dollars (\$10) per week after twelve months of employment.

## Women and Boys

(2) *Method of Payment*.—Wages shall be paid weekly and after each week's wages have been earned they shall be paid within three days.

(3) *Statutory Holidays*.—No reduction shall be made from the minimum wage for statutory holidays.

(4) *Uniforms*.—If special uniform is required it shall be furnished and laundered by the employer without cost to the employee. No girl or boy under fourteen (14) years of age shall be employed.

(5) *Notice to Be Given*.—After four weeks' employment one week's notice shall be required on the part of the employer in dismissing an employee, and on the part of the employee on leaving employment, except in the case of flagrant insubordination on the part of the employee, or flagrantly unjust treatment on the part of the employer.

## 4.—Board, Lodging, Etc.

Where lodging is furnished by the employers, there may be deducted from the wage rate a sum which shall be not more than at the rate of two dollars (\$2) per week and for board at not more than at a rate of four dollars and a half (\$4.50) per week, or one dollar and a half (\$1.50) per week if one meal is supplied each working day; or three dollars (\$3) per week if two meals are supplied each working day; or twenty-five cents (25c.) for each meal if the number supplied is less than one each working day. For both lodging and board at not more than at a rate of six dollars (\$6) per week.

## 5.—Permits of Exemption

The Board may issue a permit upon application therefor to any employer, granting modification of or exemption from these regulations. Such permits will be issued only in cases of exceptional or emergent conditions arising.

## 6.—Penalty

Any violation of these regulations is punishable by fine or imprisonment, or both. See "The Minimum Wage Act," Section 17.

## 7.—Posting of Regulations

Each employer shall keep a copy of these regulations posted in a conspicuous place.

This order becomes effective and of full force and effect from this date and all regulations and orders of the Minimum Wage Board appertaining to the above mentioned establishments made prior to the date hereof are hereby repealed.

8.—Establishments operating in towns not specified shall be governed by these regulations, except that the Minimum Wage for experienced employees shall not be less than eleven dollars (\$11) per week, and for inexperienced employees not less than eight dollars and fifty cents (\$8.50) per week for the first six (6) months after entering the industry, and not less than nine dollars and fifty cents (\$9.50) per week for the second six (6) months; after which period of twelve (12) months she shall be considered an experienced employee.

Where boys are employed, they shall be governed by Section 3a, Clause 1.

All complaints treated strictly confidential.

## MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO

THE following order by the Ontario Minimum Wage Board governing "Shoe Shine" employees in Toronto became effective on December 1, 1932:—

ORDER NO. 50.—GOVERNING FEMALE EMPLOYEES IN SHOE SHINE PARLOURS IN THE CITY OF TORONTO.

(1) *Minimum Wage*.—No female employee shall be paid wages at a less rate than twelve dollars and fifty cents (\$12.50) per week.

(2) *Hours*.—The Minimum Wage Rate established by this Order shall apply to a work period not to exceed fifty (50) hours in any one week.

(3) *Overtime*.—A female employee who works more than fifty (50) hours per week shall be paid at a rate not less than twenty-five (25) cents per hour for all time beyond the fifty (50) hours weekly work period established by this order.

(4) *Beginners or Apprentices*.—There shall be no reduction of these rates for beginners or apprentices.

(5) *Deductions for Absence*.—No deductions for absence shall exceed the exact proportion of the fifty (50) hours weekly work period.

(6) *Waiting*.—An employee required to wait on the premises shall be paid for the time thus spent.

(7) *Posting*.—Each establishment shall keep a copy of this order posted where it can be seen and read by the employees.

(8) *Penalties*.—Violations of this order are punishable by fine or imprisonment (See section 21 of the Minimum Wage Act).

(9) *Complaints*.—Any female employee not being paid at least as much as this order requires should report to the Minimum Wage Board (East Block), Parliament Bldgs., Toronto, Phone Adelaide 1211.

(10) This order shall come into force and be effective on and after December 1, 1932.

R. A. STAPELLS, *Chairman*.  
MARGARET STEPHEN.  
HENRY G. FESTER.

## MINIMUM WAGES FOR WOMEN IN ALBERTA

### Amendments to Orders Governing Hotels and Restaurants, Office Workers, and Telephone Operators

The Minimum Wage Board of Alberta recently amended Orders No. 3, No. 5, and No. 8, as indicated below:—

*Order No. 3, governing female employees in hotels, restaurants, boarding houses, etc.* This order was reproduced in the LABOUR GAZETTE, August, 1925, page 778. By the new amendment the minimum wages for this class are henceforth to be as follows:—

For experienced employees: \$12.50 per week of six days, and \$14.50 per week of seven days (these figures were formerly \$14 and \$16.50).

For apprentices (week of six days): \$9 per week for first month (formerly \$10); \$10 per week for second month (formerly \$11); \$11 per week for third month (formerly \$12).

For apprentices (week of seven days): \$10.50 per week for first month (formerly \$11.50); \$11.75 per week for second month (formerly \$12.75); \$13 per week for third month (formerly \$14).

*Order No. 5, governing office employees.* This order appeared in the LABOUR GAZETTE August, 1925, page 779. The amendment adds "assistants in post offices" to the list of occupations covered by the order.

*Order No. 8, governing female telephone operators.* This order appeared in the LABOUR GAZETTE, February, 1931. It formerly applied

"to cities, towns and villages having a population of 600 or over." The amendment provides that the order "shall apply to all private telephone exchanges in cities, towns and villages, having a population of 600 or over, and to all public telephone exchanges where the number of subscribers exceeds 250." Assistants in post offices, now added to the workers covered by Order No. 5, are removed from this order.

The United States Secretary of Labour, Mr. Doak, in a speech broadcast in September, 1932, stated that a shorter working day and week was the only way to offset mechanization of industry. With the general use of labour-saving devices, provision must be made for appropriate participation of the workers in the benefits of such devices. This participation, he continued, was absolutely essential for social, economic and civic reasons; the modern method of securing the participation of labour in the saving of money and time through the mechanization of industry must include a plan for shortening hours of work and for a general reduction of the prices of the products of machinery in favour of the ultimate consumer; the masses must benefit by the machine or the machine would destroy the society it was intended to benefit.

## AMERICAN FEDERATION OF LABOUR

### Summary of Proceedings of the 52nd Convention

THE fifty-second annual convention of the American Federation of Labour was convened at Cincinnati, Ohio, on the morning of November 21 by Adolph Kummer, President of the local Central Labour Council. Hon. George White, Governor of Ohio, was escorted to a seat on the platform, after which Monsignor Wagner, director of Catholic Charities of the Arch-Diocese of Cincinnati, delivered the invocation. Mr. Kummer followed with an address on behalf of organized labour of Cincinnati and vicinity. Governor George White welcomed the delegates on behalf of the State of Ohio, and Mayor Russell Wilson acted similarly for the City of Cincinnati. After accepting the gavel from the local chairman, President Green thanked the previous speakers for their very cordial welcome, and on declaring the convention open for business called for the report of the Credential Committee. This report showed 327 delegates present, representing 78 international and national unions, 4 departments, 22 state branches, 54 central bodies, 13 local trade and federal labour unions, and 3 fraternal delegates, one of whom represented the Trades and Labour Congress of Canada and two the British Trades Union Congress.

#### Report of Executive Council

The report of the executive council covered many pages and dealt with the various activities of the Federation during the past fiscal year. A synopsis of the report as read by First Vice-President Frank Duffy dealt with the following subjects: Unemployment; Loss of workers' incomes; Uses of excess incomes; Work week; Workers' security; Planning our lives; Relief; Unemployment insurance; National legislation; Economy law; Personnel classification; Jurisdictional problems; American Federation of Government Employees; Benefit services of national and international unions; Observance of Labour Day; Labour Sunday and Labour's Memorial Day; The Labour press; Our public school system; Workers' education bureau; Labour development in Porto Rico; Difficulties preventing a convention of the Pan-American Federation, and Organization activities. The various sections of the report were referred to the appropriate committees for consideration and report.

#### Report of the Secretary

This report showed total revenues, including the balance from the previous year, of \$837,192.25; expenditure amounted to \$468,747.28, leaving a balance on hand of \$368,444.97, of which \$33,949.88 is in the general fund and \$334,495.09 in the defense fund. Under membership were reported 106 national and international unions, 49 state federations, 619 city central bodies, 4 departments, 604 local departmental councils, 26,362 local unions, 307 local trade and federal labour unions—a total membership of 2,532,261. The treasurer's report showed income by months, warrants paid, investment of Federation funds and sums on deposit. The report of the trustees of the American Federation of Labour Building showed a balance on hand as at August 31, 1932, of \$55,593.89. A report of the auditing committee, to whom was referred the financial statement, as finding all books and records correct in every respect, was adopted by the convention.

#### Committee on Organization

The committee on organization, to which was referred that portion of the executive council's report under the caption, "Organizing work," as well as a number of resolutions, emphasized the necessity of having unorganized workers within the ranks of labour, and urged all affiliated bodies to lend their efforts to that end, as the need for expansion of unionism was never greater than at the present time.

The committee concurred in resolutions as follows: (1) that the American Federation of Labour instruct its organizers to co-operate to the fullest extent with the organizers of the International Association of Fire Fighters in their work of organizing the paid fire department members throughout the United States and Canada; (2) endorsing efforts of the Hotel and Restaurant Employees and Beverage Dispensers' International Alliance to organize all hotels and catering establishments and calling upon all affiliates of the A.F. of L. to patronize such establishments as employ union help; (3) requesting assistance in organizing culinary workers; (4) directing the executive officers and organizers to foster and assist in organizing employees of chain stores; (5) requesting all branches of the American Federation of Labour and its organizers to assist in an effort to organize

the laundry workers; (6) calling upon the Federation to urge all of its affiliated unions that discriminate against negro workers to remove the colour bar and accept the workers of this race upon a basis of equality. A resolution requesting that the Federation of Trade Union Auxiliaries be allowed a fraternal delegate to the convention of the American Federation of Labour, which was favourably reported upon by the committee, was amended, and referred to the executive council for further investigation and study.

### Union Labels

The committee on union labels reported that the Union Label League membership was 496,283, and that during the season's label campaign, 219,921 leaflets were sent out to different committees on request. The committee closed its report, the whole of which was adopted, by advising the delegates the slogan at all times should be "Buy jobs for trade unionists by purchasing only union labelled goods and union service."

### Legislation

The committee on legislation dealt with the references in the report of the executive council, as well as with a number of resolutions. On the question of convict labour competition with free labour the committee joined with the executive council in urging State federations of labour and central bodies to take action with a view to securing suitable convict labour legislation. The committee reiterated labour's oft expressed opposition to the sales tax, and recommended the adoption of the Council's suggestion that all affiliates, collectively and individually, make known to members of Congress their opposition to sales tax legislation. Approval of the committee was given to the executive council's recommendation for an extended study of the personnel classification of government employees, and it was suggested that labour be represented on the personnel classification boards, and also that representatives of affiliated organizations affected by the classification should be called into conference regarding the proposed study.

The committee on legislation also approved of resolutions as follows: (1) urging Congress to extend application of exclusion laws to include seamen; (2) seeking legislation covering government employees in the Panama Canal Zone as follows: (a) full travel and cumulative leave privileges; (b) retirement on thirty years' service; (c) extension of retirement privileges to widows of retired em-

ployees; (d) prevailing rates of wages on public works and buildings; (3) urging the placing of the rural mail delivery service on a contract basis; (4) favouring voluntary retirement after thirty years' service for employees of the United States Government; (5) favouring improved government employment standards; (6) seeking the elimination of finger-printing as an employment requirement in the United States civil service; (7) asking the government, in its purchase of supplies, to insist that advanced employment standards conforming with the principles of organized labour be followed by the manufacturer.

The following resolutions were referred to the Executive Council: (1) advocating the widening of the Calumet Sag Canal; (2) opposing the placing of a three per cent tax on all electric energy sold for domestic or commercial consumption; (3) favouring the extension of public health facilities to seamen and dredgemen.

The committee on legislation, the report of which was adopted as a whole, non-concurred in a resolution favouring a 20th amendment to the constitution of the United States limiting working days to five in each week and the working hours to six per day.

### Education

The Committee on Education reported that although in the last decade there has been a decline of twenty-three per cent in the number of boys and girls between the ages of 10 and 18 gainfully employed, there are still over two million of these boys and girls engaged in such employment; and called upon the convention to reaffirm its stand of last year, namely that the initiative in securing the ratification of the Child Labour Amendment be taken by local labour groups in the various states, that these groups, in co-operation with national and international unions and the American Federation of Labour, assume largely the responsibility for securing this action. The statement of the executive council that "the employment of children at any time, and especially during a period of such unprecedented adult unemployment, is at variance with, and incongruous to all declarations of social policy and economic stability," was recommended by the committee for adoption.

The committee commended the executive council for its interest in the public school situation, and called upon the Federation to reaffirm its position of increased revenues to maintain and develop this school system. The convention adopted the committee's

recommendation that the executive officers prepare and have introduced into the next Congress a resolution providing for a nationwide investigation into school financing, such canvas to include the relations of the public school to public welfare, to discover how these schools at present function in our national economy, and what is their worth as a social institution.

The committee commended the national advisory council of the Radio in Education for their helpful co-operation and expressed its unqualified approval of the continuance of this important educational undertaking under the general direction of the Workers' Educational Bureau.

The committee commended the Council on that part of its report dealing with the purpose of the observance of "Special Labour Days" and stated that the observance of these days had increased in number and dignity. Approval was given to the recommendation of the executive council that labour papers should be aided in every way possible and be accorded a full measure of service and support. The committee congratulated the executive upon the progress made with the Samuel Gompers Memorial, and gave October 1, 1933, as the date of dedication. Regret was expressed by the committee on the necessity of discontinuing the publication of the bulletins of the legal information bureau and recommended that their publication be resumed as soon as financially possible.

The convention adopted the committee's favourable recommendation on the following resolutions, as well as the committee's report as a whole: (1) favouring compulsory full time education to the age of 18 for all children in every state and that the necessary machinery for law enforcement be provided; (2) authorizing vigorous action to guard against curtailment or elimination of any school activity necessary to maintain and improve educational standards; (3) seeking larger appropriations for vocational education and guidance; (4) recommending a publicity campaign in order to build up an alert public opinion on school questions; (5) urging all labour bodies, organizations, individuals and the people of America, to take heed of the danger of an entrenchment policy in public school support; (6) recommending that the Federation in every possible way acquaint the public of the extra services which are causing the increase in public school expenditures; (7) authorizing the executive council to give their fullest co-operation to the national committee on education by radio, and that the labour press publish full details of projected

broadcasts under the common heading "Labour Broadcasts."

### Shorter Work-Day

The committee on the shorter work week reported on that part of the executive's report under the caption "Our Outgrown Work Week," and commended the council for presenting the following declaration:

The average work-week in all industry in 1929 was about 49 hours. If the unemployed had been put to work there would not have been over 45 hours a week for each worker. Trade union standards average 44.8 hours a week at that time. Since 1929, depression has forced still greater use of labour-saving devices. The return of normal times could not provide even 44 hours' work a week for all now.

The 5-day 40-hour week and the 6-hour day with a 36-hour week, represent standards applicable to normal times at present. But in the emergency of this fall and winter, hours must be reduced even below this standard to provide work for the unemployed and prevent starvation.

The committee called upon the Federation vigorously and definitely to declare itself in support of a sharp reduction in the work-day and the work-week, and recommended: (1) that the convention record itself in advocacy of and as proposing to the country the universal adoption without delay of the six-hour day and five-day work week; (2) that such reduction in labour hours should carry with it no reduction in pay, but on the contrary wages should be maintained and steadily increased in keeping with the expansion of productive efficiency; (3) that the convention declare that this objective of the shorter work-day and work-week be now declared its paramount purpose, and that the officers of the American Federation of Labour be directed to spare no effort in giving purpose and direction to this program, and that they call upon the people generally in support thereof as the only means whereby the prosperity of the country can be restored.

After the recommendations of the committee had been discussed by a number of speakers President Green stated:

"I should like to make a brief observation or two regarding this very important subject. I have been so profoundly impressed with the subject itself as to be forced to the conclusion that prosperity in its fullest sense can never be realized until we make adjustments such as have been suggested by the Committee on Shorter Work Day. It appears to me that the country is face to face with a momentous decision, whether we shall dismantle industry or whether we shall make adjustments necessary to provide employment for all who are able and willing to work. It seems to me that

it is clear indeed that it is quite impossible for industry to provide work for fifty or fifty-five million able-bodied working men and women eight hours per day and six days per week. We have developed such mechanical technique as to make it impossible to absorb into industry the workers of the nation. If that is true, then—and I have never heard it successfully contradicted—what must America do? Are we to resign ourselves to an economic situation where from eleven to fifteen million people are to remain idle constantly and continuously? Will our social order sustain such an economic condition as that? How long will we be patient? How long will it be tolerated? These are the questions pressing for an answer that must not be denied."

In concluding his address the president further stated:

"I am wondering whether or not the time has arrived when we could select some strong, militant, fighting organization identified with the American Federation of Labour to make the fight now for the five-day week and the six-hour day? How long shall we tolerate the present condition? What shall we do? Something must be done, and so far as I am concerned, along with my colleagues on the Executive Council, I propose to find some way, to suggest some plan, even though it may be to resort to forceful methods to compel industry to give us this great reform.

"The trouble has been, as we have pointed out in the Executive Council's report, that industrial management seems never to have learned. They do not respond to the appeals made to their hearts, their minds and their consciences. They seem to think we will follow the old line and that eventually some power not yet in evidence will correct our economic ills. Labour knows that every reform we have ever secured, every advancement that has come to us for realization and enjoyment has really been forced from the reluctant managers of industry, and I presume that aside from a few who will step out willingly and accept the reform, it will ultimately rest upon labour to utilize its economic strength in a constructive and practical way in order to secure this great change. And in doing that we are fighting the battle of the unemployed, we are fighting for those who are yet working, and we are fighting for the nation. We will not be denied the realization of this great reform. The world must know, we must be given it in response to reason, or we will secure it through force of some kind."

After concurring in the recommendation of the committee on the following resolutions the

convention adopted the entire report: (1) reaffirming faith in the shorter work-day and work-week as a means of restoring the purchasing power of the workers and consumers of the nation, and instructing the executive council to prepare legislation embracing this suggestion, in so far as possible without reduction in the daily, weekly, or monthly wage, and have same presented to the incoming session of Congress for consideration and approval; (2) Approving of shorter working hours for all fire fighters in the United States and Canada, and calling upon all affiliates to support the movement for an eight hour day, with one day off in seven.

### Local and Federated Bodies

This committee recommended the building up of local unions, a closer affiliation of local unions with central labour bodies, and a never-ceasing education of the members to confine their patronage to the products of fair employers. National and international unions were urged to take such action as would bring their locals into central labour unions. After the committee had approved of a resolution which also urged closer co-operation and affiliation between local unions and central bodies, the convention adopted the report as a whole.

### Committee on Executive Council's Report

The committee on the Executive Council's report, which in the main dealt with trade jurisdictional matters, reported that \$39,961,-873.14 was paid out in benefits to members of organized labour by the various unions affiliated with the Federation; this being over \$3,000,000 more than was contributed in the previous year by the same organizations. In regard to workmen's compensation insurance, the committee approved of the suggestion of the executive in calling upon all State Federations of Labour to urge the adoption of the exclusive State fund plan, as used in the State of Ohio. The committee commended the executive council for its actions in endeavouring to bring about a better understanding between parties to jurisdictional disputes, and recommended that the council continue its efforts to this end. These parties include: (1) Printing Pressmen—Photo Engravers and Lithographers; (2) Engineers—Firemen; (3) Bridge and Structural Iron Workers—Pulp and Sulphite Workers; (4) Pavers and Rammersmen—Hod Carriers; (5) Teamsters—Railway Clerks; (6) Theatrical Stage Employees—Electrical Workers; (7) Flint Glass Workers—Glass Bottle Blowers.

The proposed amalgamation of Cigar Makers-Tobacco Workers was left in the hands of the executive council for further action. Approval of the committee was given to the issuing by the Federation of a new charter to Federal Government employees. The committee reported that the supplemental report of the Executive Committee had been considered, and recommended that the president continue his efforts to bring about a better understanding between the Cloth Hat and Cap Makers and the United Hatters of North America. The report of the committee was adopted.

### Industrial Relations

To the committee on Industrial Relations was referred a resolution asking the Federation to renew its declaration of the unfairness of a New Jersey firm in its attitude towards members of the International Moulders' Union, and it was recommended that the attitude of the Federation as authorized at a previous convention be adopted in lieu of the adoption of the resolution. In referring to that part of the officers' report dealing with the controversies between the Stove Mounters and certain firms, involving members of another international organization, the committee requested that the members of the executive council continue their efforts to effect a settlement. It was suggested by the president that the officers of the two unions confer with a view to agreeing upon some plan or policy to overcome the difficulty.

### Unemployment

The first matter to be reported on by the committee on resolutions was the reference in the executive council's report on unemployment. The committee was of the opinion that an essential feature of the remedy for unemployment was the shortening of the work week and the work day, and approved of the executive council's proposal for promoting the security of the worker by the following means:—

1. A system of state employment services under Federal co-ordination.
2. The organization of wage earners in trade unions.
3. The diversion of work.
4. Higher wages.
5. Vocational counsel and retraining.
6. National economic planning.

As integral parts of a central or national plan the council urges the following:—

1. Steeply graduated income and inheritance taxes.

2. Constructive control of credit and finance production.

3. Recognition of the equities of workers in the industries in which they work.

4. Federal agency to collect and collate data on man-hours and wage earner incomes, and to provide standards for determining economic balance.

5. Federal licences for corporations operating on an interstate scope, with specific requirements as to accounting.

6. A protective service for investors.

7. Organization of wage earners in trade unions to advance their interests industrially and otherwise.

8. National economic planning should aim at raising standards of living for lagging groups and not at a program of limitation of production with price fixing.

In the matter of unemployment relief the committee urged the adoption of that part of the executive report which called upon union groups everywhere to take the initiative in pressing demands for the necessary relief appropriations upon state legislatures and Congress. The recommendations of the committee were adopted.

### Unemployment Insurance

A report of the international officers of the United Mine Workers of America on Unemployment Insurance together with five resolutions on the same subject was referred to the committee on Resolutions. The report of the executive council which recommended the enactment of unemployment insurance, the contributions to which "should be paid by management as a part of the cost of production" was approved by the committee in lieu of the five resolutions on this subject.

### National Legislation

The Resolution Committee approved of the stand of the executive council in opposition to legislation inimical to the interests of labour, and of its intention to urge appropriation by Congress of an adequate amount to meet relief requirements.

### Economy Law

Reference was made to that part of the executive report under the sub-caption "Economy Law," and the committee on resolutions joined with the council in expressing regret concerning reductions in the pay of employees of the Federal Government enforced under the Economy Law, and approved of the announced purpose of the Federation to give every aid to these employees to defeat this legislation.

### Immigration

Gratification was expressed by the committee on resolutions on the success of the American Federation of Musicians in securing an amendment to the immigration law which placed instrumental musicians under the contract labour provisions. The executive council's efforts towards eliminating all immigration as far as possible was recommended for approval by the committee.

### Old Age Security

The committee on resolutions referred to that part of the executive council's report under the sub-caption "Old Age Security" and expressed the hope that legislation on this subject would be forth-coming in the near future. The committee recommended that the Federation and its various State branches should continue their efforts to secure legislation providing for old age pensions.

### Anti-Injunction Law

Under the caption "The Anti-Injunction Law" the executive council recorded the enactment of the Norris-La Guardia Anti-Injunction Law as representing "the outstanding legislative achievement of the Federation during the last session of Congress"; and the committee on resolutions agreed with the council by stating that the passage of the law "marks a great step forward, reflecting, as it does, the culmination of years of effort to secure the enactment of injunction relief legislation." The committee also approved of the executive council's recommendation that State federations of labour and city central bodies endeavour to have a similar measure to the Norris-La Guardia Bill enacted into law by state legislatures.

### Volstead Act

The committee on resolutions, in addition to dealing with that part of the executive council's report under the heading "Volstead Act," considered five resolutions relating to the same subject. The committee basing its report on the stand of the Federation, which was in opposition to the Volstead Act and the resolutions submitted, urged the immediate modification of the act and recommended the repeal of the eighteenth amendment as rapidly as possible. The report of the committee on this heading was adopted.

### Non-Partisan Political Party

Under this heading the executive committee presented an account of the activities of the Non-Partisan Political Campaign Committee

in the recent national and state elections, and the Committee on Resolutions reporting on this section recommended that the convention reaffirm and adopt the non-partisan political party policy.

### Other Resolutions

The convention adopted the entire report of the committee after approving of its recommendations on the following resolutions:

Urging the members of affiliated national and international unions to use union mined coal.

Favouring the building of vessels and manufacture of munitions by the U.S. navy yards and arsenals.

Endorsing the educational campaigns for the prevention of fires.

Opposing the lowering of salaries or lengthening of hours of fire fighters in the United States and Canada.

Recommending that trade unionists agree to the philosophy of co-operation, so that higher wages and shorter hours may be the means of increasing membership in the American Federation of Labor movement.

Favouring the enactment of old age pension legislation.

Instructing all affiliated labour bodies that appeals for funds on behalf of Mooney-Billings be approved by the executive council of the American Federation of Labor.

Calling upon the government and banks of Chicago to pay city and school employees for services rendered.

Protesting against the ratification of the Treaty of Safety of Life at Sea.

Favouring the independence of the Philippines at as early a date as possible.

Instructing the executive council of the American Federation of Labor to make a thorough study and prepare a bill for introduction in Congress for the licensing of business firms and corporations.

Favouring protection for the petroleum industry of the United States.

Opposing salary cuts.

Favouring the development and upkeep of all navy yards and arsenals.

Supporting the Brotherhood of Sleeping Car Porters against a company union.

Favouring the establishment of state funds for workmen's compensation insurance in each state.

Expressing opposition and hostility to (a) communism; (b) the recognition of the communist regime in Moscow by the Government of the United States, and (c) every activity of organized communism.

Commending owners of establishments operated under union shop conditions.

Instructing the president of the Federation to aid in every way possible the rehabilitation of Porto Rico.

Advocating that contractors in the construction of public works conform to the laws of the state in which they are operating in respect to safety and prevention of accident in the building industry.

### International Labour Relations

The committee on International Labour Relations, to which was referred two resolutions—one favouring the appointment of a representative of the American labour movement as a joint representative and member of the American delegation to the Preparatory Technical Conference on the shorter work week at Geneva, Switzerland, and the other recommending that the American Federation of Labour request the United States Government to maintain a permanent representative of the Department of Labour at the International Labour Office at Geneva, Switzerland, to carry on active co-operation with the International Labour organization,—concurred in the first resolution and recommended the second referred to the executive council. The convention adopted the committee's report.

### Fraternal and Other Addresses

During the sessions of the fourth day, the addresses of the fraternal delegates were delivered. Mr. W. V. Turnbull, Montreal, Que., member of the Brotherhood of Maintenance-of-Way Employees, extended the greetings of the Trades and Labour Congress of Canada, the fraternal messages from the British Trades Union Congress being given by Messrs. Charles Dukes and W. Holmes.

Others who addressed the delegates during the course of the convention were: Mr. Louis A. Johnson, National Commander, American Legion; Hon. James J. Davis, Senator from Pennsylvania; Miss Mary Anderson, Director, Women's Bureau, Department of Labour, Washington; Most Reverend Archbishop McNicholas, Archdiocese of Cincinnati; Mr. A. F. Whitney, President, Brotherhood Railroad Trainmen; Mr. Frits Rager, LL.D., Secretary, Chamber of Labour, Vienna, Austria; Mr. John P. Frey, Secretary, Metal Trades Department, A. F. of L.; Hon. William N. Doak, Secretary, United States Department of Labour; Hon. Robert R. Nevin, Federal Judge, Southern District of Ohio.

### Presentation to Fraternal Delegates

In accordance with the established custom, the president of the Federation made presentations to the fraternal delegates. To the two representatives from the British Trades Union Congress—gold watches, chains and knives were given, wrist watches being presented to their wives. Similar tokens were presented to the delegate from the Trades and Labour Congress of Canada and his wife.

### Officers Elected

The officers elected for the year 1932-33 are as follows: President, William Green, Washington, D.C.; first vice-president, Frank Duffy, Indianapolis, Ind.; second vice-president, T. A. Rickert, New York, N.Y.; third vice-president, Matthew Woll, Washington, D.C.; fourth vice-president, James Wilson, Cincinnati, Ohio.; fifth vice-president, John Coefield, Washington, D.C.; sixth vice-president, A. O. Wharton, Washington, D.C.; seventh vice-president, Joseph N. Weber, New York, N.Y.; eighth vice-president, G. M. Bugniet, Washington, D.C.; Treasurer, Martin F. Ryan, Kansas City, Mo.; Secretary, Frank Morrison, Washington, D.C.

Fraternal delegates to the British Trades Union Congress, Thomas E. Bourke, Washington, D.C.; and Christian M. Madsen, Chicago, Ill.

Fraternal delegate to the Trades and Labour Congress of Canada, James C. Quinn, New York, N.Y.

Washington was chosen as the convention city for 1933.

The advantages of winter building are summarized in the *Contract and Record and Engineering Review*, November 2, as follows: "A contractor can keep his organization intact and command the cream of the labour market by staying on the job through the winter, and his losses from idle equipment are reduced. Frequently, too, material prices are lower in the off-season. On outside structures such as culverts, bridges and dams, it is sometimes advantageous to build at times when highway traffic is light or when water levels are lower than in the spring and early summer. While there is some additional expense involved in winter construction, this is generally more than offset by the advantages. The extra cost of heating and protection on winter concrete work ordinarily runs from one to two per cent of the total cost of the structure."

## RECENT LABOUR UNION CONVENTIONS

### International Typographical Union

The seventy-seventh convention of the International Typographical Union was held September 12-17, 1932, at Long Beach, Calif., with over one hundred and fifty delegates in attendance. President Howard replied to the addresses of welcome delivered by James Rolph, Jr., Governor of the State of California; Mayor Fickling of Long Beach, and Harvey C. Fremming, president of the Long Beach Central Labour Council.

President Howard informed the delegates that the amount of unemployment relief in some of the larger jurisdictions had reached the maximum, and that assessments to provide funds for out-of-work benefits exceeded any rate ever before imposed for a like purpose. Over three million dollars was given by the president as a conservative estimate of the amount collected and distributed to unemployed members during the past year. He reviewed in detail the many activities of the organization, giving the delegates a clear conception of the problems and difficulties confronting the Union at the present time.

According to the report of the secretary-treasurer 3,754 members received pension payments, amounting to \$1,466,897.18, while the sum of \$516,543.85 was paid to 1,137 beneficiaries from the mortuary fund, the balance on hand in this fund being \$3,039,723.87, or a net gain for the last two year period (June 20, 1930, to June 20, 1932) of \$39,412.90. The total membership for the past year averaged 76,389, comprised in 778 local unions. Receipts for the year June 20, 1931, to June 20, 1932, were \$203,652.98 below expenditures. In the general fund there is a balance of \$475,860.14, which includes the value of the headquarters property. The report further shows an average monthly cost of \$70.79 each for the 340 members resident in the Union Printers' Home.

The subject which caused the most debate at the convention was the five-day week. By a vote of 76 to 74 the delegates favoured the changing of the constitution in so far as the working time was concerned as follows:—

Section 3. Whenever any member works five days or nights on any six or seven day newspaper (exclusive of days off) in any week he shall engage for the sixth day the first available competent substitute; if no competent substitute is available these days shall accumulate; where a day is not claimed it shall be outlawed after two weeks. Time off through "begging off" or cancellation of overtime shall not relieve a member of obligation to take off the sixth day.

New section. Local unions are instructed to make operative, wherever possible, the provisions of section 3 in printing offices other than news-

papers (if necessary by negotiation or through the medium of scale contracts).

The Executive Council shall have full power to use discretion in bringing about compliance with the provisions of section 3 in printing offices other than newspapers.

Any member who fails or refuses to comply with the provisions of section 3 in offices where it is operating shall be fined one day's pay for each offence.

That the proposals in regard to the shorter work day be included with other amendments ordered submitted to a referendum vote of the membership was carried by a vote of 111 to 39 (this vote is to be held on December 7, 1932).

Another amendment to the constitution which caused considerable discussion was the proposed change in the old age pension law. The convention adopted this proposal, which if carried by a referendum vote of the members, to whom it is being submitted, will make it possible to continue the pension at the present rate to those now on the roll; it will prevent depletion of the reserve and meet the danger of insolvency; it will protect those who are to become pensioners in the future; and it will make unnecessary an increase in the assessment at a time when conditions are most unfavourable.

The old age pension laws were also amended by the convention, the change to be submitted to the membership for approval. In addition to the amendments to be voted upon in the referendum election, sixteen amendments to the by-laws were adopted by the delegates; five amendments to the general laws were approved; one amendment to the convention laws and six resolutions were acted upon favourably. These resolutions were as follows: (1) Favouring five day week for employees in the United States Government Printing Office; (2) Extending the appreciation of the delegates to Hon. George H. Carter, public printer of the United States; (3) Expressing appreciation of the union to Senator Shipstead for his efforts to safeguard the rights of the printers employed in the United States Government Printing Office; (4) Urging Governor James Rolph, Jr., of California, to pardon Tom Mooney; (5) Seeking the downward revision of the number of new apprentices allowed under new scale contracts; (6) Instructing the Board of Trustees of the Union Printers Home to study the feasibility of issuing suitable Christmas seals, the proceeds to be placed in the endowment fund of the home.

Chicago was selected as the convention city for 1933.

### United Textile Workers of America

The 1932 biennial convention of the United Textile Workers of America was opened at New York on September 12. The delegates were welcomed by John Sullivan, President of the New York State Federation of Labour, and by James C. Quinn, Secretary of the New York Central Trades and Labour Council.

President McMahon announced that there were indications in several divisions of the textile industry of an improvement in conditions, but he could not give any assurance that this improvement would be permanent. He called upon the local unions to affiliate with State branches or central bodies; and asked the delegates to give serious consideration to the question of insurance, so that some form of death benefits creditable to the International Union might become possible on a large scale. He claimed that if the textile industry was to continue on a profit-sharing basis, profitable for both employers and employees alike, the shorter work day and shorter work week must be adopted. The president vigorously condemned the practice of replacing adult with child labour, and called upon the incoming officers to do everything in their power to co-operate with all who are interested in child labour welfare.

The secretary-treasurer informed the delegates that notwithstanding all the difficulties experienced during the past two years the

organization was still in a healthy financial condition.

Resolutions were adopted as follows:—

Recommending the establishment of a *bona fide* independent political labour party.

Advocating that efforts be made to prevent further attack on the interests of the Chinese people and of the workers of the Soviet Union.

Demanding immediate recognition of the Government of the U.S.S.R. by the government of the United States.

Instructing that fraternal greetings be extended to cotton operatives of Northern England.

Demanding the liberation of Tom Mooney.

Asking that legal action be taken against corporations operating on Sunday.

Condemning the use of armed force in evicting unemployed war veterans from Anacosta and other places in the Districts of Columbia.

Re-affirming a previous declaration in favour of compulsory unemployment insurance at the expense of the State and the employers, and disapproving of the action of the American Federation of Labor at its Vancouver convention on the question of unemployment insurance.

Advocating wage increases.

Commending the United States Employment Service and urging that it be continued on a larger scale.

### International Association of Bridge and Structural and Ornamental Iron Workers

With approximately two hundred and forty delegates in attendance, the twenty-fourth convention of the International Association of Bridge, Structural and Ornamental Iron Workers was held at St. Louis, Mo., September 19-24. A civic welcome was extended by Hon. G. M. Wood in the absence of Mayor Miller.

President P. J. Morrin informed the delegates that the membership had increased up to June 30, 1930, but during the past two years the organization had suffered greatly in the loss of members, the percentage of loss, however, being less than many other international unions. The various funds showed a gain of a few thousand dollars over the amount on hand just prior to the last convention, while at the same time the amount in the death benefit, old age pension, and disability funds had advanced to approximately \$600,000. Included in the many subjects dealt with by the president in his address were a number of cases in which the

Association had recourse to the courts, particulars of which were given in great detail. The president further advised that in order that jurisdictional disputes might be avoided agreements had been entered into with a number of other international unions.

Speaking of the Canadian situation the president stated as follows:—

"Our international has had an International vice-president in the eastern part of Canada during this time and in the Western district a general organizer has been stationed in Vancouver, B.C., assisting our western local unions to secure the work that rightfully belongs to our trade.

"Our Canadian local unions have been confronted with a dual union movement, and this movement has affected all trades in general, which necessarily has hampered the activities of our International officials considerably. To assist our local unions in Canada to combat this movement our International has done everything possible through our vice-president and general organizer stationed in Canada to organize the non-union men working at our trade.

"Our International Association exempted the members of our Canadian local unions, whose wage scale was less than \$1.00 per hour, from paying our International the \$2.00 assessment, and in 1929, Local Union 97 of Vancouver, B.C., started paying this assessment due to the fact that their scale of wages had been advanced to \$10 per day."

The delegates were further advised that the monies raised from the \$2.00 assessment, authorized at the last convention, had been used not only for organization purposes as intended, but from the general fund into which the assessment was paid, there has been lent to the Old Age Pension Fund during the period from July 1, 1928, up to August 31, of this year, a total of \$538,532.60. Aside from that, it was necessary to advance to the Death Benefit Fund a total of \$43,064.81, making a grand total of \$581,597.41, which is almost one-half of the entire money received from the International assessment.

According to the report of the secretary-treasurer the total membership of the International Association, as at June 30, 1932 was 14,504, there being included in this total 389 apprentices who had graduated to journeymen during the past four years. The secretary-treasurer stated that 78 local unions, representing a membership of 1,858, were working 44 hours per week; 75 locals, representing a membership of 12,619, were working 40 hours per week; and 2 local unions of railroad bridgemen, with 27 members, were working 48 hours per week.

The report of the general treasurer showed the balance in all funds, June 30, 1928 was \$646,589.19, and the balance June 30, 1932 as

\$651,704.61, making an increase of \$5,115.42 for the four year period.

Resolutions were adopted recommending that one week's salary of \$12.00 per day be paid to the delegates attending the convention, and instructing the general executive council to secure data from the various locals and to work out a plan for the equitable distribution of work among the members.

Previous to the convention the president appointed a special committee on old age and disability pensions and death benefit fund. The following recommendations of the special committee were unanimously adopted by the convention, to be operative immediately after the close of the convention:—

That an Old Age and Disability Pension stamp be sold to our membership at the cost of \$1 per month. The money received from the sale of these stamps to be deposited in two separate funds; one known as the Death Benefit Fund and one known as the Old Age and Disability Pension Fund, and that all death benefits shall be paid first from the Death Benefit Fund and whatever balance is left from the \$1 secured by the sale of the stamps, shall be deposited to the credit of the Old Age and Disability Pension Fund to be prorated from that fund.

We further recommend that in the payment of death benefits the present law be amended and members be paid \$100 death benefits for one year's membership; \$150 for two years' membership; \$200 for three years' membership; \$300 for four years' membership and \$400 for six years' membership.

Chief officers elected were: President, P. J. Morrin, 1615 Syndicate Trust Bldg., St. Louis, Mo.; Secretary, W. J. McCain, 1615 Syndicate Trust Bldg., St. Louis, Mo.; Treasurer, J. H. Lyons, 1615 Syndicate Trust Bldg., St. Louis, Mo.

## COAL STATISTICS OF CANADA FOR 1931

THE Dominion Bureau of Statistics (Mining, Metallurgical and Chemical Branch) recently published a report of the coal mining industry in Canada for the calendar year 1931. Canadian mines, it is stated, produced 12,243,211 tons of coal valued at \$41,207,682 in 1931, a decline of 17.7 per cent in quantity and 22 per cent in value from the 1930 output of 14,881,324 tons worth \$52,849,748. The 1931, production included 8,861,360 tons of bituminous coal, 471,343 tons of sub-bituminous coal and 2,910,508 tons of lignite coal. Nova Scotia's output declined 20.7 per cent, New Brunswick's 13 per cent, Alberta's 20.7 per cent, and British Columbia's 10 per cent. Saskatchewan's output increased 14.4 per cent and the Yukon's 38.4 per cent.

Mines in operation during the year produced only 60 per cent of their possible output as

compared with 70 per cent in 1930. The output loss in 1931 was computed at 8,193,947 tons; 95.2 per cent of which was due to lack of orders. An estimated additional loss of 52,210 tons was caused through mine labour disputes involving 2,129 men with a consequent loss in working time of 11,523 man-days. Nova Scotia mines in operation during the year produced 58 per cent of their possible output; New Brunswick mines, 63 per cent; Saskatchewan mines, 65 per cent; Alberta mines, 58 per cent, and British Columbia mines, 67 per cent.

Nova Scotia shipped 408,843 tons of coal to New Brunswick, 76,483 tons to Prince Edward Island, 1,746,085 tons to Quebec, and 52 tons to Ontario. New Brunswick mines made a small shipment to Quebec. Saskatchewan lignite shipments included 244,408 tons to

Manitoba, 1,524 tons to Ontario, 71 tons to British Columbia, and 33 tons to Alberta. Mines in Alberta supplied the Saskatchewan market with 903,801 tons, Manitoba with 443,107 tons, British Columbia with 171,835 tons, Ontario with 26,750 tons and Quebec with 100 tons. British Columbia shipped 66,725 tons to Saskatchewan, 57,562 tons to Manitoba, 34,247 tons to Alberta, and 72 tons to Ontario.

Sales of Canadian coal for railroad use in 1931 totalled 3,146,967 tons, or 23.7 per cent of the total mine shipments; in 1930, railroads absorbed 30.37 per cent or 4,085,228 tons of the coal shipped from Canadian mines.

Exports of coal from Canada have declined sharply since 1927. In that year 1,113,330 tons were exported from Canada; in 1928, a decline to 863,941 tons was recorded and in 1930 the exports were still lower at 624,512 tons. During 1931, exportations amounted to 359,853 tons or only 32.3 per cent of the 1927 total.

Coal imports into Canada decreased 23.2 per cent to 13,531,831 tons in 1931 as compared with the 1930 importations of 17,620,074 tons. Receipts of coal from the United States totalled 12,467,815 tons, consisting of 2,236,423 tons of anthracite, 10,224,982 tons of bituminous and 6,410 tons of lignite. Imports from Great Britain were recorded at 998,662 tons, made up of 876,364 tons of anthracite and 122,298 tons of bituminous. Despite the fact that the imports of Great Britain coal were 12.6 per cent below the 1930 total, British coal supplied 27.6 per cent of the Canadian anthracite requirements in 1931 as against 23.4 per cent in the preceding year. Canada's coal supply was further supplemented by 60,762 tons from Germany, and 4,592 tons from French Indo-China.

*Employment, Wages, Etc.*—The statistics showed that coal mines in the Dominion employed a total of 27,860 persons as compared with the 1930 average of 29,172. Of this total,

26,489 were wage earners while 1,371 were classed as salaried employees. Of the total of 26,489 wage earners, 20,701 were employed underground and 5,788 above ground. The average number of days worked by all wage earners in 1931 was 185 while in 1930 the average was 219 days. Surface employees averaged 223 days per man per year in 1931 while underground workers averaged 174 days; in 1930 these averages were 250 and 210 days, respectively. In Eastern Canada, 14,528 persons were employed and in the western mines 13,332 employees were engaged during the year.

The total paid in salaries and wages during 1931 amounted to \$28,802,428 as compared with \$36,442,361 in the preceding year, and with \$42,376,378 in 1929. The wage total, exclusive of salaries, amounted to \$25,841,882 as compared with \$33,257,178 in 1930. In 1931 the average wage earned per man per day was \$5.28 while in 1930 it was \$5.47 per day, and in 1928 it was \$5.57 per day.

The average labour costs for each ton of coal raised in Canada in 1931 was \$2.35, the labour cost in each province being as follows: Nova Scotia (bituminous) \$2.91; New Brunswick (bituminous) \$2.77; Manitoba (lignite) \$2.29; Saskatchewan (lignite) \$1.42; Alberta (bituminous) \$2; (sub-bituminous) \$1.88; (lignite) \$1.80; British Columbia (bituminous) \$2.52; Yukon (bituminous) \$1.08. The average value of coal raised in Canada in 1931 was \$3.36 per ton f.o.b. mines as compared with \$3.55 in 1930.

A further index of the decline in employment in the coal mining industry is indicated by the number of man-days worked during the year, namely 4,891,541, as against 6,076,684 in 1930 and 7,117,692 in 1929.

The accompanying table summarizes the number of employees, salaries and wages in the coal mines of Canada by provinces in 1931.

**Employees, Salaries and Wages in the Coal Mines in Canada, by Provinces, 1931**

Province	Average number of employees					Salaries and wages		
	Salaried employees		Wage-earners		Total	Salaries	Wages	Total
	Male	Female	Surface	Under-ground

## EDUCATION IN CANADA, 1931

### Annual Survey by Dominion Bureau of Statistics

THE annual survey of education in Canada, giving statistics of schools in the Dominion for the calendar year 1931, has been published by the Dominion Bureau of Statistics. The effects of the economic depression are seen in these statistics, the report noting, for example, the exceptionally large increases in the number of older pupils as suggesting that the usual opportunities for the employment of young people at the regular age for leaving school did not exist in 1931. The census of 1931 shows that the regularity of attendance during the years at school has improved in every province. The recorded enrolment at Canadian educational institutions in 1931 was 2,542,747, and the cost of their support was \$178,701,507. This represents an increase over the previous year of 2.1 per cent in attendance, and 8.1 per cent in costs—the latter percentage increase being higher on account of a great part of the enrolment increase being in the more advanced and more costly institutions.

In addition to the increase in the proportion of young people attending school, there is a pronounced increase in every province since 1921 in the average length of time spent at school in a year. The census as taken on June 1 asks how many months the child has attended school since September 1 in the preceding year. The maximum possible is nine months. Classifying the replies in three groups, i.e., those who were 7-9 months at school, those who were 4-6 months at school, and those who attended less than four months, it is found that the proportion of the whole attending 7-9 months was 94.6 per cent in 1931, where it had been only 87.96 per cent in 1921. Those attending 4-6 months fell from 7.8 per cent to 3.21 per cent, and the short time group from 4.24 per cent to 2.19 per cent. In 1921 Quebec was found to have a higher proportion of its school children in the group attending 7-9 months than any other province, and the smallest proportion attending shorter periods. In 1931 there is much less variation among the provinces than ten years ago, four of the others showing percentages very similar to Quebec's, and all having over 90 per cent in the 7-9 months group, except one that is very close. The provinces showing the biggest gains in the 7-9 months group in the ten years were New Brunswick, Prince Edward Island, Sas-

katchewan and Alberta. Part of the gain in the last two is no doubt due to the fact that many school districts that formerly closed for two months in the winter, now operate the regular school year.

The broad results of the census on literacy are given, showing that 92.34 per cent of the population over 5 years of age in 1931 could read and write as compared with 90.00 per cent in 1921. Every province showed advance in this respect, the most rapid improvement being in the four Western Provinces and the North West Territories.

### Laws Governing School Attendance

The following paragraphs show the requirements existing in the various provinces in regard to school attendance:—

*Prince Edward Island.*—Ages 7 to 13 inclusive; monthly attendance must be 60 per cent of the days schools are in operation. In Charlottetown and Summerside, attendance must be 100 per cent.

*Nova Scotia.*—Children of ages from 7 to 14 in rural schools, and 6 to 16 years in towns and cities. Within the age limits, children in town and country schools must attend regularly must be reported for discipline when 5 days absent; and parents and guardians in addition to fines, may have 2 cents a day added to their taxes for each absence to compensate the section for the loss of the "attendance" portion of the Municipal school fund.

*New Brunswick.*—In districts other than cities and towns under section 105 of the Schools Act (on resolution of trustees, but the question must be brought up at every annual meeting until adopted)—age 7 to 12 for a period of 80 days; in cities and in incorporated towns under same section, in which the compulsory act has been adopted by city or town council, ages 6 to 16 or grade VII standing if over 12 years old, period 120 days; in Saint John, Fredericton, Chatham, and Newcastle, 6 to 14. Employment of children under 16 may be forbidden by the school board.

*Quebec.*—No statutory laws for compulsory attendance.

*Ontario.*—(a) Children 8 to 14 must attend full time; children from 5 to 8, if enrolled, must attend full time to the end of the school term for which they are enrolled. (b) Adolescents 14 to 16 who have not attained uni-

versity matriculation standing must attend full time; those exempted on the plea of circumstances compelling them to go to work must attend part time for 400 hours a year in municipalities where part-time courses are provided. This provision came into force in September, 1921. In September, 1922, urban municipalities with a population of 5,000 and over were required to provide part time courses.

*Manitoba.*—Children of ages 7 to 14 must attend full time. Any pupil over 14 if enrolled must attend regularly. A child over 12 may be exempted for employment, but only six weeks in the term. Employment under 14 (except as mentioned) is forbidden. Children of ages 14 to 16 must attend school regularly if not engaged in some regular occupation.

*Saskatchewan.*—All children 7 to 15 who have not passed grade VIII standing, subject to certain conditions as to distance from school, etc., must attend full time. Employment of unexempted children under 15 forbidden. Deaf mutes between the ages of 8 and 15 must attend an institution seven months in each year.

*Alberta.*—All children 7 to 15 must attend full time.

*British Columbia.*—Children of ages from 7 to 15 must attend full time during the school year.

*Yukon.*—All children 7 to 14 years must attend full time where there is a school established.

### High Schools and Colleges

The report contains a chapter on universities and colleges, which shows that in 1931 there were 41,168 students of university standard reported—28,960 men and 12,208 women—but the numerous preparatory and extension departments enrolled a further 36,450, making a total of 77,618, as compared with 73,515 in the preceding year. Of the 41,168 university grade students 39,127 were undergraduates, and all but 7,919 were doing a full year's work in attendance. There was an unusual increase over the preceding year due in the main, no doubt, to employment conditions. Similar increases were experienced by the high schools.

### Technical Schools

Particulars of the technical and vocational courses provided in the various provinces are given in the report as follows:—

*Prince Edward Island.*—Night courses for day workers were not offered in 1931. Day courses at Charlottetown included 872 in agricultural courses conducted through the ordinary schools, 112 in woodworking and draw-

ing, 52 in home economics and 56 in dairying short courses, 48 in a commercial course offered to students having completed grade 10.

*Nova Scotia.*—No city in Nova Scotia had yet established a day technical school of secondary grade, though such a project was under serious consideration in both Halifax and Sydney. Short term or part-time day classes in the Provincial Technical College, Agricultural College, College of Art, and Halifax Industrial School reached 3,577 women and girls (including students of home economics) and 58 men. The figures include the full-time class of 21 at the College of Art. Evening coal-mining classes, which have been conducted for many years, were held in 16 centres and were attended by 669. Other evening technical classes in 13 centres enrolled 908 males and 1,090 females, while 2,207 were reached by correspondence courses.

*New Brunswick.*—The first day vocational school of secondary grade in the province was opened at Woodstock in 1919. There were eight in 1931 with a full-time enrolment of 1,415, and a part-time class of 28. The courses most generally offered are pre-vocational, home economics and commercial, but art, pulp and paper-making and other industrial courses are also given in some schools. In addition, a winter course of three months was given to garage-men in the Saint John School, and evening technical courses in nine centres were attended by 2,004 individuals, 944 male and 1,060 female.

*Quebec.*—There are day technical schools for boys, giving diversified industrial training in courses ranging from one to four years in length at Montreal, Quebec, Three Rivers, Shawinigan Falls, Hull, Lachine and Beauceville. Their students in 1931 numbered 1,341. At Montreal and Quebec there are schools of Fine Art giving, in addition to courses in drawing, painting and design, a six-year course in architecture. Further day technical courses for boys are given at the Rimouski Intermediate Agricultural School, St. Hyacinthe Dairy School, Berthierville Forest Rangers' School, La Tuque College, etc., in addition to such institutions as the Polytechnic School included under higher education in this report. Home economics courses in Montreal and Quebec had 3,972 pupils.

Evening technical courses are widely held throughout the province—schools of arts and trades at 28 centres, commercial courses in Montreal and Quebec, dress-making schools at 55 centres, housekeeping schools, at 165. The total enrolment in courses subsidized by the Dominion Government was 7,724 in day classes and 13,654 in evening, but in addi-

tion to these there were the house-keeping and dressmaking evening classes, just mentioned, that are not subsidized, with an attendance of about 35,000 as well as some day classes.

*Ontario.*—There are now 62 day technical schools in Ontario offering full-time courses for which the completion of elementary grades is prerequisite. Of the total enrolment of 32,695 some 15,000 were taking commercial or business training. In the evening enrolment about a third of the 47,440 were taking commercial courses. Two other widely offered types of instruction in both day and evening schools are domestic or household science and art courses, and training for a variety of industries and trades is given, especially in the larger centres. Evening classes in English for "New Canadians" had 4,777 enrolled. Girls out-numbered boys in full-time classes, there being 16,891 of them to 15,804 boys. But more than half of those in evening classes are men and boys.

Men occupy the majority of teaching positions in the technical schools—792 as compared with 540 women in day schools, and 1,054 against 593 women in evening schools. Gross expenditure for technical education was \$8,692,355, of which \$1,144,052 came from legislative grants.

*Manitoba.*—The first full-time day industrial school in the province was conducted in Brandon in 1930. Its work was confined to auto mechanics, and a three-winter course was projected. In Winnipeg full-time technical courses are mainly confined to commercial training. These are given in the city's collegiate institutes and junior high schools, where attendance in commercial classes was 3,249, other 97. But in the upper elementary and high school grades, especially in the junior high schools, a number of periods are devoted weekly to vocational subjects with shop practice. Evening technical courses at Winnipeg's collegiate institutes have been popular for many years. Two of these have been equipped for technical instruction since they were first opened in 1912. Almost 2,000 attended some thirty different trades courses at these three institutions. Evening "Canadianization" classes in four of the city's schools attracted 687 others. The Winnipeg School of Art had 184 students. Evening classes are maintained outside of the provincial capital only at The Pas.

*Saskatchewan.*—Each of the province's three most populous cities has built and equipped a new technical school since 1929—the Regina school opening in 1930, the Saskatoon and Moose Jaw schools in 1931. Some technical courses were previously offered, both day and evening, in these three centres, but the work is being expanded with the new accommodation. The full-time day enrolment for the year under consideration was 1,211 in commercial courses and 146 in motor mechanics. A much wider variety of subjects was taught in evening classes, attended by 1,908 persons. Other instruction of a technical character, particularly agricultural, is given in short courses by the provincial university.

*Alberta.*—The commercial high schools in Edmonton, Calgary and Lethbridge had a full-time enrolment in 1931 of 1,219. Other day courses of a prevocational or technical character in the first two cities had 805 pupils. The Provincial Institute of Technology and Art at Calgary had 625 full-time students in a wide variety of industrial classes—electrical, mining, engineering, telegraphic, welding, tractor, drafting, art, dressmaking, millinery, etc. The Institute is affiliated with the University of Alberta, and is under the direction of the Department of Education.

Evening classes at the Provincial Institute had 372 students in courses similar to those of the day, with aeronautics, radio, etc., added. Other evening classes in Calgary reached 523, in Edmonton 621, and in ten other centres 295.

*British Columbia.*—Students in day vocational classes in 13 municipalities numbered 5,856 practically all of whom are included in the high school enrolment. There were 3,053 in commercial high schools and 2,803 in other technical schools.

Evening technical classes were held in 41 centres and enrolled 7,167 of whom 3,899 were in Vancouver and 863 in Victoria. In the former city 69 different subjects were taught, in the latter 34, and smaller numbers in the smaller centres ranging down to a single class of a dozen members. Training classes for technical teachers were attended by 166. Correspondence courses reached 301.

## ONTARIO APPRENTICESHIP ACT, 1928

### Regulations governing the Training of Apprentices in the Building Trades

THE Ontario Department of Labour recently published in booklet form the text of the Apprenticeship Act, 1928, as amended in 1932, together with the list of the "designated trades," the form for the contract of apprenticeship, and the Regulations recently issued by the Provincial Apprenticeship Board, governing the training of apprentices in the building trades. The designated trades are those of the bricklayer, mason, carpenter, painter and decorator, plasterer, plumber, steamfitter, sheet metal worker, and electrician. The amendment of 1932 provided for the establishment of an Apprenticeship Board, to consist of three members. These members are now as follows: Messrs. J. B. Carswell, of the Burlington Steel Company, Hamilton (chairman); Ernest Inglis, vice-president, International Brotherhood of Electrical Workers, London; and F. S. Rutherford, director of Vocational Education, Provincial Department of Education, Toronto. An account of the Act in its original form was given in the *LABOUR GAZETTE*, March, 1928, page 269, and the amendments made by the Legislature at its session this year were outlined in the issue for May, 1932, page 529. The text of the new Regulations governing the employment of apprentices and the collection and distribution of the Assessment Fund, as approved on October 4, 1932, is as follows:—

#### No. 1—GENERAL REGULATIONS

In the following regulations,—

(a) "Apprenticeship" means the relationship between the employer and the apprentice by which the apprentice, with the consent of his parent or guardian, and in accordance with *The Apprenticeship Act*, engages himself for a certain minimum period to the employer for the purpose of learning a trade.

(b) "Apprentice" means any minor at least sixteen years of age who enters into a contract of service in accordance with *The Apprenticeship Act*, whereby he is to receive from or through his employer, in whole or in part, instruction in a designated trade.

(c) "Board" means the Provincial Apprenticeship Board appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 1, of *The Apprenticeship Act*.

(d) "Employer" means and includes any person, firm or corporation, or municipal, provincial, or other public authority employing mechanics, helpers, labourers, apprentices, or other employees in connection with any of the designated trades or work incidental to these trades.

(e) "Trade Apprenticeship Committee" means an advisory committee from industry composed of an equal number of employers and employees in a designated trade or trades, to-

gether with an independent chairman who may also act as secretary. Committees may consist of from three to nine members.

(f) "Chief Inspector of Apprenticeship" or "Inspector" means the person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of *The Apprenticeship Act*.

(g) "District Inspector of Apprenticeship" or "District Inspector" means a person appointed by the Lieutenant-Governor in Council in pursuance of section 5, subsection 2, of *The Apprenticeship Act* to assist and act for the Inspector in a district allotted by the Chief Inspector.

(h) "District" means the area or territory assigned to a District Inspector.

(i) "Temporary Transfer" means the removal of the apprentice from one employer to another without relieving the first employer of his obligations under the contract.

(j) "Permanent Transfer" means the removal of the apprentice from one employer to another involving the transfer of the employer's obligations, also the signature and registration of the apprenticeship contract.

2. *Obligations of an Apprentice.*—(a) To render faithful service during the period of apprenticeship.

(b) To show due regard for the tools and goods of the employer and not to damage or waste the same.

(c) To furnish to his employer satisfactory reasons for absence from work.

(d) To attend regularly such classes in trade training and related subjects as may be required by the Board.

(e) To suffer loss of pay for non-attendance at prescribed day classes, and to incur the cancellation of his apprenticeship contract for wilful failure to attend day or evening classes.

(f) To notify the District Inspector immediately when, for any reason, he ceases to be employed with the employer to whom he is indentured.

(g) To be subject to and obey the regulations made by the Lieutenant-Governor in Council governing his employment and training as an apprentice.

3. *Obligations of an Employer.*—(a) To immediately notify the District Inspector when employing a minor in any designated trade.

(b) To provide adequate training in all branches of the trade insofar as his facilities and the character of his work will permit.

(c) To keep the apprentice employed so long as work of any kind is available.

(d) To refrain from hiring a minor when one or more of his indentured apprentices is idle.

(e) To pay the wages set forth in the apprenticeship contract.

(f) To co-operate with the District Inspector in the transfer of an apprentice if for any reason such transfer is deemed necessary.

(g) To notify the District Inspector before making any change affecting the contract of apprenticeship. All such changes must be approved by the Board.

(h) To submit an annual report on the progress and conduct of the apprentice to the Board. Forms for this report will be supplied by the Board.

(i) To abide by and carry out the regulations made by the Lieutenant-Governor in Council, governing the employment of an apprentice.

4. *The Number of Apprentices.*—The number of apprentices to be trained in the designated trades shall be set forth in special regulations for each trade and shall be based on the total number of journeymen employed in each trade.

5. *Entrance Requirements.*—(a) No person shall commence apprenticeship until he has passed his sixteenth birthday.

(b) Persons applying for apprenticeship may be required to furnish proof of age.

(c) Every person entering apprenticeship shall have completed the work of the junior fourth book in public school, or its equivalent.

(d) Any person applying for apprenticeship may be required to produce a medical certificate or pass a medical examination showing that he is in good health and possesses the physical requirements to successfully carry on the work of a journeyman.

(e) Every application for apprenticeship shall be made on a form to be supplied by the Board.

(f) Applications shall be forwarded to the nearest District Inspector.

6. *Probationary Period.*—The first three months of employment shall be regarded as a probationary period during which either the apprentice or the employer may terminate employment at will.

7. *Registration.*—(a) No minor may be employed for a longer period than three months without being indentured in accordance with the provisions of the Act. Those boys who have previously served three months at the trade and whose employment record is satisfactory to the District Inspector, must be placed under contract within one month after date of commencement.

(b) Triplicate copies of each apprenticeship contract shall be forwarded by the employer to the Board for approval and registration, immediately after being drawn up. One copy will be retained by the Inspector, one copy returned to the employer and the other given to the apprentice.

(c) Each registered apprentice shall be given an identification card, furnished by the Board, and this card shall be carried by the apprentice at all times.

(d) Whenever an apprentice is permanently transferred from one employer to another, all three copies of the contract must be signed by the parties concerned and the transfer registered in the same manner as a new contract.

8. *Period of Apprenticeship.*—(a) The period of apprenticeship shall be set forth in the Contract of Apprenticeship as provided in special regulations for each designated trade.

(b) Allowance of time may be granted to boys who have had previous experience in the trade. The time to be allowed shall be determined by the Board on the recommendation of the District Inspector.

(c) Where an employer fails to provide an apprentice with at least twenty-four weeks' employment in each year of the apprenticeship period, exclusive of the time spent in day classes, the apprentice shall be required to complete such period of employment before being advanced to the next year, or where, in the opinion of the Board, an apprentice has not

made sufficient progress, the Board may require that the period of apprenticeship be extended until such time as evidence of competency is adduced, or may terminate the contract without granting a diploma.

9. *Hours of Employment.*—(a) The hours of employment for apprentices shall be the same as those for journeymen.

(b) An apprentice may work overtime, but such time shall not reduce the period of apprenticeship.

10. *Wages.*—(a) The wages to be paid an apprentice shall be set forth in the Contract of Apprenticeship in the form of cents per hour.

(b) An apprentice shall be paid the full wages set forth in the contract except that deductions may be made for time lost due to illness and voluntary absence for personal reasons.

(c) Wage rates shall be determined by local trade apprenticeship committees, subject to approval by the Board. In districts where local trade apprenticeship committees have not been formed, the employer shall consult directly with the Board and obtain its approval on rates.

(d) It is suggested that the wage rate in any designated trade shall be:—

For the first year—15 per cent of the current journeyman's rate in the district when the indenture is signed.

For the second year—20 per cent of the current journeyman's rate in the district when the indenture is signed.

For the third year—35 per cent of the current journeyman's rate in the district when the indenture is signed.

For the fourth year—55 per cent of the current journeyman's rate in the district when the indenture is signed.

In no case, however, shall a contract be approved in which the wage rate is such that the apprentice shall earn less than the following amounts:—

For the first year . . . . . \$ 6 per week

For the second year . . . . . 8 per week

For the third year . . . . . 12 per week

For the fourth year . . . . . 16 per week

(e) The decision of the Board on any questions arising from an interpretation of the above clause (d) shall be final.

(f) The rates set out in the contract shall remain fixed for the term of the contract.

11. *Trade Training.*—An apprentice shall be taught the common practices of the trade. A schedule of the operations and processes to be covered shall be prepared by the Chief Inspector and when approved by the Board it shall be appended to the regulations governing the trade.

12. *School Training.*—(a) Apprentices shall attend special day classes for a period of eight weeks of five eight-hour days, or three hundred and twenty class hours, during each of the first and second years of the apprenticeship period. This day school training shall be supplemented by evening school instruction where such an arrangement can be made.

(b) Where suitable day classes cannot be organized in any municipality apprentices shall be required to attend day classes in the nearest centre where such special instruction is available.

(c) Apprentices in attendance at day classes shall receive a weekly pay allowance to be fixed by the Board.

(d) Tuition fees of apprentices from outside centres shall be paid by the school boards in the municipalities where the apprentices reside except in the case of small centres where vocational schools have not been established. In such places the fees shall be borne equally by the Assessment Fund and the Provincial Department of Education as provided in the Assessment Regulations.

(e) Where suitable instruction is available, third and fourth year apprentices shall attend classes two evenings per week during the period from October to March, inclusive.

(f) Apprentices shall pay all charges in connection with evening class instruction, except that the Board may pay from the Assessment Fund the excess cost of fees for apprentices in attendance at approved evening classes, who reside in municipalities where suitable classes are not available.

(g) The courses of study in these day and evening classes for apprentices must be approved by the Board.

(h) Weekly attendance records shall be furnished by the school to the Board for each apprentice in day classes.

(i) An annual report on each apprentice in day and evening classes shall be submitted to the Board by the school principal. Forms for this report shall be furnished by the Board.

13. *Supervision of Training.*—(a) All minor disputes between the employer and apprentice, except those involving policy, shall be settled by the District Inspector.

(b) Disputes of a major character and those involving policy shall be referred to the Board.

(c) Transfers from one employer to another may be arranged by the District Inspector but permanent transfers must be approved by the Board.

(d) Contracts may be cancelled or terminated in accordance with section 15 of the Act.

(e) An inspection visit shall be paid to each apprentice at least once each year and a written report submitted to the Board by the District Inspector.

14. *Examinations and Tests.*—(a) Every apprentice shall receive a practical test at least once each year, or failing this, the reports from his employer and the District Inspector must be satisfactory to the Board before the apprentice is advanced to the next year of his apprenticeship.

(b) Every apprentice shall be required to pass an annual examination or test in each related subject and branch of the trade taught in the special day school classes.

(c) Apprentices receiving instruction by correspondence must produce proof that they have successfully completed the course before the apprenticeship training may be regarded as completed.

15. *Certificates and Diplomas.*—(a) Every apprentice who serves the prescribed term of apprenticeship and completes the school training to the satisfaction of the Board will be granted a diploma.

(b) Those apprentices who show exceptional ability and application in connection with the trade and school training will be granted diplomas with honour standing.

## No. 2—TRADE REGULATIONS

### CARPENTRY

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in the carpentry trade throughout the Province shall not exceed one to eight, except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector, and shall include all journeymen regardless of their affiliations. Provision shall be made to accept first-year apprentices each year, so that the first, second, third and fourth year apprentices computed, shall complete the ratio quota.

(c) Each employer who employs from two to eight journeymen may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen employed, providing the number of apprentices in the district does not exceed the ratio of one to eight as determined in accordance with provisions in paragraph (a).

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

### BRICKLAYING AND MASONRY

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in bricklaying and masonry throughout the province shall not exceed one to eight.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector, and shall include all journeymen regardless of their affiliations.

(c) Each employer who employs from one to eight journeymen may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen regularly employed, provided the number of apprentices in the district does not exceed the ratio of one to eight. In no case shall more than three apprentices be under contract to one employer.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

3. *Age of Admission.*—Apprentices shall enter bricklaying and masonry between their sixteenth and eighteenth birthdays, except by special permission from the Board.

### PAINTING AND DECORATING

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in painting and decorating shall not exceed one to five.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the total number of journeymen in each district. The figures shall be obtained by the District Inspector.

(c) Each employer may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed, provided the ratio of apprentices in the district does not exceed one to five.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

#### PLASTERING

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in plastering throughout the Province shall not exceed one to eight.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector, and shall include all journeymen regardless of their affiliations.

(c) Each employer who employs from one to eight journeymen may have one apprentice. He may also employ one additional apprentice for each additional eight journeymen regularly employed, provided the number of apprentices in the district does not exceed the ratio of one to eight. In no case shall more than three apprentices be under contract to one employer.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

3. *Age of Admission.*—Apprentices shall enter the plastering trade between their sixteenth and eighteenth birthdays, except by special permission from the Board.

#### PLUMBING AND STEAMFITTING

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in plumbing and steamfitting throughout the Province shall not exceed one to five, except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector and shall include all journeymen regardless of their affiliations.

(c) Each employer may have one apprentice. He may also employ one additional apprentice for each five journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of one to five.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be five years, including the probationary period. The first four years shall be served under contract with an employer in accordance with the provisions of the Act. The fifth year shall be served as a junior mechanic, subject to the regulations governing apprentices except for the following provisions:

(1) The employer shall not be obliged to keep the junior mechanic employed during slack periods.

(2) The junior mechanic shall not be obliged to remain with the employer during a strike or lockout, but under other conditions, shall continue to serve the employer with whom he was last indentured.

(3) Where a trade agreement exists between employers and the local union, the conditions of employment for the junior mechanic shall be those set forth in the agreement.

#### SHEET METAL WORK

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in sheet metal work throughout the Province shall not exceed one to four except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector, and shall include all journeymen regardless of their affiliations.

(c) Each employer may have one apprentice. He may also employ one additional apprentice for each four journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of one to four.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

#### ELECTRIC WIRING AND INSTALLATION

1. *Number of Apprentices.*—(a) The ratio of apprentices to journeymen in electric wiring and installation throughout the province shall not exceed one to three except that those persons employed as apprentices when the Act is put into operation in any district may be allowed to complete their apprenticeship in accordance with the provisions of the Act, regardless of this ratio.

(b) In determining the number of apprentices to be trained, the ratio shall be based on the number of journeymen reported in each district. The figures shall be obtained by the District Inspector, and shall include all journeymen regardless of their affiliations.

(c) Each employer may have one apprentice. He may also employ one additional apprentice for each three journeymen regularly employed provided the number of apprentices in the district does not exceed the ratio of one to three.

(d) The preceding paragraph (c) shall not apply to the temporary transfer of an apprentice to any employer.

2. *Term of Apprenticeship.*—The term of apprenticeship shall be four years, including the probationary period.

#### No. 3—ASSESSMENT REGULATIONS

1. For the purpose of maintaining a system of apprenticeship in accordance with section 21 of *The Apprenticeship Act*, assessment shall be made on employers in each trade designated in schedule "A," including:—

Bricklayer  
Mason  
Carpenter

Painter and  
Decorator  
Plasterer  
Plumber  
Steamfitter  
Sheetmetal Worker  
Electrician

2. *Basis of Assessment.*—Assessment shall be levied on the whole or any part of the payroll of the employer as determined by the Provincial Apprenticeship Board, but such payroll shall not include salaries or wages paid to the employer, a partner, or an executive officer of a limited company. Wages or salary of any employee in excess of two thousand dollars (\$2,000) shall be exempt from assessment. Assessments shall be levied each year on the payrolls of the preceding calendar year, wherever possible. In the case of new employers entering a designated trade and where an employer from without the Province takes work in Ontario during the year, the assessment shall be levied on an estimated payroll for the year and an adjustment shall be made after the close of the year, when the actual payroll has been ascertained.

3. *Rate of Assessment.*—The rate of assessment shall be fixed by the Board each year, but in no case shall the money collected from an employer be less than five dollars (\$5) or more than five hundred dollars (\$500).

4. *Statement of Payroll.*—Every employer in each designated trade shall keep an accurate record of wages paid to employees and shall submit each year a statement of same on or before such date as shall be prescribed by the Board. Forms for this purpose shall be supplied by the Board. New employers and employers from without the Province shall submit an estimated payroll within one month after commencing work in the Province.

5. *Arbitrary Assessments.*—If any employer fails to submit a statement of his wages within the prescribed time, he may be assessed on such sum as in the opinion of the Board is the probable amount of the payroll and the employer shall be bound thereby. An adjustment may be made when the actual amount of the payroll is ascertained.

6. *Examination of Books.*—The Chief Inspector or Assessment Officer shall have the right to examine the books and accounts of the employer and to make such other inquiry as the Board may deem necessary for the purpose of assessment.

7. *Instalments.*—Except where otherwise determined by the Board, assessments under twenty-five dollars (\$25) shall be payable within one month after mailing of the assessment notice; assessments over that amount shall be payable in two instalments. The first instalment, amounting to not less than one-half of the full amount, shall fall due within one month after mailing of assessment notice and the second instalment shall be payable on October 1, without further notice.

8. *Information Confidential.*—No officer employed in connection with *The Apprenticeship Act* shall divulge or allow to be divulged, except in the performance of his duties or under the authority of the Minister, any information ob-

tained by him or which has come to his knowledge in administering the Act.

9. *Assessment Account.*—All funds in connection with assessment shall be controlled by the Board and the money shall be deposited with a chartered bank in a special account to be known as the Assessment Account, Provincial Apprenticeship Board.

10. *Use of Assessment Funds.*—The money collected from employers shall be used to defray the cost of paying apprentices weekly allowances fixed by the Board while attending day classes in accordance with regulations, the cost of railway fares to and from classes, and tuition fees for apprentices attending classes from municipalities in which vocational schools have not been established and where arrangements cannot be made to have these costs defrayed by the local school boards.

Expenditures may also be made from the Assessment Account, on behalf of employers to whom the apprentices are indentured, to pay for protection under *The Workmen's Compensation Act* of apprentices while in attendance at classes.

Funds may also be taken from the Assessment Account to pay the cost of preparing courses of study and examinations, for use in apprenticeship classes.

11. *Provincial Government Refund.*—The Assessment Account shall be reimbursed by the Provincial Department of Education to the extent of one-half the cost of tuition fees paid from the account.

12. *Payment of Cheque.*—Payment of money from the account shall be made by cheque. Each cheque shall bear the signature of the Chief Inspector of Apprenticeship and the Assessment Officer.

13. *Annual Report.*—A statement of receipts and expenditures together with information regarding the operation of the assessment scheme shall be included in the report to the Minister.

It is announced that regulations will shortly be issued in Quebec in regard to the provision of safe conditions in shipyards in the province. Shipbuilding and repairing form one of the larger industries of Quebec, the firms established there including Canadian Vickers and the Montreal Dry Docks at Montreal; the Davie Shipbuilding and Repairing Company and George Davie and Sons, at Lauzon; Morton Engineering Company, at Quebec; and the shipyards at Sorel. The Hon. C. J. Arcand, Minister of Labour of the Province, in collaboration with Mr. Gerard Tremblay, Deputy Minister of Labour, recently carried out an inquiry as to the best methods of ensuring the safety of shipyard workers, and the new order will embody the results so obtained.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Conference on Hours of Work

A Preparatory Conference, to study the question of the reduction of hours of work as a means of relieving unemployment, will be held in Geneva, Switzerland, opening on January 10, 1933, under the auspices of the International Labour Organization (League of Nations), pursuant to a decision which was reached by the Governing Body of the International Labour Office at its last meeting. Each of the countries which are members of the International Labour Organization has been invited to send three representatives to this Preparatory Conference on behalf of the Government, the employers and the workers respectively. It will also be open to governments to send advisers, if they think fit, to accompany each of the three representatives.

Authority has been given by Order in Council dated December 12 for the participation of Canada in this Conference and the attendance thereof of a representative on behalf of the Dominion Government and of two other representatives, to represent the employers and the workers of Canada respectively. The representatives appointed on behalf of the employers and workers will be chosen in agreement with the Canadian Manufacturers' Association and the Trades and Labour Congress of Canada, respectively, as in the case of the annual sessions of the International Labour Conference. The Order in Council also provides that, in view of the legislative jurisdiction of the respective provinces in regard to hours of labour, the provincial Governments shall be invited to be represented at this Preparatory Conference, as in the case of the regular sessions of the International Labour Conference which are held from year to year, and that any provincial representatives selected in this way shall be accredited as advisers to the representative appointed on behalf of the Government of Canada.

### Sixtieth Session of the Governing Body

The 60th session of the Governing Body of the International Labour Office was held in Madrid on invitation of the Spanish Government from October 24-28. The Government of Canada was represented by Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva. Mr. Tom Moore, President of the Trades and Labor Congress of Canada, was present as one of the Workers' Group.

*Date of Seventeenth Conference Session.*—The date of the Seventeenth Session of the International Labour Conference was fixed for May 31, 1933.

*Agenda of the 1934 Session.*—The Governing Body made a preliminary selection of questions which might be placed on the Agenda of the 1934 session of the International Labour Conference. The following four questions were provisionally chosen: (1) extension of the list of occupational diseases giving rise to compensation to include, among others, silicosis, poisoning by phosphorus, arsenic, benzene, etc., in industries involving utilization of these products, pathological manifestations due to radium, X-rays, etc.; (2) regulation of the employment of women on underground work in mines of all kinds; (3) measures to be taken to remedy the special consequences which unemployment involves for young persons; and (4) workers' holidays with pay.

*Election of Officers.*—The Governing Body recently adopted new Standing Orders under which its Chairman is appointed for one year and is not re-eligible until all the other members of the Government group have occupied the Chair. The Chairman is selected in rotation from the representatives of European States of chief industrial importance which have permanent seats on the Governing Body, the representatives of the extra-European States of chief industrial importance with permanent seats and the representatives of the States elected by the Conference. This year the Chairman had to be chosen from among the representatives of overseas countries with permanent seats. Sir Atul Chatterjee, Indian Government representative, was unanimously elected Chairman of the Governing Body. His term of office will begin immediately after the close of the present session.

The following vice-chairmen were elected: Government vice-chairman, Mr. Bramsnaes, Minister of Finance of Denmark; employers' vice-chairman, Mr. Oersted (Denmark); workers' vice-chairman, Mr. Mertens (Belgium).

*Report on 1933 Conference Agenda.*—The Governing Body considered preliminary reports which had been drawn up by the International Labour Office on subjects which will come up for first discussion at the International Labour Conference in 1933. These subjects are: Unemployment Insurance and various forms of relief for the unemployed; and methods of providing rest and alternation of shifts in automatic sheet glass works. The reports were approved with a few modifications of detail.

*Conference of Overseas Countries.*—The Governing Body considered suggestions of representatives of overseas countries with a

view to promoting the more effective participation of these countries in the work of the International Labour Organization. It was agreed that a meeting of members and deputy members of the Governing Body coming from overseas countries should be held in January, at the same time as the Preparatory Conference on Reduction of Hours of Work, to discuss these questions further.

*Resolutions of the International Labour Conference.*—The Governing Body considered the effect to be given to resolutions which had been adopted by the Sixteenth Session of the International Labour Conference. (LABOUR GAZETTE, May, 1932, page 553.) Action has already been taken on two of these resolutions, namely, that with reference to the forty-hour week, and measures to remedy the existing economic crisis. The resolution on the gold truce was submitted to the Financial Committee of the League of Nations, which stated that the question was dealt with in the final report of its Gold Delegation on problems of the distribution of gold and the improvements which might be introduced in existing machinery of the gold standard. The remaining resolutions dealt with collective agreements in agriculture, opium smoking among workers, the calling of a preparatory advisory conference on questions relating to colonies and mandated territories, the protection against accidents of workers employed in loading or unloading ships, recruitment of labour and long-term labour contracts, workers' housing, and the application of Article 401 of the Treaty of Versailles concerning the fixing of the agenda of the Conference. Most of these resolutions did not require any immediate decision on the part of the Governing Body. During the discussion on the resolution concerning the action to be taken to remedy the economic crisis, some of the workers' representatives asked the Director of the International Labour Office to urge Governments to supply fuller information concerning the number of unemployed in their countries.

*Sixty-first Session of the Governing Body.*—The 61st session of the Governing Body will be held in Geneva during the week beginning January 30, 1933.

#### **New Chairman of the Governing Body**

In the course of its recent session in Madrid, the Governing Body elected its officers for the ensuing year. The new chairman is Sir Atul C. Chatterjee, representative of the Government of India.

Under the amended standing orders adopted by the Governing Body last year, the chairman must be chosen from the Government Group. He holds office for one year, and is not eligible

for re-election until representatives of all the other Governments which are members of the Governing Body have occupied the Chair. Further, the choice each year must be made so far as possible in rotation—first, a representative of one of the European States of chief industrial importance (Belgium, France, Germany, Great Britain and Italy); next, a representative of one of the extra-European States of chief industrial importance (Canada, India and Japan); and, thirdly, a representative of one of the four States elected by the Conference (at present Brazil, Denmark, Poland and Spain).

In accordance with this rule, the successor to the retiring chairman—Mr. Mahaim (Belgium)—had to be a representative of the second of these three groups, and the choice fell unanimously on Sir Atul Chatterjee. The new chairman has a long and intimate knowledge of the International Labour Organization. He has been a member of the Governing Body since 1926; he represented the Government of India at the first session of the International Labour Conference, in 1919, and has been a delegate to every session from 1924 to 1932.

#### **Employment of Women during the Night**

On November 15, 1932, the Permanent Court of International Justice gave an advisory opinion on the interpretation of the Convention concerning the employment of women during the night, adopted by the International Labour Conference at its First Session (Washington, 1919).

The Court was consulted on the question whether this Convention applies to women who, in industrial undertakings, hold positions of supervision or management and are not ordinarily engaged in manual work. Some uncertainty had arisen in this connection. In 1930 the British Government proposed the express exclusion from the scope of the Convention of women holding posts of supervision or management, and a proposal for revision of the Convention in this sense was laid before the International Labour Conference in 1931. As the two-thirds majority required by the Treaty was not obtained, the proposal was defeated. Unfortunately, the discussions of the Conference on this subject allowed some doubt to remain. The text of the Convention, which refers to "women without distinction of age," was still the subject of differences of view, some States claiming that the provisions should only be applied to certain classes of women, while others held that the Convention should be applied without exception to all women employed in the industrial undertakings to which it refers.

With the object of putting an end to these differences, the Governing Body of the International Labour Office decided in April, 1932, to obtain the opinion of the Court. The latter, by its decision of November 15, has replied in the affirmative to the question submitted to it. By 6 votes to 5 the Court decided that the Convention applies to women holding positions of supervision or management and not ordinarily engaged in manual work.

This is the sixth occasion on which the Permanent Court has given an advisory opinion in regard to the working of the International Labour Organization; it is, however, the first time that it has given an opinion on the interpretation of a Convention adopted by the Conference. From this point of view its recent decision has a special importance, and will doubtless have some effect on the interpretation of the whole body of international labour legislation.

### **World Monetary and Economic Conference**

Three representatives of the Governing Body of the International Labour Office have been included in the membership of the Preparatory Committee of Experts appointed by the Council of the League of Nations to draw up the agenda of the World Monetary and Economic Conference which is to be held in London this year. The holding of this conference was strongly urged in a resolution passed at the Sixteenth Session of the International Labour Conference last spring. The three representatives nominated by the Governing Body to co-operate in this work are: Mr. Weigert (Germany), on behalf of the Government Group; Mr. Oersted (Denmark), on behalf of Employers; and Mr. Jouhaux (France), on behalf of the Workers.

The Council of the League of Nations has also decided to refer to the Preparatory Committee the suggestion which had been made by the International Labour Conference as to the desirability of formulating an international program of public works as a means of unemployment relief, and the inclusion of this item in the London Conference.

### **Publications of the Office**

The International Labour Office has just published a further series of brochures in the preparation of its *Encyclopaedia of Hygiene, Pathology and Social Welfare*, under the title of "Occupation and Health." These brochures deal with the following subjects: Paper Industry; Perfume and Essence Industry; Phenols; Photo-Engraving; Seamen (Pathology and Hygiene of); Work in Silos; Sodium; Straw; Sulphur; Tantalum; Ultra-

marine; Vocational Guidance and Selection; and Welding, Autogenous.

### **The Work of the Organization**

A bulletin has been published by the Carnegie Endowment for International Peace, Worcester, Mass., dealing with the work of the International Labour Organization (League of Nations). This bulletin is the work of Mr. Francis G. Wilson, Associate Professor of Biological Science in the University of Washington, who has just spent a year at Geneva on a Social Science Research Council Fellowship, during which he devoted his time to the study of the International Labour Organization.

"In sixteen sessions of the International Labour Conference from 1919 to 1932, thirty-three conventions and forty-one recommendations have been adopted," Professor Wilson states; "this constitutes in fact the formal sum total of its international legislative work. Behind these seventy-four declarations of the international minimum of labour protection stand years of research by the Labour Office, nearly fourteen years of international negotiation and the twists of politics, unnumbered compromises, frequent false starts, disappointments to all those connected with the Labour Organization, and, perhaps more significant, a growing sense of international reality by governments, employers, workers, and international labour officials. Each of these conventions and recommendations is formally independent of the others. A state may take any one and leave the rest. The exigencies of international ratification demand that the program of the Organization be divided minutely so that members may take a part where they do not feel that they can take all. The Organization works, therefore, with the fragments of a program, but never at a single moment with the total scheme of international labour reform. In the nature of the case, the application of the objectives of the Labour Organization, as stated in the Preamble to Part XIII of the Treaty of Versailles, is very unequal, but it is admitted now that any international program of consequence will take generations in its attainment. The Labour Organization is no exception to this appreciation of international reality.

"The object of the Labour Organization is to establish an international code of labour standards, a code of minimal protection for the most part; but a code which, in addition to averaging the law and practice of labour protection at any given time, will offer legislative and moral guidance, not only to countries less developed industrially, but also to those states which represent the farthest advance of rationalization or mechanical production. This code is not to be an industrial code, but a

labour code, a code which includes the workers on the soil, in the factory, in the commercial shop, on the water, whether seamen or fishermen, and ultimately in the air. It is to be a code which includes the protection of the potential workers, the child, and the mother of the child, the young person just entering industry, and the veteran ready for a pension or needing assistance because of industrial disease or accident. In concept it is a code which will help to relieve unemployment, and which will remove the toilers' fears of insecurity, disease and mutilation. And ultimately it will be a code which protects the intellectual as well as the manual worker. Its results will be, in theory at least, the elimination of class struggle and the establishment of rational co-operation between the factors in production. It should result in industrial peace."

The writer deals with the principle of unity embodied in the Organization and the bases of continuity both in the treaty and in the structure and practice of the Organization. He discusses the principles of international codification and treats of the different Conventions and Recommendations which have been adopted to date affecting hours of work; industrial hygiene; women, children and young persons; social insurance; wages; unemployment; education and social hygiene; migration; native labour; inspection; agricultural workers and seamen. In the concluding part of the bulletin, the writer gives an analysis of the effectiveness of the international labour code to date and reproduces a chart published by the International Labour Office showing the progress of ratification of International Labour Conventions to date.

### **Report on Unemployment Insurance**

One of the items on the agenda for the Seventeenth Session of the International Labour Conference, which is to be held in Geneva next year, is "Unemployment insurance and various forms of relief for the unem-

ployed." As this will be a first discussion, under the double-discussion procedure, the International Labour Office has drafted a "Grey Report" setting out the law and practice in the different countries and indicating the points on which Governments should be consulted in preparation for the second discussion.

The report gives detailed information on the various official unemployment benefit schemes throughout the world. There are three main types of scheme in existence: (1) State insurance schemes, supplemented in most cases by relief schemes for those who exhaust their rights to benefit and are still unable to find employment; (2) voluntary trade union schemes subsidized by the State and also supplemented in most cases by relief schemes; and (3) unemployment relief organized by the local authorities with the aid of State subsidies and associated in some cases with employment on various works.

The report examines the situation of wholly unemployed and short-time workers in relation to benefit schemes; it then deals with the classes of workers included, with special reference to agriculture; it passes on to consideration of the conditions and rates of benefit, and discusses briefly a number of facilities offered to the unemployed other than the payment of cash benefits. The financing of unemployment benefits forms the subject of a detailed study, and, finally, there are chapters on administrative organization and the treatment of foreigners.

Each point dealt with is the subject of a short discussion in order to show the principles that form the basis of the legislation and regulations in force, and there are a number of tables which enable readers to see without any difficulty what are the main provisions of the different systems. The countries for which information is given include practically all the European countries as well as Australia, Canada, New Zealand and the United States.

### **"Shorter Work Periods in Industry"**

The National Industrial Conference Board of New York recently published a bulletin entitled "Shorter Work Periods in Industry." The question of reduced working time as a problem of economic adjustment is viewed from its relationship to future as well as present conditions: "The introduction of shorter work periods," it is stated, "or the spreading of work, finds ready justification and approval as a temporary emergency measure, but the advisability of its adoption as a permanent general policy raises important questions relating to the broad economic and social effects of such a policy." It is pointed out that all the former lines of reasoning re-

lating to the problem, which were based on the physical and mental benefits of a shortened work period, have been now crowded into the back-ground by the exigency of modern economic conditions. The shortening of work schedules is discussed with reference to the effect such a policy would have on employment, on wages and purchasing power, on production, on prices, on mechanization, on leisure, on utilization of equipment, and on competition. One chapter outlines specific types of shortened work schedules such as the five-day week and the six-hour day and flexible work periods. There is also a section dealing with work periods during the depression.

The report notes that under stress of emergency conditions "shorter work schedules have been put into effect at unchanged hourly rates of pay without general protest, either because curtailment was recognized as unavoidable for the time being, or because it was understood that the shorter work schedule would make possible the employment of some who were without jobs or income." However, it is considered that ready compliance with such a policy under normal business conditions is questionable because a change, for example, from an 8-hour to a 6-hour day would mean a 25 per cent decrease in weekly wages. Three possible methods of meeting the wage problem in the event of a shortened work schedule are summarized as follows:—(1) Wage rates should remain unchanged, and in that event there would be no increase of labour costs per unit of product, but such an arrangement would hardly be agreeable to wage-earners generally; (2) wage rates could be increased to permit workers to earn as much per week under the shorter schedule as had been earned under the longer schedule, which would unquestionably be satisfactory to workers but would substantially increase labour costs of production; and (3) wage rates could be increased to compensate in part, but not in full, for the working time lost under the shortened schedule. Since under this last arrangement both management and employees would be making concessions, it would appear to offer a basis on which a fairly satisfactory agree-

ment might be reached, if price conditions permitted."

Some of the conclusions reached in the bulletin are as follows:—

"The expectation that adoption of a general policy of shorter work periods will materially increase opportunities for employment is not likely to be realized fully. Experience in adopting shorter work schedules during the business depression and in spreading work indicates that the theoretical need for more labour as a result of such a policy is likely to exceed the actual need. Adoption of the 6-hour in place of the 8-hour day would indicate the need for a third more workers, but in the case of companies that have experimented with the change it is estimated that from 5 per cent to 25 per cent more labour was employed as a result of the shorter work day.

"Moreover, if wage rates are not increased as a result of a change to shorter work periods, unemployment as well as employment will be spread. This fact seems to be too frequently overlooked. There is no magic in dividing available work that is going to create a larger total of work to be performed. There can only be a redistribution of work and payroll, a sharing of both employment and unemployment, resulting in greatly increased underemployment. Whether such a policy would in the long run create more work by stimulating more active consumption is at least problematical."

### **"Work Unit" Plan for Giving Effect to 40-Hour Week**

A plan for spreading employment by means of the 40-hour week on the basis of "work units," employment being guaranteed for six months, took effect in England on September 27, 1932, as the result of an agreement in 1932, between Mander Brothers Limited, of Wolverhampton, and the Transport and General Workers' Union. The agreement, which is signed by the chairman of the company, and by Ernest Bevin, general secretary of the union, provides as follows:—

1. That a new system of piecework shall be introduced in the first instance in the Heath Town Paint Department, and should the system be extended to other Departments, the same principles and conditions shall be observed.

2. Work shall be timed and controlled by a system known as "Work Units."

3. The timing and price for each job, set out in cash terms, shall be handed to the workpeople concerned.

4. Wages: Men—The base rate shall be 55/5 per week of 40 hours; Women—The base rate shall be 28/- per week of 40 hours; Labourers or other workers shall be paid their appropriate present rate for 40 hours as they now receive for 47 hours.

5. The above rates shall be guaranteed for a 40-hour week.

6. In fixing the price it shall be calculated to produce 55/5 as a base rate for 40 hours. Output above that shall be paid for at four-fifths of the base rate.

7. If the price or time for a job is not regarded as equitable, the worker may, through his Shop Steward, challenge it, and the same shall be re-timed and the appropriate rate discussed with the Union representative.

8. The firm undertake not to discharge any worker for six months, and if, after that time workpeople are displaced, compensatory arrangements as per the letter to the Union, dated 26th July, 1932, shall be observed.

9. *Overtime*—The 40-hour week to be one of five days of eight hours each. Overtime to be paid for in accordance with the existing Overtime Agreement. Should any of the workpeople be required to work on Saturdays, ordinary rates shall be paid for any period worked up to 4½ hours; additional hours to be paid for in accordance with the existing Overtime Agreement.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**T**HREE applications for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during November and early in December, as follows:—

(1) From employees of the New Brunswick Telephone Company, Limited, at Saint John, N.B., being members of Local Union No. 605, International Brotherhood of Electrical Workers. One hundred and forty employees were stated to be directly affected by the dispute and 200 indirectly. A proposed furlough, i.e., a reduced number of working days over a given period, scheduled to become effective December 1, 1932, was given as the direct cause of the dispute, the employees also claiming that the company had adopted drastic methods in cancelling schedule increases, making general reductions of pay, laying-off employees for definite and indefinite periods and putting repeated furloughs into effect. Mr. E. McG. Quirk, departmental representative, was instructed to visit Saint John and discuss the matter with the parties to the dispute. Mr. Quirk interviewed representatives of both parties and through his mediation a conference was arranged between a committee of the men and the leading officials of the company, the latter agreeing not to put the proposed reduction in working days into effect pending the meeting.

(2) From motormen, conductors and busmen employed by the Winnipeg Electric Company and being members of the Street Railway Employees' Unit of the One Big Union. The application stated that 650 employees were directly affected by the dispute, and 300 indirectly. The dispute arose in connection with a wage reduction which the Winnipeg Electric Company contemplated putting into effect in the case of motormen and conductors holding runs on the Charleswood route of the Suburban Rapid Transit Company, operated by the Winnipeg Electric Company. The application was under consideration at the time of going to press.

(3) From longshoremen employed by various shipping interests of the port of Halifax, N.S. The workmen in question, numbering 1,050, are members of Local 269, International Longshoremen's Association. The dispute related to the companies' proposal to reduce wages 10 cents per hour. The employees also made certain complaints as to working conditions. Representatives of the Department of Labour interviewed the parties concerned but did not succeed in effecting a settlement.

A Board of Conciliation and Investigation was established by the Minister of Labour on December 13, Messrs. L. A. Lovett, K.C., and J. A. Walker, both of Halifax, being appointed members thereof on the recommendation of the companies and employees, respectively.

Subsequently direct negotiations were resumed and an amicable settlement reached, the men accepting the companies' compromise offer of a 10 per cent wage reduction. Procedure under the Industrial Disputes Investigation Act was accordingly rendered unnecessary and the constitution of the Board was not completed.

### Recent Proceedings under the Statute

Reference was made in the August issue of the *LABOUR GAZETTE* (page 854) to the receipt in the Department of an application from miners in the employ of the Intercolonial Coal Company, Limited, Westville, N.S., being members of Local No. 50, Mine Workers' Union of Canada. The dispute, which directly affected 450 employees, arose in connection with the employees' desire to negotiate a new working agreement. The men claimed that on numerous occasions the company had violated the former agreement, practically the whole of which was in dispute. It appeared from certain correspondence which developed that the difficulty was largely due to misunderstanding and misinterpretation of certain clauses of the former wage agreement, and the Chief Conciliation Officer of the Department was instructed to proceed to Westville and if possible effect a settlement without the necessity of Board procedure. Through the mediation of this officer negotiations took place at which certain understandings were reached and some small concessions made by the company which it is believed will form the basis of a working agreement.

### Court Appeal Dismissed

Five coal miners employed by the Crescent Collieries, Limited, near Bienfait, Saskatchewan, were convicted on March 5, 1932, of having violated the provisions of the Industrial Disputes Investigation Act by going on strike on February 22 without first making application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to inquire into the matters in dispute (*LABOUR GAZETTE*, April, 1932, page 390). The charges were heard by Police Magistrate J. C. Martin, K.C., of Weyburn, Saskatchewan, who im-

posed a fine in each case of \$20 and costs, or twenty-one days in gaol.

A stated case to the Court of Appeal of Saskatchewan was obtained and the appeal was heard on November 17, 1932. The merits of the appeal were not argued, the appeal

being dismissed on a preliminary objection by counsel for the respondent that the application to the magistrate for the stated case did not comply with the requirements of law involved. The convictions by the magistrate were affirmed.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

**R**EPORTS have been received of six cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the *LABOUR GAZETTE*, October, 1932, page 1050, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1923, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

#### Case No. 83.—Operating Department—Atlantic Region.

A dispute which had come before the Board early this year regarding the abolition of the position of cashier at North Sydney, had been referred back to the parties concerned for fur-

ther information. Later the parties reached a settlement, and the case was withdrawn.

#### Case No. 92.—Operating Department—Central Region.

This case also was withdrawn, the parties having reached a settlement. It concerned the claim of a female freight office clerk to exercise her seniority in regard to appointment to the position of "advice note clerk."

#### Supplement to Case No. 93.—Accounting Department, Moncton, N.B.

An employee claimed the right to exercise his seniority in connection with an appointment to the position of stenographer at the freight claims office. This case was submitted in September, when the Board allowed the applicant the right to exercise his seniority in any position held by a junior employee as cited in Article 3, Rule (b), regardless of rate of pay, provided he had sufficient ability to perform the work (*LABOUR GAZETTE*, October, 1932, page 1051). The employees' submission last September included a request for "back-time" for this employee. This was denied for the following reasons: 1st, the reasonable doubt as to the claimant's qualifications; 2nd, the doubt that existed in the mind of the management with regard to his rights to the position; 3rd, failure of the employees to quote any section of the schedule under which the employee involved is entitled to pay for time lost.

#### Case No. 101.—Operating Department—Central Region.

Complaint was made by the employees of the dismissal of a freight trucker at Hamilton on the ground that he had been intoxicated while on duty and had been unable to perform the work assigned to him. Owing to his condition the man left his work without reporting to his foreman, but it was claimed that he had been sick, and that there was no evidence of actual intoxication.

The claim of the employees was denied by the Board.

### Case No. 103.—Operating Department— Central Region.

The crown sheet of an engine was damaged as the result of shortage of water while the engine was in charge of a "leading-hand" fire builder, and the man was dismissed from the service in consequence. The employees claimed that he had been improperly discharged as he had taken all necessary precautions with respect to the water level, and that he should be reinstated and paid for time lost through dismissal.

The Board found that the employee had evidently neglected to check the water in the boiler; and further noted that he had been out of employment for about six months, and that previously he had a clear record for twelve years of service. They considered that his undertaking to light up this engine indicated his interest in the work, and suggested the possibility that the company might take a lenient view of the case on the employee's admitting his responsibility for the damage.

The contention of the employees in the case was not sustained.

### Case No. 105.—Operating Department— Atlantic Region.

Owing to a reduction in staff, a checker in the freight shed at Charlottetown, P.E.I., was reduced to the position of freight trucker. Later, when an additional freight checker was required, another employee junior to him in service, was assigned to the position. The employees claimed that as senior qualified checker the man should be reinstated in the position, with pay for the period during which he should have held it. The company contended that the claimant had never held any permanent appointment as freight checker, and that the man who was appointed had a better claim. The Board found that the claimant was senior as a checker, and was entitled to compensation during the time his junior had been so employed. The claim of the employees was sustained.

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1932

THE following table shows the number of disputes, workers involved and time loss for November, 1932, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Nov. 1932...	12	1,130	3,653
*Oct. 1932...	15	2,225	14,470
Nov. 1931...	12	1,681	21,315

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts, as well as the number of workers involved, showed a substantial decrease from that recorded for

October, 1932, the decline in the time loss incurred being even more marked, as no strikes or lockouts involving large numbers of workers for any considerable time occurred during November. As compared with November, 1931, while the same number of strikes and lockouts was recorded, there was a sharp decline in the number of workers involved and the time loss incurred was much less than during the same month last year when strikes involving sawmill workers on the Pacific coast caused a time loss of approximately 15,000 working days.

Three disputes, involving approximately eighty-two workers, were carried over from October, and nine disputes commenced during November. Of the twelve disputes in progress during the month nine were recorded as terminated, four resulting in favour of the employers involved, three in favour of the workers concerned, and two resulting in compromises. At the end of November, therefore, there were three disputes recorded as strikes or lockouts in progress, namely: lithographers, Toronto, Ont.; women's clothing factory workers, Montreal, P.Q.; and coal miners, Princeton, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1932\*

Industry, Occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to November, 1932			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Three Hills, Alta.	25	225	Commenced Oct. 1, 1932; against reduction in wages; terminated Nov. 10, 1932; in favour of employer.
MANUFACTURING— Textiles, Clothing, etc.— Women's clothing factory workers, Montreal, P.Q.	50	1,250	Commenced Oct. 15, 1932; against dismissal of union workers and for recognition of union; un-terminated.
Printing and Publishing— Lithographers, Toronto, Ont.	7	175	Commenced April 15, 1932; against reduction in wages; un-terminated.
(b) Strikes and Lockouts Commencing during November, 1932			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Carbon, Alta.	50	150	Commenced Nov. 9, 1932; alleged violation of agreement re wage rates; terminated Nov. 13, 1932; in favour of workers.
Coal miners, Bras d'Or, N.S.	100	360	Commenced Nov. 15, 1932; for equal division of work; terminated Nov. 18, 1932; in favour of employer.
Coal miners, Princeton, B.C.	225	675	Commenced Nov. 27, 1932; for increase in wages; un-terminated.
MANUFACTURING— Textiles, Clothing, etc.— Textile factory workers, Hes- peler, Ont.	188	188	Commenced Nov. 7, 1932; against reduction in wage rates; terminated Nov. 7, 1932; compromise.
Other Wood Products— Lumber mill workers, New Westminster, B.C.	190	475	Commenced Nov. 11, 1932; against low earnings; terminated Nov. 14, 1932; in favour of employer.
Shingle mill workers, Ruskin, B.C.	27	54	Commenced Nov. 18, 1932; against reduction in wages; terminated Nov. 20, 1932; compromise.
METAL PRODUCTS— Factory workers (automobile accessories), Oshawa, Ont.	12	18	Commenced Nov. 22, 1932; for day wages instead of piece rates; terminated Nov. 25, 1932; in favour of workers.
Steel workers (sign makers), Toronto, Ont.	6	18	Commenced Nov. 28, 1932; against reduction in wages; terminated Nov. 31, 1932; in favour of workers.
CONSTRUCTION— Other— Sewer construction labourers, Verdun, P.Q.	250	125	Commenced Nov. 2, 1932; for increase in hours; terminated Nov. 2, 1932; in favour of employer.

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

as to seven such disputes, namely: motion picture projectionists, Ottawa, Ont., February 29, 1931, one employer; photo engravers, Toronto, Ont., March 23, 1931, one employer; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; composers, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and motion picture projectionists, Saskatoon, Sask., August 27, 1932. The dispute involving women's clothing factory workers employed by one firm in Montreal, P.Q., commencing August 1, 1932, and carried in the above list since October, is reported to have lapsed by the end of November and has consequently been removed from the list.

Information as to a dispute involving shingle sawyers, packers, etc., employed by a shingle mill at Ruskin, B.C., from October 17, 1932, to October 20, 1932, was received in the Department too late for inclusion in the November issue of the LABOUR GAZETTE. It is reported that the forty employees of the mill ceased work to enforce a demand for increased wages for day men and shingle packers. Negotiations between the parties resulted in the employer agreeing to grant an increase of five cents per hour for day men and one cent per thousand for shingle packers, and work was resumed under these conditions.

A minor dispute involving about forty workers, out of approximately seven hundred employed by a rubber factory at Kitchener, Ont., occurred early in November. It is stated that the strikers were temporary employees working in the shoe department of the factory and had made no definite demands, ceasing work about 11 a.m. in sympathy with certain workers who had personal grievances in connection with working conditions and wage rates. After conferences between the management and representatives of the strikers work was resumed in a short time.

A strike or lockout involving furniture factory workers employed by an upholstering company operating in Montreal is reported to have occurred during November, 1932, but no details have as yet been received in the Department.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, THREE HILLS, ALTA.**—On November 11 complete operations were resumed in the colliery affected by this dispute, the miners who had ceased work on October 1, 1932, following a wage reduction from \$1.25 to 70 cents per ton, agreeing to accept the reduced rate. The decrease had been made on the introduction of new mining machinery, the workers however, demanding \$1 per ton. Shortly after the commencement of the dispute the employer had partially replaced the strikers, and on the termination retained the new workers, only such strikers as were needed being re-employed.

**COAL MINERS, CARBON, ALTA.**—The fifty coal miners affected by this dispute ceased work on November 9, demanding payment of wages on the scale in the agreement signed with the Mine Workers' Union of Canada on October 14, 1932, on the termination of a previous strike in this district. Following negotiations between the parties on November 14 work was resumed, the employer agreeing to the miners' demands.

**COAL MINERS, BRAS D'OR, N.S.**—A number of miners in one colliery ceased work on November 15, demanding the reinstatement of about thirty-five miners who had been laid off some time previously when a section of the mine, being worked out, was closed. The employees in the mine belonged to two unions and the strikers contended that most of the men laid off belonged to a new organization, the Amalgamated Mine Workers of Nova Scotia, and were being discriminated against, the company having an agreement with the United Mine Workers of America. They accordingly demanded a division of the work available among all employees. The mine was picketed, and a number of the pickets were arrested as a result of injuries to miners on the way to work. The Deputy Minister of Mines for Nova Scotia took the matter up with the parties involved, but no agreement was reached. The management, having an agreement with the United Mine Workers of America, refused to negotiate with the representatives of the other organization. By November 18, it was reported that almost a normal force of miners was working.

**COAL MINERS, PRINCETON, B.C.**—Employees in three collieries refused to work on the shift beginning on Sunday night, November 27, demanding a ten per cent increase in

wages, the restoration of a reduction put into effect last spring. The miners also demanded certain changes in working conditions. At the end of the month the dispute was untermated.

**TEXTILE FACTORY WORKERS, HESPELER, ONT.**—One hundred and eighty-eight weavers, spinners and knitters employed in three departments of one woollen manufacturing establishment in Hespeler, Ont., ceased work on November 7, when the management posted a notice of a ten per cent reduction to apply to all wage rates except those where such a reduction would conflict with Minimum Wage regulations. A modification of the wage reduction being arranged, the strikers returned to work on November 8.

**LUMBER MILL WORKERS, NEW WESTMINSTER, B.C.**—One establishment in New Westminster, B.C., which had been operating on a co-operative basis since April, 1932, became involved in this dispute on November 12, the two hundred employees of the company ceasing work as a protest against low earnings resulting from this system. The arrangement was that the workers would receive fifty per cent of the normal wage scale and a share of any surplus from mill operations. For the month of October no surplus was available for division. The establishment was picketed, but no disorder occurred. After negotiations between the parties work was resumed on November 15, under the same conditions as prior to the dispute.

**SHINGLE MILL WORKERS, RUSKIN, B.C.**—This dispute commenced on November 18, when the management of one shingle mill proposed a decrease of twenty per cent in the wages of sawyers and packers. At a meeting

on November 20 the employer offered to resume operations at a reduction of only seven and one-half per cent, to which the employees agreed, resuming work on November 21.

**FACTORY WORKERS (AUTOMOBILE ACCESSORIES), OSHAWA, ONT.**—This dispute commenced on November 22, when twelve employees in the polishing and buffing department of one establishment engaged in the manufacture of automobile accessories ceased work as a protest against low earnings under the piece-rate system. As a result of negotiations an arrangement was reached whereby the piece-rate system was discontinued and a satisfactory day rate set, the employees returning to work on November 24.

**STEEL WORKERS (SIGN MAKERS, ETC.), TORONTO, ONT.**—Six workers employed by a company engaged in the construction of signs ceased work on November 28, 1932, as a protest against a reduction in wages from 40-45 cents per hour to 35 cents per hour. The strikers picketed the plant, and it is reported two were arrested following alleged threats of violence. Negotiations between the parties resulted in the employer agreeing to withdraw the wage reduction, and on December 1, 1932, work was resumed at the former rates.

**SEWER CONSTRUCTION LABOURERS, VERDUN, P.Q.**—Workmen engaged on the construction of a sewer as relief work by the city of Verdun, P.Q., who, on the termination of a strike early in October, 1932, had been granted the civic rate of 40 cents per hour, on November 2, 1932, again ceased work demanding an increase in hours above forty per week. Later in the day, however, they returned to work at the same hours and under the same conditions as prior to the dispute.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1932, in the review of Strikes and Lockouts in Canada and Other Countries, 1931. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the

latest figures are not for relatively recent dates.

### Great Britain

The number of disputes beginning in October was 28, and 10 were still in progress from the previous month, making a total of 38 disputes in progress during the month, involving 130,000 workers and resulting in a time loss of 213,000 working days for the month.

Of the 28 disputes beginning in the month, 12 were over proposed reductions in wages, 9 on questions of the employment of particular classes or persons, 6 on other questions of

working arrangements and one on a question of trade union principle.

Settlements were reached in 22 disputes, of which 8 were in favour of employers, 4 in favour of workers and 10 ended in compromises. In three other disputes work was resumed pending negotiations.

*Dispute in the Lancashire Cotton Manufacturing Industry.*—The dispute in the spinning section of this industry which involved about 130,000 workers and was noted in the last two issues of the LABOUR GAZETTE, terminated November 5, when it was decided by a union vote to ratify the agreement reached in October, which provided for wage reductions of 7.67 per cent.

### France

The number of disputes for the year 1930 was 1,220, involving 324,916 workers.

### Germany

A strike against a reduction in wages in the bus, subway, elevated and street car lines in Berlin, which employ about 20,000 workers, began November 3. After three days some of the strikers returned to work and traffic was

partially resumed, and by November 8 normal traffic was practically restored.

### Netherlands

The number of disputes beginning in 1931 was 200, involving directly 27,050 workers with a time loss of 856,100 working days for the year.

### Spain

Statistics for the year 1929 show the number of strikes as 96, involving 55,576 workers, with a time loss of 313,065 working days for the year.

### United States

The number of disputes beginning in September was 59, and 41 were in effect at the end of the month. The number of employees involved in disputes in effect at the end of the month was 9,707, and the time loss was 555,341 working days for the month.

*Bituminous Coal Mining Dispute.*—As reported in the last issue of the LABOUR GAZETTE, settlements were made in most of the coal fields, but in certain sections of Illinois and Oklahoma, where settlements had not yet been reached with some operators, disorders occurred at several mines during November.

## CENSUS OF INDUSTRY IN CANADA

### Summary Tables of Manufacturing Statistics and Hours of Labour in 1929 and 1930

THE Dominion Bureau of Statistics in the annual census of manufacturing establishments in Canada, secures by mail, information as to the hours per day worked by employees on wages, that is the number of persons working eight hours or less, nine hours, ten hours and over ten hours per day. The accompanying tables give summary figures for 1929 and 1930. Table I includes information as to capital invested, number of employees on salaries and wages with remuneration paid, cost of materials and the value of products by the principal groups, while Table II gives the information as to hours per day worked.

The LABOUR GAZETTE for June, 1931, pages 725-729, included information as to 1929 and 1930, except data as to hours per day which had not then been compiled. The issue for October, 1929, page 1189, contained information as to hours per day in 1926 and 1927. In the present issue information as to hours per day in 1928 for the principal groups is included with that for 1929 and 1930. Data for the more important of the sub-groups is given for 1929 and 1930. The figures show an increase in the percentage of workers on the

eight hour day or less for 1930 as compared with 1929, namely from 30 per cent to 35 per cent, with decreases in the percentage on longer hours. The sub-group showing the most change was that of manufacturing pig iron, steel, etc., as a result of the adoption of three 8 hour shifts per day instead of 2 shifts of eleven and thirteen hours each for continuous operation in the principal blast furnaces and rolling mills. An appreciable increase in the percentage of wage earners working eight hours per day or less in 1930 also appeared in the industries producing the following articles: tobacco, boots and shoes, men's furnishings, hosiery and knit goods, furniture, sash and doors, pulp and paper, automobiles, various iron and steel products, brass and copper products and clay products. The non-ferrous smelting and refining industry was already on the eight hour day to a great extent. In these industries as in others the reduction in hours in 1930 was to some extent incidental to a curtailment of operations and the adoption of the eight hour day, temporarily at least, was in a number of establishments one of the methods of working short time.

TABLE II.—NUMBER AND PERCENTAGES OF EMPLOYEES ON WAGES, WORKING SPECIFIED HOURS PER DAY IN MANUFACTURING INDUSTRIES IN CANADA, BY GROUPS, DURING 1928, 1929 AND 1930, AND FOR CERTAIN SUB-GROUPS DURING 1929 AND 1930.

## UNEMPLOYMENT RELIEF IN CANADA, 1930-1932

### Statement by the Minister of Labour in the House of Commons

THE Hon. W. A. Gordon, Minister of Labour, speaking in the House of Commons on November 22, made the following statement as to the work carried on under the Unemployment Relief Act, 1930, the Unemployment and Farm Relief Act, 1931, and the Relief Act, 1932:—

"The Unemployment Relief Act of 1930, which came into effect in September of that year, covered expenditures for the carrying out of public works and the giving of direct relief to relieve unemployment until August, 1931. Under the provisions of the 1930 Act, the Dominion government contributed \$14,396,956.79 to public works, and to direct relief \$3,556,928.47. The total cost of administration was \$43,061.97. The total expenditures under the 1930 Act by the Dominion government were \$17,996,847.23. This expenditure resulted in public and other works being carried out to the extent of approximately \$69,000,000, including the contributions of provinces and municipalities. The direct relief expenditures by the Dominion, the provinces and the municipalities totalled about \$11,000,000. The carrying out of the work under the provisions of the 1930 Act afforded work to 337,633 individuals for varying periods, the amount of work thus afforded being 7,481,449 man-days.

"In August of the following year, 1931, the Unemployment and Farm Relief Act of 1931 became effective, and contributions were made for the relief of unemployment under this Act until the first day of March, 1932, and under the continuance Act of 1932 operations under the 1931 Act were continued until the 1st of May, 1932. Under the 1931 Act the Dominion government agreed to contribute the sum of \$35,739,312.19 towards the carrying on of works by the provinces, municipalities and the federal departments for the relief of unemployment, the total cost of such works being approximately \$81,000,000. Some of this work was not finished at the expiration of the agreements on May 1, 1932. Extensions of time were arranged to different dates, extending to the fall of 1932, the gross cost of the works thus extended being approximately \$14,778,000. For direct relief, the expenditures of the Dominion government, under the 1931 Act, to date, amount to \$11,536,789.73, which includes the \$5,250,000 to the Saskatchewan relief commission. Under the 1931 Act the expenditures for public works gave employment to 579,024 individuals to the end of September, 1932, the total wages paid being \$38,802,101.63, and a total of 13,152,381 man-days work being afforded.

"After a survey of employment conditions in the shops of the Canadian National Railways, it was decided to maintain operations so as to permit of intermittent employment being given to a large number of employees. In the month of September, 1931, the Canadian Pacific Railway Company was compelled as you all know to shut down its shops and the former workers of these shops were without employment, concerning whom applications were made to the government for assistance. The government arranged, as has been already stated in this House, with the Canadian Pacific Railway Company to open its shops on November 17, 1931, and to keep them open until December 31, of the same year, the government paying the wages of the workers employed in the shops, the railway company, however, to reimburse the government for expenditures so made. The total number of railway shop employees thus given employment was 8,455, the wages involved being \$1,447,222. The cost of administration under the 1931 legislation was \$814,875.7.

"In the spring of this year, 1932, it became apparent to the municipalities throughout the Dominion, and to the provinces, that the projection of works by the municipalities and by the provinces themselves was rapidly becoming so great a burden that the municipalities and probably the provinces would soon be impoverished and unable to carry that burden further. Intimation of this condition was made to the government by various communications, and following the custom that had prevailed from the beginning of the tenure of office of this administration, no time was lost in inviting the premiers of the various provinces to come to Ottawa in order that they might sit in conference with this government to see what steps could be taken, or what other course could be adopted so that people should not suffer for lack of the necessities of life in this country, and at the same time to try to inaugurate a plan that was within the financial competence of those concerned. As a result of that invitation, on the 9th of April last, I believe it was, that conference convened in this city. All the provinces of Canada were represented, and a general and prolonged discussion took place with respect to all the various matters and the complexities of the position as it faced those interested. It was the unanimous view of the representatives of all the provinces that they could no longer finance works and undertakings on the same scale that had obtained in the year prior to

that date. These representations were heard by this government, and further representation was made by the provincial premiers, headed, I think, I am not unfair in saying, by the premier of the province of Quebec, for whom I have the utmost and profoundest respect. He made it very clear, and he was supported in his contention by the other provinces, that he wished to promote the scheme of direct relief. Obviously the expenses to those concerned would be materially reduced. Just as soon as the scheme of direct relief could be perfected, it was put into motion, save for the completion of works which had been commenced, the stoppage of which would have resulted in a total or partial loss of the benefit of the work done. Appropriate action was taken by the Dominion government to seek the advice of the provinces as to what works should be completed, and agreements were made and understandings arrived at in this connection. Many of these works have not yet been completed; others have been.

"The Relief Act of 1932 received assent on May 13, 1932. Under this Act agreements have been completed with all the provinces except Prince Edward Island providing for a Dominion non-recoverable expenditure of one-third of an amount not to exceed \$600 per family for the purpose of providing a measure of self-sustaining relief to families who would otherwise be in receipt of direct relief. This scheme was to provide for the placing of such families upon the land, the remaining two-thirds of the expenditure to be contributed by the province and municipality concerned. Agreements have been completed with respect to this project with Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, and provide for a total Dominion expenditure of \$1,385,675. It may be said by some that that is a huge sum of money to be devoted to the endeavour to place some of our citizens upon the land where they can become self-supporting, but I do not think it is. This is not a colonization scheme, state-aided; it is not offered as a solution for unemployment; it is a measure which I believe to be constructive whereby selected families with agricultural background are placed upon the land where they can sustain themselves and get into some productive vocation. These families would have received at least the amount of our subscription to this scheme under direct relief.

"Let me point out to the House something which I think is often overlooked. During the period from 1919 to March 31, 1932, this government spent in its Immigration Department the sum of \$36,718,454.97. That expenditure had nothing to do with the soldier settlement

scheme, the three thousand family scheme or the New Brunswick five hundred scheme; that is simply the amount spent by this Dominion in order to induce, invite and encourage anybody from anywhere to come to this country. . . . Anyone who cares to survey the immigration into this country during the period I have mentioned will find that there was no hope of any considerable percentage of those immigrants ever taking up land and being out of competition with the industrial workers in our cities. That fact is borne out by what has happened. Go through our industrial centres, go through our lumber camps and our mines and you will see there the men who were encouraged to come to this country by the booking agents in Europe, by the steamship lines and by the iniquitous system of permits which was in vogue for a few years, displacing Canadian labour—they are not on our farms at all.

"One of the first duties which this administration had to face when it came into office was to see that that condition of affairs no longer should prevail, and, as hon. members of this House now know, prompt action was taken to revise the regulations with respect to immigration into Canada. In passing let me say that very large numbers of the immigrants to whom I have referred are good workmen. The first criticism I have to make is that they are not on our lands, they are in our industrial centres; my next criticism is that their coming here was not so regulated that we could at least exclude the major portion of those who are to-day the instrument contributing largely to the sentiment growing up in Canada condemning their compatriots who are trying to make good."

Continuing his speech on the following day Mr. Gordon referred further to the government's policy of returning people to the land in order to afford some outlet for persons who had been receiving direct relief in the cities: "During the time," he said, "this policy of colonization within Canada has been in force and up to September 30, 1932, 66,407 individuals have been absorbed upon the land. This has been brought about by the voluntary return of people to the land or by the return of those upon direct relief and who took advantage of the several agreements which were entered into with the provinces. It is hoped that many of these people will remain upon the land and become permanent settlers.

"It might be of interest to the House to know what the feelings of the railroads are in this respect. The railroads acted in conjunction with the department, and I should like to read a short letter from the president of the Canadian Pacific Railway, dated October 15, 1932. It reads:

'I have to-day studied a comprehensive report submitted by the chief commissioner of colonization of this company which indicates that during the past two and one-half years, 4,143 families have been settled along the company's lines.'

"Those are families who were within Canada, not new immigrants. The letter continues:

'You will appreciate, I am sure, that I have received the information contained in this report with more than ordinary interest and satisfaction. In addition to the benefits which logically may be expected through the settlement of lands tributary to the company's lines, such activities also represent a definite contribution to the improvement of the Dominion's agricultural and industrial situation.

'It is perhaps, trite to say that in the well directed settlement of our agricultural lands is to be found a very substantial contribution to the solution of Canada's railway difficulties. Yet, in that axiom rests also, in large degree, the answer to other Canadian economic problems.

'The report to which I have referred recalls the meeting at Ottawa in the fall of 1930 which set in motion the co-ordinated land movement of your own department, the Canadian National and the Canadian Pacific colonization departments, with a view to the settlement of people with some resources and a background of practical experience. The results to date confirm the views that were expressed at our first joint meeting as to the possibilities of settlement of this character during the period in question. They indicate that the proposals were, indeed, well founded.

Yours very truly,

E. W. BEATTY.'

"We have received from time to time many requests and proposals from the provinces and the municipalities with a view to providing direct relief in as economical a way as possible. Proposals have been made with regard to the carrying on of works in conformity with the expressed views of the provinces. As I indicated last night, the projection of certain works has not met with their approval and, for obvious reasons, we cannot project these works without that approval. However, various works were undertaken in order to see that people should be given such food and shelter as might be necessary during these trying times.

"In Prince Edward Island at the instance of the provincial government, this government has contributed fifty per cent of the labour costs in the reconstruction of the Falconwood hospital. The Dominion's proportion amounts to \$5,328.24 out of a total of \$10,656.49.

"The provincial government of Nova Scotia pointed out the desirability of returning to their homes in continental Europe some 140 families from the mining section of New Waterford. The federal government con-

tributed forty per cent, or \$8,000 of a total cost of \$20,000. These miners had come from central Europe at the instance of the coal company.

"These miners were thrown out of work, I am told, as a result of the last report of Sir Andrew Duncan which recommended the closing down of certain collieries in that locality.

"The Dominion is also contributing forty per cent of the cost of certain provincial highway construction. Our share will be \$32,000 out of a total expenditure of \$80,000.

"The Dominion is also contributing fifty per cent of the cost of certain construction on the trans-Canada highway. Our share will amount to \$66,823.96 out of a total expenditure of \$133,647.90. On this work the following tabulation shows the number of men engaged, the number of days worked and the wages paid from May to September:

Month	Number of men working	Number of days worked	Wages Paid
May.....	900	17,961	8 57,075
June.....	1,090	22,796	61,695
July.....	765	12,603	36,869
August.....	724	14,208	42,233
September.....	855	11,208	31,729

"As regards Ontario, the Dominion, under an arrangement with that province, is contributing one-third to the cost of the projection of the road through the locality in the neighbourhood of Dysart, the province and the municipality putting up \$50,000 as against \$25,000 by the Dominion. In Swazey township in New Ontario, not in my riding, the Dominion is assuming one-half of the cost of a road into a new mining locality. The Dominion is also assisting in Ontario to the extent of 50 per cent of the board camps to which reference has been made from time to time in the House. In these camps 2,279 men were given employment in May, working 29,254 man-days. In June 3,355 were given employment for 57,066 days and in July 3,794 were employed for 66,536 days. In August 3,604 men worked 61,764 days and during September 3,499 men were employed 68,430 days. The cash allowance paid to the workers and the wages paid to the key men for May, June, July, August and September amounted to \$239,758.78.

"In the four western provinces the provincial governments were confronted with a situation with respect to that class called transients. Dealing with transients is a difficult problem. The very word 'transient' would indicate some of the difficulties. Time after

time news would come by telegraph to Ottawa that so many men had congregated in some of the western villages. Although immediate steps were taken to see that the men got food, lack of which was complained of, oftentimes within twenty-four hours arrangements were made to see that they were given food, but when it arrived, those men had drifted on another hundred miles. Time after time the provinces and the Dominion government were in a position where they could not move as fast as the transients. The situation became ridiculous. These men of course have been described as hungry, lonesome men, but the facility with which they would move about the country was a puzzling problem to both the provinces and ourselves.

"We were not fast enough to catch up with some of them to give them the food. At any rate, this resulted in the provinces and any other agencies available taking steps to see that riding illegally on trains should cease and that these men should be identified and placed under some sort of discipline, or control, or whatever you like to call it, in order that we might at least identify the problem with which we had to deal. The Dominion government, recognizing that the western provinces had been the magnet to attract single men from other provinces and also the depository for immigrants from Europe, realized that there was something more than an ordinary responsibility to this type and class. The provincial governments in the west found their finances strained and the federal government took appropriate action to standardize the relief given to those men. In each of the western provinces independent committees have been set up in order to deal with this situation and possibly to deal with relief generally. Those committees are now functioning; the transients are being registered; they are being cared for in camps and being given some useful work to do. There are certain places, but not many, where those people object to going to camps and some of them, going to the camps, say that they will not stand for this sort of treatment. Fortunately, however, that kind of objection does not obtain in the great majority of places. So far as our information goes, generally speaking, the matter of taking care of those men and providing them with work where work is available is proceeding satisfactorily. That applies to transient, single, homeless men.

"In Manitoba, the Dominion is contributing 50 per cent to the cost of road grading on the provincial roads to Clear Lake, the federal contribution being \$3,500. The Dominion is also contributing \$7,200 towards the cost of construction of dykes on the Assiniboine river.

Also, the Department of the Interior of the federal government has taken and is taking steps to absorb many men in useful work in the national parks. This information, while not in great detail, will be amplified in the report which will subsequently be filed pursuant to the provisions of the statute.

"In Saskatchewan, as in Manitoba, subsistence camps and the farm placement scheme, which was in operation last year, have been continued this year, the Dominion contributing to the cost.

"In Alberta, the same provisions, with slight variations, is made, the Dominion contributing to the cost in each instance.

"In British Columbia, the same policy is being pursued in respect to single, homeless men and also contributions are being made, as in the other provinces, towards general relief of those in need.

"As regards the number who are receiving direct relief, I think I should refer to this matter now because some days ago I made a short reference to it when, in answer to a question, I said that in the month of August there were some 840,000 men, women and children in Canada being given relief, not continuously, but for varying periods. This statement was unfortunately misconstrued by some hon. members and by a section of the press. Therefore, in order that it may be made clear to the House, more detailed information should be given. In the month of August, 1932, the number of men, women and children receiving relief was 841,931. Of that number 162,135 heads of families were receiving direct relief. It will be seen therefore that those who sought to interpret or fell unconsciously into the error of construing that statement to mean that there were 841,000 heads of families on relief were quite wrong. In the month of September last the number of those on relief had fallen to 802,592. That is, the figure dropped in the month of September, 40,000 below the August figure. The number of heads of families receiving direct relief during the month of September also fell to 158,171. Those figures if compared with the returns as to employment will in the main agree, the employment figures having steadily improved during the past three months. We expected that the unemployment situation would become more severe on the opening of winter, but it does not seem to have so developed. There may be and likely are places in Canada where it has so developed, but generally speaking that is not the case so far as the records disclose.

"I shall not take up more of the time of the House except to say this: When we speak of our country and of its illimitable resources, and I think I have heard that phrase often

before, we must bear in mind that we have a small population, but that we have immense resources, immense territories owned by the Crown, and, fortunately all not alienated to those who might improperly exploit them. If the citizens of Canada would realize the opportunities that there are in their own country, and instead of hiving in the industrial centres would get a comprehension of the empire that they have in trust, then even though there is a dislocation of industry and trade in the world to-day I think there would be very little suffering or deprivation amongst the people of this country.

"I would offer this observation in closing my remarks. The individual has a responsibility. The individual cannot continue to lean upon his fellow-man forever, and forever turn to the state to correct every misadventure which may befall him. The individual should develop a little more courage. I know that I shall be criticized for saying this, but I shall continue to repeat that this country and the world have passed through periods of stress probably not as general as now prevails throughout the world, but just as distressing, and perhaps this depression, if we can call it such, will at least bring out in bold relief to the individual the absolute necessity for his developing a little courage, and with the development of courage and initiative on the part of the individual to take advantage of this great empire that Canada presents it will not be so hard for each individual to get the share of the resources to which he is entitled."

#### Amount of Dominion Expenditures

Speaking in the House on November 25, the Minister of Labour said: "In the four western

provinces either by way of direct non-recoverable advances or in recoverable loans, the Dominion government has supplied the sum of \$73,844,130.98. . . . For all of Canada," Mr. Gordon continued, "this government has provided the sum of \$115,631,733.80 up to date for the purpose of tiding the provinces, the municipalities and the people generally over this trying period. That money does not come from people who have not got it. The tribute must be levied upon every Canadian citizen. It is those who have who will contribute that money, not those who have not. And I suggest to those who would criticize that that is no mean contribution; that this government might easily be criticized for having pledged the credit of the state in too large an amount. But as far as the government is concerned it is ready to meet any criticism of that sort. . . . As far as this government is concerned, as I have before stated in this House, we will continue to see that the people of this country will not suffer for fuel and food and the necessities of life . . . . Go out from this Chamber as Canadians," the Minister said in conclusion, "do not be content to say as partisans that the government has failed, but carry the message to the Canadian people that all is not lost by any means; that we have a great country, and a small population; that we have wonderful assets, tremendous resources for the people to make use of. As far as this government is concerned it will put forth every effort, yes, it will go to its last available dollar to see that those who are unable to take advantage of those opportunities will not suffer during this coming winter."

### REGULATIONS FOR UNEMPLOYED RELIEF IN ONTARIO

THE following Order in Council was approved by the Government of the Province of Ontario on September 19, 1932.

Upon the recommendation of the Minister of Public Works and Labour, the Committee of Council advise that the following regulations for the administration of the Unemployed Relief Fund be approved:

1. Except where the context otherwise requires, in this Order in Council the expression "Minister" means The Minister of Public Works and Labour.

2. There may be paid from the Consolidated Revenue Fund such moneys as may be deemed expedient to relieve distress and provide relief for the unemployed, and also the expenses of administration of the provisions of this Order in Council, including the salaries of temporary employees.

3. The Minister may enter into an agreement with the Government of the Dominion of Canada, or with any Minister of such Government duly authorized for that purpose, for the payment by the Dominion to the Province of the following expenditures in such proportions as may be agreed upon:

- (a) Direct Relief by Municipalities.
- (b) Direct Relief by the Province, where no Municipal Government exists.
- (c) Provincial public works, improvements, and other undertakings.

4. The administration of any fund and any sums of money that may be appropriated by the Legislature, or provided by any special warrant of the Lieutenant Governor, issued under the provisions of clause (b) subsection 1 of section 13 of the Audit Act, Chapter 25, R.S.O., 1927, for the purpose of relieving distress and providing relief for the unemployed

and the expenses of administration, shall be vested in the Minister.

5. All payments made out of any such fund shall only be made upon the requisition of the Minister countersigned by J. A. Ellis, Commissioner for Municipal Affairs for the Province of Ontario.

6. The Minister may provide for the payment by the Province to any Municipality of one-third of the expenditures of such Municipality for Direct Relief, in addition to one-third to be paid by the Dominion Government.

7. Notwithstanding the provisions of the last preceding paragraph the Ontario Municipal Board may with the approval of the Minister provide for the payment by the Province of a greater proportion than one-third of the expenditures by any Municipality for Direct Relief, in addition to any greater proportion to be paid by the Dominion.

8. In territory where no Municipal Government exists the Minister may provide for the payment by the Province of fifty per cent of the expenditures to be made by the Province for Direct Relief, in addition to fifty per cent thereof to be paid by the Dominion.

9. The expression "Direct Relief" in this Order in Council means food, fuel, clothing (including footwear), shelter, medical services and medical supplies.

10. "Shelter" includes: (a) Lodgings whether in hostels or otherwise; (b) Rent; (c) Water; (d) Light.

Provided however, that no payment for rent shall exceed monthly one-twelfth of the total to which the annual tax bill on the premises occupied, plus an additional sum of fifty per cent of such tax bill, amounts; and provided also that in no instance shall the cost of rent including water, exceed \$15 per month per family. Also provided that the monthly cost for light shall not exceed \$1 per family; and that the monthly maximum for rent, water, and light together shall not exceed \$16.

11. Payment for medical services shall not exceed one-half of the standard medical charges existing in the Municipality or locality.

12. Of the total of every monthly account rendered by a Municipality for expenditures for Direct Relief sixty per cent at least must be for food, and no more than forty per cent for fuel, clothing (including footwear), shelter, medical services and medical supplies.

13. Unemployed men and women who are heads of families, and other persons except transients, in need of Direct Relief must apply for same in the Municipality in which they reside, and all such persons shall be deemed to be residents of a Municipality who have resided there for the three months next preceding their application for Direct Relief.

14. Persons who have no fixed place of abode shall be deemed to be transients, and may apply to any Municipality in which they find themselves for temporary lodgings and food. In such cases no residence qualification is required.

15. All heads of families and other persons including transients applying for Direct Relief must be registered in the Municipality in which they make application for relief, and they must secure a residence certificate card from the Municipal Official in charge of relief, or the

person designated by the Municipal Council for such purpose.

16. All persons receiving Direct Relief and moving from one Municipality to another must produce such residence certificate to the proper official in the Municipality to which they move, and secure a new residence certificate in the latter Municipality.

17. Statements of account for expenditure for Direct Relief made by Municipalities under the provisions of this Order in Council shall be rendered monthly in duplicate to J. A. Ellis and must be accompanied by a certificate signed by the Relief Officer, or other official of the Municipality in charge of Relief, and by the Treasurer of the Municipality, that the expenditures have been duly made in accordance with such statements, and the provisions of this Order in Council.

18. The Minister may at any time call upon any Municipality to furnish such information as he may require in relation to statements of account rendered by the Municipality for Direct Relief, and he shall also have power to direct an inspection and audit of the books, accounts, and vouchers of any Municipality relating to such accounts.

19. There shall be an Advisory Committee on expenditures to be made for Direct Relief under this Order in Council, which Committee shall be composed of The Minister of Public Works and Labour, the Minister of Mines, the Minister of Lands and Forests, the Minister of Agriculture, the Minister of Public Welfare and the Minister of Highways. The Minister of Public Works and Labour shall be the Chairman of such Committee.

20. J. A. Ellis is hereby appointed Secretary of such Committee, and he and the staff of the Municipal Affairs Branch of the Ontario Municipal Board shall perform such duties under the direction of the Minister as may be required to carry out the provisions of this Order in Council.

21. Paragraphs 9, 10, 11, 12 and 17, of this Order in Council shall come into force so far as regards expenditures made by Municipalities for Direct Relief on October 1, 1932.

The validity of Workmen's Compensation legislation in the Province of Quebec is again being called in question in the Superior Court at Montreal. (The decision of Mr. Justice de Lorimier, in the case of Slanec versus Gremstead, was given in the LABOUR GAZETTE, June, 1932, page 733.) In this case the Workmen's Compensation Board had awarded Dunlop, an employee of the Canadian Pacific Railway, compensation amounting to \$9.75 per month in respect to injuries sustained in the course of his employment. Considering this sum insufficient, Dunlop has entered an action against the Company for damages, alleging that the Workmen's Compensation Act is *ultra vires* of the Legislature, as denying the right of appeal to the Courts.

## INTERPROVINCIAL CONFERENCE TO CONSIDER UNEMPLOYMENT INSURANCE IN CANADA

### Prime Minister's Announcement in the House of Commons

**S**PEAKING in the House of Commons on November 22, the Right Hon. R. B. Bennett, Prime Minister, announced that the Government intended to call an interprovincial conference, to meet at Ottawa prior to the re-assembling of Parliament on January 30, 1933, in order to discuss the question of the establishment in Canada of a system of contributory unemployment insurance, and to discuss other matters requiring joint consideration. Mr. Bennett reiterated the views he expressed in the House last year on the subject of a federal system of unemployment insurance (LABOUR GAZETTE, May, 1931, page 541). He dealt first with the problem of jurisdiction as between the Dominion and the provinces, pointing out that this problem "raises the question, on the one hand, of the conflict between property and civil rights, which are solely within the jurisdiction of the provincial legislatures, and, on the other hand, the national obligations of the Dominion when it conceives a condition to prevail that warrants assistance to the provinces to enable them to discharge their duties.

"The question of jurisdiction therefore," Mr. Bennett continued, "is at the bottom of all relief which is of a permanent character. Any legislation that may be enacted to deal, for instance, with social insurance problems must have the support of the provincial authorities. I made that abundantly clear on more than one occasion here, and it was agreed to I think by every member of the House who had taken the trouble to consider the question. Now pressure has been brought to bear by various organizations throughout the Dominion to ensure the passage of what is known as contributory unemployment insurance legislation. That legislation, to be effective in this country, with jurisdiction divided between the provincial legislatures and the federal parliament, could have validity only if it had the sanction both of the legislatures and of parliament. That I think has been conceded. But that difficulty is one that can be overcome. It can be overcome rather readily if the provinces will agree to such an amendment to our constitution as will clothe parliament with the appropriate authority.

"It has been the purpose of this government to call an interprovincial conference between now and the date of the reassembling of this House, to discuss with the representatives of the provinces of Canada this and other problems. I pointed out to the House with respect

to another matter that we had hoped to have an interprovincial conference at an early date. Conditions made it impossible to hold that conference last fall. I need hardly point out to this Chamber that the government had so much work to do, and the members of this administration were so pushed and driven by the responsibilities that rested upon them that there was not an adequate opportunity to discuss and consider many matters which an interprovincial conference should take under advisement. But we have been making arrangements for such a conference. I had hoped that we would be able to have the conference without making any statement to the House, and that we might be able to report the result of its deliberations after the House reassembled. I find it incumbent upon me now to make the statement which I have just made."

Mr. Bennett enumerated the various subjects that might be discussed by the conference, and proceeded:—

"There are many other matters which I will not dwell upon, but this is one which we have set down as being of tremendous importance to every part of this Dominion. I take it that the judgment of the House, broadly speaking, was that any measure of social insurance should be contributory in its character, that it could not be otherwise. All the representations that have been made to me with respect to the matter lead to that conclusion."

After a reference to the difficulties that had been experienced by the British insurance system the Prime Minister continued as follows:—

"The actuarial computations with respect to this matter cannot be mere guesswork. I ventured to point out to the House in April, 1931, that if they were to have any value, if in the language of one hon. gentleman who has spoken in this discussion we are to derive any benefit from the knowledge of the past, it can only be because we can rely upon it to enable us to go forward with plans and proposals that will not be shipwrecked because they are based upon guesswork. I pointed out then that the census would be taken in 1931, and I further pointed out that when the census was completed we proposed to have the figures disclosed by the census so analyzed as to enable us to deal with the subject, assuming, as we did, that we might be able to make a satisfactory arrangement with the provinces. I therefore desire to make it perfectly clear that in pursuance of the statement which I then made, and which I shall

now read, it is the purpose of this government to have a conference of the province to determine what action may be agreed upon with respect to this and other matters. In that regard these words were used by me on April 29, 1931:—

‘Under those circumstances, with a census about to be taken and the necessary figures to become available, with our actuarial force willing and ready to tackle the problem from the angles that I have suggested, does any honourable gentleman think that we would be doing justice to the Dominion of Canada or to ourselves if we now passed a resolution asking the government immediately to do something which it is not equipped to do? I propose, if we are spared as a government and as individuals, that the information we will have before our term of office is ended shall be crystallized into the form of legislative proposals to be submitted to this House. I have never had any illusions as to what is involved; I have none now, I have never had any desire other than that the legislation placed upon the statute books, whether by this government or by some other, shall be legislation based upon knowledge, and not upon mere guesswork.’

“And I further said in the concluding words of my observations with respect to a contributory form of insurance:—

‘I say once more that this country will not produce men of the character it has had until men and women begin to realize that life means responsibilities and that one of those responsibilities is to help themselves. That is the only method by which social legislation can effectively and efficiently be enacted. Of that I feel quite certain. Whatever my reading and inquiries may be worth, I have satisfied myself quite clearly that in whatever we do in this regard we must recognize and realize that insurance involves premiums and premiums should be paid by the joint action alike of the insurer and the insured themselves and with the assistance of the state. In that sense, if the hon. gentleman is prepared to accept the suggestions I make, I say to him on behalf of the administration that, at the earliest possible moment consistent with obtaining information that is essential to make any measure of social insurance worth while, we will use that information for the purpose of preparing and submitting to this House a measure embodying the views I have expressed.’

“That was my statement on the 29th of April, 1931, I merely rise at this moment to reiterate and restate it.

“I was rather surprised that the honourable member for Winnipeg North Centre, who, I judge from what he said, has made careful inquiry into the matter, was not aware of the fact that the census figures to which I referred, despite the utmost efforts of those charged with the responsibility to complete them, had been only partly prepared within the last month; it will not be until after the turn of the year that we shall have a complete set of figures which will enable us with certainty to

present the matter to this House. That I am told by the chief statistician is the present condition. We have anxiously, and my colleague the Minister of Trade and Commerce (Mr. Stevens) has persistently endeavoured, to expedite the making available of this information. But it is not easy to do it. If any honourable gentleman desires to visit the chief statistician's office and learn just what is involved, he will understand why we have not that information at the moment. It was because of these facts that, as I have said, I would have preferred to make this statement after the House has reassembled and we shall have accomplished what we had in mind, namely the completion of our discussions with the provincial authorities, and, availing ourselves of the analysis of the figures supplied by the census department, the submission to our draftsmen of the skeleton of what we conceived to be the necessary measure to meet the situation that exists.”

Referring to the relief policy of the government, Mr. Bennett said:—

“This I should like to say, not to anticipate what will be said by the Minister of Labour at the appropriate time.\* Last spring the government called a meeting of representatives of the provinces, who concluded that it was not expedient to continue their efforts for relief along the lines that had prevailed therefore. They decided they would have recourse to direct relief. The conference was very well attended; half a dozen of our ministers were there, and that conclusion having been arrived at, the action indicated was taken. With respect to homeless single men the minister will indicate just how the effort has been made to relieve the provinces of responsibility in that regard; because we have realized that an obligation rests upon the Dominion in connection with the floating population of homeless single men who may belong to one province but become a charge in another. The minister on more than one occasion has made it abundantly clear that as far as our effort is concerned—and we have no direct contact either with the municipality or with the individual, our business being with the provinces, the constituted authority in that regard—it is to see that no one should lack at least food, shelter and clothing. That has been the effort, and so far as we are advised that effort has succeeded. It would be easy to point out cases of apparent and perhaps real destitution, but Parliament is not

\* The speech of the Minister of Labour, delivered in the House of Commons on the same day, is reproduced in part on page 1300 of this issue.

and cannot be the medium to care for that particular condition. It can act only through the constituted authorities, namely the provinces and the municipalities. In that regard I think our assistance at all times has been reasonably generous, and we have endeavoured to exercise such supervisions as might be reasonable without in any sense lessening the autonomy of the provinces or depriving them of their constitutional rights or jurisdiction.

"I do not intend to deal further with this matter, Mr. Speaker, I shall only summarize the situation by saying that the government has in course of preparation what we believe will be an appropriate agenda to submit to an interprovincial conference. It is proposed to call that conference so that it may conclude its labours between now and January 30, when the House will reassemble. At that conference

it is proposed to discuss all those matters that have engaged the attention of governments, both provincial and federal, with particular reference to the question referred to by myself on April 29, 1931, namely, the problem of unemployment and how it should be and may be dealt with under the divided jurisdiction which exists in Canada.

"One further word I should add, and it is this: It is not competent for me to discuss the merits or demerits of commissions or committees of this House, but I should like to point out that Parliament has no jurisdiction to appoint a federal relief commission. That is beyond our power; such a commission could not function for the very simple and obvious reason that more than one province has made it abundantly clear that they would not tolerate this interference in their business."

## UNEMPLOYMENT INSURANCE IN GREAT BRITAIN

### Final Report and Recommendations of Royal Commission

REFERENCE was made in the last issue (page 1144) to the recent publication of the final report of the Royal Commission on Unemployment Insurance which was appointed by the British Government towards the close of 1930. The majority report is signed by the Chairman, Judge Holman Gregory, K.C., and four members, Mr. H. Clay, Dr. H. J. Hetherington, Mr. E. C. P. Lascelles and Mr. H. M. Trouncer. There is a Minority Report signed by two members, Councillor W. Asbury and Mrs. C. D. Rackham, but the recommendations of the Commission on many points are unanimous. By their terms of reference the Commission were required to deal with the Unemployment Insurance scheme and with arrangements outside insurance. Under the former heading they recommend the retention of an unemployment insurance scheme substantially on the line of that at present in force. This, they say, will "provide a first line of defence over a large part of the field of employment for the great majority of the unemployed." They make recommendations on many of the technical details of the insurance scheme, but, as these do not affect the principles of the scheme, it is natural that the other subjects which come under their review—particularly the arrangements outside insurance (which may be described as the "Unemployment Assistance" scheme)—should bulk more largely in their Report. The report makes it clear that both the unemployment insurance scheme and the unemployment assistance scheme which are recommended should be

linked up with arrangements for the training and occupation of the unemployed during their unemployment. This is regarded as an essential part of the proposals.

For those of the unemployed who do not fall within either the insurance or the unemployment assistance scheme, there will remain the system of public assistance administered by the Local Authorities.

The report discusses the principles upon which unemployment insurance should be based. The degeneration of the insurance system during the last twelve years is attributed partly to undue optimism as to the temporary character of the high level of unemployment, and partly to the fact that, as the only alternative was the Poor Law, an intolerable burden would have placed upon local authorities in the distressed areas if they had been made responsible for the relief of all unemployed workers who had exhausted their right to benefit. It is, therefore, clear that the scope and provisions of the insurance scheme must depend largely on the arrangements that exist outside it, and these are accordingly discussed first.

The minority report rejects the idea of contributory insurance and urges that the same advantages can be achieved by a contributory scheme giving a statutory right to benefit to all who comply with the conditions. The scheme would pay benefit to the unemployed worker at a fixed rate as long as he continued unemployed, and without the application of the Means Test. The majority report, on the other hand, accepts the principle of Unemploy-

ment Insurance, and proposes in fact the codification of the existing state of affairs—namely, the dual system of insurance benefits, and State relief determined by a means test.

Apart from maintaining the original conception of unemployment insurance, the majority report suggests certain amendments to the existing system. An important one is the recommendation in favour of an independent commission on unemployment insurance to advise the Minister of Labour and to endeavour to keep the question as much out of politics as possible. It recommends the extension of the insurance system by lowering the age of entry, and extending the class of non-manual workers, though it does not recommend the inclusion of agricultural or domestic service. The rates of contributions should remain for the present, but the rate of benefit should be reduced to 15s. a week for adult males, and 13s. a week for adult females, with an increase in dependant's benefit for the first child. As regards the conditions of benefit, it is proposed that the principle of relating the period of benefit to the record of insurable employment be restored. Instead of a fixed period of 26 weeks, as at present, it should range from a minimum of 13 weeks to 39 weeks in a year, taking into account the contributions paid and the benefits drawn. As regards the other half of the plan, namely, the relief scheme, it is intended to include all able-bodied unemployed who are not for the time being entitled to insurance benefit, including non-insured trades such as agri-

culture. The principles which would guide the scheme of relief are, firstly, that assistance should be subject to proof of need; secondly, that need shall be judged after an assessment of the resources of the household; thirdly, that the amount of payment must be less than wages, and, fourthly, that standards should be established which experience shows to be required to relieve needs. In addition, the Commission recommends a series of rules designed to assist the local authorities in determining needs. The scheme would be administered by the local authorities.

The proposal of the Majority that the unemployed should be provided for under two separate schemes—insurance and relief—is, in the view of the Minority, fundamentally unsound: if the unemployed are to be provided for under two separate schemes domestic service should be included in the general scheme of insurance and a special scheme of insurance should be set up for agriculture. The Minority consider that the relief scheme should not be administered through the machinery or public assistance or through new machinery set up for the purpose. The Employment Exchange should be the centre for all the services for the unemployed whether on insurance benefit or on relief. The machinery of the Court of Referees should be used for the adjudication of all claims. Claimants should prove unemployment and receive payment of benefit and relief at the Exchange as is the case with those at present in receipt of transitional payments.

## UNEMPLOYMENT INSURANCE PLAN IN OHIO

IN November, 1931, the Governor of the State of Ohio appointed a Commission to investigate the subject of unemployment insurance, and in November this year the Commission submitted their report, together with a draft unemployment insurance bill. The report and recommendations are described in detail by Professor W. M. Leiserson, in the *Survey* (New York) for December. The commission recommend an unemployment insurance system based on strict insurance principles: "in this respect," it is stated "it differs fundamentally from the experiments in European countries, and from the unemployment compensation law adopted last winter in Wisconsin (LABOUR GAZETTE, April, 1932, page 379; March, page 323). It differs further from the European plans in that no part of the cost of insurance is to be paid by the state; taxpayers are required to make no contribution whatever, not even to the expense of administering the act. It differs

again from the Wisconsin act by providing that employees shall pay a part of the premiums with which the insurance is to be purchased. In effect it would set up a mutual insurance company, maintained and administered jointly by the employers and the working people of the state, in which substantially all industries and their employees would be compelled to insure their risks of unemployment under strict control and regulation by the state."

The commission based their report upon the four following principles: (1) Unemployment is inevitable; (2) Distress from unemployment is preventable; (3) Wage-earners cannot provide against this distress, and (4) Insurance can prevent it. On the question whether a sound actuarial basis can be found for this form of insurance, the report quotes Mr. Haley Fiske, late president of the Metropolitan Life Insurance Company, who stated in 1925: "At least one company feels

that the problems of writing unemployment insurance are not unsurmountable, and it is optimistic about the practicability of this type of insurance. As soon as the insurance laws of the state are amended so that it may offer this type of coverage, it will do so."

The Ohio Bill would establish an unemployment insurance fund similar to the Workmen's Compensation Fund of the state, in which substantially all industries and their employees are required to insure their risks of unemployment. It would pool all the risks in one fund on strict insurance principles. The proposed fund is to be administered by the state as a trustee, without liability on the part of the state beyond the amounts paid in by employers and employees and the money earned by the fund. The Act would provide that the unemployed must register at the public employment offices, and their unemployment under the insurance will be reckoned from the time of registration. After the waiting period, payments of benefits will be made at the employment office, and those drawing benefits will be required to report regularly for any other work that may be available. The offices, in touch with opportunities for employment, will thus in normal times offer a work-test for those claiming benefits. There are eleven such offices in Ohio operated by the State Department of Industrial Relations. These would be transferred to the unemployment insurance authority, which would be authorized to divide the state into employment districts and to locate in each as many offices as may be necessary to administer the act. "By interlocking the employment service with the insurance system, provision is made for cutting down the out-of-work period, and to that extent controlling the bulk of unemployment. Similarly, the contributory provisions will give all working employees a personal interest in conserving the fund from which their own protection in the long run must come. Nor does the plan neglect the necessity for stimulating employers to regularize. Three years after the law goes into effect, there will be enough experience and records to determine which industries and employments are responsible for the most unemployment. A merit-rating system is then to be introduced after the manner of the successful workmen's compensation rates in Ohio. The unemployment insurance commission will classify industries and occupations, and fix rates according to the risk in each class. The bill authorizes a maximum premium of  $3\frac{1}{2}$  per cent of the payrolls for those employers whose supply of work is least regular; a minimum rate of 1 per cent

for those that have achieved relatively steady work. As in accident insurance, it is thought that such a sliding scale will not only more justly distribute the cost of insurance but will provide incentives for stabilizing. None the less the main features of the bill assume that the total reduction in unemployment that can be brought about by the preventive efforts of employers is bound to be small compared with the number of the unemployed who will need relief if not protected by insurance.

"The Commission felt that a minimum standard of benefits for unemployed working people should be 50 per cent of normal weekly earnings for a period of not less than fifteen weeks; with a maximum of \$15 per week. This, according to the unemployment experience of Ohio, could not be secured at a cost of much less than 3 per cent of the payroll. It was deemed unlikely that a contribution of more than 2 per cent from employers could pass the legislature. If the employers alone contributed and the premium was 2 per cent of payrolls, nothing like adequate benefits could be assured to unemployed workers. Therefore a 3 per cent fund was decided upon with the employees contributing one-third, or 1 per cent of their weekly wages. There were two additional reasons for adopting the contributory plan. The first was the desire to emphasize the feeling of self-help and self-respect that comes from paying in one's own insurance; and with this went the idea already noted of engaging the personal interest of every participant in conserving the fund. The second reason was the need for giving employees a voice in its administration. To insure successful operation this must be decentralized. There will have to be local appeal boards representing employers and employees as well as similar representation in the central body. Unless employees contribute their own money to the fund, their voice in the management of the insurance system is likely to be nominal.

"The waiting period before benefits begin is three weeks in the Ohio bill, instead of the two weeks commonly provided in bills introduced in American legislatures. By increasing the waiting period one week, it was found possible to extend the period during which benefits could be paid by several weeks.

"The Commission publishes a table showing the various amounts of protection against unemployment that can be bought for various premiums ranging from 2 per cent of the employers' payrolls to  $4\frac{1}{2}$  per cent. Thus a premium as low as 2.3 per cent of the payrolls would purchase benefits of 50 per cent of normal weekly wages (with a maximum

of \$15 per week) over a period of 13 weeks, but the waiting period before benefits could begin would have to be four weeks. A premium as high as 4.5 per cent on the other hand would purchase the same benefits of half-pay (with a maximum of \$17.50) over a period of 26 weeks and with only a two-week waiting period.

"On the basis of such calculations as these the Commission concludes that 'employers and employees together can easily afford to make the small payments necessary to purchase enough insurance to pay for from one-third to one-half of the wage losses caused

by unemployment, and thus provide enough income to keep self-respecting working people from becoming public charges.' Specifically it recommends that at the start 3 per cent of payrolls be fixed as the premium to be paid for unemployment insurance in Ohio, 2 per cent to be paid by the employers and 1 per cent by employees. This will purchase the following amount of insurance: 'A benefit of 50 per cent of the normal weekly wage of the insured beginning after a waiting period of three weeks and payable for a period of sixteen weeks, the maximum benefit in no case exceeding \$15 per week.'"

### Voluntary Labour Service in Germany

A voluntary labour service for young men was established in Germany in January, 1931, as a means of combating unemployment and of promoting physical and moral welfare, and has since been growing steadily in importance. *Industrial and Labour Information*, Geneva, in its issue of November 7 gives a summary of an article by the chairman of the German Federal Institution for Employment Exchanges and Unemployment Insurance, explaining the purpose, aims and organization of the voluntary labour service.

There are upwards of four million young men between the age limits of 18 and 25 years in Germany, and it was estimated that on July 30 last one-quarter of this total were unemployed. The voluntary labour service plan provides for the employment of unemployed young persons on special classes of work, such as land improvement and drainage, improvement to means of communication, forestry, work on settlements and allotments, all of which is carried out in the open air. This service cannot be used for normal productive work, as this would be an unwarrantable interference with private enterprise, and is practically restricted to useful public works which can be carried out without any great supply of raw materials and without machinery and by workers who are mostly strangers to this class of employment.

The labour service is at present entirely voluntary, but it is in receipt of financial support from the Federal Government. A man entering voluntary labour service does not receive unemployment benefits, but the employing organization receives a subsidy not exceeding two marks per worker for each working day, which must be expended on accommodation, food, working clothes and pocket money for those employed. The subsidy is paid for twenty weeks, or in exceptional cases for forty weeks. It is further provided that in addition to this subsidy a sum not exceeding 360 marks under certain

conditions is to be placed to the credit of voluntary workers by the Federal Government to help them to become settlers. The workers employed under this scheme are insured against sickness and accident, retain their acquired rights under pensions insurance and are covered by protective labour legislation. Most of the work is carried on by public bodies, public utility associations or foundations, and associations of groups of voluntary workers. Undertakings carried on for profit may employ voluntary workers only when the results of the work will entirely, or in great measure, be of direct benefit to the community. In more than half of the cases, employing organizations have so far been public bodies, generally for the purpose of land cultivation and drainage.

The voluntary labour service is supervised by a Federal Commissioner, assisted by thirteen district commissioners for the different states. These officers are responsible for deciding what work is desirable from the local economic, social and financial point of view. A sum of fifty million marks from the Federal budget of Germany was placed at the disposal of the Federal Commissioner for the support of this work on August 1 last. It was expected that this sum would provide for approximately 26 million days of employment up to the end of the financial year on March 31, 1933. The expectation of the administrative authorities was that the number to be employed in the voluntary labour service during the winter would be 200,000 persons.

Although the compulsory labour reserve in Germany is at present entirely voluntary, the plans of the Federal government do not exclude the possibility of its transformation in the light of future experience. The beginnings of the compulsory labour service may be seen in the proposal put forward by the Federal Chancellor that in future students should work for a year after leaving the secondary school and before attending the university.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN OCTOBER, 1932

THE following information as to the employment situation in Canada is based upon report from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on November 1, was 8,125, the employees on their payrolls numbering 780,301 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

October was 1,765, having an aggregate membership of 162,682 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

### (1) Employment Situation at the Beginning of November, 1932, as Reported by Employers

There was rather more than the customary seasonal contraction in industrial activity at the beginning of November, reversing the favourable movement of the preceding month, and bringing the index, after correction for seasonal influences, to a point slightly below the September 1 level. The 8,125 firms furnishing employment returns to the Dominion Bureau of Statistics reported 780,301 workers, compared with 799,100 on October 1. Reflecting this reduction, the index number declined from 86.7 in the preceding month to 84.7 on the date under review, as compared with 103.0 on November 1, 1931. On the same date in the ten preceding years, the index was as follows: 1930, 112.9; 1929, 124.6; 1928, 118.9; 1927, 108.8; 1926, 104.0; 1925, 98.3; 1924, 94.1; 1923, 100.0; 1922, 97.0 and 1921, 91.3.

Pronounced seasonal curtailment took place in manufacturing, notably of lumber, food and iron and steel products. The general declines in factory employment were smaller than those recorded at the beginning of November in 1931, 1930 and 1929, although they exceeded the losses in most of the earlier years of the record. Continued improvement was shown in textiles, and pulp and paper mills were also more active. Among the non-manufacturing groups, there were reductions in communications, transportation, construction and services, with increases in logging, coal and metallic ore mining and retail trade. These changes were generally seasonal in character.

#### Employment by Economic Areas

The tendency was upward in the Maritime Provinces, while elsewhere losses were recorded.

*Maritime Provinces.*—There was a considerable increase in employment in the Maritime Provinces on November 1, 1932; most of the gain took place in manufacturing (notably of iron and steel products), and in logging, coal-mining and highway construction. On the other hand, shipping and building and railway construction were slacker. Returns were received from 585 employers, with 60,521 workers on their payrolls, or 1,456 more than at the beginning of October. Largely owing to unemployment relief works then underway, a much greater increase had been indicated on November 1, 1931, when the index was considerably higher.

*Quebec.*—There was a large reduction in Quebec, where the 1,964 co-operating firms reduced their staffs by 6,166 employees, bringing them to 226,902 on November 1. Logging, local transportation, animal food and non-ferrous metal factories and retail trade reported improvement, while construction and manufacturing as a whole registered considerable curtailment. Within the manufacturing group, the lumber, tobacco, textile, pulp and paper and iron and steel divisions showed contractions, that in the last named being most pronounced. Employment was in less volume than on the same date in 1931,

although the reported decreases were then much more extensive.

*Ontario.*—Employment declined in Ontario, the losses being on a somewhat larger scale than those indicated on October 1 last year, when the index was higher. The most marked recessions on the date under review were mainly of a seasonal nature in construction, transportation, canning, saw-milling and iron and steel plants, while pulp and paper, rubber and textile factories, logging and retail trade were busier. A combined working force of 316,103 persons was reported by the 3,615

the other hand, manufacturing, building, highway and railway construction, transportation and services showed contractions. Within the manufacturing group, lumber, clay, glass and stone and iron and steel reported the largest losses.

*British Columbia.*—Decreased employment was recorded by the 796 employers furnishing returns in British Columbia; their staffs aggregated 63,530, compared with 67,280 in the preceding month. The reduction occurred very largely in manufacturing, chiefly of food and lumber products, and in transportation,

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

employers whose data were tabulated, and who had 322,854 on their payrolls in the preceding month.

*Prairie Provinces.*—As is usually the case at this time of year, there was a decrease in the Prairie Provinces on November 1, 1932. The decline involved a greater number of workers than that noted in the autumn of 1931, when the index was higher, largely owing to the extensive programs of unemployment relief work then being carried out on the Highways. Returns were compiled from 1,165 firms having 113,245 employees, as against 116,837 on October 1, 1932. Coal-mining and retail trade afforded considerably more employment; on

construction and trade. Pulp and paper mills and logging, however, showed rather more activity. Employment was in smaller volume than on November 1 last year, when the movement was decidedly favourable, largely owing to the unemployment relief projects then underway.

Table I gives index numbers of employment by economic areas.

### Employment by Cities

Additions to staffs were registered in Hamilton and in Windsor and the adjacent Border Cities, while in Montreal, Quebec City, To-

ronto, Ottawa, Winnipeg and Vancouver there were reductions.

*Montreal.*—The trend of employment in Montreal was downward, 5,007 persons having been let out from the staffs of the 1,120 co-operating firms, who employed 125,651. Manufactures, construction and transportation reported reduced activity, while there were gains in retail trade. Within the manufacturing group, there was curtailment in textile, leather, tobacco and beverage and iron and steel

plants; the iron and steel industry reported a very large share of the general decrease. Declines had also been noted on November 1, 1931, but the index was then several points higher.

*Quebec City.*—Employment showed a falling-off in Quebec, according to 152 employers of 12,364 persons, compared with 12,554 on October 1. Construction and manufacturing indicated contractions, while other industries recorded only slight changes. Employment as

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS,  
(AVERAGE CALENDAR YEAR 1926=100)

Relative Weight of Employment by Districts as at Nov. 1, 1932.....	100.0	7.8	29.1	40.5	14.5	8.1

reported by employers was in smaller volume than on the same date of last year, although larger losses had then been noted.

*Toronto.*—There was a reduction in the number of workers on the payrolls of 1,229 firms in Toronto, who had 110,929 persons in their employ, or 918 fewer than in the preceding month. Most of the decline took place in manufacturing (notably in iron and steel), and in building and transportation, while trade was seasonally busier. A much larger loss had

been registered at the beginning of November of a year ago, but the index was then higher.

*Ottawa.*—In Ottawa, curtailment was shown in construction, while manufacturing was slightly more active and the changes in the other groups were small. The 156 employers furnishing data reported 11,983 workers, as against 12,032 on October 1. Employment was in less volume than on the same date in 1931, when the contractions indicated had involved a much greater proportion of the payroll.

**NOTE.**—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative Weight of employment by Cities as at Nov. 1, 1932.....	16.1	1.6	14.2	1.5	3.1	1.0	4.5	3.5

*Hamilton.*—Employment continued to increase slightly in Hamilton, where the 241 co-operating firms employed 24,503 persons, or 66 more than at the beginning of October. Manufacturing was brisker, chiefly in the textile and iron and steel groups, but building and transportation afforded rather less employment. A small increase had also been reported on November 1 of last year, but the index was then higher.

*Windsor and the Adjacent Border Cities.*—Activity in the Border Cities showed an advance; 135 employers reported 7,978 persons on their payrolls, compared with 7,469 at the beginning of October. The improvement took place largely in automobile plants, in which, however, activity was generally less than it had been in the weeks intervening since the last report. Reductions had been indicated on the same date a year ago, but employment

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

was then a few points above its level on November 1, 1932.

*Winnipeg.*—Employment in Winnipeg was slacker, according to 394 firms employing 34,882 workers at the beginning of November, as compared with 35,332 in their last report. Trade reported seasonal advances, but manu-

facturing (particularly iron and steel works), transportation and construction released help. A greater falling-off had been recorded on November 1, 1931, when employment was, however, at a higher level.

*Vancouver.*—There was a downward movement in Vancouver, where 342 employers had

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight	Nov. 1, 1932	Oct. 1, 1932	Nov. 1, 1931	Nov. 1, 1930	Nov. 1, 1929	Nov. 1, 1928

All industries.....	100.0	84.7	86.7	103.0	112.9	124.6	118.9

The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

27,151 persons on their staffs, or 230 fewer than in the preceding month. Manufacturing, on the whole, showed no change, while trade, transportation and communications were quieter. Employment was not so brisk as at the beginning of November of last year, improvement having then been reported.

Index numbers by cities are given in Table II.

### Employment by Manufacturing Industries

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the iron and steel, lumber and food-canning industries, although there were also losses in leather, building material, electric current, non-metallic mineral and tobacco and beverage works. On the other hand, pulp and paper, textile, rubber, electrical apparatus and non-ferrous metal factories registered advances. The 4,974 co-operating manufacturers reported 405,821 operatives, as against 417,792 at the beginning of October. This decline involved fewer workers than that shown on November 1 in each of the last three years, but the index numbers then were many points higher.

*Animal Products—Edible.*—Dairies and fish canneries reported seasonal curtailment while meat-packing plants afforded slightly more employment. Statistics were received from 235 manufacturers employing 17,822 persons, as compared with 19,868 in the preceding month. This contraction, which took place chiefly in Ontario and British Columbia, was much larger than that registered on the corresponding date last year, when activity was generally greater.

*Leather and Products.*—There was a falling-off in employment in this group on November 1, chiefly in boot and shoe factories in Quebec. The 244 firms furnishing data reported 18,137 workers, as against 18,384 on October 1. The index was fractionally higher than on the same date in 1931; the decline then noted had been larger.

*Lumber and Products.*—Further contractions, involving a decidedly smaller number of employees than in the autumn of last year, were indicated in the lumber group, in which employment was, however, in less volume than in November of a year ago. The losses on the date under review took place chiefly in rough and dressed lumber mills, but container plants were also slacker, while furniture works showed improvement. A combined working force of 28,444 persons was reported by the 760 co-operating manufacturers, as compared with 30,146 at the beginning of October. There were decreases in all provinces.

*Musical Instruments.*—Practically no change in staffs was indicated in musical instrument factories 37 of which reported 1,401 workers. Employment was in smaller volume than at the beginning of November, 1931, when the tendency had been slightly upward.

*Plant Products—Edible.*—Fruit and vegetable canneries made large seasonal reductions in their payrolls, while chocolate and confectionery factories showed an advance. The forces of the 398 reporting firms aggregated 31,923 persons, or 2,657 fewer than in their last return. Employment declined considerably in Ontario and British Columbia, while elsewhere the changes were small. This curtailment involved more workers than that registered on the corresponding date last year, but the index number was then slightly lower than on the date under review.

*Pulp and Paper Products.*—There was a large increase in the staffs reported by employers in this group, 566 of whom had 53,055 workers on their payrolls, as compared with 52,607 at the beginning of October. Improvement was recorded in pulp and paper mills and in printing and publishing houses. The tendency was favourable in all provinces except Quebec, the greatest gains taking place in Ontario. Little general change had been indicated at the beginning of November a year ago, but the index was then higher.

*Rubber Products.*—Employment in rubber goods showed a slight increase on November 1; data were compiled from 42 firms with 10,438 employees, as against 10,303 in their last report. This increase took place in Ontario. Employment was at a lower level than on November 1, 1931, when an advance had also been noted.

*Textile Products.*—Hosiery and knitting, cotton and woollen factories reported heightened activity, but the production of garments and personal furnishings and headwear showed a falling-off; 864 textile manufacturers enlarged their payrolls from 83,671 on October 1 to 84,160 on the date under review. The increases were recorded largely in Ontario. A loss had been shown at the beginning of November last year, when the index was several points lower.

*Tobacco, Distilled and Malt Liquors.*—There was a considerable decline in employment in tobacco and beverage factories, according to the 155 establishments furnishing statistics, which employed 14,150 persons, as compared with 14,875 on October 1. Most of the reduction occurred in Ontario. Improvement had been indicated on the corresponding date last year, and employment was then in greater volume.

*Chemicals and Allied Products.*—A small gain was recorded in this group, in which statements were furnished by 139 plants employing 7,990 persons, or 85 more than in their last report. Activity was less than in the autumn of 1931, although the tendency had then been downward.

*Clay, Glass and Stone Products.*—Seasonal curtailment was indicated in building material plants, chiefly in Ontario and the Prairie Provinces; employment generally was at a lower level than on November 1, 1931. The forces of the 189 employers from whom information was received, declined by 959 persons to 6,577 at the beginning of November, 1932.

*Electric Current.*—Employment in the production of electric current showed a contraction, 305 workers being released from the forces of the 93 co-operating manufacturers, who employed 13,782 persons. Similar declines had been indicated in this industry on November 1 of last year, when the index was higher.

*Electrical Appliances.*—Improvement was reported in electrical apparatus works, 96 of which had 11,570 employees, or 109 more than in their last report. A falling-off had been reported on the same date last year, but employment was then in greater volume.

*Iron and Steel Products.*—The crude, rolled and forged, automobile and wire product divisions showed moderate improvement over the preceding month, while the railway shop, machinery and some other divisions of the iron and steel group registered reduced activity. Statements were received from 772 manufacturers whose payrolls aggregated 75,318 persons, as compared with 79,979 in the preceding month. Employment declined in all except the Maritime Provinces, the losses in Quebec being most noteworthy. The curtailment indicated at the beginning of November last year was not so pronounced and employment then was more active than on the date under review.

*Non-ferrous Metal Products.*—Data tabulated from 132 firms in the non-ferrous metal group showed that they employed 12,852 workers or 167 more than on October 1. The improvement was registered largely in aluminum works. Employment was slacker than on the same date of 1931, although losses in personnel had then been reported.

*Non-metallic Mineral Products.*—There was a decline in employment in non-metallic mineral product factories, 108 of which released 186 persons, bringing their staffs to 11,807 at the beginning of November. Estab-

lishments in Ontario reported most of the reduction. The index was lower than on November 1, of last year, when the curtailment had involved a slightly smaller number of persons.

### Logging

Statistics were tabulated from 218 firms employing 10,380 men, or 2,656 more than in the preceding month. This advance was much smaller than that reported at the beginning of November, 1931, and employment was then more active than on the date under review, when it was, in fact, at a lower level than in the early winter of any other year on record. The greatest increases on the date under review occurred in the Maritime Provinces, although all five economic areas shared in the improvement over October 1, 1932.

### Mining

Coal mining afforded much more employment, and metallic ore extraction was also brisker, while quarries and other non-metallic mineral mines were slacker. Statements were compiled from 232 mine operators, with 45,770 employees, or 1,363 more than in their last report. Of the total employees recorded on the date under review, 25,195 belonged in the coal-mining, 15,932 in the metallic ore and 4,643 in the non-metallic group. A slight recession had been indicated, on the whole, on the same date in 1931, but the index then was above its level at the time of writing.

### Communications

Telephones and telegraphs showed a seasonal contraction in employment; the companies and branches making returns had 23,558 workers on their payrolls, a loss of 424 since October 1. Conditions were not so good as on November 1, 1931, when a similar falling off had been noted.

### Transportation

*Street Railways and Cartage.*—There was a reduction in employment in local transportation, according to 181 firms whose staffs aggregated 25,317 at the beginning of November. Small gains in Quebec were offset by losses in Ontario and the Western Provinces. Activity was rather less than on the corresponding date in 1931.

*Steam Railways.*—Statistics were tabulated from 100 divisional superintendents and other employers in the railway operation group, in which their payrolls decreased by 2,467 persons to 59,242 on November 1. Declines were recorded in the five economic areas, those in the Prairie Provinces being most pronounced.

Employment was not so brisk as in the autumn of 1931; much smaller contractions had then been indicated.

*Shipping and Stevedoring.*—Losses were noted in water transportation, 90 companies employing 15,290 workers, as compared with 15,844 in the preceding month. There were losses in the Maritime Provinces and Ontario. Improvement had been shown on November 1 last year, and the situation was then more favourable.

### Construction and Maintenance

*Building.*—There was an important decrease in building, 2,702 persons being let out from the forces of the 665 co-operating contractors, who had 16,998 employees, a number considerably less than that reported by the firms making returns at the beginning of November, 1931; the losses then indicated had involved a smaller number of persons. The largest decline took place in Quebec and Ontario.

*Highways.*—Work on highways and streets decreased to some extent, in spite of increases in the Maritime Provinces. Curtailment in this group is usually indicated during the autumn, although unemployment relief works had last year caused a reversal of this trend; the index at the beginning of November was lower than on the same date of 1931. Statements were tabulated from 352 employers, whose staffs, standing at 47,153, were smaller by 969 persons than on October 1.

*Railways.*—Curtailment of railway construction work was recorded, especially in Ontario and the Prairie Provinces. The forces of the 35 companies and divisional superintendents furnishing returns declined from 27,285 persons on October 1, to 25,401 at the beginning of November. This shrinkage was on much the same scale as that registered on the corre-

sponding date in 1931, when the level of employment was considerably higher.

### Services

There was a continued falling-off in the personnel of hotels and restaurants, as the tourist and vacation season closed. The other groups coming under the service heading showed little general change; 311 firms in this division employed 20,723 persons, as against 21,404 at the beginning of October. The index was lower than on November 1, 1932, although much greater contractions had then been indicated.

### Trade

The trend of employment in trade was again upward, 1,009 workers being added to the forces of the 885 retail and wholesale establishments furnishing returns, whose staffs aggregated 84,648. The advance took place in the former division. The index, standing at 115.4, was some seven points lower than on November 1, 1931; it was also below the level of the preceding three years, but was higher than in earlier years of the record. Further pronounced gains in employment may be expected during the next few weeks, in preparation for the Christmas and holiday trade. The increases recorded on the corresponding date last year gave employment to a rather larger number of workers.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of October, 1932

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Workers who are occupied in employment other than their own trades, or who are idle owing to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment as reported by local trade unions at the end of October showed the first

increase to be registered since April, the 1,765 labour organizations from which reports were received, with 162,682 members indicating 22.0 per cent of idleness in comparison with 20.4 per cent in September. Greater depression was in evidence than in October, 1931, when 18.3 per cent of inactivity was recorded. In Ontario and Nova Scotia only fractional improvement in conditions from September was noted while the other provinces reported an unfavourable employment volume, Quebec with a 4 per cent drop in activity showing the most important employment losses. This curtailment in Quebec was due to a large extent to dullness prevailing in the garment trades of Montreal, though employment generally

throughout the provinces was on a somewhat smaller scale. From New Brunswick employment recessions of 3.6 per cent from September were reported, the manufacturing industries, particularly the iron and steel trades, being a notable factor in this unfavourable movement. In the majority of provinces, however, railway operation and the iron and steel trades were affected to some degree by railway car shop closings, which became effective on October 21 and extended throughout the month. All provinces participated in the downward employment trend indicated from October, 1931, New Brunswick unions showing considerable curtailment of operations during the month reviewed, though pro-

couver the recessions noted were of lesser degree, the Saint John situation being but nominally adverse. Some slight lessening of the unemployment volume from October last year was reflected by Regina and Vancouver unions, though conditions in these two centres still remained quite slack. On the other hand, the situation for Halifax and Saint John unions was distinctly unfavourable as compared with October a year ago, and contractions in activity on a much smaller scale were reported by Edmonton, Montreal, Winnipeg and Toronto unions.

From the chart which appears with this article it will be noticed that the curve, after pursuing a steadily downward course from

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

nounced declines in activity were also apparent among Alberta, Ontario and Quebec unions.

The returns on unemployment for the largest city in each province with the exception of Prince Edward Island are tabulated separately each month. Of the cities used in the comparison Toronto alone reported a better situation during October than in the previous month, although the gains were but moderate. Decidedly less active conditions were registered in Montreal where unemployment showed a rise of over 7 per cent from September, due mainly to quietness prevailing in the garment trades. In Edmonton the volume of work available was reduced by about 4 per cent, Winnipeg showing a drop in activity of 3.5 per cent. From Regina, Halifax and Van-

April, showed some change in October, the projection being upward due to the greater prevalence of unemployment during the month reviewed. The curve, however, rested at a level somewhat above that in October, 1931, when a better volume of employment was offered.

The manufacturing industries showed an increase in idleness of 3 per cent during October over the previous month, quietness in the garment trades of Montreal influencing largely the percentage for the group as a whole, adversely. For October returns were tabulated from 475 unions in the manufacturing industries, with a total of 45,056 members, of whom 10,928 or 24.3 per cent were without employment on the last day of the month contrasted with 21.3 per cent in September.

Small scale reductions in comparison with those shown by garment workers were reflected by wood, glass, fur, textile, brewery and leather workers, metal polishers and bakers and confectioners. The iron and steel trades reported almost the same situation as in September, though fluctuations were apparent in the various provinces. In the printing trades also and among general labourers fractional changes only occurred. Hat and cap makers and cigarmakers, on the other hand, reported substantial improvement, and the

tendency for pulp and paper makers was better though the change was slight. Less favourable conditions also prevailed in the manufacturing industries than in October, 1931, when 21.0 per cent of idleness was recorded. As in the previous comparison inactivity for garment workers accounted in large measure for the change. A noteworthy drop in employment was reported by hat and cap makers who, however, form a small share of the total membership in the manufacturing industries, and among textile workers, general labourers, pulp and paper makers, and printing tradesmen the situation also showed a decline. A much better employment volume, however, was afforded wood workers, cigarmakers and metal polishers than in October last year, leather workers showing moderate gains.

Employment in the mining industry was slightly retarded during October from the previous month, the 46 unions making returns, with 14,362 members indicating an unemployment percentage of 13.3 in contrast with 12.3 per cent in September. This decrease in activity from September took place in the Nova Scotia coal fields, Alberta and British Columbia mines showing a nominally improved situation. Nova Scotia, Alberta and British Columbia miners all participated in the unfavourable employment movement shown from October, 1931, when 6.2 per cent of unemployment was recorded in the mining group as a whole, the western provinces especially sharing heavily in the losses. Short time work was also in evidence among miners to a noteworthy degree.

In the building and construction trades during October activity tended slightly upward from September, though conditions were still quite depressed, 59.6 per cent of idleness being recorded in comparison with 61.5 per cent in September. The October percentage was based on the reports tabulated from 227 unions of building tradesmen, with 20,329 members, of whom 12,122 were without work on the last day of the month. Bricklayers, masons and plasterers were afforded a much better employment volume than in September, and among painters, decorators and paperhangers the situation was substantially improved. Increased activity on a much smaller scale, was reported also by carpenters and joiners. On the contrary, hod carriers and building labourers, and granite and stonecutters reported fair-sized employment recessions, with more moderate declines among plumbers and steamfitters. The tendency for tile layers, lathers and roofers and electrical workers was also less favourable than in September though the changes were slight. Increased slackness was apparent in the building and construction trades from Oc-

tober, 1931, when 49·7 per cent of idleness was recorded, tile layers, lathers and roofers, and painters, decorators and paperhangers alone reporting a better trend during the month reviewed, though the improvement for the latter named tradesmen was practically negligible. On the other hand, hod carriers and building labourers, granite and stonecutters, plumbers and steamfitters, bridge and structural iron workers, and carpenters and joiners suffered heavy employment losses during the month surveyed. Among electrical workers also noteworthy declines occurred, bricklayers, masons and plasterers showing but a slightly less favourable situation.

The transportation industries, as a whole, showed some curtailment of activity during October from the previous month, particularly in the steam railway group, which was noticeably affected by shutdowns in railway car shops towards the close of the month. For October returns were received from 772 unions in the transportation industries, with 60,362 members, 12·9 per cent of whom were idle on the last day of the month contrasted with 11·3 per cent in September. As previously stated, restricted steam railway activities were largely responsible for the adverse change during October while among street and electric railway employees, the recessions were less than 1 per cent. Some lessening of the unemployment volume was evidenced by navigation workers during October, and teamsters and chauffeurs were slightly better engaged. Activity in the transportation industries was somewhat retarded from October, 1931, when 10·9 per cent of idleness was recorded, steam railway employees, navigation workers, street and electric railway employees, and teamsters and chauffeurs all contributing in varying measures to this less favourable situation.

An almost unchanged employment volume was afforded retail clerks during October from the previous month, employment for these workers being quite brisk, the 6 unions making returns with a combined membership of 1,106 persons showing 2·0 per cent of idleness compared with 1·9 per cent in September. Nominal improvement in conditions was shown from October, 1931, when 2·8 per cent of unemployment was recorded.

Civic employees indicated moderate gains in employment during October, as shown by the reports tabulated from 73 unions with 7,316 members. Of these 388 were reported idle on

the last day of the month, a percentage of 5·3 in contrast with 7·1 per cent in September. The employment level, however, was somewhat reduced from October last year when 2·2 per cent of the members reported were without work.

Little variation in conditions was indicated in the miscellaneous group of trades during October from September, the 118 unions furnishing reports with 4,357 members showing an unemployment percentage of 20·8 contrasted with 20·0 per cent in the preceding month. Among stationary engineers and firemen the situation declined by about 4 per cent, with lesser reductions among hotel and restaurant employees and barbers. On the other hand, theatre and stage employees and unclassified workers reported a slightly higher level of activity. Compared with the situation in the miscellaneous group of trades during October, 1931, when 19·5 per cent of the members reported were idle, stationary engineers and firemen, theatre and stage, and hotel and restaurant employees all showed noteworthy employment recessions during the month reviewed. Among unclassified workers a considerably better volume of work was available, and slight gains occurred for barbers.

Fishermen reported 21·3 per cent of idleness in October contrasted with percentages of 10·6 in September and 15·6 in October last year. The percentage for the month reviewed was based on the reports received from 2 associations of these workers, with a membership aggregate of 705 persons.

Unemployment for lumber workers and loggers eased up to some extent during October, though conditions were still very slack, the 4 unions from which reports were received, with a membership total of 1,299 persons, showing 36·3 per cent of idleness contrasted with 42·3 per cent in September. Slightly less work was available than in October, 1931, when the percentage of unemployment stood at 34·1.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1931 inclusive, and also the percentage of unemployment by provinces for October of each year from 1919 to 1929 inclusive, and for each month from January, 1930, to date. Table II summarizes the returns in the various groups of industries for the same months as Table I.

### (3) Employment Office Reports for October, 1932

During the month of October, 1932, reports from the offices of the Employment Service of Canada showed a decline from the preceding month of 26 per cent, and from October last year of 57 per cent in the average daily placements effected. The decline from September was due chiefly to curtailment in farming operations, though services, manufacturing, trade and transportation also showed fewer placements. These losses were counteracted in part by a substantial gain in construction and maintenance and by much smaller increases in logging and mining. In comparison

vacancies and placements in relation to applications dropped about ten points during the first half of October, with a further decline of over four points during the latter half of the month, and at the close of the period reached a level 26 points below that shown at the end of October a year ago. The ratio of vacancies to each 100 applications was 43.5 during the first half and 38.6 during the second half of October, 1932, in contrast with ratios of 68.4 and 64.6 during the corresponding periods of 1931. The ratios of placements to each 100 applications during the periods under review

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

with the corresponding month last year, all groups, except transportation, recorded reduced placements, the gain in the last-mentioned group being negligible and the loss in the highway division of construction and maintenance, which was very heavy, responsible for almost the entire decline.

The accompanying chart shows the trend of employment since January, 1930, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Employment Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of

were 41.3 and 37.1, as compared with 66.6 and 63.7 in the corresponding month of 1931.

The average number of vacancies referred daily by employers to the offices of the Services throughout Canada during October, 1932, was 929, as compared with 1,285 during the preceding month and with 2,108 in October a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,276, in comparison with 2,138 in September, 1932, and with 3,174 during October last year.

The average number of placements made daily by the Offices of the Service during Octo-

ber, 1932, was 889, of which 398 were in regular employment and 491 in work of one week's duration or less, as compared with a total daily average of 1,198 during the preceding month. Placements in October a year ago averaged 2,067 daily, consisting of 1,051 placements in regular and 1,016 in casual employment.

During the month of October, 1932, the Offices of the Employment Service referred 23,858 persons to vacancies and effected a total of 22,205 placements. Of these, the placements in regular employment were 9,930, of which 6,522 were of men and 3,408 of women, while placements in casual work totalled 12,275. The number of vacancies reported by employers was 16,388 for men and 6,834 for women, a total of 23,222, while applications for work numbered 56,877, of which 43,511 were from men and 13,366 from women.

The following table gives the placements effected by the Offices of the Employment Service of Canada, each year, from January, 1922, to date:

Year	PLACEMENTS		
	Regular	Casual	Totals
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155

1928.....	334,604	135,724	470,328
1929.....	280,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932 (10 months).....	125,299	170,340	295,639

#### NOVA SCOTIA

During the month of October, positions offered through Employment Offices in Nova Scotia were nearly 93 per cent higher than in the preceding month, but nearly 24 per cent lower than in the corresponding month last year. Placements were nearly 99 per cent higher than in September, but over 23 per cent less than in October, 1931. The decrease in placements from October of last year was due to losses in construction and maintenance and services, as small declines in farming, logging and transportation were offset by corresponding gains in manufacturing, finance and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 21; construction and maintenance, 506; trade, 50; finance, 22; and services, 293, of which 211 were of household workers. During the month 80 men and 56 women were placed in regular employment.

#### NEW BRUNSWICK

There was a gain of nearly 12 per cent in both the number of positions offered and placements effected when compared with the preceding month, but a decline of 34 per cent in comparison with the corresponding month of last year. As in Nova Scotia, the reduction in placements from October, 1931, was due to declines in construction and maintenance and services. The changes in all other groups were unimportant. Placements by industries included manufacturing, 20; construction and maintenance, 634; and services 402, of which 287 were of household workers. Placements in regular employment numbered 19 of men and 42 of women.

#### QUEBEC

Orders received at Employment Offices in the Province of Quebec were nearly 8 per cent less than in the preceding month, but 9 per cent above the corresponding month last year. There was a decline of over 10 per cent in placements when compared with September and over 11 per cent in comparison with October, 1931. Logging showed the only decrease of importance in placements, when comparison was made with October last year augmented somewhat by small losses in construction and maintenance and manufacturing. The changes in other groups were nominal only, except services, in which placements of female domestic workers showed a gain. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 85; construction and maintenance, 124; trade, 58; and services, 1,131, of which 932 were of household workers. During the month 422 men and 803 women were placed in regular employment.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during October, were slightly lower than in the preceding month, but nearly 68 per cent less than in the corresponding month of last year. There was a gain of 1 per cent in placements when compared with September, but a loss of over 68 per cent in comparison with October, 1931. During October last year large numbers of men were placed in relief camps on road construction, whereas during the month under review few such placements were made, which accounted for the heavy decline under this comparison. Fewer placements were also made in services, manufacturing mining and trade. The only gain of importance was in logging. Placements by

industrial divisions included: manufacturing, 476; logging, 424, farming, 589; transportation, 113; construction and maintenance, 3,735; trade, 309, and services, 3,141, of which 1,766 were of household workers. There were 1,855 men and 1,303 women placed in regular employment.

#### MANITOBA

The number of positions offered through Employment Offices in Manitoba during October was over 27 per cent less than in the preceding month and over 48 per cent less than during the corresponding month of last year. There was a decline also in placements of nearly 29 per cent when compared with September and of nearly 49 per cent in comparison with October, 1931. A large reduction in placements on highway construction, with smaller losses in services, farming and trade, accounted for the decline from October last year. The only group to show any improvement was manufacturing, and this was quite small. Placements by industrial divisions included: manufacturing, 53; farming, 366; construction and maintenance, 937; trade, 37; and services, 915, of which 711 were of household workers. There were 719 men and 346 women placed in regular employment during the month.

#### SASKATCHEWAN

Employment opportunities, as indicated by orders received at Employment Offices in Saskatchewan during October, were nearly 68 per cent less than in the preceding month and nearly 30 per cent below the corresponding month of last year. There was a decline also in placements of nearly 65 per cent when compared with September and of nearly 31 per cent in comparison with October, 1931. A considerable decline in placements on highway construction from October last year was almost entirely responsible for the decrease under this comparison, although a reduction in farm placements and a minor loss in transportation contributed to the adverse change. Gains were reported in services, logging, trade and manufacturing. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 30; farming, 611; mining, 34; construction and maintenance, 327; trade, 61; and services, 387, of which 542 were of household workers. Regular employment was secured for 673 men and 396 women.

#### ALBERTA

Orders received by Alberta Offices during October called for over 58 per cent fewer workers than in both the preceding month and

the corresponding month of last year. There was a decline also in placements of nearly 57 per cent when compared with September and of 58 per cent in comparison with October, 1931. All groups, except transportation and trade, where small gains were reported, participated in the decline in placements from October of last year. The losses in highway construction and farming were quite substantial and were mainly responsible for the net decrease in the province as a whole. Placements by industrial divisions included: manufacturing, 31; farming, 1,210; mining, 88; transportation, 41; construction and maintenance, 711; trade, 52; and services, 590, of which 420 were of household workers. There were 1,648 men and 296 women placed in regular employment during the month.

#### BRITISH COLUMBIA

There was a decline of over 1 per cent in the number of positions offered through Employment Offices in British Columbia during October, when compared with the preceding month and of nearly 70 per cent in comparison with the corresponding month of last year. Similar percentages of loss were recorded in placements under both comparisons. The decline in placements from October a year ago was almost entirely due to fewer men being provided with relief work on highway construction. Placements of this kind were very heavy during October, 1931. Manufacturing, services and logging also showed losses and transportation a small gain, but the changes in other groups were nominal only. Placements by industrial divisions included: manufacturing, 33; logging, 29; farming, 70; transportation, 48; construction and maintenance, 2,134; and services, 550, of which 360 were of household workers. There were 1,106 men and 166 women placed in regular employment during the month.

#### Movement of Labour

During the month of October, 1932, the offices of the Employment Service of Canada made 9,930 placements in regular employment, 3,997 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 165 were granted the Employment Service reduced transportation rate, 155 going to centres within the same province as the despatching office and 10 to other provinces. The reduced transportation rate which, is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to

\*2,149 Placements effected by offices since closed.

distant employment for which no workers are available locally.

The transfers at the reduced fare in Quebec during October numbered 7, all provincial, and were effected by the Quebec city office which despatched 5 bush workers and 2 carpenters to employment within its own zone. In Ontario also, 7 certificates for reduced transportation were granted during October, these being issued to provincial points. From Port Arthur the labour movement included 4 bush workers and 1 restaurant cook journeying to situations within the same zone, while from North Bay 1 cook was transported to Sudbury and 1 pulp cutter to Timmins. Workers taking advantage of the Employment Service reduced transportation rate in Manitoba during October were 62 in number, 52 of whom were bound for provincial situations, and 10 for points outside. Provincially the Winnipeg office transferred 1 farm hand, 3 farm domestics and 1 town general to Brandon, and 35 farm hands, 10 labourers and 1 bushman within the Winnipeg zone. In addition, St. Boniface despatched 1 farm hand to a point within its own zone. The movement outside the province was entirely from Winnipeg, 3 bush workers and 1 farm hand travelling to Port Arthur and vicinity, and 5 farm hands and 1 farm housekeeper to employment in Saskatchewan rural districts. Reduced rate certificates were granted by Saskatchewan offices during October to 16 persons bound for centres within the province. Of these, 12 were farm hands and

one a farm domestic destined to various agricultural localities, 9 of whom travelled from Regina and the balance from Saskatoon. From Regina also 1 school teacher was sent to Prince Albert and from Saskatoon 1 hotel waitress proceeded to employment within the Saskatoon zone. To a point within its own zone Prince Albert despatched 1 sawmill watchman. Benefiting by the Employment Service reduced transportation rate in Alberta during October 66 persons travelled to employment within the province, the Edmonton office being instrumental in the transfer of three farm hands and 2 miners to Calgary and of 26 farm hands, 1 farm domestic, 22 miners, 1 mine foreman, 4 bush workers, 3 sawmill labourers, 1 blacksmith, 1 fisherman and 1 store clerk to centres within the Edmonton zone. From Calgary also 1 farm hand proceeded to Drumheller. The Vancouver office was responsible for all transfers effected in British Columbia during October, which totalled 7. Of these, 6 were for employment in the Vancouver zone, and included 3 mine workers, 2 farm hands, and 1 town housekeeper, while the Kamloops zone received 1 mine blacksmith.

Of the 165 persons who travelled at the Employment Service reduced transportation rate during October, 123 were carried by the Canadian National Railways, 35 by the Canadian Pacific Railway, 4 by the Pacific Great Eastern Railway, and 3 by the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada During October, 1932

The estimated value of the building authorized by 61 cities during October was \$3,056,137; this was an increase of \$852,607, or 38.7 per cent, as compared with the September total of \$2,203,530, but a decline of \$5,386,490, or 63.8 per cent, as compared with the aggregate of \$8,442,627 for October, 1931.

Some 50 cities furnished detailed statistics, showing that they had issued over 350 permits for dwellings estimated to cost approximately \$1,400,000, and about 2,000 permits for other buildings valued at almost \$1,650,000. During September, authority was granted for the erection of about 400 dwellings and 1,800 other buildings, the estimated cost in each category being about \$1,000,000.

Nova Scotia, New Brunswick, Quebec and Ontario recorded increases in the value of authorized building as compared with September, 1932, that of \$833,575, or 183.1 per cent in Quebec being greatest. The largest de-

crease in this comparison was that of \$186,492, or 42.5 per cent in British Columbia.

In comparison with October, 1931, there were declines in all provinces; Quebec reported the most pronounced losses, amounting to \$2,310,160, or 64.2 per cent.

Montreal and Toronto showed an increase over September, 1932, but a reduction as compared with October, 1931, while Winnipeg and Vancouver recorded decreases in both comparisons. Of the other centres, Westmount, Belleville, Galt, Hamilton, Sandwich, Woodstock and Nanaimo reported increases over both September, 1932, and October, 1931.

*Cumulative Record for First Ten Months, 1932.*—The following table gives the value of the building authorized by 61 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as

100. The average index number of wholesale prices of building materials in the first ten months of the years since 1920 are also given (average 1926 = 100).

The aggregate for the first ten months of this year was lower than in 1931 and other years since 1920, but in this connection it should be noted that the average index numbers of wholesale prices of building materials were also much lower than in any other of these twelve years; from its peak of 154.4 in 1920, the index has dropped to 77.7 in the same ten months of the present year, or by 49.7 per cent.

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of value of permits issued in first ten months (1926=100)	Average Indexes of wholesale prices of building materials in first ten months (Average 1926=100)

Beginning on December 5, a 40-hour week became effective for the mechanical staff at the Government Printing Bureau, Ottawa. The employees affected are those "on prevailing rates" of wages, including printers, pressmen, and bookbinders, who will lose one hour's

time a day for the first four days of the week. The shorter working hours were to be in effect until the re-opening of Parliament, when full time will be resumed. This plan was adopted in preference to that of laying off some of the employees for a week at a time.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, November, 1932, summarized the employment situation as follows:—

Employment at October 24 showed a substantial improvement as compared with September 26. There was an improvement in coal mining, the textile industries (except lace manufacture), the principal clothing industries, including boot and shoe manufacture, general engineering, the motor vehicle, tinplate, metal goods, furniture, leather, pottery and glass industries, and dock and harbour service. On the other hand, the seasonal decline continued in the building trade, public works contracting, brick and tile manufacture, the distributive trades, hotel and boarding-house service, and most of the transport services. There was also a slight decline in iron and steel manufacture (exclusive of pig iron) and in the lace industry.

Employment showed a substantial improvement in the Midlands and North-Western divisions, and it improved also, though not to the same degree, in the North-Eastern division, in Northern Ireland and in Scotland. On the other hand, it showed some decline in the South-Western division and in Wales. Employment was moderate in London and the surrounding counties, slack in the South-Western and Midland areas, and bad in other parts of the country.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at October 24, 1932 (including those temporarily stopped as well as those wholly unemployed) was 21·9, as compared with 22·8 at September 26, 1932, and with 21·9 at October 26, 1931. The percentage wholly unemployed at October 24, 1932, was 17·9, as compared with 17·8 at September 26, 1932, while the percentage temporarily stopped was 4·0, as compared with 5·0. For males alone, the percentage at October 24, 1932, was 25·5, and for females, 12·5; at September 26, 1932, the corresponding percentages were 26·2 and 13·9.

At October 24, 1932, the number of persons on the registers of Employment Exchanges in Great Britain was 2,139,448 wholly unemployed, 508,923 temporarily stopped, and 98,635 normally in casual employment, making a total of 2,747,006. This was 111,005 less than a month before, but 20,914 more than a year before. The total included 2,246,247 men,

70,837 boys, 381,064 women, and 48,858 girls. Comparison of the numbers on the registers with the figures for a year before is affected by the results of legislative and administrative changes.

The persons on the registers included 1,247,324 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,122,970 insured persons with applications for transitional payments; 243,779 insured persons not in receipt of insurance benefit or transitional payments; and 132,933 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the registers of Employment Exchanges at October 24, 1932, was 2,816,940.

### United States

The Bureau of Labor Statistics of the United States Department of Labor reports the changes in employment and payrolls in October, 1932, as compared with September, 1932, based on payroll reports ending nearest the 15th of the month, received from 67,988 identical establishments in 17 major industrial groups, having in October 4,505,857 employees, whose combined earnings in one week were \$89,125,870. The combined totals of these 17 industrial groups show an increase of 1·1 per cent in employment and an increase of 3·8 per cent in payrolls over the month interval.

The most pronounced gains in employment and payrolls from September to October were reported in the anthracite and bituminous coal mining industries the anthracite group reporting increases of 14·4 per cent in employment and 42 per cent in payrolls and the bituminous group reporting gains of 7·4 per cent in number of workers and 25·1 per cent in payrolls. Employment in the retail trade group in October was 4·5 per cent above the level of the previous month and earnings were 3·9 per cent higher. The metalliferous mining group reported increases of 4·3 per cent in employment and 5·8 per cent in payrolls. The group of manufacturing industries reported an increase of 2·4 per cent in number of workers and a gain of 4·7 per cent in payrolls. The crude petroleum group reported

increases of 1.2 per cent in employment and 1.3 per cent in earnings, and the wholesale trade group reported increases of 0.9 per cent and 1.2 per cent in employment and payrolls, respectively. The building construction group reported an increase of 0.5 per cent in number of workers coupled, however, with a decrease of 2.7 per cent in payrolls, and the quarrying and non-metallic mining group reported an increase of one-tenth of 1 per cent in employment coupled with a decline of 1.3 per cent in earnings. In the remaining 8 groups, decreases in both employment and payrolls were reported. These decreases, with the exception of the seasonal declines of 35.3 per cent in employment and 31 per cent in payrolls in canning and preserving, were small. The bank-brokerage-insurance group reported 0.4 per cent fewer employees and decreased payrolls of 0.3 per cent; dyeing and cleaning establishments reported a drop of 1.2 per cent

in employment and 3.6 per cent in payrolls; power and light plants reported 1.3 per cent fewer employees with decreased earnings of 0.4 per cent; and laundries reported decreases in employment and payrolls of 1.4 and 2.7 per cent, respectively. The telephone and telegraph group reported a decrease of 1.5 per cent in number of employees combined with a decrease of 0.2 per cent in earnings. The electric railroad operation and maintenance group reported a decrease of 1.7 per cent in employment and 1.6 per cent in payrolls, and the hotel group reported a decrease of 2.1 per cent in number of employees combined with a decrease of 0.8 per cent in payrolls.

A statement in the American Federation of Labor *Weekly News Service* of November 5 estimates that nearly 11,000,000 were totally unemployed in the United States at the end of October.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any

established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodeling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no

custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work

hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" con-

ditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Construction of improvements to wharf at Squatteck, Temiscouata, P.Q. Name of contractors, Belley, Villeneuve & Lajoie, Pointe au Pic, P.Q. Date of contract, November 12, 1932. Amount of contract, approximately \$3,719. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 50	8
Blacksmiths.....	0 45	8
Boatmen.....	0 30	8
Divers.....	1 00	8
Hoist operators (gas).....	0 45	8
Hoist operators (steam).....	0 55	8
Labourers.....	0 30	8
Powderman.....	0 40	8
Teamster, horse and cart.....	0 50	8
Teamster, team and wagon.....	0 65	8
Timberman.....	0 40	8

Construction of repairs, improvements and alterations to the Lazaretto at Tracadie, N.B. Name of contractor, J. S. Parker, Saint John, N.B. Date of contract, October 3, 1932. Amount of contract, \$3,866. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Boiler makers.....	\$0 60	8
Boiler setters.....	0 60	8
Bricklayers.....	0 80	8
Steamfitters.....	0 60	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Teamster.....	0 35	8
Motor truck driver.....	0 40	8

Construction of a pile bent railway and passenger platform trestle wharf (an extension of the existing C.P.R. structure) at Arrowhead, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, November 15, 1932. Amount of contract, approximately \$4,257. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 65	8
Piledriver engineman.....	0 81½	8
Timberman.....	0 55	8
Labourer.....	0 40	8

Construction of an extension to the Orthopaedic Factory at Christie Street Hospital, Toronto, Ont. Name of contractor, Daniel C. Kay, Toronto, Ont. Date of contract, November 18, 1932. Amount of contract, \$7,046. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day*
Concrete mixer operator.....	\$0 80	8
Cement finisher.....	0 75	8
Bricklayers.....	1 10	8

J. E. Poole Co., Toronto, Ont.....	370 25

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Iron, Steel and Products

VICTORIA, B.C.—EMPLOYERS AND BOILERMAKERS AND IRON SHIPBUILDERS.

The verbal agreement between two employers and certain of their employees, members of the Boilermakers' and Iron Shipbuilders' Union of Canada, Local No. 2, in effect from year to year since May 15, 1929, and reported in the LABOUR GAZETTE, October, 1932, page 1110, as being renewed until May 15, 1933, has been terminated, a reduction in wages of approximately 10 per cent being put into effect July 1, 1932.

Agreements between certain employers and the International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, Local No. 191, in effect from May 15, 1929, to May 15, 1932, were also terminated similarly.

### Manufacturing: Printing and Publishing

PORT ARTHUR, ONTARIO.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 575.

The agreement which came into effect November 1, 1920, has been in effect from year to year since, until April 4, 1932, when it was amended and is to be in effect until April 4, 1933, with a wage reduction of 10 per cent for that year.

Only union members to be employed and the union constitution to be observed.

Hours: 48 per week for day work except during June, July and August when they are 45 per week; for night work, 42 hours per week all year.

Overtime and work on Sundays and holidays, time and one half.

Wages: the wage rate paid after the 10 per cent reduction which is in effect from April 4, 1932 to April 4, 1933, is: \$39 per week for day work and \$41.40 per week for night work.

One apprentice allowed for every five journey-men employed and they are to serve five years and be examined yearly as to their progress.

The union grants the employer signing the agreement the use of the union label while the agreement is in effect.

VANCOUVER, B.C.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 83.

Agreement to be in effect from March 1, 1932, to March 31, 1933. New agreement to be settled by conciliation or arbitration.

Only local union members to be employed, if available.

Hours: 48 per week for day work and 45 for night work.

Overtime and work on four holidays, time and one half; work on Sundays and the other three holidays, double time. If called back to work after leaving office, \$1 extra to be paid in addition to overtime pay.

Wages: 90 cents per hour for day work and 96 cents per hour for night work, which is \$43.20 per week for both day and night work (a reduction of 10 per cent from the previous rate). Foremen \$8.10 per day.

Apprentices to be paid one third of journey-men's wage in the third year, one half in the fourth year and two thirds in the last year.

In case of any dispute a joint committee to be formed and disputes to be referred to it.

### Transportation and Public Utilities: Electricity and Gas

MOOSEJAW, SASK.—NATIONAL LIGHT AND POWER COMPANY LIMITED AND THE SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2.

Agreement to be in effect from January 1, 1932, to December 31, 1932, and thereafter until 30 days' notice from either party.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1931, page 711, with the following exceptions:

Overtime and work on statutory holidays and for the seventh day if a day off in seven has not been granted, time and one half.

Instead of all permanent employees receiving fourteen days holidays with pay as in the previous agreement, under the present agreement exception is made of coal and ash conveyor operators who are to receive such holidays without pay and will be relieved by the other employees of the same class who will work seven days per week at the regular rate of pay, making twelve such extra days worked.

There is now no clause referring to life insurance policies.

Wages are reduced between 5 and 6 per cent for most of the classes and the wage rates per hour are: shift engineers 90 cents, firemen 70 cents, oilers with third class certificates 47½ cents, oiler with second class certificates 61 cents, coal and ash men 50 cents, foremen of repairmen 75 cents, repairmen 67½ cents, repairmen's helpers 40 to 60 cents.

MOOSEJAW, SASK.—NATIONAL LIGHT AND POWER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 802.

Agreement to be in effect from May 1, 1932, to April 30, 1933, and thereafter until 30 days' notice of change by either party.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE,

January, 1932, page 91, with the following exceptions:

All overtime and work on holidays and on the seventh consecutive day if no day allowed off in seven, time and one half.

Wages per hour: sub-line foremen  $87\frac{1}{2}$  cents, first class journeymen linemen  $82\frac{1}{2}$  cents (reductions of  $7\frac{1}{2}$  cents per hour); second class linemen 70 cents (a reduction of 10 cents per hour); troublemen \$162 per month (a reduction of \$18 per month). Meter installers, plant electricians and helpers are not mentioned in this scale.

### Transportation and Public Utilities: Local Transportation

VANCOUVER, B.C.—ASSOCIATED DAIRIES LIMITED OF BRITISH COLUMBIA AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 464 (MILK DRIVERS AND DAIRY EMPLOYEES).

Agreement (reached following mediation by a representative of the Department of Labour) to be in effect from November 1, 1932, to November 1, 1933, and thereafter from year to year until notice. If a new agreement cannot be settled between the parties, it will be referred to a board under the Industrial Disputes Investigation Act.

All employees must be union members and the company is to deduct union dues from wages and pay them to the union officer. In consideration of this, the union agrees to reimburse the company if any union member should defraud the company. No discrimination to be shown employees on account of union activity.

One day off in seven or one week off in seven weeks. All employees except salesmen and checkers to work 8 hours for day work with time and one-half for overtime.

Retail salesmen to be paid a minimum of \$79 per month (which increases as the price of milk is lowered) and a commission of 4 per cent on sales. Wholesale salesmen, helpers and inside help to be paid at rates ranging from \$112.50 for helpers to \$140.00 per month for outside relief men, to be increased \$2.50 per month if milk reaches a certain higher price.

Seniority in the company's service to be considered in making promotions. If staff is reduced, those laid off to be given first opportunity of employment as vacancies occur.

No strikes or lockouts to occur during the life of this agreement and all disputes which cannot be settled between the parties will be referred to arbitration.

VANCOUVER, B.C.—TWO TAXI CAB COMPANIES AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 151.

Agreement to be in effect from June 15, 1932, to June 15, 1933, with the exception of the wage scale which may be opened on 30 days' notice from either party.

All employees must be union members and no discrimination to be shown employees on account of union activity. The companies are to deduct union dues from the wages and pay them to the union officers, and the union will reimburse the company in case any union member should defraud the company.

Hours: 9 per day for day shift; 10 per day for night shift.

Overtime: after the first half hour, 50 cents per hour.

Wages in effect at June 15, 1932, which may be negotiated after 30 days' notice; for the first thirty days to be 30 per cent of their gross receipts; after thirty days \$2.25 per day or 35 per cent of gross receipts, whichever is higher. Spare drivers to be paid \$1 for four hours and 25 cents for all hours over four or 35 per cent of receipts, whichever is greater.

Any disputes are to be referred to arbitration.

VANCOUVER, B.C.—A CERTAIN TRANSFER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 466.

Agreement to be in effect from June 1, 1932, to June 1, 1933, and till notice.

All employees must be union members and no discrimination to be shown any employees on account of union activity.

Hours: 9 per day.

Overtime to be paid at 75 cents per hour.

Wages for drivers (baggage wagon) \$4.25 per day.

All disputes to be settled by arbitration.

### Transportation and Public Utilities: Street and Electric Railways

NIAGARA, ST. CATHARINES AND TORONTO RAILWAY (ONTARIO) AND THE PASSENGER TRAINMEN IN THEIR EMPLOY.

The agreement dated April 30, 1926, and the supplementary agreement dated October 20, 1932, which was reached in the proceedings of a board under the Industrial Disputes Investigation Act were printed under the report of that board, LABOUR GAZETTE, November 1932, page 1154.

NIAGARA, ST. CATHARINES AND TORONTO RAILWAY (ONTARIO) AND THE BARN AND SHOPMEN IN THEIR EMPLOY.

The agreement dated April 30, 1926 and the supplementary agreement dated October 25, 1932, which was reached in the proceedings of a board under the Industrial Disputes Investigation Act, were printed under the report of that board, LABOUR GAZETTE, November 1932, page 1157.

NIAGARA, ST. CATHARINES AND TORONTO RAILWAY (ONTARIO) AND THEIR ELECTRICAL FORCES, SUB-STATION OPERATORS, TOWERMEN, TRACK FORCES, STATION FORCES, BRIDGE AND BUILDING DEPARTMENT EMPLOYEES.

The agreement dated April 30, 1926, which has continued in effect from year to year was amended May 1, 1932, to provide for a 10 per cent deduction from wages from that date for one year.

Hours and overtime: for electrical forces 9 hours per day with time and one-half for overtime and work on Sundays and holidays. For track forces and bridge and building department 9 per day with time and one-half after ten hours' work.

After two years' service, section foremen to be given one week's holidays and sub-station operators and towermen two weeks holidays with pay each year.

Wages per hour which were in effect from 1926 to May 1, 1932: linemen 50 to 55 cents per hour, groundmen 40 to 45 cents, labourers

30 to 35 cents, welder 50 to 55 cents, bonder's helper 40 to 45 cents; section foremen \$100 to \$110 per month; section men 30 to 35 cents per hour; sub-station operators \$100 to \$110 per month; towermen \$85 to \$95 per month for first class towermen and \$75 to \$80 per month for second class towermen; carpenters in the bridge and building department 38 to 48 cents per hour. As noted above, this wage scale is subject to a 10 per cent deduction for one year from May 1, 1932.

**NIAGARA, ST. CATHARINES AND TORONTO RAILWAY (ONTARIO) AND THEIR EMPLOYEES IN THE FREIGHT TRAIN SERVICE.**

The agreement dated April 30, 1926, which has continued from year to year was amended June 1, 1932, to provide for a 10 per cent deduction from wages from that date for one year.

Hours: 10 per day. A minimum of two hours' pay on week days and of five hours' pay on Sundays and holidays to all men called out to work.

Overtime: time and one-half.

Wages per hour from April, 1926, until June 1, 1932, were: motormen and conductors in the freight service 50 cents during first year, 53 cents during second year and 55 cents during third year and thereafter; trainmen 43 cents during first year, 45 cents during second year and 48 cents during third year and thereafter. As noted above, the wage scale is subject to a 10 per cent deduction for one year from June 1, 1932.

Seniority to be considered in the choice of runs. When men on the spare list do not work twenty days per month, junior men to be dropped from the list.

**WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND MOTORMEN, CONDUCTORS AND BUSMEN IN THEIR EMPLOY.**

Agreement reached following findings of the board under the Industrial Disputes Investigation Act and further conciliation and negotiations as noted in the *LABOUR GAZETTE*, January, 1932, page 16 and February, page 123.

Agreement to be in effect from February 1, 1932, to January 31, 1933.

No discrimination to be shown employees on account of being or not being members of any labour organization. Leave of absence to be granted union officers to attend union business or to fill union offices.

Hours: 8 per day except that the employees to have the option of working 7 hours per day from May 1, to November 30 inclusive. In addition to actual running time on cars, men on two men cars to be allowed 5 minutes extra for taking cars out of barn or yard or returning cars to barn or yard, and men on one man cars and busmen to be allowed 10 minutes extra.

Overtime to be paid for actual running time on cars in excess of 8 hours and 20 minutes per day at the rate of time and one-half. Extra men not to be paid overtime rates except when on same car as regular men.

Wages per hour for motormen, conductors and busmen when 8-hour day in operation: daily except Sunday for two-men car operators 45 cents during first six months of their employment, 47½ cents during second six months, 51 cents during second year and 54 cents during third year and thereafter; one-man car operators and busmen paid 5 cents per hour more

than two-man car operators; rate for Sunday work 5 cents per hour over week day rates.

Wages per hour for motormen, conductors and busmen when 7-hour day in operation: for first six months of employment, 3½ cents per hour over the rate when 8-hour day in operation; after first six months 4 cents per hour over rate when 8-hour day in operation.

When training students, 5 cents per hour extra to be paid.

All extra motormen, conductors and busmen reporting regularly at the Company's stated time each day to be paid a minimum of \$20 per week.

Seniority subject to efficiency to govern the choice of runs and also opportunities to qualify for bus operation.

Free transportation to be given employees.

Except for first uniform of which the new employee pays half the cost, all uniforms to be furnished by the company.

If any dispute or grievance cannot be settled satisfactorily with officials of the company, it will be considered by a joint committee of company officials and a committee of employees.

**WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES OF THE MECHANICAL DEPARTMENT.**

Agreement reached following findings of the board under the Industrial Disputes Investigation Act and further conciliation and negotiations as noted in the *LABOUR GAZETTE*, January, 1932, page 16, and February, page 123.

Agreement to be in effect from February 1, 1932, to January 31, 1933.

No discrimination to be shown employees on account of being or not being members of any labour organization. Leave of absence to be granted union officers to attend union business or to fill union offices.

Hours: the ordinary hours are to be 8 per day with a minimum working week of 44 hours, but to relieve unemployment conditions, the employees to have the choice of working 7 hours per day instead of 8.

Overtime: with certain exceptions, overtime and work on Sundays and holidays, time and one-half.

Wages per hour if the 8-hour day is worked: machinists, blacksmiths, welders, armature winders, carpenters, painters and pipefitters 67½ cents; apprentices from 26 cents during first six months to 62 cents during last half of fifth year; machinists' helpers, blacksmiths' helpers, armature winders' helpers 39½ to 49½ cents; babbittmen 40½ to 51½ cents; wheelmen 51½ cents; car wiremen 58½ cents; electrical inspection and repairmen 53 and 55 cents; brush hands (painters) 51½ cents; sheet metal workers 55 cents; fendermen 39½ to 44 cents; pitmen leaders 47½ to 53 cents; pitmen helpers 43 to 46½ cents; motormen repairmen of box type motors 43 to 46½ cents; air brake repairmen and inspection 58½ cents; car cleaners, sweepers, stove tenders and unskilled help 38 and 39½ cents. All men working on night shift to be paid 2 cents per hour extra.

Wages per hour if 7 hour day is worked to be from one to 2½ cents per hour higher than when 8 hour day worked.

Apprentices to start between ages of 16 and 21 years and serve five years.

Seniority to be considered when laying off employees.

Free transportation to be given employees.

Disputes which cannot be settled with officers of the company to be considered by a joint committee of company officials and representatives of employees.

**WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES OF THE TRACK DEPARTMENT.**

Agreement reached following findings of the board under the Industrial Disputes Investigation Act and further conciliation and negotiations as noted in the *LABOUR GAZETTE*, January, 1932, page 16 and February, page 123.

Agreement to be in effect from February 1, 1932, to January 31, 1933.

No discrimination to be shown employees on account of being or not being members of a union and leave of absence to be granted union officers, if required.

Hours: from April 16 to November 15, 8 per day, a 48-hour week. For the remainder of the year, the regular hours are 44 per week but employees to have the option of working a 39 hour week instead of 44 for these five months. Shift work to be 8 hours per day, 6 days per week.

Overtime: with certain exceptions all overtime and work on Sundays and holidays, time and one-half.

Wages per hour if an 8-hour day worked: leading trackmen 58½ cents; assistants 45 cents; electric welders 63 cents, assistants 49½ cents; acetylene and thermit welders, 58½ cents, assistants 45 cents; electric switch and diamond repairmen, handymen and emergency men 49½ cents; grinder men 49½ cents, assistants 45

cents; flat car motormen 49½ cents, flat car motormen on part time 45 cents; compressor men and derrick men 45 cents; labourers from 34 to 40½ cents according to length of service.

Wages if 39-hour week is worked to be from 2½ to 4 cents per hour higher than the rates given above.

Seniority to be considered in making promotions and in laying men off.

Free transportation to be given employees.

Disputes which cannot be settled by company officials to be settled by a joint committee.

**Transportation and Public Utilities: Water Transportation**

**VANCOUVER, B.C.—THE SHIPPING FEDERATION OF BRITISH COLUMBIA AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.**

The agreement which came into force November 1, 1930 and which was summarized in the *LABOUR GAZETTE*, March, 1931, page 349, continues in effect until November 1, 1933. It is provided therein that at any time the "Rules, Working Conditions and Wage Schedule" may be amended by mutual agreement. The wage schedule was amended May 1, 1932, to provide for a reduction of approximately 5 per cent, making the rate for labour 82 cents per hour straight time on ships and 78 cents on docks and \$1.23 overtime on ships and \$1.17 overtime on docks. All other wage rates applying to overtime work, to work on cargoes of special commodities and other special wage rates are similarly reduced approximately 5 per cent.

**AGREEMENTS AS TO WAGES AND WORKING CONDITIONS FOR MAINTENANCE OF WAY EMPLOYEES ON UNITS OF THE CANADIAN NATIONAL RAILWAYS, 1902 TO 1932**

**T**HE Brotherhood of Maintenance of Way Employees, affiliated with the Trades and Labour Congress of Canada and with the American Federation of Labour, has recently issued a bulletin entitled "Rates of Pay of Maintenance of Way Employees on Units of the Canadian National Railways, 1902 to 1932." This contains a list of the agreements between the union and the various railway lines in Canada at present forming the Canadian National Railways, with tables of rates of pay for the various classes of workers, hours of labour, and the more important of the rules as to overtime work, seniority, leave of absence, discharge, etc.

The publication opens with a brief account of the origin and growth of the principal railways included in the Government owned system in Canada: the Intercolonial and the Prince Edward Island lines, owned and operated by the Government since construction, following Confederation; the National Transcontinental, completed and put in operation in 1915; the Canadian Northern Railways, taken over in September, 1918; the Grand

Trunk Pacific, added to the Canadian National System in October, 1920, after being operated by the Minister of Railways as receiver since March 9, 1919; and the Grand Trunk Railway System, included in October, 1922. A number of smaller railways taken over in recent years are also mentioned, including the Hudson Bay Railway.

The first of the union agreements in any of these lines was that for the Intercolonial and Prince Edward Island Railways, July 1, 1902, which provided for \$1.30 per day of 10 hours for sectionmen, \$1.75 and \$2 for section foremen, and \$1.50 and \$1.75 for bridge and building carpenters. An agreement for the Canadian Northern became effective on western lines on August 1, 1905, and on the eastern lines on July 1, 1915. On the Grand Trunk Pacific an agreement became effective on August 1, 1912, and on July 1, 1913, the first agreement with the Grand Trunk Railway System was reached.

Following the arrangement between the various railway managements and the various employees' unions in 1918 to apply to the

railways in Canada the changes in wages and conditions provided for in General Order No. 27 of the Director General of the United States Railroad Administration, the "McAdoo Award," the Brotherhood of Maintenance of Way Employees and the Canadian Railway War Board, representing the principal railways, negotiated and signed an agreement, effective from September 1, 1918, covering wages and working conditions for the railways represented, including the present Canadian National lines, the Canadian Pacific Railway and others. Previously these railways had negotiated agreements separately with the union but since that time through the Railway Association of Canada have dealt with this union collectively, signing new agreements or amendments and supplements from time to time. The agreements since 1918 have

covered the various classes of mechanics in the bridge and building departments, signalmen, watchmen, etc., as well as work in yards and on sections. Between 1902 and 1918 many of these classes were included from time to time in the agreements negotiated.

As in the case of other agreements between employers and employees, most of these agreements have been given in the LABOUR GAZETTE complete or in summary form when negotiated and signed. The first agreement secured by the Brotherhood of Maintenance of Way Employees in Canada was that for trackmen on the Canadian Pacific Railway reached on August 16, 1901, following a strike lasting two months. The other agreements on the principal railways were secured without strikes.

## UNION WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics compiles each year data as to rates of wages, hours of labour, etc., under the union scales for certain trades in the principal cities in the United States. The information secured is published in detail annually in special reports issued the following year; but summaries of the figures are given in the *Monthly Labour Review* pub-

lished by the Bureau. The issue for November contains index numbers for May 15, 1932, and previous years.

The Bureau publishes the hourly rate of pay for each trade in each city on May 15, as specified in the agreements between the unions and employers. The number of employees working under these agreements is also given, the hours per week and the weekly wages for a full week's work. It is stated that it has not been found practicable to secure from the unions or the employees themselves data as to actual or average weekly earnings.

It may be mentioned here that the Bureau also compiles and issues reports on wages

TABLE I.—INDEX NUMBERS OF UNION WAGE RATES AND HOURS OF LABOUR IN THE UNITED STATES AS OF MAY EACH YEAR 1907 TO 1932  
(1913=100)

1932.....	235.3

and hours of labour in various industries in the United States, the data being taken from the payrolls of employers by agents of the Bureau, and for these reports data as to actual weekly earnings are secured and also as to hours worked.

The Bureau analyzes the data as to trade union scales, calculating index numbers of rates of wages per hour, full time hours per week and wages per week full time. Table I gives these index numbers for all trades and cities for previous years, the data going back to 1907.

The data cover Bakers, Building Trades, Chauffeurs, Teamsters and Drivers, Granite

Cutters and Stonecutters, Laundry Workers, Linemen, Longshoremen, Printing Trades (book and job offices). The number of employees included in the compilation was 595,637 in 67 cities. It will be observed that figures for railway employees, coal miners, iron and steel workers, electric railway employees, etc., are not included but have been reserved for publication later.

The average rate per hour for all trades included in the calculation was found to be \$1.111 in 1932 as compared with \$1.254 in 1931.

Table II shows index numbers of changes in the wages of the building trades since 1913.

### Imperial Oil Limited Adopts 5-Day Week

On October 22, the President of Imperial Oil Limited sent the following circular to the company's employees in reference to a new plan to establish a five-day week. The Canadian establishments of the company are situated at Halifax, Montreal, Sarnia, Regina, Calgary and Vancouver.

#### LETTER TO EMPLOYEES

Unemployment in Canada is at once the most pressing problem that we have and the only problem which every man and woman at present having employment in the country, can by personal effort, assist in solving. We must necessarily leave other issues, involving economic intricacies, to our National and Provincial governments but it is within the power of every individual who has work to do, or work to give, to share that work. To the extent that work is shared our over-burdened philanthropies will be relieved, resulting in those now maintained by relief becoming self-supporting instead of being supported by those employed.

As long as the consumption of goods in Canada continues to dwindle because a growing number of people are unable or afraid to buy, the more precarious the earning power of every individual becomes. Governments are humanely making provision against anyone suffering from hunger or lack of shelter during the winter months, but the consumption of goods purchased by government grants for this purpose constitutes an additional burden of taxes for the tax-clouded future.

In announcing the application of a shorter working week, Imperial Oil Limited has in mind—

First, the reassurance so far as possible of all those in its service that there will be no cessation of employment through a further reaction in general business.

Secondly, that through employment of others not now on the payroll the fear of unemployment will be alleviated and the ability to purchase will be resumed resulting in a widened market for commodities produced in Canada and an accelerated return of normal business conditions.

The principle of dividing labour and service is a further step in the evolution of working hours and working conditions which has been in progress since the twelve hour day was in effect.

Until further notice, the following practice will therefore be observed throughout the operations of the Company effective Nov. 1, 1932 with the exception of those affected by similar action already:

1. To the extent practicable a normal working week of five days or its equivalent will apply to all employees engaged in the Company's operations and now on a 5½ day week.

2. Hourly wage earners will continue to be paid on the basis of time actually worked.

3. Salaried employees now on a 5½ day schedule will go on a 5-day basis with a reduction in pay of one-eleventh, which reduction will apply throughout the organization, including directors and executives, and irrespective of such a decline as has already occurred in the annual earnings of these two latter classes. This reduction to a 5-day basis shall not affect salaries of \$100 or less per month, nor result in a reduction below \$100 per month for those now receiving more than that amount.

4. All reductions in compensation will be effective currently on the payroll regardless of whether the reduction in working time shall be taken off currently each week, or in one or more periods over the year.

The Board is confident of the co-operation of all those concerned.

Yours very truly,

C. O. STILLMAN,  
President.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1932

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was downward, a seasonal advance in the retail cost of foods being more than offset by a decline in fuel and rent, while in wholesale prices the index was again lower mainly because of declines in prices of live stock and certain raw materials.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities showed a slight increase at the beginning of November at \$7.09 as compared with \$7.07 for October. Comparative figures for earlier dates are \$7.82 for November, 1931; \$10.25 for November, 1930; \$11.75 for November, 1929; \$11.08 for November, 1921; \$16.92 for June, 1920 (the peak); and \$7.96 for November, 1914. The advance was due to a seasonal increase in the price of eggs. The prices of beef, veal, mutton, pork, butter, bread, flour, rolled oats and beans were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.10 at the beginning of November as compared with \$16.40 for October. Comparative figures for earlier dates are \$17.81 for November, 1931; \$20.60 for November, 1930; \$22.03 for November, 1929; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); and \$14.36 for November, 1914. Fuel was somewhat lower, due mainly to decreases in the prices of wood. In rent declines were reported from several localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, again showed a slight decrease at 64.8 for November as compared with 65.0 for October; 70.7 for November, 1931; 79.5 for November, 1930; 95.7 for November, 1929; 164.3 for May, 1920 (the peak); and 67.2 for November, 1914. Eighty-five prices quotations were lower, sixty-two were higher and three hundred and fifty-five were unchanged.

In the classification according to chief component materials three of the eight main groups were lower, four were higher and one was unchanged. The groups which declined were: the Animals and their Products group, mainly because of lower prices for hides, leather, steers, calves, hogs, lambs, and fresh and cured meats; the Fibres, Textiles and Textile Products group, because of reductions in the prices of raw cotton, jute and certain lines of manufactured cotton; and the Non-Metallic Minerals and their Products group, due to decreases in the prices of coke which

more than offset higher prices for coal tar and sulphur. The groups which advanced were: the Wood, Wood Products and Paper group, owing to higher prices for lumber and pulp; the Iron and its Products group, mainly due to higher quotations for steel tank plates, automobile body plates and scrap steel; the Non-Ferrous Metals and their Products group, due to higher prices for aluminium, lead, silver and zinc, which more than offset declines in the prices of antimony and copper wire bars; and the Chemicals and Allied Products group due to increases in the prices of calcium chloride and zinc oxide. The Vegetables and Vegetable Products group was unchanged, lower prices for wheat, rye, gluten meal and shorts being offset by advances in the prices of barley, corn, oats, rolled oats and oatmeal.

In the grouping according to purpose both consumers' and producers' goods declined, the former because of decreases in the prices of gluten meal, shorts, fresh and cured meats, butter, silk fabrics and woollen cloth which more than offset advances in the prices of oatmeal, rolled oats, potatoes and eggs, and the latter due to declines in the prices of wheat, rye, livestock, coke and antimony, which more than offset advances in the prices of barley, corn, oats, pulp, lead and zinc.

In the grouping according to origin raw and partly manufactured goods declined, decreases in the prices of wheat and live stock more than offsetting advanced quotations for barley, corn, oats, eggs, lead and zinc. Fully and chiefly manufactured goods were also lower, mainly because of declines in the prices of gluten meal, shorts, cured meats, butter, cheese, and copper wire bars. Canadian farm products and articles of marine origin declined, articles of forest origin were slightly higher and articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics

by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE.

(Continued on page 1350)

### COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 1343)

GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes

twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel 2%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

## Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3;

1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1931. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1930 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 127.6. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1; 1930, 158.8. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices were considerably lower in practically all localities, sirloin being down in the average from 24 cents per pound in October to 22.7 cents in November, rib roast from 17.9 cents to 16.4 cents and shoulder roast from 12.5 cents to 11.9 cents. Mutton was also generally lower, averaging 18 cents per pound in November as compared with 19.2 cents in October. Fresh pork declined from an average price of 15.7 cents per pound in October to 14.5 cents in November. Decreases were more pronounced in Ontario and the Western Provinces. Lard was up from an average price of 12.6 cents per pound in October to 13.3 cents in November.

Eggs were substantially higher in practically all localities, fresh averaging 38.6 cents per dozen as compared with 30.3 cents in October

and 25.6 cents in September, and cooking averaging 29.4 cents per dozen in November, 24 cents in October and 20.5 cents in September. Milk was unchanged at an average price of 9.4 cents per quart. Increases were reported from Hull, Ottawa, Cobalt and Victoria, while prices were lower at Sherbrooke and Brockville. Butter prices were slightly lower, dairy being down from an average of 23 cents per pound in October to 22.7 cents in November and creamery from 26.9 cents per pound to 26.4 cents.

Bread was fractionally lower at an average price of 5.7 cents per pound. Potatoes were little changed at an average price of 81 cents per ninety pounds. Evaporated apples declined from 16 cents per pound in October to 15.7 cents in November, while prunes also were fractionally lower at an average price of 10.7 cents per pound. Bituminous coal declined from an average price of \$9.47 per ton in October to \$9.42 in November, while coke was down from \$12.16 per ton to \$11.96. Both hard and soft wood were lower, the former in stove lengths being down from \$12.78 per cord in October to \$12.49 in November and the latter from \$9.54 per cord in October to \$9.37 in November. Reduced quotations for rent were reported from a number of localities.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was down from an average price of 48.2 cents per bushel in October to 46.7 cents in November. The high price for the month was 48 cents per bushel reached on November 12 and the low 44.8 cents per bushel reached at the end of the month. The decrease in the latter part of the month followed the appearance of the new crop from Australia and the Argentine, and the sharp decline in sterling exchange. Coarse grains for the most part were higher, western barley advancing from an average of 25.7 cents per bushel to 30.3 cents, oats from 23½ cents per bushel to 24 cents, rye from 29.2 cents per bushel to 29.5 cents and corn from 68.8 cents per bushel to 71.4 cents. Rolled oats at Toronto advanced from \$2.25 per ninety pound bag to \$2.60 and oatmeal from \$2.48 per ninety-eight pound bag to \$2.86. Shorts at Montreal were 80 cents per ton lower at \$18.45. Raw sugar at New York was down from \$1.28 per cwt. to \$1.25 (Canadian funds), while granulated at Montreal was unchanged at \$4.37 per cwt. Ceylon rubber at New York rose from 3.8 cents per pound to 4 cents (Canadian funds). This advance was

due entirely it was said to fluctuations in exchange and not to the market situation. Live-stock prices for the most part were lower, choice steers at Toronto being down from \$4.70 per hundred pounds to \$4.22 and at Winnipeg from \$3.63 per hundred pounds to \$3.51. Bacon hogs at Toronto declined from \$4.50 per hundred pounds to \$3.92 and at Montreal from \$4.84 per hundred pounds to \$4.08. Lambs were lower at Toronto but advanced at Winnipeg. In the former market the price was down from \$4.77 per hundred pounds to \$4.72 and in the latter advanced from \$3.64 per hundred pounds to \$4.08. Fresh eggs showed a substantial seasonal advance, the price at Montreal being up from 39.4 cents per dozen to 49 cents, at Toronto from 37.4 cents per dozen to 46.4 cents and at Winnipeg from 31 cents per dozen to 32 cents. In butter, creamery prints at Montreal were slightly lower at 23½ cents per pound. Raw cotton at New

York was down from 7.2 cents per pound to 7.1 cents, following the publication of the Government crop forecast which placed the crop somewhat higher than in the previous month. Raw silk at New York was slightly lower at \$2 per pound, while wool was unchanged in price. In lumber, prices of red oak advanced from \$73 per thousand board feet to \$75 and spruce from \$19.50 per thousand board feet to \$20. In iron and steel, heavy scrap steel was slightly higher at \$7.25 per ton, while steel tank plates were up from \$1.73 per hundred pounds to \$1.82. Electrolytic copper at Montreal was unchanged at \$7.31 per hundred pounds, while copper wire bars declined from \$6.77 per hundred pounds to \$5.99. Silver at New York advanced from 29.8 cents per ounce to 30.7 cents (Canadian funds). Coke was 50 cents per ton lower at \$7.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the *LABOUR GAZETTE*, October, 1932, page 1126.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 60.8 for October, a decline of 0.9 per cent for the month. Food declined 1.4 per cent and non-foods 0.7 per cent. Among non-foods, coal and iron and steel advanced, but all other groups were lower for the month.

The *Statist* index number on the base 1867-1877=100, was 77.8 at the end of October, a fall of 3.2 per cent for the month. The general decline included all of the six groups, the greatest fall occurring in animal food which amounted to 7.7 per cent.

**COST OF LIVING.**—The index number of the *Ministry of Labour Gazette* on the base July 1914=100, was 143 at November 1, showing no change from October. Except for a slight increase in the rent group, all groups were unchanged for the month.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base

1913-1914=100, was 94.3 for October, a decline of 0.8 per cent for the month. Non-ferrous metals, textiles and rubber showed the greatest declines.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 119.0 for October, which is 0.4 per cent lower than for the previous month. Rent and heat and light were slightly higher, but other groups declined.

### India

**WHOLESALE PRICES.**—The index number of the Government of Bombay of wholesale prices in Bombay, on the base July 1914=100, was 107 for September, showing no change from August.

**COST OF LIVING.**—The index number of the cost of living, Bombay, on the base July 1914=100, was 109 for September, showing no change from August. A decline in food was counteracted by an increase in clothing prices.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 64.4 for October, a decline of 1.4 per cent from the September level, due to declines in farm products, foods, textile products, chemicals and drugs and miscellaneous commodities, partly counteracted by advances in hides and leather products, fuel and lighting materials, metals and metal products and building materials.

*Dun's* index number, which is based on the wholesale commodity quotations proportioned

on the *per capita* consumption of each of the many articles included was \$133.898 at December 1, a decline of 0.6 per cent for the month. Declines in breadstuffs, meat and "other food," clothing and metals were partly offset by advances in dairy and garden produce and miscellaneous commodities.

**COST OF LIVING.**—The cost of living index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 124.7 for October, a decline of 0.4 per cent for the month, due to lower food prices (chiefly meats) and decreases in fuel and light and sundries, partly offset by an advance in clothing.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Employer's guarantee of employment for definite period is enforceable

In an action in the High Court of Justice of Ontario certain employees sued individually for wages alleged to be owing by the defendant company by virtue of oral and written agreements. The Company, which carried on a tailoring business at Toronto, desired to conduct what is known as an "independent shop," in which it could employ non-union workmen. Accordingly, some time prior to July 24, 1931, Hillman, a member of the Company, approached several of the plaintiffs, and told them that the company wanted to form an independent shop, and that it would be better for all parties if they worked separately from the Manufacturers' Association and the Workers' Union, respectively, and advised them for their part to break away from the Union, and that if they did the company would give them a year's work.

As a result of the negotiations between the plaintiffs and the defendant company, the following written agreement was entered into on the 24th July, 1931:

Toronto, July 24, 1931.

Agreement, made in duplicate between the Shiffer & Hillman Co., and the Shop Group, acting in the interest of the coat department.

(1) It is hereby mutually agreed by both parties to withdraw from their respective Associations immediately and establish instead a direct contact between the firm and the workers of the shop; (2) The firm hereby recognizes the right of the workers to be organized and deal with their shop committee or elected representative; (3) It is further agreed that the workers in the shop are guaranteed the right to the job; (4) The shop Committee is to supply any additional help needed in the shop; (5) 44 hours to constitute the working week; (6) The existing Union scale of wages to remain in force unless there is a general readjustment of the clothing market; (7)—(11) (inc.) (These clauses deal with irrelevant matters); (12) This agreement is entered into for the period of one year from the above date.

Signed for the Shiffer & Hillman Co. Ltd.—  
"B. Hillman," "E. Shiffer."

Signed for the Coat Shop—"Sam Weinran," and others, including the plaintiffs.

Pursuant to the agreement, the plaintiffs left their union and the defendant company left its association. The plaintiffs were working under the agreement when a strike was called by the union. Some of the signatories were intimidated, others assaulted, and some left the employment of the defendant company, but the plaintiffs continued for ten weeks to work for the company, and were paid for that time. The defendant company then made peace with the union and the plaintiffs were dismissed for no other cause than that they did not belong to the union.

It was submitted, on behalf of the plaintiffs, 1st, that the written agreement standing by itself was an enforceable agreement, whereby the company agreed to employ each of the plaintiffs, among others, for the period of one year; 2nd. That if there was any ambiguity in the agreement, it could be explained by oral testimony; 3rd. That if the written agreement was for any reason invalid, there was a collateral enforceable verbal agreement to the same effect.

Mr. Justice Logie, in a written judgment, said that the agreement was intended to create and did create the legal relationship of master and servant between the defendant and the individual plaintiffs. The plaintiffs left their trade union and this constituted valuable consideration for the defendants' promise to employ them, *Hudson v. Cincinnati, New Orleans and Texas Pacific Railway* (1913), Ky. 711 distinguished. The learned Justice was of the opinion that the words "it is further agreed that the workers in the shop are guaranteed the right to the job" meant that the signatories would not be supplanted by others so long as there was work to do, and that paragraph 12 meant that this work was to last for the period of one year. Even if the plaintiffs should be considered as members of an unincorporated association, the agreement was not therefore a mere nullity. It could be enforced by or against those members who actually executed it. Reference to *Chitty on Contracts*, 18th ed., p. 297.

In *Young v. Canadian Northern Railway Co.* (LABOUR GAZETTE, December, 1930, page 1474), Lord Russell said, in reference to a wages agreement between a trade union and the railway company, that, "It appears to their Lordships to be intended merely to operate as an agreement between a body of employers and a labour organization, by which the employers undertake that, as regards their workmen, certain rules beneficial to the workmen shall be observed. By itself it constitutes no contract between any individual and the company which employs him." Reference also to *Bancroft v. C.P.R.* (1920), 30 *Manitoba Law Reports*, 401.

The learned Justice observed that the agreement in the present case differed from those under consideration in either of the above cases. It was more than a collective agreement similar to the collective bargains made by the Amalgamated Clothing Workers of America with employers on behalf of workmen—the only remedy for breach of which is a strike. It was more than merely a memorandum of rates of pay, regulations governing hours of work, and scale of production, and, considered from the viewpoint of the company, it was more than evidence of its intention to be governed in the conduct of its business by the rules set out for the time stipulated. Nor was it solely the defining of a usage that was an established method of dealing adopted in this particular shop by those engaged in the Coat Department which only acquired force because the people signing it made their contract with respect to it.

In the opinion of the learned Justice, the document was just what, on its face, it purported to be, namely, a contract with the individuals forming what was called a shop group, for a year's employment by the company if there was work to do and a year's service on the part of the employees on the special terms contained in the document itself.

Moreover, the learned Justice was satisfied, on the evidence, that there was a collateral verbal agreement on the same subject consistent with the written document. The verbal agreement, in essence, proceeded upon the principle of the Smokeball case, *Carlill v. Carbolic Smokeball Co.* (1892), and the offer by the representatives of the company, in the case at bar, was available to all who accepted it. In effect, it was "to such of you who give up your union and form with us an independent shop, we, the employers, will give work for a year upon the terms of an agreement which we will put in writing."

The learned Justice said that, if he were correct in his interpretation of the written agreement, there was no mutual mistake and

no ground for rectification of the written agreement. There should be judgment for the plaintiffs, with costs, with a reference to the Master to determine the damages.

#### Union officials not responsible for Mutual Benefit Department

A member of the Order of Railroad Telegraphers, residing in Manitoba, took out an assurance policy from the Mutual Benefit Department of the Order, the certificate being issued at St. Louis, Missouri. After his death, his widow as the beneficiary named in the certificate, entered an action at Winnipeg to recover from the Manitoba Branch (Division No. 43) of the association the sum of \$1,000 as the amount payable on the death of the assured. Neither the Order nor its Mutual Benefit Department had been incorporated or registered in Manitoba and the head office of each was at St. Louis. Objection was taken by the Referee to the statement of claim on the ground that the defendant named therein was not a legal entity. The plaintiff therefore asked for, and obtained from the Referee, leave to substitute as defendants the chairman and secretary of Division No. 43, who both resided in Manitoba, and the secretary of the Grand Lodge of the Order, who resided at St. Louis. The plaintiff appealed against this decision of the Referee.

Mr. Justice Donovan reversed the decision of the Referee, his judgment being in part as follows:—

"As I view it, neither the general members of the Order nor the officials thereof have a common interest with the general members of the Mutual Benefit Department, and the moneys payable under such certificates or contracts of memberships issued by that Department are not in any way subject to the control of the officials or members of Division No. 43.

"While it is conceivable that the existence of the General Order of Telegraphers may be beneficial or even essential to the development of the Mutual Benefit Department, yet it does not seem to me that the case on that point, and particularly as against the Benefit Department, can be said to come within the terms of Rule 211 of *The King's Bench Act* (Revised Statutes of Manitoba 1931, chapter 6), which provides:—

"Where there are numerous parties having the same interest in one action, one or more of such parties may sue or be sued, or may be authorized by the Court to defend, in such action, on behalf of, or for the benefit of, all parties so interested."

"It was contended on behalf of the plaintiff that the judgment in the House of Lords in the case of *Taff Vale Railway v. Amalgamated Society of Railway Servants* (1901), was authority for the making of the order made by the learned Referee. In that case however the defendant society was a trade union, registered under statutory authority, and Farwell, J., at p. 427, points out that in such a case the defendant was to be considered 'an association of men which almost invariably owes its legal validity to the *Trade Union Act, 1871, ch. 31.*'

"In *Hay versus Union No. 25, Ontario, Bricklayers and Masons International Union* (1928) 63 Ontario Law Reports, page 418, an amendment was sought in a situation which had some points of similarity to this case, and although an issue was not raised on the question, Hodgins, J. A., at p. 419, says: 'The initial difficulty is that the Local Union, being unincorporated, could not be sued, and therefore that the adding at the trial of the individual defendants was incompetent, it being in fact a substitution of defendants for an original defendant against whom no cause of action existed. This was not pressed at the trial or on the appeal; nevertheless I think the Court is entitled to pronounce upon the point, and upon that ground alone the action against the individual defendants should be dismissed.'

"In *Society Brand Clothes Ltd. v. Amalgamated Clothing Workers of America* (LABOUR GAZETTE, January, 1931, page 108) Mr. Justice Cannon (page 111), distinguishes that case from the *Taff Vale* case, *supra*, as follows: 'It is therefore clear that the defendants have not the status of quasi-corporations to which the decision in the House of Lords in *Taff Vale Ry. v. Amalgamated Society of Ry. Servants* might be applied.'

"The individuals from Manitoba named as the representatives cannot, it seems to me, be held, under the constitution or contract, to be agents for the Mutual Benefit Department, nor, without showing that they were members of such body, can they be held to have any control over the funds or the procedure required to make the assessment. (See *Walker v. Sur* (1914) 2 K.B. 930, 83 L.J.K.B. 1188, and *Local Union No. 1562 United Mine Workers of America v. Williams*, 59 S.C.R. 240, (1919) 3 W.W.R. 828.

"The certificate does not provide for the payment of \$1,000, as claimed, but only for such sum as may be realized from an assessment to be levied on account of the death of the member named in the certi-

ficate, and such levy is made subject to a proviso that the amount to be paid shall not exceed \$1,000.

"In the *Taff Vale* case, *supra*, Lord Macnaghten, in discussing the question of the form of action against trade unions, says, 'I have no doubt whatever that a trade union, whether registered or unregistered, may be sued in a representative action if the persons selected as defendants be persons who, from their position, may be taken fairly to represent the body. As regards this point, Mr. Haldane relied on the case of *Temperton v. Russell* (1893) 1 Q.B. 435, 62 L.J.Q.B. 300; but *Temperton v. Russell* as I said in *Bedford (Duke) v. Ellis* (1901) A.C. 1, 70 L.J. Ch. 102, was an absurd case. The persons there selected as representatives of the various unions intended to be sued were selected in defiance of all rule and principle. They were not the managers of the union—they had no control over it or over its funds.'

"In my opinion therefore the plaintiff has not established her claim to have the Manitoba representatives added as defendants in this action, and furthermore on the facts, as noted above, the Court has no jurisdiction to make the Mutual Benefit Department, or representatives of it, defendants; or if so made defendants, to have under Rule 290 of *The King's Bench Act* service made out of Manitoba.

"The appeal will therefore be allowed with costs."

On further appeal by the plaintiff from the order of Mr. Justice Donovan the Manitoba Court of Appeal dismissed the appeal with costs, without prejudice to the right of the plaintiff to take other proceedings as she might be advised.

*Timmons vs. Order of Railroad Telegraphers* (Manitoba) 1932, *Western Weekly Reports*, vol. 3, page 312.

### City Relief Work is not Subject to Law Governing Contracts of Employment

Relief workers at Regina were required by the civic authority to sign an agreement under which the city was to hold in trust 75 per cent of the wages they earned while engaged on relief work. The legality of this ordinance being challenged by the Unemployed Workers' Council, an action was brought by one of the workers in the Police Court as a test case, it being alleged that the action of the City in reserving part of the wages earned by the relief workers was contrary to the provisions of the Workmen's Wage Act (Revised Statutes of Saskatchewan, 1930, chapter 259), which provides as follows:—

2. In every contract for the hiring of a workman in any of the occupations contained in the schedule to this Act the wages of such workman shall be made payable in Canadian currency or in the notes of a chartered bank doing business in Canada or by cheques drawn upon and duly accepted by a chartered bank having a branch or agency at or within five miles of the place where the workman is employed; a contract providing for payment in any other manner shall be illegal and void.

3. If in any contract hereafter made between such workman and his employer any provision is contained respecting the place where or the manner in which or the person with whom the whole or any part of the wages of the workman shall be expended the contract shall be illegal and void.

4. The entire amount of the wages of every such workman shall be paid him in Canadian currency or in the notes of a chartered bank doing business in Canada or by accepted cheque as aforesaid at the end of every seven days if his employment does not sooner cease, or at the time it ceases if the employment is for a period of less than seven days; and every

payment made in respect of such wages by the delivery to the workman of goods or otherwise than as before mentioned shall be illegal and void.

5. Every such workman shall be entitled to recover from his employer in the manner by law provided for the recovery of servants' wages or by any other lawful means so much of his wages as has not been paid to him in the manner authorized by this Act; and in any action, suit or other proceeding hereafter brought by a workman against his employer for the recovery of money due as the wages of labour, the defendant shall not set off nor claim any reduction of the plaintiff's demand by reason of the delivery to him of goods, wares or merchandise on account of wages, or by reason of goods, wares or merchandise sold, delivered or supplied to such workman at any shop or warehouse of the employer or in the profits of which such employer has an interest.

The magistrate held that the City of Regina was not a contractor within the meaning of the Act, and dismissed the case.
